Recognition of National Transportation Week

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7, 1961

Mr. WILEY. Mr. President, during the 86th Congress, legislation was enacted for a 1-year recognition of National Transportation Week. The recognition, I believe, was well merited and well deserved.

Currently, there are bills pending to make this a permanent observance.

We recognize, of course, the significance of transportation to our people individually as well as to the whole economy.

I hope, therefore, that the respective committees and subcommittees in the House and Senate may find it possible to give early consideration to the proposal now pending for permanent observance of National Transportation Week.

Recently I received some messages from a number of individuals deeply interested in this matter, urging such recognition. I ask unanimous consent to have these letters printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

A. O. SMITH CORP.,
Milwaukee, Wis., March 2, 1961.
Hon. ALEXANDER WILEY,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: As a sustaining member of the Associated Traffic Clubs of America, and being actively involved and interested in the furtherance of recognition of the importance of transportation, I would like to solicit your assistance in the following:

Senator MAGNUSON and Representative HARRIS have introduced resolutions to make National Transportation Week a permanent observance. Senator MAGNUSON'S resolution is Senate Joint Resolution 35 and the companion measure introduced by Representative HARRIS is House Joint Resolution 143. A similar bill was passed by Congress last year; the number of that bill was House Joint Resolution 602. Unfortunately at that time in order to get the bill on the floor of both Houses for a vote, the bill was made a 1-year bill only in place of one which would designate a permanent National Transportation Week.

I believe that recognizing the importance and significance of transportation to the everyday living of fellow Americans is a vital necessity, and the observance each year of a National Transportation Week would certainly help get the message across.

I earnestly solicit your help and favorable action on these resolutions.

Yours very truly,
R. H. HEILMAN,
Director of Transportation.

JOS. SCHLITZ BREWING CO.,
Milwaukee, Wis., March 2, 1961.
Senator ALEXANDER WILEY,
Senate Judiciary Committee,
Senate Office Building, Washington, D.C.

DEAR SENATOR WILEY: Your support of Senator MAGNUSON'S resolution, Senate Joint Resolution 35, in connection with establishing a permanent National Transportation Week will be appreciated.

This bill, House Joint Resolution 602, was passed by Congress last year.

Kindest regards.

Sincerely yours,
G. C. LOESER,
Assistant General Traffic Manager.

"Integrity," the First Word in Carl M. Saunders' Book

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. MEADER. Mr. Speaker, Mr. Carl M. Saunders, one of the outstanding journalists of our times, has retired as editor of the Jackson Citizen Patriot, of Jackson, Mich.

Mr. Saunders has been a true patriot and a forward-looking leader in the promotion of good government and American principles of economic and political liberty.

Mr. Saunders won the Pulitzer Prize for distinguished editorial writing and is best known for his "Prayer for Peace," which pursuant to congressional resolution the President has included in his Memorial Day proclamations.

The Jackson Citizen Patriot of March 1, 1961, contains an excellent editorial on its former editor which I include at this point in my remarks:

"INTEGRITY," THE FIRST WORD IN CARL M. SAUNDERS' BOOK

With his retirement as editor of the Citizen Patriot, effective today, Carl M. Saunders, for the first time in nearly 27 years has not the power of veto over the content of this column.

And because that is true, we can talk freely about this remarkable newspaperman. He would say "No" if he could, for he is a modest individual.

Those who know him best, the men and women who have worked with him—no one worked for Carl Saunders—recall the thousands of times when he dodged the credit for an especially enterprising bit of newspaper work. He preferred to hand the

bouquets to the reporter, photographer, or subeditor.

And there are many other things about Carl Saunders that we can speak about for the first time—because he can't say "No."

Jackson knows him well, as does all of Michigan, for a career that has been remarkable for its service to the public; as an editor who never hesitated to speak out for what he believed for the public good.

The honors that have come to him through the years—and they have been many—have stemmed from this sense of service and the ability to make it a living thing.

He has fought for the preservation of Michigan's natural resources; for the betterment of the economy of the state; for legislation which would improve the government.

Health services, schools—you name it and Carl Saunders has had his part in improving it.

That is the public record, but not the story we set out to tell on this first day that Mr. Saunders turns to a life of community service independent of the newspaper, and enjoying his beloved out of doors and his garden.

What the public may not know is the impact that he has had on journalism throughout Michigan and the Nation. Wherever he went in professional gatherings his opinion was asked and respected.

Schools of journalism sought his counsel and will continue to do so. Due to his performance, the Citizen Patriot often has been cited as a model community newspaper with high ideals and a great standard of performance.

All this is true because Mr. Saunders has in addition to great talent as an editor, a set of principles by which he lives.

He often was called to speak before students, in high school and college, to discuss careers in journalism. That naturally involved listing the requirements which he believes a newspaperman should have.

He always places one qualification above all others: Integrity.

Without it, he will insist, ability to write or to do the other things required of the journalist are without meaning.

He lived that belief every day of his more than 50 years in the profession that he loved.

And he was proud to be a newspaperman. To him it is the noblest of all callings.

He never shrank from the great responsibility that goes with control of a medium of communication. He would lean over backward to make certain that the other side had its say.

Letters to the "Voice of the People" have to be screened for libel. But there always was one exception. Any writer could say almost anything he pleased about the editor.

The life of an editor often is one of hard and sometimes unpleasant decisions. He can consult with his associates, but must assume the final responsibility.

And it was in this area that the great character of Carl Saunders stood out. He called them according to principle, even though his opinion might be unpopular.

He has another sincere belief: That a newspaper, as such, cannot have friends—only principles. He believes that friendships belong in the social realm and that when the public trust is involved, the public interest must come first.

A man who adheres to such principles accumulates scars through the years. Carl Saunders carries his share into retirement. But there is no malice festering in the wounds. No more kindly or forgiving man ever lived. What is often mistaken for gruffness is a protective shell over a soft and warm heart.

He carries, also, the respect of a community and State on which he has placed his mark. And he takes the affection and admiration of all Citizen Patriot staffers of today and those who have passed this way through the years.

Our wish for him as he retires is a weedless garden that flourishes so as to shame Burbank; fish that cannot ignore his lures; and a further unlimited opportunity to utilize his great energy and wisdom in community service for the city and State that he loves so well.

State Peace Corps Agencies

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1961

Mr. DULSKI. Mr. Speaker, I want to bring to the attention of my colleagues a proposal from the Buffalo Committee for a Sane Nuclear Policy, University of Buffalo, Buffalo, N.Y. The proposal follows:

We of Sane at the University of Buffalo have studied the proposal of the U.S. Peace Corps and with some enthusiasm. We would like that States, specifically our own State of New York to be joined by others, should establish peace corps agencies as liaison between the National Peace Corps and the public. It might be sufficient, at this time, to say in a tentative way that the State peace corps agencies would, above all else, be alert and responsive to the needs and requests of the National Peace Corps; the pattern would be similar, perhaps, to that which now exists in civil defense. Specifically, it can be foreseen that the functions of a peace corps agency on the State level would be concentrated in the following areas:

(a) Recruitment, induction, and screening of young teachers and skilled workers of all kinds from the State;

(b) Explanation in schools and factories, and to the general public, of the ultimate aim of the program in furthering world peace; and

(c) Guaranteeing that the "veterans" of the Peace Corps on their return will have ample opportunity to tell the public about their experiences.

There is another kind of function the peace corps agencies could perform within the States. Arrangements have recently been made for 200 students from 6 major African countries to begin regular 4-year college courses in this country next fall; 85 colleges in 29 States are cooperating in the program. Travel expenses of the students will be met by their own governments; their tuition fees by the host colleges; their living expenses by the International Cooperation Administration; and administrative expenses by a Carnegie Corp. grant. The only expense not taken care of above is the extra small amount it would take to bring home to the American people the tremendous contribution such a program makes to international understanding and peace—a small amount compared with the terrible expense of the misunderstandings that might occur and of the wasted opportunity that might be forfeited. Peace corps agencies, concerned as they are with our own expeditionary forces, would be well able to prepare the public for such "invasions" from overseas, showing the great value of this two-way traffic. Peace corps agencies will concern themselves not only with the preparations to give of our own youth but also with our willingness to receive of others.

We ought to admit the proposal for State peace corps agencies is partly selfish. As quickly as possible we would like machinery created through which we ourselves can participate in the Peace Corps activity in our locality. We go further and suggest Buffalo as a pioneer induction and training station, the first divisional headquarters of the New York State Peace Corps Agency.

Good Old American Get-Up-and-Go Moves Dallas Ahead

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. ALGER. Mr. Speaker, I am always grateful when I have the opportunity to point out to my colleagues the spirit which makes Texas, and particularly Dallas, the district I am privileged to represent, such an outstanding example of the philosophy which made our country great. We, in Dallas, have never waited for Federal handouts in order to move our city ahead. We have always found the initiative of our own people the most driving force in keeping our community alert, ready to seize its opportunities, and to keep pace with the progress of this day.

At this time, when there are some in the land who would have us believe that our country is on the verge of economic chaos, when some are ready to lose all faith in the private enterprise system, Dallas and its people once again meet the challenge by embarking on a program of new construction of homes, business enterprises and industry, creating jobs and offering better opportunity for all its people—not through Government subsidies, but through private initiative, individuals who are willing to invest time and money in the future and in our country.

The following editorial and news story from the Dallas Morning News of February 26, tells the world what is being done in Dallas and points out the only real solution for any recession, depression or business slowdown—progress through individual initiative:

DALLAS BUILDS AHEAD FOR FUTURE GROWTH

Despite President Kennedy's talk of a largely mythical recession, Dallas plans to build this year with unusual vigor. With January building permits here reaching a 3-year record, the city is off to a good start.

In addition to large residential construction under way or in planning stages, the year will see much downtown building in Dallas. Work has started on Cary Plaza at Ross and Akard and will begin soon on Southwestern Bell's tripling of its present quarters. In the blueprints, with sites bought, are new homes for the Southwestern Life Insurance Co. and the First National Bank.

Less certain in timing is the big Federal center which Washington has authorized and for which the site has been acquired on Commerce Street. An early appropriation by Congress for this structure would save rent money and add convenience by putting most Federal agencies under one roof.

HUGE CONSTRUCTION TOTAL IN PROSPECT—MULTIMILLION-DOLLAR JOBS WILL GET UNDERWAY IN 1961

(By Rudy Rochelle)

It looks as if Dallas might be off to a recordbreaking year in construction.

If the remainder of this year comes even close to January's booming total of more than $21,700,000 in building permits (the city's biggest building month in almost 3 years), there is a good chance 1961 will smash the alltime high of $172 million in 1955.

During 1960 there was a scarcity of multimillion-dollar construction jobs which would have easily pushed last year's total even with prior years. But this year it appears that at least a score of multimillion-dollar projects will come to fruition.

Some of these huge construction projects are still in the early planning stages, others are on architects' drawing boards, and many of them have been in the promotional mill for 2 or 3 years.

Despite talk of overbuilding downtown, at least four of five multistory office, apartment, and hotel buildings will start to take shape on the Dallas skyline this year.

Work recently got underway on Cary Plaza, the two-tower, $10 million hotel-apartment complex on the northwest corner of Ross and Akard. Completion of the project is expected in late 1962.

Southwestern Bell Telephone Co. revealed in late 1959 that it would triple the size of its downtown headquarters building at 308 South Akard, and the company recently announced that it will award the contract for the job next month.

The big Bell job involves razing a downtown Dallas landmark, because the 4-story brick building at the corner of Akard and Jackson Streets will be torn down to make way for a new 21-story structure.

Eight stories will be added atop Bell's adjacent 13-story structure, plus 2 levels below ground, and 4 penthouse floors on top. Estimated cost of the entire project is $9 million. Completion is planned in mid-1963.

In early December of last year Bell also began work on a new building for its Taylor exchange at Bryan and McKell. Cost of the multistory structure and its equipment is estimated at $8 million.

Southwestern Life Insurance Co. has hopes of breaking ground for its new home office building late this year. Plans for the building, to be located on the north side of Ross between Akard and St. Paul, should be completed by September.

BANK POSSIBLE

A new downtown building is being given serious consideration by officials of the National Bank of Commerce. If, as it has been rumored, the National Bank of Commerce merges with the Bank of Services and Trusts, a new building would be the next logical step.

The First National Bank in Dallas announced at yearend that it had acquired an entire block of property for a new building, which will probably be one of Dallas largest buildings, costing in the $25 million-plus range.

One of the key downtown projects, and perhaps the most controversial, is the Dallas Federal Building. This $26 million building has been a political football for 3 or 4 years.

Prospects for the building, which would be constructed next to the Santa Fe Building at 1114 Commerce, are pretty dim at present, particularly if the piecemeal movement of Federal offices to other cities continues.

If the building receives the approval of both the House and the Senate, plus the appropriation, it could get underway quickly, because the land has already been acquired and the architectural plans are complete.

Many Dallas leaders believe the approval of the Federal building would trigger off a number of other major buildings in the downtown area.

OUTLYING JOBS

Out of the downtown area there are also a number of multimillion-dollar projects which will probably be moving dirt this year.

Oak Cliff Bank & Trust Co. has acquired a block bounded by Zang, 12th Street, Beckley and Centre for its new home.

A decision concerning the development of a 21-acre site which is the present location of Jesuit High School should be forthcoming in the next few months.

Dr. Daniel Gevinson of Miami Beach, Fla., has an option on the land for more than $2 million. A court battle over the zoning of the land has raged for more than a year, but next month the final decision should be given by the court of civil appeals in Dallas. Construction will begin as soon as his plan is approved by the court.

He plans an apartment-office-hotel complex to contain three 18-story office buildings, three twin-tower apartments with 960 units, a 240-room hotel, facilities for retail outlets, and a huge underground parking lot.

Trammell Crow, developer of the Dallas Market Center, last fall reported that he plans two additional multimillion-dollar buildings for his center, both scheduled to start in the near future.

One is the Trade Show International, an "S"-shaped 252,000-square-foot structure, and the other is a Construction Materials Mart.

In East Dallas, a massive 3,500-acre development is being undertaken by Buckner Benevolences and the Carolyn Hunt Trust.

Work is progressing slowly on the projects because rainy weather has slowed dirt moving and clearing of the land.

The Buckner tract, about 2,200 acres, and the Carolyn Hunt Trust land, approximately 1,300 acres, will be developed into a 490-acre industrial district, 121 acres of commercial properties, two shopping centers, three schools, five churches, and more than 4,000 homesites.

In the shopping center category, a lot of activity is planned along Northwest Highway.

Early this month W. W. Caruth announced that he will build a shopping center, located at Northwest Highway, Abrams, and Skillman this year. First unit planed for the center is a new $3-million department store called the Medallion.

Almost 2 years ago, plans were announced for a $6-million mall-type shopping center on Northwest Highway overlooking Bachman Lake.

G. C. Ledyard, Jr., vice president of the developing firm, Bazaar Northwest, Inc., said last week that some action should be taken on the center in the next 90 days.

SHOPPING CENTERS

At least a dozen other shopping centers in other parts of the city are also scheduled for 1961.

Dallas' rapid population gain has prompted a big construction budget for new schools.

School officials report that two senior high schools, three junior high schools, two elementary schools, and major additions to existing schools are on the drawing boards or already under construction for completion after the end of this year, representing construction costs amounting to $14,200,000.

Other major projects include: A major hospital building permit of $5 million for the new St. Paul Hospital helped swell the January construction total.

Last week Sanger's broke ground at its Preston Center branch to double the size of the present store there. The expansion will cost more than $1,250,000.

The Methodist Church will build a $1,200,000 addition to the C. C. Young Memorial Home. Groundbreaking is planned in June.

Coleman Development Co. has announced plans for a 7-story, $1,650,000 office building on Irving Boulevard.

Luxury apartments, some requiring an investment of well in excess of $1 million, continue at the rate of three or four a month.

Homebuilding, the largest dollar volume category in local construction, also shows signs of perking up.

After a somewhat disappointing year in 1960, homebuilders are again optimistic, some forecast a 10-percent increase in business for 1961.

Even though home starts were restricted in January by bad weather, the month's home total was still above last year, and with the return of sunny weather activity will be accelerated.

The "Hope" Sails The Seas

EXTENSION OF REMARKS

OF

HON. ABNER W. SIBAL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. SIBAL. Mr. Speaker, the whole world has been thrilled by work of the hospital ship *Hope*, which has been bringing needed medical training and care to underdeveloped areas of the world.

Recently the Bridgeport Telegram, a leading newspaper in my district, reprinted an editorial on the *Hope* that originally appeared in the Worcester (Mass.) Gazette. I would like to place that editorial in the RECORD:

THE "HOPE" SAILS THE SEAS

A year ago, the U.S. Navy set aside one of its hospital ships, the *Consolation*, to carry a message of medical hope to the underprivileged of the world. The vessel was rechristened *Hope* to honor her new sponsors, a group known as Health Opportunities for People Everywhere, which was launched by Dr. William B. Walsh of Washington.

The ship soon set sail on errands of mercy. It is now anchored at Sumbawa, one of the many islands comprising the Republic of Indonesia. Dr. Walsh says that the *"Hope's* reception in Indonesia has shown that this teaching and training idea, to which the ship is dedicated, fills a long-existing vacuum with a people-to-people action program."

So impressed have been other areas with the work of this vessel's staff that requests for visits have come from Vietnam, Cambodia, Thailand, and Korea. The ship has a permanent medical crew of 60, including doctors, dentists, nurses and other medical personnel. About 200 Indonesian medical workers are being trained in daily sessions on the *Hope*.

Hope plans to expand its activities next year by setting up a corps of medical minute men—volunteers who will respond to medical emergencies in all parts of the world.

The world is often at odds on political questions, but in the past 2 or 3 years there have been encouraging signs of global cooperation in medicine. Soviet Russia, for

example, has promised full cooperation in the forthcoming International Public Health and Research Year.

And a year ago, in his annual message, President Eisenhower urged a worldwide fight against malaria, heart disease, and cancer. He said this country would pool all of its knowledge of these subjects with Russia.

Proposed Solution to the Distressed Area Problem in West Virginia and Eastern Kentucky

EXTENSION OF REMARKS
OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. MOORE. Mr. Speaker, for a number of years, the Congress has been giving a great deal of consideration to the problems of the depressed areas of this Nation of ours. Many legislative proposals have been submitted, some of which have been cleared by the appropriate committees of both the House and Senate, and yes, even to the extent that the House and Senate have passed bills dealing primarily with the problem of distressed areas of our Nation. It should also be noted that the executive and legislative branches of our Government have heretofore disagreed as to what legislation should contain and, therefore, ultimate enactment into law has never been realized.

As a West Virginian coming from a State which has a higher percentage of distressed conditions than her sister States, I have been searching for the answer to this problem in my own mind both as an interested citizen and as a Member of this great body.

There has come to my attention an article by the Honorable David L. Francis, mayor of the city of Huntington, W. Va., which I should like at this time to include in the RECORD as it is a suggested and possible solution to the distressed area problem in West Virginia and eastern Kentucky. His proposal might well be applied to other depressed areas of our Nation:

PROPOSED SOLUTION TO THE DISTRESSED AREA PROBLEM IN WEST VIRGINIA AND EASTERN KENTUCKY

(By David L. Francis)

INTRODUCTION

There is no one single solution to the distressed area problem in our mountain States, and unfortunately, most of the solutions suggested by fact-finding committees and legislators are of a "pump priming" nature—such as road or other public works programs, extension of unemployment compensation, improvement of food distribution, etc. All of these are temporary shots in the arm which when turned off allow the area to drop back to its original distressed condition. Nor do they always reach down to the person who is unemployed and really needs the help. A second form of solution is the effort to bring new industries into a distressed area by such aids as special subsidies, moratoriums on depreciation rates and taxes, etc. At best, this has proven to be slow and an uncertain process. Now conditions are so critical that it is time for a new type program to be effected.

The only real wholesale solution that the writer has found to provide both an immediate and long-range cure for the unemployment problem in our distressed areas is through a crash program of vocational training which would annually teach in West Virginia 15,000 and in eastern Kentucky 10,000 unemployed workers a basic vocation that will train them to accept jobs either within their local community or in other parts of the country. These unemployed must be made mobile so that they can properly seek employment in areas where job opportunities are available.

Such training programs are already successfully in effect both in West Virginia and eastern Kentucky and, if expanded, they can provide just such a solution. However, they are not now of sufficient size or capacity to solve the problem. To date these schools have only proven that they can be a solution to the unemployment problem. Later in this report the writer will go into detail as to what has been accomplished to date and how vocational schools can be developed into a crash program to care for a large portion of our unemployed.

In summary, the vocational training program proposed herein involves four major steps, as follows:

1. In West Virginia, establish a series of major vocational training schools, such as the Huntington East High Training School, which can adequately process 1,600 unemployed students per year. We now have such schools in Parkersburg, Wheeling, Huntington, Charleston, and Welch. But additional schools or expansion of existing schools are needed in Bluefield, Beckley, Weirton, Fairmont, Martinsburg, Keyser, and Elkins.

West Virginia now has 25 satellite vocational training schools surrounding these large schools. These need expanding and still more are needed to operate in conjunction with the local high schools. These schools, because of their size, would not have the facilities and equipment of the central schools, but they would serve the purpose of providing the high school student with his first-year familiarization courses and the unemployed with orientation and the simpler courses not requiring specialized equipment.

In eastern Kentucky, the plan now in operation at the Mayo State Vocational School at Paintsville would be stepped up and this central school plant expanded to process 2,000 students annually. At the same time the program for the development of 10 new vocational training extension centers in strategic counties in eastern Kentucky would be implemented at a much more rapid rate. The parent schools in Hazard, Harlan, Somerset, and Ashland would, like Paintsville's, be enlarged.

Thus, to get this plan in full bloom, capital expenditures for land, buildings, and equipment would have to be appropriated immediately. The plans for this program have already been developed by the two States. This, in effect, would be a public works program but would be lasting because it would leave permanent facilities to carry on this very important training.

2. Provide sufficient funds for teachers' salaries and the operation and maintenance of this crash program.

3. Arrange the curriculum of the schools so that sessions are double shifted. During the first shift high school students would be trained as they are at present. On the evening shift, as a general practice, the older men and women would be rehabilitated and trained in the vocation they have selected. It has been proven that students are more rapidly and easily trained if they are grouped within their own age bracket. Presently the East Huntington High Trades School is training some 350 high school students on the day shift and an equal number of men and women who are at age 45 or over on the evening shift. Records show that these vocationally trained groups have a very high rate of employment. Even now there are several sectors of the labor market that are absorbing many of the graduates.

THE MAGNITUDE OF THE UNEMPLOYMENT PROBLEM

There are 85,000 unemployed in West Virginia and 50,000 in eastern Kentucky as of the first of January 1961. This is an incease from 60,000 a year ago in West Virginia and 40,000 in eastern Kentucky of a year ago. In West Virginia 40,000 are receiving unemployment compensation as are 13,000 in eastern Kentucky. It is to be noted that there are several thousand persons on direct public assistance who are not included in the above unemployment totals. The number of people receiving surplus food on a regular basis totals 300,000 in West Virginia and 175,000 in eastern Kentucky.

IMMEDIATE ACTION BY LEGISLATORS IS IMPERATIVE

The program presented by the West Virginia Legislature in its current session is a long-range start toward a solution but will in no manner solve the unemployment problem as it exists today. A brief analysis will show the inadequacies of the current West Virginia program.

First, the legislature has passed a bill to increase the gross sales tax by 1 percent and this is designated to raise $7½ million for a 6-month period, after which the tax will be rescinded. This money is to be used for a public works program for the relief of unemployed. Actually this amount of money is at a rate of less than $100 per unemployed person in the State. If the plan is for public works, generally 50 percent of the cost of these programs goes into equipment, supplies, and overhead; so that actually only half of the total would be available. To express this another way, if $4 million were spent at $50 per employee per week for 25 weeks (the summer building season), it would gainfully employ about 3,000 men. Many of these would not come from the unemployed roles. This program might look good on paper, but it will reach only a few of the unemployed and is strictly temporary in nature.

Governor Barron has asked for $17½ million to be produced by personal income tax, and increases in the business and occupation tax and transportation privilege tax. An analysis of the proposed use of these moneys also reveals an inadequacy to solve the total problem. About half of this money is scheduled to be used for a north-south highway, another inadequate and temporary public works program. Three and one-half million is to be used for higher education and to increase teachers' salaries. Another 3 million is to be allocated to the newly formed Industrial Development Authority. This latter program may, over a period of years, bring in new industries to West Virginia but it may take this new department a year to get organized. Other States with similar departments have shown that the moving in of new industry to absorb unemployment is, at best, very slow. Likewise, other inducements by Federal and State which include free gifts of land, waiving of depreciation, or special tax benefits, etc., are slow to produce new plants.

Commendably, the West Virginia Governor has requested new funds of $500,000 for vocational retraining of the unemployed. This amount is 25 percent greater than the 1960 appropriation. Such action, although not nearly enough, is at least a start toward the enormous task of getting to the fundamentals of West Virginia's chronic job deficit.

Kentucky has also gotten underway with an enlargement of its vocational education program, although funds have not been specifically earmarked for the unemployed, as in West Virginia, the vocational education facilities have under Governor Combs' leadership received an increase of 168 percent over the funds of the previous biennium. Last year Governor Combs' bold new program was passed by the legislature, and has started many new plans to solve eastern Kentucky's problems. Those programs include better roads, schools, teachers' pay, recreational areas, etc.

No criticism is intended in the above remarks. All of these plans are good, but they are not enough to meet the tremendous immediate job of providing for and retraining tens of thousands of family men who are out of work. Unless these unemployed are vocationally fitted to find jobs most of them will remain unemployed for a long, long time.

THE FREE FLOW OF POPULATION

West Virginia has had a net drop in population of 145,131 and for eastern Kentucky 128,444 during the 1950 decade. However, this does not show the complete story. The net losses are increased to a total loss, due to birth-rate gains, of 459,000 in West Virginia and 265,000 in eastern Kentucky. If these large numbers of people had not been able to relocate themselves in other areas the distressed situation in West Virginia and eastern Kentucky would have been greatly compounded.

The citizens of these two areas have been solving their own problems by having the initiative to move to another area. Many of these workers saw the handwriting on the wall or found better job opportunities in booming areas. Many were young people who had to move because of lack of opportunities. But now jobs in other areas are more difficult to secure unless one has special qualifications. This movement of population from one area to another is as old as history and is constantly in progress. Many observers believe that the speeding up of this migration from the distressed areas is the only rapid solution to labor surpluses.

A careful but rapidly expanded vocational program for both high school students and retrainable unemployed will make larger segments of our population in these areas more mobile in their jobseeking and will also have the important effect of making them better trained citizens who can more easily adapt themselves into the living pattern of a new location.

WHAT THE TWO STATES ARE PRESENTLY ACCOMPLISHING

West Virginia is presently graduating from vocational schools some 10,000 high school students, 6,000 employed students who are upgrading themselves, and about 1,500 unemployed students per year.

Eastern Kentucky is presently graduating from vocational schools some 3,000 high school students, 2,000 employed students who are upgrading themselves, and about 800 unemployed students per year.

WHAT CAN BE ACCOMPLISHED IF THE CRASH PROGRAM IS IMPLEMENTED

Educators in West Virginia estimate that if the vocational education expansion program as outlined below is carried out, 15,000 unemployed can be trained annually. In Kentucky, if a similar program is carried out in expansion of vocational schools, 10,000 unemployed can be retrained annually for useful jobs in industry.

Analyses by educators reveal that nearly 50 percent of our unemployed are retrainable in vocational schools. The remainder are not eligible or interested because such factors as a lack of basic education, physical handicaps, health, or a lack of desire for self-improvment. Separate rehabilitation solutions for these people's problems must be found and are not a part of this report.

On the premise of nearly 50 percent of the unemployed there are 35,000 fairly good training prospects in West Virginia and 20,000 in eastern Kentucky to be planned for. Assuming that unemployment does not increase in either State, most of this group within 3 years could be retrained and qualified for relocation, if necessary, in other areas as useful citizens gainfully employed.

The school facilities that would be constructed to care for this expanded program would continue to be used when unemployment surpluses are eliminated. Normal growth in the number of high school students taking vocational education would easily take up the expanded facilities.

FUNDS REQUIRED TO IMPLEMENT PROGRAM

Inasmuch as West Virginia has more available present facilities than does eastern Kentucky to absorb additional student load, the capital costs are slightly more for eastern Kentucky.

Purpose	West Virginia	Eastern Kentucky
Land and buildings	$2,200,000	$2,800,000
Equipment for new shops	2,750,000	3,500,000
Total capital cost	4,950,000	6,300,000
Annual operating costs	8,250,000	5,500,000

These figures are over and above that already appropriated for normal growth requirements described below.

West Virginia has had no recent capital funds from State money for building construction. Some growth needs and new facilities have been paid for by the counties. Equipment has been provided by diverting a small percentage of operating funds. Kentucky has a program for the next 2 years to erect new buildings throughout the State at a cost of $4 to $5 million of State funds plus another half million dollars of county funds to be added to the program. The State will spend $2 million to equip these buildings. These expenditures are for normal growth requirements and do not provide in promptness or size the facilities which would be required to service large additional groups of unemployed now.

THE FINANCING OF THE UNEMPLOYED AS WELL AS NEEDY STUDENTS THROUGH VOCATIONAL SCHOOLS

Experience has proven in the past year in West Virginia that no large quantity of unemployed will take advantage of present vocational facilities unless adequate financing is provided for subsistence. It has also been brought to light that many high school students do not have sufficient funds to complete their educational program, whether vocational or high school, and these young people also require careful consideration. A procedure to provide for both of these groups is outlined below.

The unemployment offices within the area should expand their counseling program so that when a person becomes unemployed he immediately would be advised to go to these offices where a counselor would give him an aptitude test which would indicate the areas in which he could best be trained. The counselor would advise the unemployed of the nearest location of vocational schools and the courses available; then work out with him his financial situation. If the person is newly unemployed, a sufficient grant over and above the unemployment insurance would be provided for the duration of the course. He would also be advised of the source of surplus foods. In the case of those unemployed who are no longer drawing compensation, or who have not been eligible for compensation, a larger grant by necessity would have to be made.

The pattern of the original education plan for World War II veterans appears to be applicable. School costs are paid direct to the institution and the student receives a subsistence allowance.

In the case of the student of high school age who is without means to continue on with vocational training, a counseling service within the school system itself should be established and funds provided for these people to continue with their education.

Upon graduation from the vocational training schools counseling service both within the school system and the unemployment office should be available to advise the graduates of the availability of jobs in various parts of our country. If prospects of jobs can be located loans should be made where needed to those who do not have adequate finances for them to go and secure the job, and to transport their families to the new location. At least 1 month's subsistence should be made available in a loan form to these people so that they may become settled in the new area.

Almost every analysis of the Appalachian region's unemployed includes a statement of need for elevating the average level of education. Such an improvement, says the consensus, would help eradicate some of the region's unattractiveness to prospective industry and would improve the chances of the region's people to obtain employment.

Harvey S. Perloff in his article "Lagging Sectors and Regions of the American Economy" states: "I would put at the top of the list an intensive effort to improve education in the depressed areas, to prepare young persons for a lifetime of skilled, productive work. Compared to other governmental measures that have been proposed, public investment in education promises the greatest relative returns."

None of the previous studies, however, have come to grips with the specifics of this distressed area unemployment. Detailed plans for correction and statements of cost of what would be entailed to train these unemployed have not heretofore been presented. We submit that the current situation is sufficiently critical to demand detailed planning and action that can effectively bring this unemployment down to a minimum amount. It is with this intent that the foregoing is respectfully proposed.

Future of the New Federal Reserve Rule

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7, 1961

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful column written by Mr. Arthur Krock in the New York Times of February 28:

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FUTURE OF THE NEW FEDERAL RESERVE RULE

(By Arthur Krock)

WASHINGTON, February 27.—The recent announcement by the Federal Reserve System that it has dropped its ban against the purchase of long-term Federal securities has come under heavy fire. The immediate objective—to push down long-term interest rates in the securities market while keeping short-term rates high—is being variously characterized by those who oppose it and are urging Congress to review the announcement critically.

Among the attacks are these: The Fed has surrendered its statutory independence to assist a purely political policy of the administration, being a soft alternative to holding down Government spending and cutting Government costs. The Fed has violated the concept on which it was established by Congress under the leadership of the late Senator Carter Glass by using Federal influence to "rig" the central Government's own security market—a criminal offense when engaged in by a private corporation. And the consequence will be to stimulate the inflation which Federal Reserve policies have done so much to bring to a halt.

The defenders of the Fed, and of Chairman Martin, who was a controlling factor in a decision on which his own group divided, deny these charges on the following grounds:

The relaxation of Fed policy is only an "experiment," for use only in the present abnormally mixed economic situation—a recession and a balance-of-payments deficit. Its limited employment thus far suggests it will not be a large market operation. If the experiment fails, it will be abandoned. And with recovery from the economic recessions the Fed will immediately return to its old policies of dealing only in short-term Government paper. As for the belief that Chairman Martin surrendered the independence of the Fed to the pressure of political power, to avoid a situation which might force him to resign, the fact is merely that he decided the Fed could safely assist the Treasury with this "nudge" against high interest rates without lasting commitment or loss of independence.

Since the attackers cannot instantly prove their charges, and the defenders cannot immediately establish their representations, the proofs of both will have to await the passage of time. But economic recovery and a return of the Fed to its former policy would be a demonstration almost unique in Government that the Fed can become "a little bit pregnant," as its critics now describe it, and limit the process at that point. However, if the "experiment" goes the way of all similar steps in recent American government, it will grow into a permanent, ever-expanding inflationary policy. In which event the critics will have proved their case to the utmost, and Chairman Martin will be obliged to confess error, and either resign or bear the onus of associating administration politics with the management of the Federal Reserve System.

The last time the Fed agreed to try to help the Treasury hold down the carrying charges (interest) on the public debt, the relaxation of policy did not subject it to comparable criticism. That was because the action was required to finance the war. When repeated postwar administration deficits sent long-term Government securities under par, the Truman administration sought an indefinite pegging of the securities market on both new and old issues. But Marriner Eccles, then Chairman, publicly asserted the Fed's independence by limiting its pegging of each new issue to the period necessary to float it. Then the System sold its holdings on the testimony of experience that cheap money for the Federal Government means cheap money for everybody.

But it was not until the late Senator Taft, also Senator DOUGLAS, of Illinois, threatened a full-scale investigation of the Fed-Treasury relationship that the Treasury concurred in the Fed's resolve to withdraw its peg entirely from the Government long-term securities market. The System had demonstrably been used as the engine of inflation it intended not to be, instead of as a salvage corps of the economic consequences of the many and large Treasury war bond issues. So to check the inflation to which it had unwillingly contributed, the System returned to its policy of investing almost wholly in Government short-term paper.

This time, because of the recession, not because of war, deficits, or rising inflation, the Fed is engaged in a retest of what opponents believe inevitably must fail, whatever its constructive purpose. It should not take more than a few months to find out.

Via Cuba: Communist Path to Conquest of Western Hemisphere

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following article appeared in U.S.A. of February 24. It is written by the Honorable Spruille Braden, who had a long and distinguished career in Latin America.

Mr. Braden knows these countries and speaks their language, and what he has to say in the article should wake us up a little.

Of course it is not very pleasant to realize that we have a thoroughgoing Communist apparatus working full time within about 90 miles of our shores. And it is equally unpleasant to realize that today Cuba under Castro has one prime mission, the destruction of the U.S. prestige and influence in Latin America.

Mr. Speaker, the day for brushing unpleasant facts under the rug and going off fishing are gone forever, if this Nation is to survive. We have got to face the facts in Latin America; we have to get some friends there, and then we have to back them loyally and completely. This is the only hope we have to defeat communism in this hemisphere.

The article follows:

VIA CUBA—COMMUNIST PATH TO CONQUEST OF WESTERN HEMISPHERE

(By Spruille Braden, delivered at the annual Founder's Day luncheon of the National Society of the New England Women, January 25, 1961)

For more than three decades, the Communists have been seizing the favorable opportunities afforded by peaceful coexistence for subversion, class struggle, and sabotage everywhere and for revolution wherever and whenever they could get away with it, as they now have in Cuba.

Endocio Ravines, former Peruvian Communist, tells of a Moscow meeting during 1934 of several Latin American and Russian Communist leaders. It was suggested that actual insurrection might be provoked in Brazil, but that any advances in the other American Republics should be made through popular front governments and subversion. Ravines objected that the United States of America quickly would suppress by force any attempted uprising in Brazil. Dmitri Manuilsky, who was presiding, sarcastically replied: "Our dear comrade * * * would be right if the United States were to dispatch its ships and troops to Brazil. Clearly, we could not ask the people to fight with clubs or orchids against cannons. But, happily for us and for the luck of the world proletariat, we have resolved the problem far in advance. Comrade, the international has concerned itself not with controlling cannons and warships, but by influencing and absolutely controlling the finger which would press the magic button, the one which makes the fleet sail."

Manuilsky then detailed the great Communist accomplishments in penetrating the highest, most important and powerful spheres in the United States of America—the fundamental positions of the high command of capitalism.

AMBASSADOR SOUNDS ALARM

Based on several personal experiences, I can attest to the existence of this penetration.

In 1954 I testified before the Senate Internal Security Subcommittee that while serving as Ambassador to Argentina, in early July 1945, I sent two top secret cables for the President and the Secretary of State who were about to attend the Potsdam Conference. I referred to a long list of telegrams, dispatches, memorandums, and reports in person to the State Department made over a period of several years on Communist activities throughout this hemisphere. I told how Peron was playing hand-in-glove with the Communists. I urged in the strongest terms that Truman and Churchill at Potsdam lay it on the line with Stalin, that these machinations and subversions must stop immediately.

As I discovered years later, someone in the State Department or somewhere along the line so contrived that those extremely urgent messages never reached the President and Secretary of State. Who pressed that magic button? The question never has been answered.

Among the many alarms I repeated through the years, both in and out of Government, as to the Communist danger in this hemisphere, I specifically warned about the Communists' attempt to control Bolivia and Guatemala—but all to no avail.

CASTRO, CHAOS, AND COMMUNISM

I testified on July 17, 1959 before the Senate Internal Security Subcommittee that on October 4, 1957, I went out of my way to warn the top echelons of the State Department that if they continued their present policies, they would bring Castro, chaos, and communism to Cuba. I was assured that my message had gone to the very top. Yet, 1 month later, on November 6, the Secretary of State, in a press interview, declared that the United States did not consider Communist activities in Latin America as dangerous [sic].

The time has come to find out who deceived and kept the truth from the Secretary of State. Was it only the result of stupidity, or did someone control the finger that presses the magic button?

The State Department and the Central Intelligence Agency should have had far better knowledge than I—as a private citizen—about Castro and his Communist background; what he had done and planned to do; what was happening and going to happen. If they did not, why not? Actually, we know they were informed. Why then did they fail to protect the United States? Why was aid and comfort given to Castro and the Communists?

This state of affairs is all the more shocking, because there never has been any secret about Fidel Castro and some of his government colleagues being all-out Communists.

CHRONOLOGY ON CASTRO

In early 1943, along with other Young Communist League members, Fidel was known to have been put through a course of instruction by Gumer W. Bashinov, of the Soviet legation, in Havana. In the university, Castro was recognized by both profes-

sors and fellow students as belonging to a Communist apparatus.

In 1948, he was sent by the party on a vitally important mission in Colombia. There he may have had a hand in the assassination on April 9, 1948, of Gaitan, a leading Colombian presidential candidate.

There is positive testimony by the Colombian chief of national police and others that Castro incited, and actively participated in, the rioting and looting, incendiarism, and murdering during the Bogotaza, which was planned and directed by international communism, and which destroyed that capital city. There are responsible accounts that Castro boasted of having killed three priests.

When, during 1955, Fidel, his brother Raul, Che Guevara, and others were being trained for guerrilla fighting by the notorious Spanish Communist, Colonel Bayo, in Mexico, our Embassy in Mexico City officially reported to the State Department that Castro was a Communist.

It appears that this report and often others from the CIA, the FBI, and the State Department's intelligence staff were not even read. The officer in charge of Mexican, Central American, and Caribbean affairs in August 1959 was unaware, or claimed to be unaware, of an analysis of Castro and other Cuban Communist governmental leaders which had been prepared by the State Department's research staff.

Castro's revolution, generally called the 26th of July movement, is the direct outspring of, and includes much of the same membership as, the Buro del Caribe (Bureau of the Caribbean) which was a section or branch of the Comintern. This bureau was in existence when I served as Ambassador to Cuba from 1942 to 1945. Its chief, Fabio Grobart (a Polish Red who traveled under 9 different nationalities and 11 aliases) directed all Communist activities throughout the hemisphere except for propaganda aimed at the colored people around the Caribbean which was directed from Harlem in New York City.

WRONG U.S. POLICIES

Fidel's conduct of the revolution from the Sierra Maestra was characteristically Communist—typified by his kidnaping of U.S. citizens and a group of marines from our Guantanamo Naval Base. After suffering from this indignity, we humiliated ourselves by sending two consular officers to negotiate with Raul Castro for the release of these U.S. citizens. Instead of demanding their release, we treated the Communist bandit as if he were the head of a sovereign power. This unprecedented self-abasement reinforced the conviction—already created by previous stupidities showing utter ignorance of Cuban psychology—that the United States was backing Castro against Batista.

Of course, many Cubans who had become fed up with long years of corruption, were desperately anxious to get rid of the old-type government. So, not unnaturally, they stumbled into supporting Castro. Even so, they primarily are responsible for their present desperate straits. But the U.S. Government must accept its share of the guilt. With a little commonsense diplomacy, Batista could have been eliminated and replaced by a reasonably honest, constitutionally elected, representative government. Instead, either we committed one of the most grievous and costly blunders of our history, or some finger pressed the magic button, and thus helped to bring the Communists to power in Cuba in what may turn out to be the worst catastrophe ever to strike this hemisphere.

COMMUNIST SCOURGE

The bloodthirsty Communists have scouraged and defiled Cuba, destroyed decency and obliterated every right and freedom. The extent of their property confiscations from Cubans is rivaled only in part by the more than $1 billion of U.S. investments they have seized. They have corrupted the young, set children to spy against and denounce their own parents, and condemned and punished the innocent. They have made thousands of Cubans homeless and jobless. Weeping mothers, wives, widows, children, and orphans testify to the imprisonments, and slow death in the Isle of Pines and in other prisons. Worse than all these barbarities has been the searing of Cuba's soul and the scorification of her spiritual values.

It would be inhuman of us to abandon our Cuban friends to Communist slavery and Soviet-Sino domination. Over 18 months ago, at a press conference in Chicago, I said I had been praying to God that the Cubans might rescue themselves. I am still praying, although the record shows that no people ever have been able to overthrow a Communist police state without strong assistance from abroad. The Communists, with an estimated 6,000 to 8,000 Russian, Czech, Polish, and Red Chinese advisers, instructors, and mercenaries, are entrenched so strongly in Cuba that liberation becomes more difficult with each day that passes.

The Cubans must have our all-out moral support, arms and money. To give them these things now would not be giving something for nothing; it would be self-defense.

We cannot tolerate a Communist satellite state on our very threshold, controlling the Caribbean and the approaches to the Panama Canal and the Mississippi Valley. The last bulwark in the defense of our territory and the Western Hemisphere is at stake.

WE MUST STAND FIRM

We must fight. Only by our vigorous and courageous stand can we attract other nations to our cause and induce them to make themselves strong in order to fight at our side. Such a stand will help to restore confidence in our loyalty to our friends. Too often the U.S. Government is distrusted because it turns against friends and allies and goes along with the enemy, as in the case of Suez. Finally, resolute and brave action now will show that all our vacillations, weaknesses, and faintheartedness in the United Nations and the Organization of American States were merely passing phases in our international conduct.

Castro and his accomplices frankly proclaim their intention to become the Mao Tse-tung's of the Western Hemisphere, including the United States. They are propagating communism among the Cuban workers in Florida and appealing for Negro sympathizers all over the United States. (Witness Castro's planned hocus-pocus in moving to a Harlem hotel during his last visit to New York City.)

In recent years, the Chinese Reds have become increasingly active in the subversion of this hemisphere. They seemingly inspire more confidence among intellectuals and students—even in the secondary schools—than do the Russians, Czechs or Poles, perhaps because the Red Chinese are not so well known.

Now the Cuban government is spreading its Red agents over the entire hemisphere; they are financed lavishly and are proving to be far more effective than agents of any other nationality, including the Chinese. They travel in the garb of diplomats, cultural, trade or labor delegations, or of simple tourists.

Cuban Communist attempts at subversion have induced Peru, Nicaragua, Guatemala, Paraguay and the Dominican Republic to break diplomatic relations with the Castro regime. Other nations, such as Uruguay and Panama have expelled the Cuban Ambassadors and other Communist diplomats.

CARIBBEAN UNDER ATTACK

The Caribbean is in danger of becoming a Red lake. The Communist, Cheddi Jagan, is top man in British Guiana. The French islands, such as Martinique, are represented in the Paris Parliament by Communists. Betancourt's government in Venezuela, while admittedly leftwing, has barely escaped from being upset by the Communists, and might fall at any time. Panama is weak, and the comrades are infiltrating there as they have been trying to do again and again throughout Central America. Trinidad grudgingly permits us to retain our military base at Chaguamaras; but other bases in the West Indies have been or will be, abandoned.

Of all the Caribbean republics, by instinct and experience the one which should be least influenced by totalitarianism is Colombia. Yet, since 1948 it has suffered continuously from Communist inspired and directed guerrilla bands operating in outlying districts. As a result, in these areas the national economy has been disrupted and agriculture paralyzed, thus raising the cost of living. The terrorized peasants have had to seek refuge in the cities where they can find no work. The ensuing chaos has broken down law and order and eased the way for communism. Two Red enclaves, Viota and Sumapaz, exist in the interior of Columbia. They collect their own taxes, run their own schools and fly the hammer and sickle as their flag. Colombian officials and troops must obtain permission from the Communist leaders to pass through these districts.

Two tons of Communist propaganda are flown daily from Havana to the Cuban Embassy in Mexico City. Former President Cardenas of Mexico, always an extreme leftist, recently returned from Moscow and Peiping and again is exercising an evil and powerful influence behind the scenes. He is organizing a Latin American Conference to condemn the United States as the despoiler of Cuban liberty, justice, and peace. In Mexico, and throughout the hemisphere, the Communists are poisoning public opinion and arousing hatred and demonstrations against the United States by every conceivable means. They have a receptive audience among the intellectuals. For instance, there are 55,000 students in the University of Mexico, and it is estimated that 90 percent of the professors are Communists. In contrast, our propaganda and defense are insignificant and inept, dated, and uninspired. Parenthetically, I am sorry to admit that one of the largest U.S. foundations presently is financing to the tune of several hundred thousand dollars a notorious European Communist professor in Latin America.

Were Mexico to fall under Communist control, the conditions would not be within the relatively mild limitations set by President Lopex Mateos, when he declared a few months ago that his Government was "of the extreme left, within the Constitution." The Mexican situation would be more serious than that in Cuba due to a population four times as large and a 2,000 miles frontier along the United States.

COMMUNIST CUBAN TACTICS

Presently, the Communists probably do not control, or even have the sympathy of, more than 15 to 25 percent of the Cuban people. However, the Communists always are a small minority. Even in the Soviet Union, they constitute not more than 4 percent of the population. They hide within other political parties and are hard to detect or expose.

Communists, to gain temporary benefits, will enter into a united front with anyone—with reactionary dictators, nationalists, or sworn anti-Communists. They try to create new conflicts and to deepen those already existing. They gladly reverse themselves, sacrifice and kill their own agents, and always will go back two steps in order to take three forward.

Fidel Castro could become expendable and be wiped out by his comrades overnight— just as was done to Beria in Russia.

Playing both ends against the middle, Communists often pretend to have intra-Party disputes with one group supporting and the other opposing a particular government. This situation developed for a time vis-a-vis Peron in Argentina. However, the Communists also have genuine and desperate schisms, such as that which arose between the Stalinists and the Trotskyites. Such a cleavage may be starting now in Cuba between the older and younger generations of Communists.

TWO TEAMS, ONE GOAL

In the terminology of American football, I call the present Cuban Government, led by Castro the "offensive team." But there are indications that the Kremlin might find it desirable to put in substitutes. Castro and his crowd would be sacrificed; if possible, he might be converted into a martyr of Yankee imperialism and travel around the Americas denouncing the United States. The new or defensive team would take over, shout for Fidelism without Fidel, agrarian reform and other so-called revolutionary principles. The new regime would pretend to want friendly coexistence with Washington.

Actually, it would be Communist, opposed to freedom and representative government, hating the United States, and, under its camouflage of coexistence, would be just as villainous as and more dangerous than the present first or offensive team.

Another dangerous alternative might arise if the Castro regime were to fall and be replaced by a Socialist one. This action would not bother Moscow and Peiping too greatly since they know that inevitably socialism leads to some form of totalitarianism. Socialism is a prep school for communism, and the latter would in this way eventually regain control of Cuba.

Certainly, it behooves the free Cubans, the other American republics, including the United States, to be on the lookout to prevent any such developments.

Based on the circumstances I have described, during the last 2 years I have urged, publicly and privately, the following course of action:

1. Inform the other American republics that:

We now expect them, belatedly though it may be, to fulfill their solemn commitments in cooperation with us "to take the necessary measures to protect their political independence against the intervention of international communism, acting in the interest of an alien despotism." These words, from the Declaration of the Organization of American States, exactly fit existing conditions in Cuba and the Caribbean.

If they fail to take collective action with us against this Communist attempt to seize the Western Hemisphere, then for its own security the United States will be forced into unilateral action. The other republics and not we will have destroyed the OAS and hemisphere solidarity. The responsibility will be theirs.

Fortunately, we still retain the "inherent right to collective and individual self-defense" under the U.N. and the OAS charters. But, far more imporatnt, it is our patriotic duty to save our Nation.

Action by the United States, strictly speaking, would not be unilateral. On the contrary, it would be at the earnest behest of all anti-Communist Cubans. It would not be intervention.

At long last, since October we have had as Assistant Secretary of State for American Republics a man of courage and intelligence, Mr. Thomas C. Mann. Given adequate authority, he may be able to lead us out of the Cuban morass. Already Mr. Mann has brought about the break in diplomatic relations with the Cuban Communist regime.

Our next steps must be:

2. Recognize a responsible Cuban government in exile, just as we recognized the Free French and other regimes in exile during World War II.

3. Give that government our full support, morally and materially, with arms and money.

4. Invoke a pacific blockade of Cuba, to halt trading by the Communist nations. Incidentally, some of our NATO allies and the other American republics who want to increase or at least continue business as usual with Cuba, should be induced to desist.

5. Continue U.S. cooperation and guidance after the Communists have been driven out of Cuba in order to rehabilitate it and bring it back to freedom and constitutional representative government.

If speedily enacted, such a program could succeed. Although several of my Cuban friends insist that, in addition, the United States will have to help with its Armed Forces, both to throw out the Communists and thereafter, as a simple humanitarian measure, to preserve order and save Cuba from a horrible blood bath. I pray they are wrong, but I fear they are right.

Forestry: The South's Pot of Gold

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7, 1961

Mr. TALMADGE. Mr. President, the March issue of the Progressive Farmer features an informative interview conducted by Mrs. Anne Haney, associate editor, with Dr. Richard E. McArdle, Chief of the U.S. Forest Service, and Regional Forester J. K. Vessey. Printed verbatim under the title "Forestry Can Be South's Pot of Gold," the answers of Dr. McArdle and Mr. Vessey point up forestry as the economic hope of the South. They predict that by the year 2000 the South will be raising more than half of the timber used in the United States and they see in that fact the salvation of the hard-pressed small farmers of the South. I ask unanimous consent, Mr. President, that the text of this interview be printed in the Appendix of the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

FORESTRY CAN BE SOUTH'S POT OF GOLD

What do you think will be timber possibilities for the South in 2000 A.D.?

Dr. MCARDLE. In the year 2000 the South will be raising more than half of the timber used in the United States. There will be bigger and more varied forest industries. We'll see far more managed forests. Forty years from now people traveling highways will see forest land that looks like wood factories. Forest products industries will be the backbone of the prosperity of the South.

Mr. VESSEY. The South must double its timber production by A.D. 2000. From this better forestry will come the added benefits of cleaner water, more and better fishing and hunting, and more commercial recreation in timberland

Where does the Nation stand in forestry? Where do we stand in the South?

Dr. MCARDLE. As is the case with the rest of the United States, the South is growing only about one-half the volume of timber that it should be growing. Annually, it is growing 24.1 billion board feet; it should grow 48.2 billion board feet.

Half of all U.S. forest land is in small forest properties. These are not producing the wood for the Nation or income for their owners which they should. They aren't managed with the same attention and skill their owners use in managing other crops.

What is the future of forest farming in the South as compared with timber farming in other sections of the country?

Dr. MCARDLE. It's good everywhere; it's especially good in the South. Most people think that the biggest part of forest land in the United States is in the Far West. Actually 80 percent of the land which will grow trees commercially is east of the Great Plains, and 50 percent of this is in the South.

Are we going to overproduce timber?

Dr. MCARDLE. No. We're going to need more timber because there are going to be more people. We have no surplus now. I see no chance of a surplus. The South must make up most of the deficit when remaining old-growth western woods will have been harvested.

Why do you think the South will make up most of the deficit for the future?

Mr. VESSEY. The South has several tremendous advantages—a long growing season, warm temperature, abundant rainfall, and soils especially adapted to timber.

We have a lot of mountain country suited for watershed and wildlife land. The average southern farm has all the advantages of being close to market and having good transportation. It takes 8 to 15 years to grow pulpwood thinnings here—30 to 45 in other sections. The South also has an advantage in the wealth of different kinds of trees that grow here naturally. If I were advising someone to go somewhere to make the most money growing trees, I'd advise the South.

What are some new and future uses of wood that may increase demand even further?

Dr. MCARDLE. We can look forward to ever-increasing use of wood in glued-up products—laminated beams, plywood, particle board, and composites of wood with metals and plastics. Already we are seeing a healthy growth in the uses of corrugated containers and food boards. We should see more structural uses of paper and other fiber products, such as paper honeycomb, paper-plastic facings, hardboard, and insulating board. The chemical industry doubles every 8 years; we are just crossing the threshold of possibilities in chemical utilization of wood.

Everywhere we go we see pulpwood trucks on the road, pulpwood loading yards, or pulpwood moving by freight. How important is pulpwood in the South today, and what about pulpwood's importance in the future?

Mr. VESSEY. Pulpwood has helped the South in many ways. Forward-looking pulp mills have contributed greatly to the South's growth. Growing pulpwood will always be a major activity in the South. Pulp and paper mills are moving South. Those already here are expanding. They are getting close to their source of raw material. Though many own a great deal of timberland, their primary supplier is still small private timberland owners.

And uses of pulpwood in paper products and in chemistry are constantly on the increase. Demand for lumber is expected to double in the next 40 years; demand for pulpwood is expected to triple.

What are we doing on better trees?

Mr. VESSEY. State forestry services are singling out patches of better trees and saving those as natural seed orchards. Industry is doing a good job of finding "superior trees" for use as parent trees. The

Forest Service is now doing the same thing. We are doing more and more research on superior trees that are better growers and more insect and disease resistant.

Dr. McARDLE. We are now developing superior pine hybrids that not only grow fast, but resist insects and diseases. We are developing better gum naval stores trees. In the nurseries we are eliminating tree root diseases, lowering cost of seedlings, increasing production, and providing healthier trees to the landowners. Also, we are reforesting thousands of acres each year in the South by direct seeding.

The South has been buying a lot of western wood in recent years. That disturbs a lot of our farmers. Will that continue?

Dr. McARDLE. Yes, because we haven't yet found out how to make use of certain southern woods. For example, we're using Douglas-fir doors because we haven't found a way of cutting rotary veneer from southern pine. The South does have an advantage over other parts of the country because half of southern timber is hardwood, some of the most beautifully figured hardwood in the world.

Competition now is in softwoods. The South has made prodigal use of its own quality woods and has to start over. The South can grow quality wood, but it will take time. The West still has a lot of big, fine-quality softwoods. But the South can produce quality hardwood. In high-quality hardwoods, the South has a gold mine and doesn't know it.

We continue to hear the desire expressed for wider uses of many of our hardwoods. What are the possibilities?

Mr. VESSEY. Half our Southern timberland is in hardwoods that have been neglected or overlooked. The opportunity for producing hardwoods is excellent for growing cash crops on small woodlands. They are used for flooring, furniture, interior trim, and panel boards. Our pulpmills are using some hardwood now and prospects are that they will expand the use of hardwood.

The oaks, poplars, gums, and many of our other better hardwood species have become the subject of much more research.

Before cutting weed trees, a farmer should get advice on what his land will handle best. He can get advice from the extension service, consulting foresters, State foresters, or U.S. Forest Service.

We understand that commercial woodlands and large private tracts sometimes get nearly double the yield of smaller woodlands. Why?

Mr. VESSEY. Difference is in technical knowledge and know-how. Large timber owners employ foresters. The farmer has know-how in producing other crops, but not so much about his timber and how to make it produce. Hundreds of thousands of acres of potential forest land are producing nothing. Many small woodlands—98 percent of which are less than 500 acres—are producing less than one-fourth what they could.

What is the remedy?

Mr. VESSEY. Better information to landowner so he realizes cash value * * * technical assistance * * * and added capital borrowed from banks or partial incentives from Federal and State Governments. And he can invest his own labor. Those who have had the foresight to make these investments in years past are reaping the profits today.

Do you see any opportunities for some of our smaller farmers to develop timber as their basic source of income?

Mr. VESSEY. It is possible for a small full-time farmer to have timber as his basic source of income. He should be able to make upward of $7 to $10 per acre per year from producing timber by harvesting all products to best advantage. If the farmer processes the trees from the stump to the market, he can increase net income materially. Products obtainable are pulpwood, veneer bolts, poles, posts, sawtimber, and, in some areas, naval stores. Number of acres he would need would depend upon standard of living he desires.

More than half the part-time farmers in the Nation are in the South. What do you think of forestry in this type of economy?

Mr. VESSEY. A tree crop is one of the best answers to the needs of the part-time farmer. Investment of capital, machinery, equipment, and labor is much lower for tree crops than for row crops. Tree harvesting can always be delayed from one season to another and from one year to another, unlike row crop harvest.

For young people, what opportunities does forestry offer?

Mr. VESSEY. As good as any scientific or professional endeavor. We have unlimited confidence in the future of wood. Every year, the forestry field broadens. We need more foresters than ever.

Opportunities in the research field are unlimited. Many new uses for timber are being developed each year.

If a youngster plants trees while he attends school, they will be producing when he graduates.

There are fields as yet untouched, such as effect of radiation on tree seed. Research in forest tree insect and disease problems needs to be stepped up. I am sure there are more fields that our young people of tomorrow will be conquering.

Los Angeles County Official on House Un-American Activities Committee

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I wish to call to your attention a very significant newspaper article in the form of a letter to the editor, entitled "County Official on HUAC."

You will note the writer thereof is acting chief assistant, county counsel, Los Angeles.

The article follows:

COUNTY OFFICIAL ON HUAC

I have read with much interest your editorial "Attack From L.A.," with reference to the leftist-inspired campaign to kill the House Committee on Un-American Activities stemming largely from this area under the leadership of Frank Wilkinson, former Los Angeles Housing Authority publicity man.

You are to be strongly commended upon your editorial, as well as the later editorial entitled "No Time To Waste," which gave a list of the representatives and senators with whom we all should communicate.

You may recall that Jean Benson Wilkinson, the wife of Frank Wilkinson, was dismissed as a teacher in 1953 by the Los Angeles City Board of Education for refusing to testify before the Fact Finding Committee on Un-American Activities of the California State Senate, a committee similar to the House Un-American Activities Committee.

A board of education rule required employees summoned to appear before such committees to answer under oath questions propounded relating to present or past membership in any organization advocating the forceful overthrow of the Government of the United States or of any State.

Mrs. Wilkinson refused to answer questions.

Her dismissal was sustained by the superior court and by the district court of appeals, which opinion is reported in the case entitled *"Board of Education* v. *Wilkinson"* (125 Cal. App. 2d 100).

She was the first public employee in the State of California dismissed for refusal to testify before such a committee.

At the same time one other teacher was also dismissed for the same reason. Three others have since been dismissed for refusing to testify before the House Un-American Activities Committee.

More recently, two Los Angeles County employees were dismissed for refusing to testify before the House committee, their dismissals being upheld by the superior court, the district court of appeals, and the U.S. Supreme Court.

The above short history, it seems to me, fully justifies the House Un-American Activities Committee in its efforts to investigate and obtain information concerning subversive activities, and the committee should be retained with all its present powers.

I am sending a copy of this letter to each of our Representatives in this area and to our two U.S. Senators.

WILLIAM E. LAMOREAUX,
Acting Chief Assistant,
County Counsel, Los Angeles.

The Country Will Be Watching

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. DEROUNIAN. Mr. Speaker, legislation implementing the appointing of additional Federal judgeships has brought with it disturbing rumors and I submit for the Appendix of the CONGRESSIONAL RECORD a discerning article by David Lawrence, which appeared in the March 6 issue of the Washington Evening Star:

POLITICS AND THE NEW JUDGESHIPS—ONE-PARTY DOMINANCE, HINTED BY CELLER, HIT AS IMPAIRING PUBLIC TRUST IN BENCH

(By David Lawrence)

Bad government is largely traceable either to the indifference or to the ignorance of the voters.

A conspicuous example of how the public interest may be injured by neglect has been given in the last few days.

What could be more important to the American people than the selection of qualified men and women as Federal judges to interpret and enforce Federal law? Yet the press has just reported indications that the 73 new judgeships being created by Congress may be filled by the President largely from one political party. Every little protest has been heard—even from the so-called liberal Democrats in Congress—over the implication that judgeships are to continue to be a matter of political patronage like postmasters. There has been a strange silence from "liberal" quarters about the gag rule imposed by the Democratic majority, which passed the bill in the Senate without even permitting hearings.

Attorney General Robert F. Kennedy gave to the House Judiciary Committee the usual promise that "the best qualified individuals" would be appointed. The United

Press International on March 1, however, reported, that the Attorney General declined to heed a Republican Congressman's plea for a "promise that the total number of Federal judges would be kept somewhat equally divided between Democrats and Republicans." The dispatch continued:

"Later Chairman CELLER, of the House Judiciary Committee, frankly told Representative MCCULLOCH that even though the bill to create new Federal judges was approved by the committee last year, House Democratic leaders bypassed it because they thought their party would soon take over the White House. 'The leadership gambled and won,' he said."

The figures presented to the House Judiciary Committee a few days ago showed that out of the 225 judges appointed by Franklin D. Roosevelt, there were 217 Democrats and 8 Republicans. President Truman appointed 118 Democrats and 12 Republicans. President Eisenhower appointed 175 Republicans and 11 Democrats. Mr. Eisenhower's supporters have insisted that he was merely "trying to restore the balance" which was impaired by 20 years of Democratic administrations in which the number of judges selected from one political party was overwhelming.

Last year, when a bill to create the new judgeships was recommended, the Eisenhower administration offered to divide the appointments evenly with the Democrats, but the measure was blocked.

The Nation has been led to believe that the Kennedy administration would introduce a new virtue in the matter of appointments. During the last campaign the Democratic presidential nominee said:

"All appointments, both high and low, will be made on the basis of ability, without regard to race, creed, national origin, sex or occupation and appointees shall be drawn from all segments of the community, wherever the best talent can be found."

This was widely construed as a new approach. The selection of the Federal judges now affords an opportunity for the campaign pledge to be fulfilled.

There can be no more effective way of destroying confidence in the impartiality of the Federal judiciary than to make it the tool of party politics. People in the community grow distrustful of politicians on the bench and, in litigation between prominent persons in politics and their adversaries, suspicion arises that a fair verdict will not be rendered.

There have, of course, been many judges of ability appointed who eschewed all previous political connections and discharged their duties fearlessly and objectively.

But how can the country be sure that the best qualified men and women are appointed to the Federal bench? One might assume that the local bar associations would step in and protest the appointment of incompetent judges. But this, too, is a course fraught with political embarrassments. The lawyers who are subsequently to appear before the same persons nominated for the bench would hesitate to oppose confirmation or to express themselves on the qualifications of such nominees.

It would be better, of course, if the bar associations in each district would select in advance at least five persons for a judgeship and, without expressing a preference, testify that each was qualified to serve. Failure to be selected by a local bar association need not always be conclusive, but at least in the vast majority of cases the country would have the assurance that the persons best qualified in the law were being selected for the Federal bench irrespective of their political background, political activity, or political influence, and solely on merit.

Continental Bald Eagle Project

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1961

Mr. LINDSAY. Mr. Speaker, one of my constituents in New York City is Mr. Carl W. Buchheister, the distinguished conservationist who serves as president of the National Audubon Society. I might lay claim to the whole society, since its national headquarters at 1130 Fifth Avenue, New York City, are in my district but, of course, its members are to be found in every district of the Nation.

Recently the National Audubon Society launched a continentwide survey and research program to determine the population trends and survival problems of the bald eagle. This great bird, which has been our national emblem since so designated by act of the Continental Congress in 1782, appears to be in trouble. Upon the findings of its study, the society hopes a conservation program can be devised that will make certain the eagle, as a species of wildlife, will, like the Nation it symbolizes, remain forever strong and free.

Mr. Buchheister explains the reasons for the Audubon Society's bald eagle project and it outlines in an editorial appearing in the January–February 1961 issue of Audubon magazine. Under unanimous consent I include excerpts from this editorial by Mr. Buchheister in the Appendix of the RECORD:

CONTINENTAL BALD EAGLE PROJECT

A study of the literature reveals that the bald eagle may have been declining in numbers a long time, perhaps for most of a century. Forbush speaks of it in his "Birds of Massachusetts and Other New England States," published 33 years ago. Many kinds of wildlife suffered drastic reductions from about 1890 to 1920, the period that prompted the birth of the Audubon movement and the growth to national prominence of the National Audubon Society. The passenger pigeon, we recall, disappeared as a wild bird between 1900 and 1907 and the last remaining representative of the species expired in the Cincinnati Zoo in 1914. The last wild heath hen disappeared in 1932.

Many species, both mammals and birds, skidded from abundance to scarcity as drainage blotted out great areas of now forgotten marshes in the East, Midwest, South, and as power machinery revolutionized agriculture while conservation lagged from 1920 through World War II.

There are alarming signs that the bald eagle, symbol of our Nation's majesty and might since it was so dedicated by act of the second Continental Congress in 1782, may be following the passenger pigeon and the heath hen toward the point of no return. It would be unthinkable, of course, to permit the bald eagle to become extinct. It would be unthinkable even to let it reach the state of crisis from which we are now trying to rescue the whooping crane.

Experience and commonsense dictate that the first task must be a thorough, scientific study of the bald eagle: to inventory its numbers throughout its North American range—this species does not occur elsewhere in the world except as accidentals—and, concurrently, to investigate its feeding, nesting, and migratory habits, its reproductive success, and other factors affecting its survival.

One cannot prescribe for a sick species until a careful diagnosis has been made of the malady. The general factor depressing the bald eagle is known: declining habitat due to changes wrought by man in the landscape. But while the general cause is known, the specific ways in which the eagle is affected by a changing ecology are not known. Once the biological and ecological facts are at hand, we are confident that methods will be devised to save the eagle, just as the wild turkey, the pronghorned antelope, the trumpeter swan, and other species thought doomed a few decades ago, have been brought back to comparative security. It was National Audubon Society research that laid the groundwork for a program that has arrested, at least, the decline of the whooping crane.

For these reasons the National Audubon Society has begun the Continental Bald Eagle project, a 5-year cooperative research program. A continentwide survey of the population and distribution of the species is now being organized under the direction of our research director, Alexander ("Sandy") Sprunt, IV, and we have solicited the cooperation of Federal, State, and provincial wildlife agencies, and local Audubon groups and ornithological societies, throughout the United States and Canada. We have no illusions about it. Without their assistance we cannot get the job done.

Why the Controversy?

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. WESTLAND. Mr. Speaker, when I was out in my district last fall, I presented the film "Operation Abolition" before many audiences. The reaction to this film was favorable. Since the Congress convened in January, I have received many letters concerning the film and the Committee on Un-American Activities. With very few exceptions, the comments have supported both the film and the committee.

The Bellingham Herald, a daily newspaper published in my district, carried an editorial about the film in its March 1, 1961, edition. It, too, found "Operation Abolition" a fair presentation of events that happened during the San Francisco hearings. Under leave to extend my remarks in the RECORD, I include this editorial:

WHY THE CONTROVERSY ABOUT "OPERATION ABOLITION"?

We consider ourselves as zealous in support of basic individual liberties as anyone, but so far as the film "Operation Abolition" is concerned, we are at a loss to explain the hue and cry that has arisen about it.

We went to see the film with an open mind, ready to take note of any unjustified smear on innocent persons or groups. We saw none.

What we did see was a startling exhibition of disorderliness and rioting which disrupted the San Francisco hearings of the House Un-American Activities Commitee last May. The committee staff was subject to violent personal abuse, frenzied chanting and defiance of law officers. No city council or school board would have stood for such behavior.

The film was taken by newsreel photographers, not by committee employees. Several key figures were identified by name as Communists. Students who participated in the fracas were described as unwitting dupes, rather than sympathizers of communism.

A reasonable person would find little, if anything, to criticize in the presentation. Nor would a reasonable person approve of the tactics of the persons subpenaed who shouted insults at the committee, a duly constituted extension of the U.S. Congress which was attempting to proceed in orderly fashion under its congressional authority.

It would seem to us to be beyond any reasonable doubt that the San Francisco affair was planned and executed under Communist direction and that "Operation Abolition" is a fair presentation of what happened.

New Attack on Pocketbook

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1961

Mr. BECKER. Mr. Speaker, legislation is being prepared dealing with Federal aid to education. There are many arguments well founded in opposition to the need for such legislation, therefore, I am inserting herewith an editorial from the Tablet. The Tablet has a very large circulation not only in Brooklyn and Long Island, but in Washington and many other places. It is highly respected because of the factual news it prints and it publishes excellent articles and editorials. I recommend the reading of this editorial to all the Members of Congress:

NEW ATTACK ON POCKETBOOK

The modest Federal aid program to expend $5,625 million on education during the next 3 years is discussed elsewhere in this issue by a number of our Bishops. We offer these additional considerations:

1. Where is there an honest, factual, accurate study which will show that the massive aid is needed? There is ample evidence to show that practically every State in the Union and the overwhelming number of school districts are properly supporting their schools, or at least are financially able to care for the situation if they really desired to. The shortage of both teachers and classrooms can easily be created, magnified and propagandized by professional educators and politicians who use education for selfish, personal designs. Roger Freeman in his classic "School Needs in the Decade Ahead" disproves the contentions of serious classrooms shortages and inadequate teachers' pay.

2. If the Federal Government believes that States, cities and towns are unable to find money to fulfill these obligations, then why should not police and fire departments and other local functions likewise be subsidized? Surely police and fire departments are complaining they have great difficulties meeting budgets and maintaining efficiency. Should they—as well as other agencies of State, city and town governments rush to Washington for handouts? Or perhaps the national government has those additional ideas in view.

3. It is said that the $5 billion to $6 billion outlay is only for 3 years. That should be one of the objections to the program. At the end of that time, it will likely double, and 10 years from now it will triple. Federal ventures usually start off with a reasonable outlay—although this one is described as modest—but the thirst for power, jobs, and appropriations represents a voracious and constantly growing appetite.

When the Federal income tax started, the sum fixed was 1 percent of a person's income over $1,000. The late Senator James Reed of Missouri sought to write a maximum in the bill, prohibiting any tax over 10 percent. He was laughed down by other Senators who maintained it was preposterous that any American's income would be taxed as much as 10 percent. Now most people pay from 20 to 90 percent.

4. The entire proposition is a classic answer of the nonsequitur in reasoning. The President and his advisers complain about the present woeful condition of education; a new standard of excellence is required. But further down in the message it is said: "We are educating a great proportion of our youth to a higher degree of competence than any other country on earth." One might presume that a system that has been so successful and satisfactory would be continued as such.

It is undoubtedly true that there are only a few school districts, out of tens of thousands, that need aid, but that, it appears, is no longer a guide for making appropriations. If some need educational relief, then all must have it; just as if there are some impoverished old people, then all must be helped by the Government, whether or not they need it, whether or not they want it. This is a ubiquitous nonsequitur, this habit of leaping over the center of the argument. It is encountered whenever there is a program put forward to have the Federal Government take over our medical care, move into our schools, spur growth in the economy, or whatever it may be. The fact that America has grown from a wilderness to the greatest industrial nation on earth is supposed to be rendered meaningless by the observation that we need more growth, and therefore we should supersede the successful market economy with a Government-managed economy. If you object you are opposed to more growth.

5. How and when will this increased appropriation be met? Nothing is said as to where the increased billions of dollars will be obtained for this new bureaucratic program. It is certain, however, the people will pay—with the result that the day may not be too far distant when the workers' salary envelope will be almost empty after all deductions are taken out—for the Government is considered by many to be the only trustworthy party for handling an individual's money.

New York State, under the new educational program, will receive $128,000,000 for school construction, teachers' salaries and scholarships, but New York's contribution to Federal educational aid, based on the percentage of total Federal taxes which the people of this State pay, will be $767 million. Connecticut and New Jersey are in the same proportional boat. They will also receive $15 per pupil, the lowest in the Nation. Texas will receive $27.19 per pupil, Alabama, $34.65, Tennessee, $33.19, etc.

Those States which now take care of the problem will be taxed to care for those who refuse to meet high standards.

6. This whole unfair situation is crowned by its bias directed against the parents of children—5 million children—who attend religious public schools. They will be doubly taxed for this wasteful program—and this in a day when racial and religious equality is preached as a Government ideal.

This injustice is based on what is called the unconstitutionality of granting Federal aid to private or church schools. The champions of discrimination talk of the "absolute wall of separation" between church and state demanded by the Constitution. But one can find no such thing in the Constitution—certainly not in the official wording of the document. They speak of a violation of time-honored traditions—but many can also think of time-honored traditions on the question of racial segregation that were blasted beyond recall by a second look at the Constitution and a persistent demand for a recognition of personal rights.

Perhaps the time has come for American parents, sick and tired of already bearing a double burden of taxation to support schools of their own choice, to demand a thorough study and recognition of their full civic rights, before a third burden be saddled upon them by unnecessary and extravagently massive spending for Federal aid to education. They have every right to question the civil righters, who glibly point to their own interpretation of the Constitution, and demand a hearing, asking full recognition of their fair share of the benefits of taxation, otherwise, sit back and suffer a new attack upon your pocketbook.

Hon. John J. Kane

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, on Sunday morning the city of Pittsburgh and Allegheny County lost a distinguished public servant, the Honorable John J. Kane. Commissioner Kane was a fine and able leader in our community and served us well for many years. We shall regard his passing with a great sense of personal and public loss, for his devotion to the people and his duties stood as an inspiration to all of us.

An editorial, which appeared in the Pittsburgh Post-Gazette and Sun-Telegraph on March 6, 1961, expresses the esteem with which he is regarded by all of the people of Pittsburgh and Allegheny County. Under unanimous consent, I include this editorial in the Appendix of the RECORD:

HON. JOHN J. KANE

Pittsburgh's political patriarch is with us no more. John J. Kane, former Allegheny County Commission chairman, died early Sunday morning. His long career, of vital importance to all who live in this area, ended 2½ months short of his 71st birthday.

Among the public servants born and raised in Pittsburgh, few have done as much, worked as hard, bossed as well or been as shrewdly realistic in the face of all problems—civic or political—as Mr. Kane.

From modest beginnings in the Hill District of the 1890's, John J. Kane rose to power in the classic American manner. Early an errand boy and newspaper carrier, the young man became a pressman's apprentice—which led to activity in the AFL Newspaper Pressmen's Union. In 1922, he was

elected president of local No. 9 and held the post 10 years. It was then that he became interested in politics.

Early in his political career, he was recognized as a natural and took to leadership with alacrity—and rose fast. Elected to the Pennsylvania House of Representatives in 1932, he backed a progressive Democratic program that put the Republican majority on the spot and helped win the State in the presidential election.

In 1935, Mr. Kane was elected county commissioner and maintained his hold over the board for 24 years until his retirement in 1959. His mark on the county was stupendous: greater economy in government, nearly total unionization of county employees, the launching of a county improvement program with a $34 million bond issue for bridge, highway and airport construction and the extension of the smoke control program; he strongly supported the Pittsburgh package introduced to the legislature in 1947 which led to this city's widely esteemed renaissance.

Mr. Kane's dream of a new county air facility was realized with the construction of the $33 million Greater Pittsburgh Airport. His interest in keeping North and South Parks in their natural and unspoiled state was instrumental in their current significance to all residents.

Mr. Kane was a lifelong opponent of higher taxes and unemployment, as well as militant against tolls for the Liberty Tunnels and area bridges.

The crowning mark of Mr. Kane's life, after years spent planning for a hospital designed expressly for the indigent and chronically sick, was the naming of that hospital, built in Scott Township, after him. It was recognition long deserved, for in his career he had constantly aimed at giving the people of Allegheny County good government—honest, efficient, forward-looking.

The Parkinson's disease that destroyed the Commissioner's health even as he held office was as severe as it was unrelenting. It plagued an able administrator and hastened his end.

In his days of service John J. Kane was more than the county's best vote getter or the politician who held office longer than any other in modern times. He has often been called one of the best Commissioners we ever had. That is how we will remember him.

Mennen Williams: The Storm Grows

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following article and editorial appeared in the Sunday Nation of Nairobi, Kenya, East Africa, on February 26. It is well the Members of this House, and the American people try to see themselves as others see them.

A friend of mine, now in Kenya, has this to say on the subject of the unfortunate Mr. Williams:

They—

Meaning some of the officials—

had not wanted Mr. Williams at this time, right in the middle of their elections, and had tried to put him off, but unsuccessfully. The situation in East Africa is tense enough, without any Americans shooting off their faces.

This wraps it up very completely, I think.

MENNEN WILLIAMS: THE STORM GROWS

The U.S. State Department yesterday intervened in the growing storm over the activities of Mr. Kennedy's special envoy on Africa, Mr. G. Mennen Williams, at present in Dar es Salaam. But this is considered unlikely to allay the anger of Kenya Europeans and a group of British Tory Members of Parliament who are proposing to take a House of Commons motion censuring his activities.

The State Department, after refusing to comment on reports that British Members of Parliament were critical of their envoy's published remarks, issued a "clarification" of his "Africa for the Africans" statement made in Nairobi last week.

The Department spokesman said: "The phrase was quoted out of context and did not mean support of Negro supremacy, but was only intended to reaffirm the U.S. support of the right of all peoples to self-determination.

"In the achievement of that goal the claims of all elements of a given society of whatever race, creed, or color should be resolved according to responsible, just, and democratic standards."

But, newspapermen, including those of the Nation group, deny that Mr. Williams was quoted out of context when he arrived in Nairobi last Tuesday.

At an airport press conference, Mr. Williams said: "The new American administration recommends self-determination for the countries of Africa, including South Africa and the Rhodesias—self-determination means Africa for the Africans."

Not until his departure on Thursday did Mr. Williams explain that "Africa for the Africans" included non-Africans.

Rightwing British Tory Members of Parliament will, it is understood, base their attack on Mr. Williams on the following points:

1. His original "Africa for the Africans" statement;

2. His behavior at a cocktail party given by the U.S. consul in Nairobi at which it is alleged white guests were "snubbed."

3. His remarks in Uganda to the effect that British "tyranny" might be replaced by another tyranny. Mr. Williams immediately withdrew this remark.

PLAYING TO THE GALLERY

From the inception of this newspaper nearly 1 year ago we have made no secret of our belief that the majority of the people of east Africa must as soon as possible rule their own countries.

And in our view the term "as soon as possible" means whenever it becomes apparent that the transfer of power from Her Majesty's Government will not be accompanied by disorder, but will entail the acceptance of responsibility by a government capable of ruling in a manner generally accepted as civilized.

However, the fact that we hold this view on uhuru, independence, self-determination—call it what you will—does not imply that we should hesitate in describing the sentiments uttered by Mr. G. Mennen Williams last week as downright irresponsible foolishness.

Mr. Williams, the Assistant Secretary for African Affairs in Mr. Kennedy's "new look" American Cabinet, during his brief visit to Kenya last week delivered himself of the trite "Africa for the Africans" as being the current American policy on Africa.

This sounded suspiciously like playing to the gallery, but if by this slogan Mr. Williams meant that colonial rule should vanish to be replaced by majority rule we would obviously have no quarrel with him.

But then Mr. Williams went on to say that the "people of Africa should set the pace and set their own objective."

This in a world aghast at the horror of the Congo wherein an unprepared people "set their own pace" in a headlong rush to a free state of bloody anarchy.

And by the same yardstick Mr. Williams would, presumably, have urged the British Government to agree to the recent secession declaration by the Buganda Lukiiko. That British assent to Buganda secession would be catastrophic for the whole of Uganda cannot be denied, but certainly the Buganda were setting their own pace.

That Mr. Williams, speaking on behalf of America's new President, should consider such remarks suitable for utterance in British-controlled territories of Africa is quite inexplicable. He must have been aware that Britain's policy is to remove the red from the map of the world as fast as possible.

There is no doubt that independence is very near for all of East Africa, but the path to that desirable political condition will not be smoothed by the remarks of Mr. Kennedy's representative which savour of an attitude to colonial problems we thought had died, even in America, when India and Pakistan were relieved of the weight of the British Raj 13 years ago.

California Assemblyman Attacks Narcotics Problem in the State of California

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. DOYLE. Mr. Speaker, as you know, the narcotics problem continues to be one of the very serious ones facing our beloved Nation, particularly so where it relates to the young people of America. In my native State of California, the legislature is being very active in the premises.

Following is a copy of an assembly joint resolution introduced by Messrs. George A. Willson, Chapel, Bradley, Carrell, House, Munnell, Petris, Sumner, and Thelin, on February 6, 1961, relative to international traffic in narcotics:

ASSEMBLY JOINT RESOLUTION 14

Joint resolution relative to international traffic in narcotics

Whereas it has been reliably estimated that over 70 percent of the heroin that reaches our State is derived from opium poppy fields in Mexico; and

Whereas it has been reliably estimated that over 90 percent of the marijuana found in this State is illegally smuggled across the border from Mexico; and

Whereas the enforcement problem at the border is aggravated by the large amount of traffic that crosses the border, the annual traffic across the United States-Mexico border having been as high as in excess of 6 million vehicles and nearly 18 million passengers and in excess of 5 million pedestrians; and

Whereas the control of the smuggling of narcotics and the negotiating of cooperative agreements with friendly nations to eliminate the source of narcotics is a Federal responsibility; and

Whereas one of the acknowledged requirements for the solution of narcotics problems is drying up the source of narcotics; and

Whereas measures which would substantially reduce traffic across the border would also aid enforcement of the narcotics laws, and such measures can effectively be taken

only by the Government of the United States: Now, therefore, be it

Resolved by the Assembly and Senate of the State of California (jointly), That the Legislature of the State of California respectfully memorializes the President of the States and the Congress of the United States to consider the negotiation and adoption of treaties with the purpose of controlling more effectively the import, export, manufacture, and use of heroin and marijuana, as between Mexico and the United States, with particular reference to California, and to consider the enactment of legislation, including, but not limited to legislation requiring visas or identification and legislation limiting the number of crossings of the border by any one person that shall be permitted, designed to reduce traffic across the border, in order that law-enforcement authorities can better cope with the narcotics problem, and to consider the appropriation of greater sums for patrol of the border; and be it further

Resolved, That the chief clerk of the assembly be hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States.

Also, I wish to call to your attention, and the attention of my other distinguished colleagues, assembly bill No. 1688, introduced by Assemblyman George A. Willson, a distinguished assemblyman from the great 23d District which I represent this my 15th year in this great legislative body. It is "An act to add chapter 8—commencing with section 11850—to division 10 of the health and safety code, relating to commitment of narcotic addicts, and making an appropriation." I also bring to your attention Assemblyman Willson's press release in the premises. It is informative and timely.

AN ACT TO ADD CHAPTER 8

Chapter 8 (commencing with sec. 11850) to division 10 of the health and safety code, relating to commitment of narcotic addicts, and making an appropriation

SECTION 1. Chapter 8 (commencing with sec. 11850) is added to division 10 of the health and safety code, to read:

"CHAPTER 8. STATE INSTITUTIONS FOR NARCOTIC ADDICTS

"Article 1. Administration

"11850. As used in this chapter, 'director' means the director of correction; 'State narcotic hospital' refers to the institution established under article 1 of this chapter; and 'narcotic addict' means a person who habitually uses, to the extent of having lost the power of self-control, heroin, morphine, opium, or any opium derivative.

"11851. The director shall establish and maintain an institution, to be known as the State narcotic hospital, for confinement and treatment of narcotic addicts committed to the custody of the director pursuant to this chapter.

"11852. The director may accept contributions from the United States or from any other governmental entity to be used for construction and equipping of the State narcotic hospital.

"11853. The director shall appoint, subject to civil service, a superintendent for the State narcotic hospital and such officers and employees as may be necessary.

"11854. The director shall adopt rules and regulations as necessary for administration of this chapter.

"11855. The director must accept any person committed to his custody pursuant to this chapter.

"11856. The director shall maintain, in the State narcotic hospital, a program designed to diagnose the causes of narcotic addiction in the inmates of the hospital and to rehabilitate such inmates, if possible, to the extent that they can be released with the probability, that, under parole supervision, they will not return to the use of narcotics.

"11857. At such time as he concludes that the conditions for release described in section 11856 have been met, the superintendent may release an inmate on parole, subject to such reasonable terms and conditions as the superintendent shall prescribe. Such parole shall continue for the duration of the life of the parolee, or until such time as he is returned to the State narcotic hospital pursuant to section 11859.

"11858. Parole pursuant to this article shall be administered by the division of adult paroles, department of corrections, under the supervision of the director of corrections.

"11859. The chief of the division of adult paroles shall advise the superintendent of the State narcotic hospital of any violation by a parolee of the terms and conditions of his parole. If the superintendent concludes that the violation is of such a nature as to necessitate resumption of confinement of the parolee, he shall issue an order requiring the return of the parolee to the State narcotic hospital. Such order shall be sufficient authority for any peace officer to take the parolee into custody and return him to the State narcotic hospital.

"Article 2. Commitment to State narcotic hospital

"11875. The district attorney of a county may file with the superior court a verified petition alleging that there is in the county a narcotic addict, and petitioning the court to commit such alleged narcotic addict to the State narcotic hospital. Supporting affidavits may be submitted with the petition and such affidavits and testimonial evidence may be required by the court before it takes action pursuant to section 11876.

"11876. If the court finds that there is no probable cause for believing the person who is the subject of the petition to be a narcotic addict, it shall dismiss the petition. If it concludes that there is probable cause for believing such person to be a narcotic it shall issue to a peace officer a warrant directing that the person be apprehended and brought before the court. Thereafter, proceedings shall be had in the same manner as if such person had been arrested on a warrant for a felony, and such person shall have the same rights as in a felony prosecution, but apprehension and commitment pursuant to this article shall not be deemed an arrest for and conviction of a crime.

"11877. If upon the trial, it is the verdict of the jury, or if the trial is without a jury, the court finds, that the person who is the subject of the petition is a narcotic addict, it shall order him committed for life to the custody of the director of corrections, for confinement in the State narcotic hospital, with the right of parole provided in article 1."

SEC. 2. The sum of ____ dollars ($____), or so much thereof as may be necessary, is appropriated from the general fund for the construction, equipping, and operation of the State narcotic hospital pursuant to chapter 8 (commencing with sec. 11850) of division 10 of the Health and Safety Code.

PRESS RELEASE

Assemblyman George A. Willson has introduced assembly bill No. 1688, calling for the creation of a State narcotics hospital for the confinement of narcotics addicts. The State hospital would be placed under the control and supervision of the department of corrections where, the assemblyman said, "the highest security from narcotics can be achieved."

"The object of the bill," said Assemblyman Willson, "is to take the narcotic addict off of our streets and confine him in a State hospital dedicated solely to the 'drying out' and rehabilitation of narcotic addicts." Persons charged with narcotic addiction would not be committed to the State narcotic hospital unless filed against by the district attorney and convicted under due process of law. A conviction under this new law would require the imposition of an indefinite sentence, placing the narcotic addict under an indefinite supervision of the department of corrections of the division of adult parole.

Assemblyman Willson further stated that he believes his bill would substantially reduce the public risk of further infection of others by narcotic addicts and will soon reduce the cost of crime where addiction is prevalent.

While the bill, in its present form, does not designate the amount of money to be appropriated for the creation of a narcotic hospital, Assemblyman Willson believes that a 600-unit narcotic hospital with provision for an addition of 600 units would constitute a capital outlay of some $7 million. Such a hospital should be located in southern California and properly in the Los Angeles area where it would be accessible to transportation, employment opportunities, doctors, and medical schools so that addicts on a rehabilitation program might be more effectively treated.

This program, said Assemblyman Willson, contemplates a compulsory treatment as distinct from our Federal narcotic institutions which are presently run mainly on a voluntary basis. The addict would be compelled to undertake a drying-out period and treatment for some 5 to 6 months during which time the physical dependency on the drug would be cured and the addict's rehabilitation encouraged by the treatment of proper food, exercise, and work. If, in the opinion of the department of corrections, such a person would be a good subject for the present narcotic treatment control program then he might be released on a daytime parole program which would permit early detection and immediate reconfinement.

The bill provides for a contribution toward the cost of creation of a hospital from both the county, State, and Federal Governments. Said Willson, this problem is not only State and countywide but involves the Federal Government and the assemblyman stated he would actively seek financial aid for this program from Congress and that he has already written a letter embodying the proposed program to Congressman CLYDE DOYLE of the 23d Congressional District.

In conclusion, Assemblyman Willson stated that all of the evidence at hand at the present time indicates that the narcotic addict first develops a dependence upon the drug followed by a tolerance and as the tolerance of the human body increases the victim is forced to increase the dosage to obtain his illicit pleasure. For this reason, the common addict cannot live on a maintenance dosage and hence must be forced to be hospitalized and treated in order to avoid danger both to himself and to others.

"The indeterminate sentence," said Willson, "will be a method of reducing costs to the taxpayer and the enforcement of our narcotic laws." The addict who violates his parole will be returned to the State hospital without the necessity of a new trial which would require the time of the district attorney's office and defense attorneys and the usual costs of litigation.

It is the prediction and hope of the assemblyman that this law will become an effective tool in reducing both narcotics addiction and the high cost of crime to the people of California.

Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to call this material on narcotics to the attention of yourself and the Members of this august body.

Appendix

Mission to Berlin: Summer of 1960

EXTENSION OF REMARKS
OF

HON. MILTON W. GLENN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. GLENN. Mr. Speaker, the following is a summary of a visit to four West German cities made by Rabbi Martin M. Weitz, DD., Ph. D., during the latter part of July 1960, upon invitation of the Ventnor Foundation, in New Jersey, interested in bringing hundreds of medical students from several countries of Europe for a year's internship in American hospitals and institutions. This foundation is chairmaned by Dr. Isadore Ravdin, of Philadelphia, Pa., and directed by Dr. and Mrs. Hilton S. Read, of Ventnor City, N.J., and has sponsored over 500 such interns from West Germany alone. Upon invitation of the foundation, Rabbi Weitz was invited to visit with individual doctors and with available groups who are graduates of its programs, and spotcheck current situations and surface exposures and report on the value—or lack of it—for continuation of such a program in West Germany, especially in view of recent swastika outbreaks in Cologne and elsewhere since December 1959. The summary of Rabbi Weitz follows:

After an invitation had been extended for a 17-day itinerary for a visit to the State of Israel, July of 1960, it was in the nature of a pleasant surprise, hesitant challenge and bold resolve, to have it followed by a different type of invitation, for an entirely different purpose. When an invitation was received, as a result of a casual conversation one day, from Dr. Hilton S. Read, it was indeed for a larger purpose beyond fugitive emotions regarding past tragedies and present tribulations. If faith has any sanctity and freedom has any validity, surely our reply must be affirmative, we thought, especially if it means finding a few more islands of stability in a sea of chaos, and even, in a small and limited way, helping to secure better foundations across whatever barriers there are—for none can deny deep barriers—on the very lives and labors of the Conrad Adenauers and Willi Brandts and countless others, including the hundreds of American-exposed interns brought last decade by the Ventnor Foundation, and now German physicians and surgeons who may be able to help keep West Germany free—free from any kind of tyranny and free for humanity. Shall we keep on hating, regardless of provocation, to the end of our days—or shall we attempt to discover those few or many Germans who were also victims of the same hate and who now are trying to rebuild their lives, the nation and the world, simultaneously free from hate?

The late great lamented rabbi of Berlin, Leo Baeck, answered this question for all of us of lesser stature, when, released from Thieresenstadt Concentration Camp near the end of the war, he restrained his fellow-inmates and victims from tearing apart their captured captors, as he confronted them, "Do not vent your hate, for hatred will not destroy our enemies—it will destroy us first."

My first stop was Cologne. Cologne is not only a cathedral city, graced as it is by its magnificent sky-searching cathedrals and many lesser shrines of Romanesque, Gothic, and also modern designs, but is a university city, home of the third oldest university of Europe. Cologne—or Koln—on the banks of the Rhine, was a port city in Roman days, a walled ramport in medieval days, and a metropolis of great size and stature in modern days.

"To appreciate its full historic significance, one need not glance upward to the spiral heights of its giant cathedral, but take a long walk and look under its new municipal townhouse and see four layers of history, vaulted in cement bridgework to preserve these ancient pre-Roman, Roman and medieval excavations and foundations and yet support the magnificent, adequate and thoroughly modern and modernistic city hall above these subterranean levels of history. Nearby, as an extension to this giant concrete grotto is recently uncovered "ghetto" area, especially Jewish mikveh or "ritualarium," which reminds us that Jews were on the banks of the Rhine long before Germans were, for ancient documents attest to the historic fact that Jews petitioned Constantine the Great, Emperor of Rome in the year 321 C.E., for permission to build a synagogue on the banks of the Rhine, near Cologne: This was the very setting—and in the near future it, too, will be encased and enshrined in glass above the excavation, with a new edifice atop this Roman-era Jewish life-arena. Cologne still has its three—ring ramparts of ancient, medieval, and modern—cities in one, and a vast parklike circumference, established by Konrad Adenauer when mayor of the city before he was taken into custody by Hitlerism. It helps filter industrial smoke, conserve land and provide scenic landscape.

Of general Jewish interest was a visit to the rebuilt Cologne synagogue, upon which was daubbed the first of the swastikas in the epidemic of last December; a conversation with the chief rabbi of North Rhine Westphalia who was present and attendance with him at a funeral he conducted for a returnee at the Jewish cemetery of Cologne, which has stones in its walls dating back to 11's.

In the heart of Cologne is the Museum of Cologne History, and a prominent and proud section on its second floor is a generous display of Torah covers. Torah mantels and pointers, Kiddush cups, Passover plates and scrolls, and other sacred objects, all of them presented to the museum by German citizens who hid them for their Jewish friends in their homes, churches, and cemeteries for many years. Not far away is a monument, subtle and sad, yet steadfast—"Mother and Child," in tribute to a Jewish family, all of whose seven members were martyred by Hitlerism on that very site.

Perhaps the most meaningful visit of all was an early morning conference with Dr. Theo Burauen, burgermeister, mayor of Cologne. I presented him with a golden key from the Honorable Joseph Altman, mayor of Atlantic City, and he presented me with several original works, "The Jews of Cologne," and "Cologne—Old and New in Sacred and Secural Art," inscribed and autographed.

We had a long conversation on things, ideas, and people. Indeed here was a man of destiny and decision. He told of his recent and forthcoming visits to Israel, his endless inspiration from it, his insistence—in higher policy levels of his own government—that West Germany forthwith recognize the State of Israel regardless of so-called Realpolitik and insist on pursuit of justice, which is, in reality, the highest politics, his constant encouragement of the many pilgramages by thousands of German youth to local shrines in memory of Anne Frank and her parallels, and beyond that, visits to distant Israel itself for an understanding of the Jews they never knew nor met throughout their young years, as expiation for a new generation. He helped over 1,000 youths participate in this new kind of Aliyah. We learned from him, also, in response to our inquiries, that two youths were responsible for the swastikas on the Cologne synagogue, that they are in custody and are under psychiatric treatment.

Some tentative, yet major, impressions and evaluations that followed us and fermented within us as we took air flight from West Germany, and saw an air view of the total life we experienced, the events we shared, the people we queried, the sights we beheld, the sounds—pleasant and unpleasant—we heard are as follows:

1. An exposure in cross section to approximately 50 alumni of the Ventnor Foundation in cities as Cologne and Berlin, of the 500 from West Germany this past decade, is a convincing commitment that each American intern—now a German doctor—has found his year in America, in the language of one, "a can-opening experience," with unquestionable dividends for democracy, freedom from medical paternalism at best, and authoritarianism at worst, willingness to learn from all sources and find in all peoples, emergent fraternity and fellowship. Some even had a great sense of guilt for all Germany and a need for expiation in helpful medical assignments in Jewish hospitals, homes for the aged, etc. Very few exceptions still have to struggle to overcome previous patterns of prejudice. Most are eager and anxious to free Jews and themselves from any leftover fears. We strongly commend the Ventnor Foundation and recommend its continuation, and that it widen its number by including more available medical personnel from smaller and newer countries, as Israel in the Near East, Ghana in Africa, Burma in Asia, and, newest of all, Cyprus in the Mediterranean, and also deepen its significance by quarterly or annual extension courses on not only medical but great human themes, to keep them all alive and alert, ever sensitive to human and humane issues as well as to personal medical advancement.

2. There seem to be several levels of psyche in the dynamism of culture, expansionism of commerce, and absorptionism of all manner of refugees that is West Germany today. In the muddy bottoms of this turbulent Rhine may be unknown primordial sediment of nazism, acquiescent currently, to be sure, and subdued generally, but which may reappear in chaos and crisis. This includes unregenerate Nazis, crackpots, swastika smearers, etc.

Above it, in the shallow flow of river bottom, moving sluggishly and in mystical moody shadows, living in a Nibelungenlied of their own, are those who go along with the stream because it is the best thing to do—now—who follow the new order as they did the old, who appreciate security (economic) more than liberty (political), who, as civil servants, teachers, government clerks, and others, want to serve their fatherland without necessarily liberating themselves. Their numbers are legion but not formidable; they may yet learn the truth, as it were, but when they do, it may teach them to be free—in the larger sense—free even from themselves. On the surface and at the cutting edges of shorelines is the full tide of the contemporary current. It has urgency, foam-crested energy, and full play of sunlight. It carries the real traffic today. In this tide are 13 millions of new refugees from the East Zone and its areas who have remade Germany within as well as without. Here, too, are the graduates of the Ventnor Foundation, over 500 of them, who have been touched by distant stars and find a way to a new day in an emergent brotherhood. Here, too, are the new leaders, as Konrad Adenauer in Bonn, Willi Brandt, and A. Albertz and Tiburtius in Berlin, and Theo. Brauer and Siegfried Ikenberg in Cologne, who have commitments to conscience as well as commerce.

Here, too, are the "new-old refugees" Jewish returnees, 30,000 of them, who dare to come back, after everything, and help West Germany become civilized as never before.

3. Why do so many Jews return?

Among the many reasons no doubt, these would be major: (1) the Federal Republic of Germany has deliberately attempted to make amends to the Jewish people for the suffering inflicted by the hated Nazi predecessors. This it has done throughout West Germany, by rebuilding Jewish synagogues, hospitals and other institutions, by encouraging growth of Jewish communities, by material compensation to all victims and their survivors wherever they be, by reparations to the State of Israel in helpful settlement of homeless Jews and, lest we forget Adenauer's Germany refused to clamp sanctions or end reparations to Israel when even the United States stopped the Sinai invasion. Then, too, Adenauer and Ben Gurion themselves created a new moral climate for West Germany, Israel, and the world at large, even as late as 1960 when they met at the Waldorf Astoria Hotel in New York City. (2) Anti-Semitism is not tolerated in West Germany. Its constitutions, Federal and State, its penal codes are vigorous safeguards for all minorities and individuals, and are in high lineage of Goethe and Lessing, not of Bismarck and Hitler.

The "basic law" is specific for "dignity of man" protection of individual and group against blasphemy (No. 166), slander (No. 185), desecration of holy places (No. 304), spreading nazism or anti-Semitism in action or utterance (Nos. 52, 58) even against the use of Hitler salute. Recent expressions by trade unions, Lutheran Church, German war invalids, and widespread solid reaction to anti-Semitic incidents December 1959, as well as many positive, new units as societies of Christians and Jews and rewriting all curricula for youth, are healthy barometers and as welcome mats in one, not only for German "refugees" from the East, but Jewish "returnees" from the West. As a Jewish judge in Cologne explained it: "We have no children. We knew no other home. We were tendered this unusual invitation to serve as judge in a high court and also to help our own people help themselves."

4. Since Jerusalem and Berlin were the highpoints of this exciting itinerary turned pilgrimage, because of these two cities primarily, we find that these two great cities, though deeply different, do indeed have much common ground (as we observed in our response at the luncheon by the Senate of Berlin):

(a) Jerusalem faces the East while New Jerusalem faces the West—so with Berlin;

(b) Old Jerusalem faces the East while New Jerusalem faces the West—so with Berlin;

(c) Jerusalem is almost surrounded by enemy territory—so is Berlin, completely so;

(d) Jerusalem lost its Hebrew University atop Mount Scopus, and is in process of completing a new Hebrew University in the Kiryah area of the West—so Berlin lost its university (now renamed Humboldt in East Berlin) and is in process of completing its Free University in West Berlin;

(e) Jerusalem is continuously welcoming refugees from many lands of the world during the last 15 years—so Berlin is welcoming refugees from many lands of the east during the last 15 years;

(f) Jerusalem has been sustained in great measure by a helping hand and understanding heart from America—so has Berlin.

(g) Jerusalem has its Mandelbaum Gate that makes it a city divided and keeps it an outpost of freedom—so Berlin has its Brandenburg Gate, is a city divided and an outpost of freedom.

(h) In Jerusalem, in Hebrew University, is a great fragment of immortality called the "theory of relativity"; in Berlin is the Wilhelm Institute where its author, Dr. Albert Einstein may first have written his theory while serving as its director. Perhaps it was in Berlin when he commented:

"If my theory works, the French will call me a Jew, while the Germans will call me a German; if it fails the French will call me a German, while the Germans will call me a Jew."

Perhaps the reverse is now true. Perhaps history has changed since France and Germany are such good friends, and the Rhine is no longer a barrier, but a bridge. Is it not all a matter of relativity?

Connecticut and New Federal Judgeships

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. BUSH. Mr. President, I ask unanimous consent that an editorial from the New Haven Register of March 6, 1961, entitled "Connecticut and New Federal Judgeships," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONNECTICUT AND NEW FEDERAL JUDGESHIPS

The just passed Senate bill creating 73 new Federal judgeships is particularly significant for Connecticut because of the heavy backlog of cases in our Federal district court. We must now hope that the House of Representatives will take equivalent action, and soon, on creating at least the 59 judgeships which have been recommended as essential by the Judicial Conference of the United States.

It is unfortunate that the judgeships have become involved in political maneuver between Democrats and Republicans. It is regrettable that the Democrats last year refused to act on the same measure, even when President Eisenhower guaranteed an equal sharing in the patronage involved. But at this point the overwhelming need is for judges themselves, and every week spent in further partisan pulling and hauling is a burden upon the whole body of Federal justice.

The fruits of delay are shown in striking terms here in the Federal district of Connecticut.

At the beginning of this year there were 100 criminal cases pending in our Federal court district, involving over 200 defendants. A year ago there were 44 cases, with 54 defendants. On the civil side—which must wait upon the criminal business of the court—there were 765 civil cases pending as 1961 opened. Last year the number was almost the same. But 10 years ago there were only 296 civil cases awaiting disposition, and 20 years ago—in 1940—the total civil backlog was 180 cases.

Since 1927 there have been two judges assigned to the Federal district of Connecticut—and in that time cases pending have increased by 400 percent.

Obviously the concept of justice begins to falter when the time element in court cases—which is in itself a significant factor in the provision of individual justice—stretches out into months and years. The median time from filing to disposition in our Federal district last year was 25.8 months. In 1952 a case could be filed, and heard, and disposed of within 8 months.

There are innumerable other evidences of how badly Connecticut needs the two Federal judgeships which the current legislation provides.

They have all been presented to the Judicial Conference, to the White House, and to the Congress.

Action in the House is the step needed now.

After that the issue will become hotly political as the judgeships themselves are filled. The Kennedy administration can meet its responsibilities only if it fills these judgeships with minimum concern for political acceptability and with maximum concern for legal capacity and personal integrity.

Act of Assassination

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. DERWINSKI. Mr. Speaker, facts concerning the Soviet attack on the American RB–47 reconnaissance plane are coming slowly to the public's attention. I feel that the editorial in the Chicago American of March 5, 1961, entitled "Act of Assassination," is a penetrating and thought-provoking analysis of the matter:

ACT OF ASSASSINATION

Now that the two captains who survived the shooting down of the American B–47 reconnaissance plane have told how it happened, the horrifying nature of the incident is clear: The attack was made simply for the purpose of keeping alive the propaganda uproar which Premier Khrushchev had raised over the U–2 flights.

To keep the hysterical campaign of accusation going, Khrushchev needed another American spy plane. Since there wasn't any, it was decided to destroy the RB–47, which was flying offshore from Russia over the Barents Sea on a perfectly legal mission, and then charge that the plane had been flying over Russian territory.

The Russians probably expected that all members of the RB–47's crew would be killed. However, Khrushchev did not let the fact that Capts. Freeman Olmstead and John McKone survived discourage him from launching his shameless lie anyway. Olmstead and McKone could not refute his charges of spying at the time because they were in prison in Moscow. But they have refuted them now.

In their press conference Friday, they said the Russian Mig fighter plane that attacked them July 1, 1960, came out over the sea and circled the American aircraft, trying to crowd it in toward the Russian shore. Failing in that, the Mig dropped behind the RB–47 and shot it down.

This was a cold and inhumanly cruel act of assassination. Only those Americans who have soft spots in their heads can feel that this country owes Khrushchev tearful gratitude for setting McKone and Olmstead free for propaganda purposes of his own after holding them prisoners illegally for 7 months.

But the United States does owe it to its national self-respect to demand that Russia apologize for the attack and pay reparations to the families of lost American airmen.

Highway Problems in Kentucky

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 8, 1961

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Hon. Henry Ward, Commissioner of the Department of Highways for the Commonwealth of Kentucky. Mr. Ward has very comprehensively stated our problems in Kentucky and I think that the same situation prevails in some other States. I am sure that my colleagues will find Mr. Ward's observations of interest.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMONWEALTH OF KENTUCKY,
DEPARTMENT OF HIGHWAYS,
Frankfort, February 27, 1961.

Hon. THRUSTON B. MORTON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MORTON: Considerable public misunderstanding has been created in Kentucky by press reports which indicate that additional funds have been made available by the Federal Government for highway construction purposes in this State. I am sure you are aware of the fact that no extra Federal money has been allocated to Kentucky, either through any action by President Kennedy or by Congress.

The misunderstanding has arisen from a statement made in February by President Kennedy that he had authorized the States to proceed now to advertise highway construction contracts against the fourth quarter allotment of Federal funds. The allotment normally would not have been available until April 1. However, this did not represent any increase in available funds to Kentucky. We knew that the money would be available to us April 1, and we had already made plans to utilize it.

In fact, Kentucky had moved to expedite highway construction long before the President issued his statement. When the voters of the State last November approved a $90 million bond issue to provide State money to match Federal aid funds, we decided to speed up the roadbuilding program by advancing from bond money funds to pay the full cost of projects available for State-Federal financing, even though we knew that we would have to wait for reimbursement of the Federal share. Because of this decision, we made plans to award contracts for highway work that will total approximately $30 million more than the total would have been if we had not had the bond money available for this purpose and if we had not elected to "gamble" on the reimbursement of Federal funds.

I am sure that part of the public misunderstanding of this situation arises from the complicated procedures under which the Federal funds are made available for highway construction. As you know, Federal funds are apportioned among the States on a formula based on several factors. The States are notified annually of the amount of this apportionment. However, under the Byrd amendment to the Federal legislation, the States are not guaranteed that they will be reimbursed up to the full amount of the apportionment unless receipts from taxes which go into the Federal highway trust fund equal the amount of the apportionment. For the past several years, the amount which the Bureau of Public Roads has certified as being available each year for reimbursement has been less than the full amount of the apportionment. The difference was held in reserve for the States. Kentucky had accumulated approximately $30 million as the difference between the apportionment and the reimbursable amounts.

I was told last November by the Bureau of Public Roads that Kentucky could go ahead and let contracts against this balance, with the understanding that we would not be reimbursed the Federal share of the project until money was available in the Federal highway trust fund. A decision was made to proceed on this basis in order to expedite roadbuilding in Kentucky, and I referred to this above as our gamble. I am confident that the taxpayers of Kentucky approve what I regard as a sound financing decision.

The net effect of this situation is that we cannot provide for further expediting of the Federal aid highway program in Kentucky unless additional Federal funds are made available.

In fact, as a result of the 1960 census which showed that Kentucky did not keep pace with other States in population gains, we actually are receiving less Federal money. As you well know, Kentucky faces the loss of a congressional seat for the same reason.

Under the formula based on the 1950 census, Kentucky would have received a total of $15,632,887 in Federal funds for 1960–61 for the primary, urban, and Federal secondary programs. The same formula, applied to the 1960 census figures, will produce only $14,893,025 for Kentucky for the same programs.

Kentucky matches these Federal funds with State funds, on a 50 to 50 basis. This means that, for the 1960–61 fiscal year, we have a total of $29,786,050 for Federal aid primary, urban, and secondary highways in our State. These figures, of course, do not include allocations for the Interstate Highway System, since funds for this purpose are restricted to the highways on the limited Interstate System.

With only $29,786,050 of Federal and State funds available each year, the Kentucky-Federal primary, urban, and secondary highways cannot be improved to satisfactory standards within the lifetime of most of us. This is the critical problem that addresses itself to all of us who are concerned with this program which is so vital to the economic development of our State and to the welfare of our fellow citizens.

The Automotive Safety Foundation study of Kentucky highway needs, which was conducted over a period of 2 years and completed in 1955, estimated that $110 million would be required annually in Federal and State funds to bring the Federal primary, urban, and secondary highways up to desirable standards within 10 years. Since 1955, we have made some good progress toward the improvement of highways on the Federal aid systems. However, 1,937 miles of highways have been added to the State system since then, and many hundreds of miles need to be added to the Federal aid system.

Even a conservative estimate would indicate that it would take $100 million a year for 10 years to bring the Federal aid system up to standards which would serve the needs of Kentucky.

Under the present financing plan, we will have an estimated $29,786,050 a year to accomplish this task. At this rate, it would take 34 years to get the job done. By the end of that time, thousands of miles of roads that had been approved at the beginning of the program would have become outmoded and woefully inadequate.

This problem is not confined to what might be classified as the distressed or underdeveloped areas of Kentucky. It exists in every area of our State—in every county.

There are 19,091 miles of highways on the Federal aid system in Kentucky. Of this total, 3,852 are on the primary system, including urban extensions, and 15,239 are on the Federal secondary system. On the basis of the automotive safety study and reviews conducted by the department of highways since its completion, 9,210.2 miles of the total of 19,089.5 are classified as deficient when compared to the standards to which they should be built.

Kentucky cannot correct these deficiencies within the funds available to the department of highways in a period of time that would meet the needs of out State.

I am not suggesting that we are seeking to transfer this whole problem to Washington. It is one that all of us as Kentuckians need to know about, however, so that we may work together to seek it solution.

Yours very truly,

HENRY WARD,
Commissioner.

National Commander of AMVETS: Harold Russell

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. TEAGUE of Texas. Mr. Speaker, the national commander of AMVETS, Harold Russell, was presented to the Committee on Veterans' Affairs this morning by our distinguished majority leader, the Honorable JOHN W. MCCORMACK. Mr. Russell offered testimony which was of great significance and will be a real help to the Committee on Veterans' Affairs. Under unanimous con-

sent, I include it as a part of my remarks:

STATEMENT OF HAROLD RUSSELL, NATIONAL COMMANDER, AMVETS, BEFORE THE COMMITTEE ON VETERANS' AFFAIRS, U.S. HOUSE OF REPRESENTATIVES, ON AMVETS' 1961 LEGISLATIVE PROGRAM, MARCH 8, 1961

Mr. Chairman and members of the committee, I deeply appreciate your courtesy in granting me the opportunity to appear today for the purpose of presenting the highlights of AMVETS' legislative program for 1961. Having been engaged in the activities of organized veterans since the end of World War II, I am not entirely unfamiliar with the many accomplishments of this committee on behalf of the Nation's war veterans and their dependents. I can assure you that I am highly honored by this privilege today.

AMVETS have been in existence only 17 years, but in this short time have evolved an important philosophy—a philosophy that recognizes that the veteran has a vital stake in the economy of the Nation. He has an obligation as a citizen, as well as a veteran, and he is not entitled to burden the Nation's economy with unreasonable demands—demands that cannot be fully justified. We are interested in perfecting a sound, enduring structure of veterans' benefits that will discharge—adequately and properly—the Nation's responsibility to its veterans and, at the same time, earn the respect of the American people. In blunt language, we are not interested in milking the public treasury, and violently oppose those who are. Rather, we seek only a benefit structure that will enable the veterans to live self-sufficiently, with dignity, and contribute to his maximum ability to the welfare of the Nation.

Inherent in the responsibilities of this committee is the overriding problem of deciding how best and most equitably the moneys available for direct veterans' benefits can be distributed. If there were available an unlimited supply of funds to meet all the needs and all the demands of all veterans, this indeed would be no problem. In the absence of this Utopian concept, however, this committee must address itself to the problem of determining which proposals under its jurisdiction have merit and then, equally important, which proposals deserve priority of action.

We of AMVETS are mindful of the economic state of the Nation. We are mindful, too, of our obligations as citizens. Our legislative objectives have been formulated with these considerations in mind.

COMPENSATION

Any consideration of measures benefiting veterans and their survivors must necessarily include a discussion of the rates of compensation for service-connected disability and death. It is the carefully considered opinion of AMVETS that an increase in the rates of compensation for veterans and survivors is deserving of priority attention.

To keep pace with the rising cost of living, we recommend first a nominal increase in the basic rates of compensation. Even more important, however, are the needs of the seriously disabled veteran. Here much remains to be accomplished. It is the feeling of AMVETS that current needs dictate that less emphasis be placed on the so-called "scattergun" approach to compensation, and more emphasis on the "rifle shot." By that I mean that the greatest part of the compensation dollar should be distributed in a manner that recognizes factors other than the immediate degree of disability.

For example, the loss of life expectancy should be considered. It is not unlikely that two disabilities rated at 40 percent could have entirely differing effects. One could shorten the life expectancy of the person afflicted by 5 years, while the other would result in no similar effect. The "scattergun" approach would increase compensation payments to both in the same amount. The "rifle shot" approach would recognize the intangible factor of life expectancy and make compensation payments in differing amounts to the two classes of disabilities.

This committee, in the 86th Congress, gave some recognition to the special needs of the seriously disabled in the passage of Public Law 86–663, the so-called "housebound bill," establishing a new statutory rate of compensation of $265 monthly for those who are totally disabled and are permanently housebound. This proposal recognizes that there are differing degrees of incapacity even among the totally disabled.

Current studies being conducted by the Veterans' Administration have already established the fact that certain disabilities cause a loss in life expectancy. We urge your committee to utilize the results of these studies and to report a bill containing an increase in basic compensation rates as well as an increase in the rates for those disabling conditions that result in a shortening of the life span.

HOSPITALS AND MEDICAL SERVICES

The Veterans' Administration hospital system today operates under a ceiling of 125,000 beds. This appears to be adequate to meet present needs. The average age of World War I veterans is 66 years, while World War II veterans average nearly 42 years of age. As the veteran population ages and their medical needs grow, there will be increasing demands for hospital beds in Veterans' Administration facilities.

A particular problem in accommodating the aged veteran is the great need for facilities to provide intermediate or long term care for chronic disabilities. Persons in this category usually do not require the same degree of active medical care given the more acute cases, and yet they do not meet the requirements for domiciliary care. In short, the need for special facilities to accommodate the chronic long term patient will increase.

In spite of the growing need for facilities to accommodate the chronic, long term patient, the Veterans' Administration hospital system consistently has a substantial number of beds labeled "beds out of active service." At least 1,000 of these "out of service" beds have been retired because of "no patient demand, beds not required." It is patently ridiculous to say there is no patient demand, on the one hand, and then spend unlimited man-hours attempting to solve the health problems of the aging veteran, on the other. We respectfully urge this committee to use its great influence in having these unused beds immediately converted to the care and treatment of the long term chronic patient. Secondly, we recommend that long range plans be developed to permit the Veterans' Administration to more adequately discharge its responsibility to this class of veteran. Unless legislation is enacted creating special facilities for this rapidly growing class of patient, hospital facilities presently designed for active medical care will be greatly overtaxed.

PENSIONS

In August 1959, the 86th Congress enacted Public Law 86–211. This law for the first time incorporated a basically sound philosophy into the non-service-connected pension program—a philosophy that related the payment of pensions to realistic tests of financial need. It was estimated that the new law would benefit more than a million veterans and survivors. For the minority already on the pension rolls that might have suffered a reduction, the law contained a savings provision, a so-called "grandfather's" clause, that permitted them to continue receiving benefits under the old law. Thus, not one single pension payment was reduced by the new law, while the vast majority of pensioners would be entitled to increased payments.

Yet the ink was hardly dry on the President's signature of approval before proposals were being advanced to change the pension program so that greater pensions could be paid to persons with less need. These proposals have continued unabated in the present Congress.

We of AMVETS have studied these proposals in the light of the present system of pensions with its sliding scale of payments based on varying degrees of need. We have studied them with a view to the economic justification; their effect upon the Nation and their effect upon other benefits. Each of these views considered separately leave the impression that these pension proposals are unwise. Considered together, they leave the overpowering conviction that the proposals should be rejected by the Congress as ideas which appear on the surface to be beneficial but which by every yardstick are designed to defeat the very cause they purport to espouse.

Let me make it crystal clear that AMVETS do not oppose the non-service-connected pension program. On the contrary, we are proud of our supportive role in the enactment of Public Law 86–211. This is a sound measure reflecting the coordinated views of this committee, its able staff, the Veterans' Administration and the major veterans organization. It was designed to provide an equitable pension program for the veterans of all wars and their survivors. It does just that.

The single factor that predominates in any discussion of veterans benefits is the tremendous cost of the program. It is inevitable that as unwarranted expenditures for non-service-connected pensions arise, the entire structure of legitimate veterans' benefits will be placed in jeopardy. It will be increasingly difficult to obtain and maintain adequate rates of compensation for service-connected disability and death. A moment ago we mentioned the need for determining priority of legislative action. Certainly, on the theory that first things should be first, we must first take action to assure that the rates of compensation for service-connected disability and death are adequate. We must assure that the Veterans' Administration hospital system retains its "second to none" reputation both in the quality of care and the condition of its physical plant. These are matters that deserve priority attention before embracing additional pension programs that are actually in the nature of a service bonus.

Let those who advocate a new pension program first join in a concerted effort to obtain for pensioners the increased payments already made available through the enactment of Public Law 86–211. Estimates made at the time of enactment of this new pension law indicated that approximately 70 percent or 838,000 of those persons already on the pension rolls would receive an increase in monthly payments if they so elected. Yet, only 255,000 have thus far elected to receive payments under the new law. Studies conducted both in and outside the Veterans' Administration indicate that at least 500,000 to 600,000 additional pensioners would receive an increase if they elected to be paid under Public Law 86–211. We of AMVETS are confident that a vigorous public relations campaign launched by the Veterans' Administration and veterans organizations would result in more pensioners electing to receive the greater benefit awaiting them.

HOSPITAL CONSTRUCTION

Undoubtedly, the Veterans' Administration hospital and medical program represents

the greatest single medical project undertaken by any government in the world. It has often been referred to as a "second to none" medical program. To continue enjoying that fine reputation, however, it is necessary that adequate funds be provided each year. This is particularly true in the case of the continuing program of replacement, repair and modernization. Hospitals that are outmoded or badly in need of repair or renovation cannot be operated economically or without unnecessary cost. We were pleased to note that the 1961 Veterans' Administration budget contained funds to permit the launching of a 12-year hospital construction and revitalization program. The budget request for fiscal year 1962 continues this program. Much of the credit for the increase in the tempo of this program rightfully belongs to this committee. We urge that you continue your vigilance and make every effort to see that sufficient funds are appropriated to complete this commendable program in even less time than the proposed 12-year span.

NON-SERVICE-CONNECTED HOSPITALIZATION

Considerable discussion in recent years has centered upon the subject of hospitalization for the treatment of non-service-connected disabilities. Those who oppose non-service-connected hospitalization point to abuses in the program by those seeking admission to a Veterans' Administration hospital when they can well afford to pay for the treatment.

They point to the length of stay in Veterans' Administration hospitals compared with the stay in private hospitals. Length of stay in Veterans' Administration hospitals will be reduced materially as the result of Public Law 86–639 which permits the prehospital workup and laboratory tests as well as treatment required during convalescence on an outpatient basis. AMVETS subscribe wholeheartedly to the theory that veterans should be treated in Veterans' Administration hospitals for non-service-connected disabilities provided they cannot assume the cost of hospitalization and a bed is available. Notwithstanding our support of non-service-connected hospitalization, however, I wish to make it clear that AMVETS will not condone abuses in this program. If a veteran can afford to pay for his non-service-connected hospitalization, he should not occupy a bed at the Federal Government's expense. We believe that abuses of this nature have been held to a minimum in recent years.

JUDICIAL REVIEW

A matter of great interest to AMVETS is the creation of an independent court or board outside the jurisdiction of the Veterans' Administration for the review of decisions of the Administrator of Veterans' Affairs with respect to service-connected disability and death compensation claims. Under the present system of adjudication, the Board of Veterans' Appeals, acting for the Administrator of Veterans' Affairs, renders a decision that is final in all respects and not subject to review by the judiciary. Meanwhile, the Veterans' Administration has acted as judge, jury, and counsel for one or both parties.

This situation gives cause for just criticism by veterans whose claims have been denied. It is the opinion of AMVETS that an agency completely independent of the agency that makes the original decision should be established. It is desirable in every program that safeguards be established to prevent unreasonable or arbitrary decisions in the interests of both the citizen and his Government. It is in keeping with the spirit of American political institutions that judicial review should be available to assure that executive action shall not be arbitrary, and that those with claims against the Government may, under prescribed conditions have their day in court.

PEACETIME READJUSTMENT BENEFITS

A problem of some consequence confronting this committee is the matter of benefits for persons who served in the military and naval forces of the Nation after January 31,, 1955.

In the past, the Congress, in providing benefits for former members of the Armed Forces, has been guided by one very important consideration—whether the military service was performed during time of war or in time of peace. Aside from the fact that the wartime serviceman was exposed to extra hazards not normally encountered in a regular tour of duty, it could be assumed that the greater portion of the wartime force was either drafted or volunteered because of the patriotic appeal and a sense of duty to country during a time of peril. In either event, it was clear that military service, in most instances, had interrupted the pursuit of a career in civil life. Thus it followed that special treatment, including benefits to assure their successful reintegration into civil life, was in order for the wartime veteran.

The straight peacetime ex-serviceman, on the other hand, was not exposed to the same hazards of service, nor was he motivated in the same manner in entering military service. In most cases, he voluntarily enlisted in the military because it offered him the career of his choice. The distinction, therefore, between war and peacetime service was crystal clear and the Congress proceeded to grant different benefits to each group.

The status of the group with service after January 31, 1955, is not so well defined. These men are not war veterans nor should they be placed in the straight peacetime service category. For the most part they are not men who analyzed the advantages and disadvantages of a military career and then enlisted through choice. These are men whose civilian pursuits were involuntarily interrupted. They were either drafted or served under the compulsion of the draft. In many instances the service was even more hazardous than that experienced by some war veterans. Yet, they are not entitled to non-service-connected pensions. They cannot be hospitalized for treatment of a non-service-connected disability unless there is also present a service-connected disability. They receive no mustering out pay. They have no entitlement to vocational rehabilitation, education, and training, housing loan guaranty, and other benefits. In short, this is an entirely different category of veteran for whom no precedent with respect to veterans benefits has ever been established.

It is the carefully considered opinion of AMVETS that the post-Korean conflict group is deserving of special consideration, and we urge this committee to address itself to this problem.

CONCLUSION

We have attempted this morning to touch briefly upon AMVETS program for the year. With your permission, Mr. Chairman, I should like to submit at this time a digest of the resolutions adopted at AMVETS most recent national convention for inclusion in the record of this hearing.

We welcome the opportunity to appear before this committee from time to time to express our views on veterans' problems. As you embark upon your duties in this year of uncertainty, we wish you well. We pray that you may be blessed with the wisdom and foresight necessary to plot the best course for the millions of veterans and their dependents whom you serve. We pledge to you our cooperation and objective thinking in arriving at our mutual objectives.

Dr. George I. Sanchez, Noted University of Texas Professor, Writes Brilliant New Frontier Policy for the Americas

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 8, 1961

Mr. YARBOROUGH. Mr. President, because of our close historic and cultural connection with Mexico, my State of Texas has been blessed with a substantial number of leaders who are Americans of Spanish and Mexican descent. One of the most outstanding of these is Dr. George I. Sanchez, a native of New Mexico, who joined the faculty of the University of Texas 20 years ago, as the first professor of Latin American education in the Nation.

For a decade, Dr. Sanchez was chairman of the department of the history of philosophy of education at the University of Texas. During 1943–44 he served with Nelson Rockefeller in the Office of Coordinator of Inter-American Affairs, where his record was outstanding.

Because I have personally known Dr. George Sanchez for many years, and have had the high honor of his advice, confidence, and support, I was deeply pleased when President Kennedy named Dr. Sanchez to the extremely important Citizens Committee for a New Frontier Policy in the Americas. His complete understanding of the people of the Americas, his intellectual power and knowledge of the overall problem, his exceptional record of educative service, all serve to make him extremely well qualified for the Committee.

Mr. President, Dr. Sanchez recently wrote a brilliant report on our problems in the Americas and on some of the possible solutions to them. He has by far the finest grasp of our needs jointly with the needs of the people in the Americas, that I have ever read. His argument for more students from the other Americas in U.S. colleges is unanswerable. I strongly urge every member of the Congress to consider it carefully, and ask unanimous consent to have printed in the RECORD Appendix the report in the March 1961 issue of the Alcalde, the University of Texas alumni magazine, published at Austin, Tex., entitled, "A New Frontier Policy for the Americas," by Dr. George Sanchez.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NEW FRONTIER POLICY FOR THE AMERICAS

(By Dr. George I. Sanchez)

During the recent campaign, President John F. Kennedy expressed his conviction that the need was urgent to reestablish the bonds of the Americas, and that the peoples of the Americas join in an alliance for progress.

As an endorsement of that position, and as an organization to advise on its elabora-

tion, there was formed a Citizens Committee for a New Frontier Policy in the Americas. This committee is constituted of 50 individuals who, for many years, have been students of inter-American affairs and who are concerned over the deterioration of our country's status in the other Americas. Among the members of the committee are Adlai E. Stevenson, W. Averell Harriman, Dr. Henry Commager, Dr. Arturo Torres Rioseco, Dr. Frank Tannenbaum, Senator Dennis Chavez, Dr. Arthur M. Schlesinger, Jr., Senator Wayne Morse, and Judge E. D. Salinas.

Judge Salinas (111th District Court of Texas, a graduate of the School of Law of the University of Texas) and I are the only members from Texas. It is our hope that we can present to the committee views from the unique vantage point that our backgrounds in the Southwest and in Latin America have given us.

My thesis is a perfectly simple one, and one whose validity we are driven to accept by the inexorable trend of events the world over, but particularly in Latin America. That thesis is this: power lies with the masses of the people, and that power in Latin America can no longer be bought and sold over the counter. Further, the masses in Latin America are very seriously disadvantaged and, by fair means or foul, they will not be denied their heritage much longer. The calamity of Cuba, and reverberations elsewhere, testify eloquently to this. The United States, somehow, must find ways of joining hands with those masses in programs to alleviate their urgent needs—their hunger, their sickness, their lack of education. We need to inject ourselves into their situation in ways which do not infringe on their dignity and self-respect, and which leave no doubts as to our humanitarian motives and our desire for genuine, mutual good will.

WE MUST JOIN HANDS WITH THE LATIN AMERICAN MASSES

The big question is: How can this be done? It hardly needs mention that the methods of the recent past do not constitute the answer to this question. Our unilateral judgments of the past, or even our bilateral ones, are poor models upon which to base a new frontier policy in the Americas. We are dealing not with one nation, but with the sentiments of the peoples of all of the Americas and of the world. What we do about Cuba individually, or Argentina, or Venezula, and so on—what we do about one of our American neighbors will characterize us with the peoples of all of the others.

So, we can no longer think of foreign policy for Latin America as that which we can agree upon with the governments currently in power, or with the vested interests that may have put them in office. We are going to have to base our policy on the posture which brings us most closely to the masses of the people of Latin America, on that position which, if necessary, without reference even to the Organization of American States, tells the common man of Latin America that we are his friends de confianza, no matter what the political and economic maneuverings of the moment may seem to make us appear.

In thinking on how to attain this rapport with the Latin American masses I am convinced that in the recent past we have failed to make partners of those who do the most serious thinking in Latin America. We have either ignored these thinkers, the pensadores; or, worse still, we have taken a condescending, patronizing attitude toward them. Understandably, their followers—and, it is well to note that the poet, the university professor, the literary figure in Latin America is high in political stature—reflect the chagrin, the hurt feelings, and the bitterness of the intellectuals. It seems to me that it is time that we had a meeting of minds with such men as Romulo Gallegos (Venezuela), Germán Arciniegas (Colombia), Alfonso Reyes (Mexico), Gilberto Freyre (Brazil), and Luis Muñoz Marín (Puerto Rico). This meeting of minds on the formulation of principles for hemispheric development, on our mutual stake in progress and survival, and on the very bases for mutual understanding could well set the tone for political, economic, and spiritual collaboration.

I am suggesting that we consult with these pensadores, these thinkers of the Western Hemisphere, to determine how we—all of us—can join in the plans for helping the underdeveloped peoples and areas of the Americas. Let us ask the Latin American intellectuals to tell us how we can be of most value in helping the disadvantaged peoples of their countries—without offense to their dignity, without prejudice to our sincerity, and without any stigma of material gain or mean advantage. It is fatuous to think that we in the United States have the answers, and the only answers, to the questions raised in our hemisphere. The pensadores of Latin America have answers, too—and theirs have a firmer base of understanding of the Latin American masses than do ours.

Closely related to the above area in relationships with the rest of the hemisphere is the status of minority groups in the United States. I am thinking particularly of the Spanish-speaking minorities in this country. Our protestations of good faith and of good neighborliness towards Latin Americans are given a hollow ring when, for example, we look upon the plight of the American of Mexican descent in the United States. The fact that our "Latin Americans," almost 2 million of them in Texas alone, are the most disadvantaged minority group here—as measured by any criteria which depict health, wealth, education, and welfare objectively—is not lost upon Mexico, nor upon Latin America as a whole. We even use, cynically, cheap labor from Mexico to further depress the total situation of the Mexican-American, a U.S. citizen, here. It has not been long since many school systems in the Southwest segregated "Mexican" children in the public schools—and, even more recently, some counties systematically excluded U.S. citizens of Mexican descent from service on juries. Again, thees facts are not lost upon our southern neighbors, and we have much to make up, much to undo if we are to be truly convincing when we try to deal with their thinkers and with their masses as we profess good.

One of the most valuable undertakings which should be greatly expanded under a new policy for inter-American solidarity is that of the exchange of students and educators. Many, many more of our teachers and students need to go to Latin America to study there and to collaborate with their fellows in the educative processes there. Even more Latin American students and teachers should come here to study, to teach, to establish bonds of scholarship and of friendship with us. Our current programs to these ends are far from adequate, barely scratching the surface of need and opportunity. Subsidies in much larger amounts and on much more generous terms are sorely needed.

By way of illustration, I have suggested on several occasions through the years that the United States should establish a "student dollar" program to help equalize purchasing power in the field of inter-American education. At present, even well-to-do Latin Americans find it next to impossible to come here to study because of the differences in cost of living, because of prohibitive exchange rates, and the like. It seems to me that we would be making an exceedingly wise investment if we could work out a scheme by which the student from Latin America could be given the same purchasing power (for educational purposes) in the United States that his money would have in his own country. A scheme of this sort would drain no dollars out of the United States, as the visiting scholar would take back to his country only what he had learned here—and, undoubtedly, immense good will. I can think of nothing that would establish bonds of friendship among the Americas more quickly or more firmly than the subsidization of a community of scholars.

Closely allied to the "student dollar" idea is that of outright scholarships to worthy Latin Americans who otherwise could not come to study in this country. I am convinced that we would be very wise, indeed, if we made a special effort to bring here for education bright young men and women from the laboring classes, from the poor of Latin America. Again, the masses of Latin America are rapidly coming into their own—and they will generate leadership for the momentous changes that are surely in store for them. Let us hope that we in the United States have the good sense, the foresight to be wise and generous in participating in the development of that leadership.

We Americans of the north must identify with the Americans of the south. Heretofore, political cliques and economic vested interests could speak for most of those southern Americans. That will soon be a thing of the past for all, as it is already for some. Our new policy needs to be grounded on the fullest understanding of this new departure in hemispheric affairs, and we will need to get our heads together with the best minds of Latin America to see how the peoples of the Americas can form a friendly community, that strives for the common good by joining in an alliance for progress.

Representative Thomas B. Curtis, of Missouri, Looks at Federal Supply

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. WILEY. Mr. President, the Honorable THOMAS B. CURTIS, of Missouri, senior Republican representative of the Joint Economic Committee, and senior Republican member of the Subcommittee on Military Procurement, member of the Committee on Ways and Means, made a splendid address on various aspects of Federal supply before the Federal Supply Management Association in Washington, D.C., on February 7, 1961. I ask unanimous consent to have excerpts from this speech printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

A CONGRESSMAN LOOKS AT FEDERAL SUPPLY

Commissioner Bean, I appreciate your generous introduction.

Mr. Eagle, members of the Federal Supply Management Association and guests, it is a pleasure for me to be here with you tonight at your first meeting and to discuss a subject which has been of vital interest to me during the 10 years I have been in Congress.

Before discussing the assigned subject "Congressman Looks at Federal Supply" in detail I should like to express my satisfaction and approval of the fact that the 50 or more members of your association have seen fit on their own initiative to organize a Federal Supply Management Association. I am sure that you have come to the same

conclusion as others who have studied this subject, namely, that there should be a specially trained group organized to raise the management of Federal supply to a high professional level. The broad field of supply management represents the single most important financial and physical element in the security of our country.

According to the Tax Foundation, Inc., in 1932, less than 30 years ago, the per capita tax for all levels of Government totaled $64. The Federal take was $15 or 22.7 percent, the State the same, and the local tax 53.6 percent. So the Federal Government took roughly 23 percent and the State and local governments 77 percent. By 1958 the per capita total tax was $639—almost 10 times that of 1932 and the Federal Government took 71 percent and the State and local governments 29 percent. This complete transposal, mind you, took place in less than 30 years.

SCOPE OF MILITARY SUPPLY OPERATIONS

While there have been some changes in the statistics on military supply operations from a year ago, they have not been great so I will quote a few paragraphs from the report of the Subcommittee on Defense Procurement:

"Military procurement has had a major impact upon the national economy and segments thereof during the past two decades. Procurement of supplies, materials, and weapons amount to $22 to $25 billion per year. From fiscal year 1950 to 1959, inclusive, there have been 38 million procurement transactions with a dollar volume of approximately $228.4 billion.

"Military transportation bills amount to several hundred million dollars annually.

"The inventories of supplies in the many duplicating military supply systems amount to some $44.4 billion and are stored in 585 million square feet of depot space throughout the world.

"The annual cost of maintaining the many military supply systems is conservatively estimated at $2 billion.

"The annual disposal of surpluses according to congressional testimony runs from $8 to $10 billion, with a net return on sales of less than 2 percent of cost. Many of the sales have a serious impact upon portions of the economy." (Report of Subcommittee on Defense Procurement to the Joint Economic Committee, pp. VII–VIII.)

Let us compare these figures with others which will give you a yardstick for measuring them.

General Services Administration

GSA was established after many years of study. It was endorsed by the first Hoover Commission, by the Congress and many outside interests.

The declaration of policy (sec., Public Law 152, 81st Cong.) states its intent: "It is the intent of the Congress in enacting this legislation to provide for the Government an economic and efficient system for procurement * * * utilization of available property * * * disposal of surplus property * * * records management * * *."

It was intended that GSA would act as the general manager in the common areas of property management for the Government.

After 11 years of operation GSA has barely scratched the surface of its intended possibilities.

It stocks 9,000 items compared to 3.4 million in the DOD.

The stores inventories are valued at $51.6 million compared to nearly $50 billion in the DOD.

It has 11 major depots and 2 annexes with a total of 5.7 million square feet of space or about 1 percent of the 585 million square feet in the DOD's numerous supply systems.

According to former Administrator Floete GSA purchases about 3 percent or $833 million in supplies and equipment from a total Government procurement of about $30 billion.

Evidence gathered by the Joint Economic Committee was that GSA is doing a better job than the DOD in the common supplies field.

GSA stocks turn approximately three times per year whereas military stocks are relatively slow turning with resultant deterioration and waste.

GSA buys much more on competitive bids than the military and is more helpful to small business.

I ask this question: "If the supply management functions of the Federal Government had been well organized and managed—I mean—if we had obtained the most from the means and available—how many billions of dollars could we have saved for better uses and what human and natural resources could have been made available for permanent, solid growth purposes?"

I will only say that $2 to $3 billion per year for at least 10 years could have been saved in my opinion. That I believe is a modest estimate.

CONCLUSION

Here is a challenge to the executive branch, the legislative branch and to the Federal Supply Management Association. I commend you for seeing the challenge and wish you the best of success in your efforts to meet it.

Career Employees in the Post Office Department

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following telegram was received by many members of the New York State delegation in Congress.

As I am in hearty agreement with Mr. Kiess and his associates I am asking that the telegram be placed in the CONGRESSIONAL RECORD for future reference.

WILLIAMSPORT, PA., *March 6, 1961.*

Hon. KATHARINE ST. GEORGE,
House Office Building, Washington, D.C.:

In your capacity as a member of the House Post Office and Civil Service Committee I urgently request that you bring an immediate halt to the illegal retirement, downgrading and resignation demand presently being forced through coercion and intimidation upon civil service career employees in the Post Office Department. That these are definite political actions is well known throughout the Nation. We ask that you immediately take the following action for the prompt protection of these victims:

1. Direct the Civil Service Commission to investigate immediately the use of political coercion and intimidation to eliminate key civil service personnel in the Post Office Department, who were appointed or promoted during the last 8 years.

2. Direct the Post Office Department to halt these wholesale dismissals, forced resignations and retirements, and downgradings, which were maneuvered for political reasons, until conclusion of investigation by the Commission and your committee.

3. Direct the Postmaster General to provide you with a list of names of all persons on a departmental and regional level, who have been dismissed, retired, downgraded or forced to resign, or who have been threatened with any one of these actions since taking office. Everyone of the fifteen regional operational directors of the postal service is on that list and is now in the process of being liquidated. If immediate action is not taken they will be removed from office, together with other key civil service personnel who earned their position during the last 8 years. The Republican party provided full civil service protection for all Government personnel during the Eisenhower and Summerfield administrations. Now it is doing nothing to protect Government personnel, appointed or promoted during the aforesaid administration, from the ruthless sabotage of the civil service system in the Post Office Department. This is one of the blackest chapters in our Government's history. Your help is urgently needed. Please advise of any action on your part, giving details.

CLYDE G. KIESS.

(District chairman, Republican State Committee, for Lycoming County, Bradford County, Tioga County, Potter County, Cameron County, Columbia County, Montour County, Sullivan County, Union County, Snyder County, Northumberland County, Clinton County.)

Citation of Harry B. Haines as "Editor of Editors and Publisher of Publishers" in the State of New Jersey

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 8, 1961

Mr. CASE of New Jersey. Mr. President, a few days ago the Jersey Parade carried a tribute to Harry B. Haines, editor in chief of the Paterson Evening News of Paterson, N.J. Harry Haines has contributed richly to the community not only through his newspaper but in countless acts of civic devotion.

I ask unanimous consent that the column referred to be printed in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the Record, as follows:

HARRY B. HAINES PROCLAIMED "EDITOR OF EDITORS AND PUBLISHER OF PUBLISHERS" AS EDITOR IN CHIEF OF PATERSON EVENING NEWS, OF PATERSON, N.J.

(By M. Martin Turpanjian)

As president of the New Jersey League of Weekly Newspapers, Inc., I take great pride to proclaim Harry B. Haines, editor in chief of the Paterson Evening News, of Paterson, N.J., as the "Editor of editors and publisher of publishers in the State of New Jersey."

Individuality is the precious asset of Harry B. Haines as being the most progressive editor and publisher in the Garden State barring none. His newspaper is fast gaining the stature as being the very best daily newspaper in New Jersey. There is an extraordinary mark of distinction in his clear, coherently phrased editorials and I came to this happy conclusion after having before me New Jersey's 26 daily newspapers. The Paterson Evening News editorials are rich in sound rational philosophy and yet they are clothed in the crystaline garments of captivating simplicity.

Harry B. Haines does not editorialize with an academic pontifical air of dogmatic intellectualism. He does not parade a vast

wordy treatise teeming with vacuous verbosity. He is terse and the clarity of his diction is so impressively simple that his message can be understood by the elemental mass minds.

Harry B. Haines is indeed and in fact the supreme example of the "Editor of editors" as well as the "Publisher of Publishers" for his definitive commonplace phrases are so aptly coined and phrased with such dexterous verbal ability that they literally can penetrate the most elemental mind. It is a real thrill to read his richly phrased literary commentaries because they embody and penetrate the basic truth that in the final analysis the simplified approach to editorial writing never fails to strike the full target of public opinion.

Harry B. Haines stands out preeminently as a supreme editorial individualist. He is definitely incomparable. He is no hackneyed carbon copy imitator. He is no run-of-the-mill-mediocre editorialist. He is not only the living essence of originality but he is gifted inherently with the sheer genius for creative writing.

Harry B. Haines does not bore you with the grim monotony of verbose repetition. He has such an overpowering wealth of knowledge and his brilliancy of observation is so keenly acute that he can depict or picture the complete civic as well as social and educational problems with such a masterly array of sound logic and realistic facts that the general reasoning public can get the full moral impacts of his many editorialized sermons.

In a word Harry B. Haines is no commonplace expounder of the obvious. He is indeed the master of true educationalized editorialized editorials. He is indeed the pride and the outstanding editorial philosopher of the State of New Jersey. He is honored, respected, and loved by the vast majority of the city of Paterson as well as in all other parts of Passaic County and throughout the Garden State.

Harry B. Haines is one of the very few editors throughout the world who honors his late beloved father on the anniversary of his passing away since May 3, 1911.

His gentle dignity and his instinctive humility to his readers and his unselfish service for the promotion of all the civic projects for the general welfare of the citizens of the city of Paterson, the third largest municipality in New Jersey, has endeared Harry B. Haines as civic conscious editor and publisher as a public spirited executive who has become a part—a living dynamic promoter of every program that seeks as its objective a greater, a better, and a more progressive municipal government for the city of Paterson. The people of Paterson are fortunate to have such a personage of majestic moral aspirations molding the public sentiment and opinion of the civic area.

Harry B. Haines has proven to be a dedicated man of destiny for he has a radiant future. He cannot retreat. He is immune to failure. He wields something greater than the sword. His mighty pen can mold and shape human destiny with his editorial illumination.

Committee on Un-American Activities

SPEECH
OF
HON. HAROLD B. McSWEEN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. McSWEEN. Mr. Speaker, I rise in support of the full appropriation for the House Committee on Un-American Activities. This committee, under the chairmanship of the distinguished gentleman from Pennsylvania, has done outstanding work. It must continue its vital functions. The committee is indispensable to the Congress and to the American people. Its functions must not be impaired. I strongly support the work of this committee and the appropriation requested in this resolution.

Crash of Air Force Tanker Aircraft

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. BUSH. Mr. President, I ask unanimous consent to have an article from the Hartford Courant of March 2, 1961, entitled "State Airman, Four Others Killed in Tanker Crash," printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE AIRMAN, FOUR OTHERS KILLED IN TANKER CRASH

MOUNT CLEMENS, MICH.—A loaded Air Force tanker plane smashed in a flaming smear across a busy highway here, destroying two buildings while narrowly missing a tavern and a tulip farm home.

Five crew members, one from Manchester, Conn., died in the flames.

The pilot, 1st Lt. John C. Bibble, 24, of Urbana, Ill., had just veered his stricken ship, loaded with 6,000 gallons of jet fuel and 3,500 gallons of her own fuel, away from a crowded housing project.

UNIVERSITY OF CONNECTICUT GRADUATE

First Lt. Robert L. Lewis, 24, of Manchester, Conn., was the navigator aboard the stricken craft. Killed with Lewis and Bibble were Capt. Lydell M. Haygood, 29, of Hawthorne, Calif., aircraft commander; T. Sgt. Robert E. Derby, 38, of Tacoma, Wash., flight engineer; and S. Sgt. Ernest J. Lemoin III, 29, of Houston, boom operator.

Lieutenant Lewis, son of Mr. and Mrs. Felix E. Lewis, of 39 Turnbull Road, Manchester, was a graduate of the University of Connecticut. He was commissioned a second lieutenant upon graduation in 1958.

(He was a Courant carrier in Manchester from 1948 to 1952.

(Besides his parents he leaves a brother, Capt. Ronald Lewis, stationed in Japan; a sister, Mrs. Leonard Eurto, of Middletown; and his grandmother, Mrs. Lillian E. Rittstig, of Manchester.)

HIGHWAY CLOGGED

A housewife, Mrs. Ruth King, 32, said the four-engine, prop-driven KC–97 from nearby Selfridge Air Force Base struck "in a great big billow of flame and smoke" late Tuesday.

The big potbellied ship crashed moments after takeoff, leaving a wake of burning wreckage. Pieces hung from overhead powerlines and also clogged U.S. 25, the highway leading from nearby Detroit.

The ship smashed one home but the woman who lived there was away. Her dog was killed.

Spouting flames burned out a vacant real estate office. The barn, a tool shed, and a windmill at the tulip farm were damaged by flames and wreckage.

The plane, on a routine flight, suffered a power loss during takeoff. It veered away from a 380-unit housing project at Selfridge. It clipped a tree and knocked off part of its tail before crashing.

Migratory Labor

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr ZELENKO. Mr. Speaker, I have introduced a number of bills designed to eliminate the disgraceful nationwide abuses against thousands of migratory laborers.

These workers are treated no better than peons. Their ranks are composed mainly of the historically exploited underprivileged groups, especially Negroes, Puerto Ricans, and imported Mexican Nationals. This is a national problem. Few States are blameless in their conduct of the treatment of these workers. Many of the States involved do not have any protective legislation, and a number of those that do have such laws show a general disinclination to enforce them properly.

The legislation covers housing, child and adult education, health, wages, and most important, the flushing out of racketeers, swindlers, and unscrupulous labor bosses who dominate the industry. The bills are:

H.R. 5284, to amend title V of the Housing Act of 1949 to assist in the provision of housing for domestic farm labor; H.R. 5285, to amend title III of the Public Health Service Act to authorize grants for improving domestic agricultural migratory workers' health services and conditions; H.R. 5286, to provide grants for adult education for migrant agricultural employees; H.R. 5287, to provide certain payments to assist in providing improved educational opportunities for children of migrant agricultural employees; H.R. 5288, to provide for the establishment of a Council to be known as the National Citizens Council on Migratory Labor; H R. 5289, to provide for the registration of contractors of migrant agricultural workers; H.R. 5290, to amend the act of June 6, 1933, as amended, to authorize the Secretary of Labor to provide improved programs of recruitment, transportation, and distribution of agcultural workers in the United States; H.R. 5291, to amend section 13(c) of the Fair Labor Standards Act of 1938 with respect to the exemption of agricultural employees from the child labor provisions of such act; H.R. 5292, to amend the Fair Labor Standards Act, 1938, as amended, to provide for minimum wages for certain persons employed in agriculture; and H.R. 5293, to amend title V of the Social Security Act to further assist States in establishing and operating day-care facilities for the children of migrant agricultural workers.

These bills are similar to those introduced in the Senate by the Honorable HARRISON WILLIAMS, of New Jersey, and a number of his colleagues. Senator WILLIAMS has done magnificent work in this field and has been a leader in this crusade.

It is my hope that this vital legislation will be the subject of early hearings so that they may be enacted into law as promptly as possible.

Latin America's Future

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. FULBRIGHT. Mr. President, unless we recognize that the political spasms of Cuba are born of deep-seated convulsions generated by hunger, illiteracy, and lack of opportunity in Latin America, we run the very real risk of a virulent communism spreading to other areas in the Western Hemisphere.

Mr. A. N. Spanel, founder of International Latex Corp., a company that has spent great effort and time over the years in behalf of free world unity, accordingly gave widespread publication to an article first published in April 1956, and republished every year since then on the problems besetting the Western Hemisphere, and especially Latin America. Mr. Spanel's piece, in the wake of the events in Cuba today, is more timely than ever.

It is heartening and commendable that an American corporation can devote itself to the problems critical of our own hemisphere with such understanding.

Mr. President, I ask unanimous consent that the statement to which I refer be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LATIN AMERICA'S FUTURE

(By A. N. Spanel, chairman, International Latex Corp.)

Our time is destined to conflict. East versus the West in the war of ideas, if not of weapons.

One narrow segment of the globe from pole to pole is mankind's citadel of freedom in this struggle. This is the Western Hemisphere, itself the scene of evolution and change.

On the North American Continent the English-speaking peoples have developed mammoth industrialization while pursuing fruitful experiments in mass freedom with mass education. All this, with the great material wealth they have created spilling over into many lands, paints a bright, dynamic picture.

In middle America, South America, and the Caribbean island chain live over 170 million Latin American people who, in the main, produce agriculture and extract raw materials. And though the bright glow in North America partially obscures and masks it, a weakness in freedom's stronghold arises from poverty and disunity among the Latin American States.

Superindustrialization in the United States depends critically on foreign supplies of raw materials. World War II dramatically underlined this as one source after another fell to the enemy. The Paley Commission's report in 1951 officially publicized the fact that the tremendous expansion of the U.S. economy to meet freedom's needs has made this country a raw materials have-not nation.

As World War II also underscored, the Latin American countries control much of the mineral and other natural resources that the United States needs to supplement its own. This would appear to guarantee the stability of the Western Hemisphere.

The larger truth is far less happy, for the Latin American peoples are themselves have-nots of another kind. Though their countries possess enormous dormant wealth, underdevelopment deprives Latin Americans of almost everything that civilized human beings need and want.

HUNGRY PEOPLE TARGETS FOR COMMUNISTS

We are accustomed to think of underdeveloped areas as those lacking in big dams, modern highways, huge industries, a car in every garage, and a labor force with middle-class living standards. But Latin America's retardation means lack of all these and much, much more. United Nations reports reveal that the great majority of Latin Americans, in spite of their enormous natural resources, do not get enough good food. Their lot is malnutrition; they live on the edge of hunger. As in all great land areas, there are exceptions, but in the main, poverty, illiteracy, and lack of opportunity plague the people and their lands.

Within the high walls of the noisy xenophobia called nationalism, Latin America's 170 million people, divided into 20 national groups, have been for years fighting 20 separate battles to change their woeful standards of living.

These are uncoordinated, grim, diverse battles. The proud Latinos of many countries do not like to admit how desperate they are. Some progress has been made, to be sure. But it is pitiable in comparison to the need and shockingly inadequate in light of nature's rich endowment of this vast area.

Also, in many of these Latin American countries, dictatorships frustrate their peoples' hunger for democratic government; and for over a quarter of a century ultranationalist and leftwing partisans have been relentlessly spreading the lie to the masses that the giant Yanqui civilization of the north is their heartless exploiter and ruthless enemy.

Today the press exists in Latin America none too happily. Too often oppression, imprisonment, and exile threaten far too many who would speak the whole truth or wear the badge of democracy.

Thus endemic hunger, disease, illiteracy, stagnation, and the unholy twins of dictatorship and nationalism, grievously torment Latin America, while communism threatens from without.

RESTLESS MASSES

The weakness in freedom's arsenal, its Achilles' heel, is that: The region of the new world that is a critical raw materials reservoir for the West is itself a citadel of human misery.

Latin America is restless as its people hear of progress but do not themselves feel it. Yet the slogans and trick accusations against the United States employed by some Latin American politicians in order to justify their own glaring failures will solve precisely nothing. For while the entire Latin American situation in this atomic age is a highly complicated one, requiring full cooperation from the United States, this much is plain: If the Western Hemisphere is to remain the bulwark of freedom, Latin America's problems must be urgently reappraised. The hunger for democratic rule can be best met after hunger itself is satisfied. Above all, Latin Americans themselves must unite to forge solutions that are new, bold and workable.

In Latin America God and nature created an incredibly rich land. Long before the Spaniards discovered it, the Indian civilizations of the Incas and Mayans were well advanced in astronomy, architecture, military science, metallurgy, surgery, textiles, and art.

Even so, their society and their powerful military organization were destroyed when they encountered the unquenchable zeal of the Spaniards who understood so well the principle of "Divide and Conquer." In a comparatively short period of time a civilization of the Old World was superimposed on the new.

RIPE FOR ECONOMIC UNITY

Today, 18 of the 20 Latin American States are deeply rooted in the historic heritage of Spain. Brazil and Haiti also bear the stamp of strong colonizing nations—Portugal and France. Ironically enough, it would take but a fraction of that ancient zeal to unite these Latin American States economically. This could result in achieving the needed standard of living within the framework of a free, democratic society. In this process, the United States, with wisdom and statesmanship, could play the kind of role that would result in winning the lasting respect and enduring friendship of all these people.

Latin America from Mexico's northern border to the tip of South America possesses every natural resource for a living standard as high as technology and human effort can make it. It has minerals and petroleum in huge quantities, and the widest range of tropical and temperate agricultural products. With this there exists a vast hydroelectric potential to provide power for broad industrialization. As always, its people are its greatest asset: patient, peaceful, hardworking men and women, eager to improve their lot.

Yet from colonial times, Latin America has lived, for the most part, by exporting mined and grown raw materials to industrialized nations of the world while importing manufactured goods. Retarded and denied by this and other economic disparities, they have for a generation attempted to industrialize. But, unlike the United States, where no economic obstacles exist in commerce among the 48 States (now 50), we find in Latin America 20 national states, 20 separate countries representing 20 border barriers, 20 obstacles to commerce narrowing the markets and thereby impeding the industrial development of each one of them, and of all Latin America.

DIVIDED, THEREFORE WEAK

As Latin Americans struggle to build industry within 20 national areas, they condemn their factories to splintered fractional markets. This means their industries are chained to low production, low wages and high consumer prices—a pattern exactly the opposite of modern industry which grows because of growing living standards and the increased purchasing power of people. These restricted markets actually tend to restrict the standard of living for all of Latin America. The dead-hand parallel is to be found in Europe. But they have the remedy: the Common Market plan.

While the Latin American nations were still young colonies, imperial Spain actively discouraged interchange among them, to keep them manageably exploitable. Today, the Latinos themselves, with nationalistic barriers, are unconsciously preserving this devisive weakness.

There are those who say that Latin America needs a great flow of foreign capital such as developed the young United States. But it should be remembered that this capital was flowing into a young federation of States unhampered by economic barriers vis-a-vis each other. Their States being united, and not divided, the United States offered wide-open markets and growth potentials that Latin America will continue to lack so long as it remains carved up into 20 divided economic groups, with enormous dissimilarities and disparities among them.

Those who are critical of investors for neglecting investments in Latin America would do well to consider the facts revealed by recent United Nations studies:

1. Latin America is the only underdeveloped region where considerable U.S. private capital is gravitating into manufacturing, in spite of risks and barriers.

2. Over 90 percent of this capital has gone to the three nations having the largest market potentials: Argentina, Brazil, and Mexico. The other 17 countries are obliged to share less than 10 percent. (Is more proof needed?)

3. Very much larger sums for industry have flowed into industrialized Canada, not only because of its growing domestic purchasing power, but also because of tariff preferences, which encourage manufacturing in Canada for export to other British Commonwealth countries.

The lesson to us all is plain. Latin America, with all its enormous dormant wealth, suffers from the economic barriers of division. In contrast, the patriotic songs of the North American Revolution proclaimed, "United we stand, divided we fall." And so the young States become one federation, and in that bond they developed the strength to be and to become.

ABUNDANT HUMAN RESOURCES

Latin America today has its share of great men, creative, dedicated men of broad vision and leadership. They understand the complexities and the urgency of these problems. Also, in the United States as in Canada, there are men of dimension and horizons who realize their responsibilities in the vital interdependence that exists among the nations comprising the Western Hemisphere.

But this hard fact must be faced: The United States started on its road to abundance with a federation that abolished all internal economic barriers. Just as Simon Bolivar of old called for political emancipation for Latin America, so 20 modern "Simon Bolivars" have the opportunity today to lead 170 million Latin American people to an adequate and hopeful standard of living, through cooperation and unity, and ultimately economic federation itself.

In the Western Hemisphere, the Latin Americas are old in history, learning, and culture. They are young only in modern economic development as measured by the hemisphere standards of Canada and the United States. In their struggle to emerge as nations, political, economic, and military conflicts left their scars of oppression, violence, and war. In this process the United States played no small part—often good, frequently bad.

Prior to World War I, time stood still for the majority of people of Latin America. They suffered from an incredibly low standard of living. The underdevelopment was in glaring contrast to the vastness of their land area. The upheavals of two World Wars markedly changed the economic structures of most of the 20 nations comprising these fabulous lands; at last there was evidence of the beginnings of industry. Their cities had grown tremendously. Buenos Aires reached a population of 3 million; Rio de Janeiro, 2,500,000; Sao Paulo, 2,250,000; Santiago, 1,025,000; Havana, 825,000; Bogotá, 650,000. The great pride these republics take in their cities is well justified. For some of the most beautiful architecture in the entire Western Hemisphere is to be found there.

COMMUNISM THREATENS LATIN AMERICAN NATIONS

But these bright city lights should not blind us, for they mask the poverty, the struggle for existence, that is to be found in the hinterlands of many Latin republics. Indeed, in some of them the living standards and conditions of the burdened Indians have not changed in a century. Theirs is the treadmill struggle with want. And the Communists never fail to ply them with false promises and with conspiratorial cunning.

Nevertheless, economic progress was in the making. But it was a watered-down progress, grotesquely uneven and impeded by a lack of economic unity wherein 20 hemisphere nations erected trade barriers each against the other so that until this very day, with the possible exception of the coffee industry, there exists only economic disunity among the Latin American States.

The result was to be expected. After more than 40 years, we see in most of these countries living standards still so low as to border on hunger and want. Inevitably, democracy in Latin America is put on the defensive. Communism does not stand idly by; the Western Hemisphere is threatened.

Canada and the United States can no longer afford the luxuries of indifference or neglect toward the problem. For the alternatives are plain enough: Either we initiate economic development with cooperation among the nations of this hemisphere for the maintenance of their economic health, or, like Gulliver, be pinned down by Communist-Fascist chaos.

URGENT NEED FOR FOREIGN CAPITAL

Right now most Latin American countries desperately need foreign venture capital—the kind of capital that is willing to come with the knowledge that the Latin people want full employment and a growing standard of living. For it is a certainty that without these their countries will be condemned to creeping communism, fascism or socialism which feed on poverty, illiteracy and lack of opportunity—the chains which people everywhere want to lose.

The opportunities for industrialization and the development of resources in Latin America are enormous. For here live 170 million people (approximately the population of the United States) on lands that are indescribably rich in natural resources and potentials. Dr. Milton Eisenhower, in his Latin American tour, stated that the United States has its best markets and customers in these countries, not only now, but also in the foreseeable future.

With imaginative hemispheric planning, private venture capital, technology and initiative could be encouraged to flow into these lands.

As it is now, very real obstacles block the roads to an accelerated, privately financed economic development program for Latin America. For even the most enlightened investors point out that under the free enterprise system the basic reason for venture capital is the anticipated monetary reward; but that in the United States, taxation of corporations and individuals has grown to such burdensome dimensions as to encourage investors to play it safe with the blue-chip shares of the growing giants of North American industry.

Prospective investors, therefore, find three extremely difficult obstacles to hurdle: (1) the splintered fractional markets of the Latin countries themselves, born of outmoded border barriers; (2) increasing taxation in most of these countries; (3) the high taxation rate imposed by the U.S. Government on profits earned in Latin America—so high, in fact, as literally to penalize the pioneering investor for having the courage, the initiative and the money to venture into underdeveloped foreign fields.

These are the proportions of the dilemma. The responsibility for surmounting these obstacles falls on the shoulders of the industrial giants of North America no less than on the 20 Latin American countries. In this atomic age, in an age of idealogical pressure, it is certain that neither indifference, condescension, paternalism or the handouts of endless aid from the North—nor the false pride and the habitual unrealism that exists among the nations south of the United States, will solve the problems that demand solution now.

THE SOLUTION WE URGE

It is therefore our earnest recommendation that the U.S. Government take the initiative to call a meeting of all the Western Hemisphere nations (within the framework of the Organization of American States) to present the following reciprocal plan to the 20 countries of Latin America:

1. It is proposed that the 20 countries of Latin America enter into a mutual agreement to drop all existing trade barriers between them. In return for this agreement the United States will not only declare tax exempt all profits earned through new investments of its citizens in the aforesaid countries prior to the transfer of these profits to the United States (which is the usual procedure) but that when such profits are transferred they shall be taxed no higher than at capital gain rates. Furthermore, in order that the volume and scope of such investments may be realized, the United States will assume responsibility for effecting a minimum private investment of $1 billion a year for 5 years.

2. These U.S. commitments will hinge upon the Latin countries agreeing that, except for petroleum and minerals, the profits on such new private investments shall not be taxed more than 10 percent per annum, and that this maximum 10 percent rate shall apply either to corporations or to individuals, but not to both. In this way, North American investors would not have their incentives stifled by self-defeating, high Latin tax rates; at the same time, they would know in advance what to expect and thus act with confidence and promptness.

3. The 20 Latin American nations to agree to the free and unrestricted movement of both profits and capital from one country to another, in order to encourage the pioneering development, not just of some, but of all their countries.

Whatever costs the United States might incur as a consequence of reduced tax receipts would be inconsequential compared to the overwhelming financial burdens it would otherwise be forced to undertake in the future, in helping to snuff out the hemispheric fires of communism or fascism.

HUGE REWARDS FOR UNITED STATES AND DEMOCRACY

Collectively the proposal as a whole would provide a dynamic incentive for the populations of the 20 Latin American nations to commit their greatest exertions toward increasing the national product of their industrial economies and improving the social and political status of their separate societies. Democratic principles would take deeper root and flourish more luxuriantly.

Through providing the capital resources and technical assistance initially required, American industry would reap lasting material benefits which in turn would lead to a vast strengthening of mutual interest and respect between the United States and its great neighbors to the south.

But over and above these hemispheric considerations, there remains the overriding is-

sue of world freedom and democracy. The Western Hemisphere is the greatest reservoir of strength and nourishment for these principles. But the maintenance of this strength is contingent on the growing development, prosperity, and self-realization of the nations of Latin America, sparked by U.S. leadership. (This article first appeared in the press on April 15, 1956.)

(Presented as a public service by International Latex Corp., New York, N.Y.)

Statement of John E. Erickson, National Commander of Veterans of World War I of the U.S.A., Inc.

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. TEAGUE of Texas. Mr. Speaker, the national commander of the Veterans of World War I of the U.S.A. this morning presented their program for the 87th Congress to the Committee on Veterans' Affairs. Under unanimous consent, I include it as a part of my remarks:

STATEMENT OF JOHN E. ERICKSON, NATIONAL COMMANDER, VETERANS OF WORLD WAR I OF THE U.S.A., INC., BEFORE THE HOUSE COMMITTEE ON VETERANS' AFFAIRS

Congressman OLIN E. TEAGUE, chairman, and distinguished members of the committee, today I appear before you, as the national commander of the Veterans of World War I of the U.S.A., Inc., speaking for over 170,000 members, the fastest-growing veterans organization today.

On behalf of the Veterans of World War I of the U.S.A., I deeply appreciate this opportunity to appear before your distinguished committee for the purpose of presenting the 1961 program of the Veterans of World War I for legislation and economic welfare of World War I veterans and their dependents.

Mr. Chairman, to show you the sincerity and interest of our members in our program for the families of the veterans in World War I, as well as their beliefs of the entitlement of our program, at the last year's national convention at Miami, Fla., being a rather small organization compared with others, we expected approximately 5,600 registrations of members of our organization at the annual convention. However, to point out the sincerity of this veterans group, which is dedicated principally to veterans' affairs, we had over 8,600 registrations. It is our desire and purpose to be recognized as a veterans organization, dedicated to the welfare and to the benefits of veterans and their dependents everywhere. We are also willing to support programs for the welfare and security of the Nation. It is not our intention to be known as an organization that is spreading our activities to welfare progarms and money raising activities nor do we propose to tell the President, the distinguished Members of Congress, the official Cabinet members how they shall conduct the affairs of their respective offices for the good of the Nation.

Many members of our organization throughout the country would welcome an opportunity to come to Washington and appear with some of the national officers to present their legislative program. However, as we are an organization that discourages fund raising drives and with no financial assistance and foundations; regardless of the sincerity of the members, we felt it would work a hard financial burden on them, who are already suffering an economic hardship. With your kind permission, I would like to introduce my national officers and members of the interim legislative committee present, as well as members of the auxiliary.

Mr. Chairman and distinguished members of this committee, I would like to tell you that the membership of the Veterans of World War I is composed of veterans who have served as national, department, and post officers in the American Legion, Veterans of Foreign Wars, the Disabled American Veterans, as well as the rank and file members of these organizations. Thousands of these members have served with distinction overseas in the Armed Forces during time of war.

I respectfully call to the attention of this distinguished committee, at the close of World War I, no provision had been made to return these veterans to their normal civilian occupations. These men left their employment, their homes, and schools to serve their country. Upon their return, in many instances, they found their position had already been taken by others. In the absence of legislation comparable to the GI bill, these were then forced into the competitive field in their efforts to rehabilitate themselves. Today these men, who were boys in 1917 and 1918, are joined together to fulfill their obligation to the veterans and their dependents in working for benefits for the welfare, contentment, and security for the veteran.

As other patriotic groups, we are interested in the welfare of our Nation and the preservation of our democracy. Our organization certainly has proven its loyalty, devotion to country, as well as our continued interest in our preservation of democracy. If our advice is needed or solicited, we will be very cooperative to the proper authorities but, as a veterans organization, we feel that our principal purpose in this particular program is principally that of assistance to the veteran.

With your kind permission, I would like to tell you that I served overseas with the 82d All American Infantry Division, through three major offensives, liaison agent for brigade and regimental headquarters, and I was evacuated to the hospital in October 1918 and was discharged from the hospital and service in August 1919.

I have been a member of the Veterans of Foreign Wars for 37 years, serving through the chairs to and including department commander of Minnesota, two terms as a member of the national council of administration, and through my efforts, we organized the famous department rehabilitation welfare and service committee on which I was privileged to serve as chairman for 16 years. I am also a charter member of the American Legion and hold membership in post No. 62 in Minnesota. In the Veterans of World War I, I have served as commander of Mill City Barracks, commander of region No. 7 during which term of office I helped organize the departments of Iowa, North Dakota, and Nebraska. I am a past department commander of my State and a past member of the national legislative committee. In Springfield, Ill., I was elected national junior vice commander. Today, in the capacity of national commander, it is my proud privilege to present our program for 1961.

Moral strength and national willpowers are critical factors in the struggle to achieve a lasting world peace today, tomorrow, and especially the coming decade will demand the ultimate in determination and a new sense of national purpose to meet the challenges which do now and will continue to confront our free and open society.

As a nation, we now enjoy security, liberty, and the highest standards of living in the world. However, this efficient society of ours shows some indications of moral slackness and undue preoccupation with personal advancement. If we are to meet the problems and the challenges of the sixties, we must regenerate our sense of national purpose, rekindle our pride in national achievement. We, therefore, are eager and willing to accept the challenge which our President presented to the Nation. "Let the word go forth from this time and place, to friend and foe alike, that the torch has been passed to a new generation of Americans—born in this century, tempered by war, disciplined by hard and bitter peace, proud of our ancient heritage—and unwilling to witness or permit the slow undoing of those human rights to which this Nation has always been committed and to which we are committed today at home and around the world."

In presenting our program, we are in full accord with the thinking of this administration and that is to "boost the economy of this country." It is our honest and sincere belief that the enactment of a distinct and separate pension for the remaining veterans of World War I would do much to help solve part of the economic problems facing the Nation.

Our program is one pertaining to national security and other legislation to benefit the World War I veterans and their dependents.

I am happy to inform you that our organization has tried to follow the many suggestions that have been given by Members of Congress that have been visited by representatives of this organization during the current session.

H.R. 3745 was introduced on February 2, 1961 by Congressman WINFIELD K. DENTON from Indiana. We are confident that we have used and followed the adivce obtained from these well informed and most helpful sources, the Members of Congress, in having this bill referred to the Committee on Veterans' Affairs. This bill asks for an increase over the old pension provision of $78.75 and it does contain income limitations, which we feel are in keeping with the economic condition confronting our country. It also includes the eligibility or period of service which must be performed for such payment. In defining or interpreting income for limitation purposes, earned income only should be computed. We believe it is contrary to sound economic doctrine in a free enterprise system to penalize a person who has, by sacrifice and thrift, managed to build up an annuity or retirement program.

H.R. 4611 introduced by Congressman ROLAND V. LIBONATI from Illinois, a distinguished member of this committee, asking for a 30-percent increase for the widow is in keeping with thinking of the present administration and has the full support of the Veterans of World War I.

H.R. 4918 introduced by Congressman ARNOLD OLSEN from Montana asks for a 10-percent increase for the disabled war service veteran. We realize that the distinguished chairman of this committee has introduced two bills, H.R. 4010 and H.R. 4011, asking for 5 and 7 percent increase; this, we feel, is not sufficient for these veterans who have given so much. In the past, the Veterans' Administration has not given or recommended less than 10 percent increase. We feel that this bill should receive your sincere and thoughtful consideration.

I would like to call your attention to the two bills, H.R. 4583 and H.R. 4584, introduced by a gracious member of this committee, Congresswoman JULIA BUTLER HANSEN from the State of Washington. These two bills ask that legislation be passed to provide medical treatment and outpatient medical services to all World War I veterans as granted to service connected veterans of World War I; also that the same considera-

tion be given the widow of deceased, honorably discharged veterans of World War I, providing they come under the provisions of the act. This legislation, we believe, is in keeping with the farewell address by the first President of the United States, George Washington. "It must also be a comfortless reflection to any man that he may have contributed to securing the rights of his country at the risk of his life and the ruin of his fortune, there would be no provision made to prevent himself from sinking into indigence and wretchedness in his old age."

H.R. 4685 introduced by Congressman GEORGE P. MILLER from California, a member of this organization, is a bill that should be given thoughtful consideration as similar language is mentioned in the Democratic Platform. "The Rights of Men—Under Health." "We shall provide medical care for the aged as part of the time tested Social Security Insurance System. We reject any proposal which would require such citizens to submit to the indignity of a means test—a paupers' oath." I am sure that you and I agree that no veteran or his widow should have to submit to the indignity of such a test.

Congressman FRED MARSHALL, from my State of Minnesota, has introduced H.R. 4450 which asks that sufficient appropriations be granted to the Veterans' Administration to allow for remodeling, installing of modern equipment, and supplying of personnel adequately to operate the Veterans' Administration hospitals, domiciliaries, outpatient, and dispensary facilities. I would be remiss this morning if I did not compliment this committee for instigating a program in which a huge sum of money is allocated over a 10-year period to carry out this program. It is certainly commendable that this committee would advocate such a constructive program; we are indeed proud of your foresight and activities in allocating these funds. However, we feel that this might be a good time to allocate more funds to step up the program at this particular time.

H.R. 4769, introduced by Congressman JAMES A. BURKE from Massachusetts, asks that the present ceiling of 125,000 beds be increased to commensurate with the veterans' population requirement of this country. As I stated previously, perhaps moneys could be allocated at this time for this purpose. I am sure you are aware that this condition increases daily and that you will give every consideration to Mr. BURKE's bill.

At this time I want to go on record as stating that it is our belief that the Veterans' Administration is doing a splendid job in carrying out the present law. We commend the present and past Veterans' Administrator and his staff and we recognize that they are doing the best possible job in operating with the funds, facilities, and staff under the present budgetary restrictions.

As a member of our organization, and especially myself who served with Alvin C. York, who received many decorations including the Congressional Medal of Honor, I hope that legislation will be passed by this Congress. This perhaps is just one example of one of the many hardships that are faced by our highest decorated heroes and I feel that this is regrettable and that certainly some legislation should be approved to compensate veterans who have won this highest award. You are to be complimented, Mr. Chairman, in asking in your bill that a pension of $100 a month be provede to all Congressional Medal of Honor veterans. On January 3, 1961, Congressman JOE L. EVINS from Tennessee introduced H.R. 1305 which asks that Alvin C. York should be relieved from all liability to the United States arising under the International Revenue Code of 1939 for the calendar year 1942 and 1943. We ask for your favorable consideration of this bill. We also feel that a bill should be introduced to take care of such a case as Mr. York's for medical treatment and nursing attendance at his home given in dire circumstances for these Medal of Honor heroes. It is always well to recognize the services of great military men.

A concurrent resolution has been introduced by a member of this organization by Congressman THOMAS J. LANE from Massachusetts and expressing the the sense of the Congress with respect to effective methods of combating the idealogical advances of world communism, which I am sure you will be interested in.

H.R. 5089, introduced by Congressman A. S. HERLONG, JR. from Florida, asks that a new subsection be inserted immediately below section 105(b), section 105(c). An injury or disease incurred during active military, naval, or air service will be presumed to have been incurred in line of duty and not the result of the veterans' own misconduct in the absence of a certification to the contrary by the service department concerned.

I believe that this statement of former President Herbert Hoover should be submitted in requesting your consideration for our legislative program for 1961: "We believe that military service is extraordinary service which transcends the normal duties of citizenship and consequently entitles veterans with honorable service to special consideration." I also believe that it is good to remind this committee that the Democratic platform, "the Right of Man," states: Veterans of World War I whose Federal benefits have not matched those of veterans of subsequent service, will receive the special attention of the Democratic Party looking toward equitable adjustments. As national commander of the Veterans of World War I, I endorse the policies of this administration and say to you I am sure that not one of you on this distinguished committee believe in the statement of General Bradley: "Military service in time of war or peace should be treated as discharging an obligation of citizenship and not in itself a basis for future Government benefits."

In closing, the figures that I am about to give are approximate. One hundred and five thousand veterans of World War I died last year. The average age of the veteran of World War I is 67.9. The limitations in H.R. 3745 will reduce the cost of a pension program for veterans of World War I. Veterans living away from the Veterans' Administration facilities will use their pension to pay for doctors and medical services. Indigent veterans, like all others, must be taken care of. Time and attrition will reduce the cost for a separate and distinct pension for the veteran of World War I. Not only will the veteran benefit, his community, his State, and the Nation will benefit by the added purchasing powers granted under this act and, ladies and gentlemen, I am sure this money will be spent in the United States of America. Thousands of the older veterans who have been forced to retire because of age and who are seeking employment again will find retirement a little better and it certainly will give him a little more security and livelihood, all in keeping with the policy of this administration to "boost the economy." May I remind you again that this organization is one dedicated to the veteran of World War I, his widow and children, always ready and willing to support a program for the welfare and security of the Nation.

At the hearing of our legislative program, which I understand will be in a very short time, we will try to be in a position to present to this honorable committee approximately the cost of the program and such data that you might request from us.

In behalf of the Veterans of World War I and myself, I want to express to you the sincere appreciation for the wonderful work this committee has done for the veterans of all wars.

In closing, Chairman OLIN E. TEAGUE and the distinguished members of this committee, may I again thank you for giving me this opportunity to present our veterans program for the Veterans of World War I for 1961. Thank you very much.

Wisconsin Courts

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. WILEY. Mr. President, the question of timely justice is very important to the survival and success of our democratic system. For years our courts have been unable to cope with the increasing burden of cases coming before them.

Those suffering from the delay of justice are not only the people directly involved in the case—but the community at large.

The recent action of the Senate Judiciary Committee and the Senate to approve a large group of new judgeships is designed to help resolve the problem of court congestion. While I believe that the creation of 73 new judgeships was a worthwhile improvement—I fear that the hasty approval of this measure somehow smacks of political and partisan maneuvering.

I believe that partisan politics should be taken out of our judicial system. In this regard, I would like to emphasize here the fact that in my own State of Wisconsin—judicial appointments are completely nonpartisan.

In fact, I am proud to report that beginning with January 1, 1962, the State of Wisconsin will completely reorganize its court system.

This reform follows many years of intensive study and debate. It demonstrates that if the parties can rise above politics—they can provide the people with more effective justice. I should like to have printed in the Appendix of the RECORD, a brief article describing the Wisconsin courts which appeared in the Milwaukee Reader, dated March 6–12, 1961.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WISCONSIN COURTS

(By Peter J. McCormick)

Following years of intensive study and debate, Wisconsin's court system will be substantially reorganized, effective January 1, 1962, in accordance with the Court Reorganization Act passed by the State legislature in 1959.

The major objectives of this reorganization are to eliminate unnecessary overlapping of jurisdictions, to clarify and simplify judicial procedures, and to more fully utilize judicial manpower and skills.

The Wisconsin constitution vests the State's judicial power in a supreme court, circuit courts, probate courts (county courts), and in justices of the peace. It

further authorizes the legislature to create municipal and other inferior courts, as well as to confer criminal and civil jurisdiction upon the county courts. Over the years, the legislature has created a large number of special courts to deal with specific matters. In a number of instances, these courts (while similar in name) vary considerably in their jurisdictions and procedures, e.g., municipal courts. The Reorganization Act abolishes these special courts and, for the most part, transfers their jurisdictions to the county courts. The need for specialization in large urban areas is recognized by establishing branch courts of special types, rather than by distinct and separate courts. If a branch court is created for certain types of cases, e.g., traffic, all cases of this type will be initially assigned to this branch but can be reassigned to another branch if the court calendar is overloaded, or for a number of other valid reasons. Each branch will be required, when necessary, to handle types of cases other than its particular specialty. In addition to this built-in flexibility, the act strengthens and streamlines judicial administration, both on the State and local level. It provides for and expedites the temporary reassignment of judges to meet special situations.

Under the Court Reorganization Act, Wisconsin's court system will consist of the following:

SUPREME COURT—CONSISTING OF SEVEN JUSTICES

The chief justice is the oldest in point of service on this bench. This court has original jurisdiction in a limited number of cases of statewide concern. It has appellate jurisdiction in all other cases. It is the final authority on the State constitution, and the highest court for any action begun in State courts, except when a Federal question is raised and on an appeal is accepted by the U.S. Supreme Court.

CIRCUIT COURTS

There are 25 judicial circuits in Wisconsin, each comprising one or more counties. The jurisdiction of these courts will not be substantially changed in the reorganization. As at present, they will have original jurisdiction in all cases—civil and criminal—including concurrent jurisdiction in cases which may be brought to inferior courts. The act does provide for additional branches of these courts in four urban counties. Milwaukee County will have 13—2 more than at present. These two will deal primarily with criminal matters, and to do this the two existing municipal courts will be transfered over and made branches of the circuit court.

COUNTY COURTS

County courts have had jurisdiction over all probate matters and, in most counties over juvenile matters. The Court Reorganization Act expands their jurisdiction to include matters now handled by a number of special courts. In Milwaukee County, the existing county, district, civil, and children's courts will become branches of a new county court with 11 branches. County courts will have concurrent jurisdiction with circuit courts in civil and criminal matters. However, the circuit court will retain exclusive jurisdiction over civil cases, involving damage suits of more than $25,000, and, over serious criminal cases. Appeals from the county court will go to the circuit court.

JUSTICE COURTS AND MUNICIPAL JUSTICE OF THE PEACE COURTS

Justice courts are presided over by justices of the peace. They are not courts of record, and their procedures are quite informal. The Court Reorganization Act limits their civil and criminal jurisdiction. Police justice courts are similar to justice courts, and exist in a number of cities and villages, and are presided over by municipal justices of the peace. They conduct preliminary examinations, have the same jurisdiction as other justice courts, and exclusive jurisdiction of violations of city or village ordinances. The Reorganization Act requires that all new municipal justices of the peace be attorneys and be paid a salary rather than fees.

All Wisconsin judges are elected on a nonpartisan basis in spring elections. Supreme Court justices are elected by statewide vote for 10-year terms; circuit and county court judges are elected for 6-year terms by the voters of their districts. Justices of the peace are elected for 2-year terms.

In the March 7 primary this year, voters will nominate the two candidates to run in the April 4 election for each of these positions: supreme court and the children's court branch and traffic and misdemeanor branch of Milwaukee's new county court.

The April 4 election will include the final vote for these three judgeships and, in addition, voters will choose judges for five other branches of Milwaukee's County Court; and for three branches of the Milwaukee County circuit court in which there are no primary contests.

Clichés of Socialism—No. 2

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. ALGER. Mr. Speaker, I am pleased to insert a second in the series, "Clichés of Socialism," published by the Foundation for Economic Education, Inc.

CLICHÉS OF SOCIALISM—No. 2

Of some 45 professors attending the dinner meeting at which I spoke, the 2 or 3 who might have agreed with the free exchange, private property, limited government philosophy kept discreetly silent. All of the questioning, particularly by one professor of economics, was deliberately antagonistic—not at all in the spirit of inquiry.

Following this meeting, I went to an auditorium to address the student forum. Some of the professors also attended.

Upon the conclusion of my address, one student said, "As I understand the extent to which you would limit government, there would be no place for social security." Then he asked, "Wouldn't that bring a great hardship to many people?"

"Let me answer your question," I replied, "by going back to October 1948," and I told him the following story:

"Just a month before the Truman-Dewey election, I asked a chance acquaintance if he thought the rapid trend toward socialism would abate, should the Republicans win.

"Rapid trend toward socialism? What do you mean by rapid trend toward socialism?"

I named a dozen items, including compulsory social security.

"Do you mean that you do not favor social security? What would you do, let 'em starve?"

"You are as old as I, are you not, Mr. G.?"

Being considerably older, he replied in the affirmative.

"Then you were around when Mr. Roosevelt took office?"

"Yes; I was."

"Did we have any compulsory social security previous to 1933?"

"No; I guess not."

"Tell me, did you ever know of anyone in America who starved prior to that date?"

Mr. G. acknowledged that he had never heard of anyone in America who had starved prior to F.D.R.

That was the end of my story to the student. But the professor of economics, who had led the antagonistic questioning at the dinner session, could not let this pass. Shouted he, "I have seen a dozen starve."

"Do you mean to tell me, professor, that you actually stood by and watched a human being starve to death?"

The professor, of course, had never witnessed a human being starve to death, and the students were well aware of the fact. Even a gangster, who would murder a competitor, could not stand by and watch a kitten, let alone a human being, starve to death.

Proposed Amendments to Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Mr. Paul S. Hudgins, attorney at law, Bluefield, W. Va., during the hearings before the Senate Subcommittee on Labor with reference to proposed amendments to the Fair Labor Standards Act.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF BLUEFIELD SANITARIUM TO THE SENATE SUBCOMMITTEE ON LABOR WITH REFERENCE TO PROPOSED AMENDMENTS TO THE FAIR LABOR STANDARDS ACT OF 1938 (S. 895)

Bluefield Sanitarium, a general hospital, of Bluefield, W. Va., located in a depressed area, requests consideration of the following facts in connection with the proposed amendments to the Fair Labor Standards Act of 1938 (S. 895).

There are 890 proprietary hospitals in the United States. Of these, only approximately 30, including the Bluefield Sanitarium, will be affected by this bill.

It is respectfully submitted that unless hospitals are exempt from this bill, health and hospital services to the people served by these 30 hospitals will be seriously curtailed.

While figures for all of the 30 hospitals are not available, those for the Bluefield Sanitarium will serve to illustrate what the plight of those 30 hospitals will be.

The Bluefield Sanitarium is an unusual hospital for a city the size of Bluefield, W. Va. Having 211 beds and 26 bassinets, its gross income is more than $1 million annually. It is a proprietary hospital. Primarily due to the economic condition in this depressed area, the hospital suffered a loss of over $10,000 in 1960. Conditions causing this loss have worsened, so it is anticipated there will be a much larger loss in 1961.

Charts showing the effect of including hospitals in the proposed amendments are attached. Among other things, it will be seen from these charts that to include proprietary hospitals in the coverage would affect approximately only 30 hospitals in the United States. Bluefield Sanitarium has 257 employees, who will be affected. It is estimated that the maximum number of employees affected in each of these 30 hos-

pitals is 300. Thus, not more than 9,000 people throughout the United States would have forced increases in their wages through this legislation. In contrast to this number of affected employees throughout the entire United States, it will be seen that the Bluefield Sanitarium alone admitted over 9,000 patients to the hospital in 1960 and, in addition, had over 70,000 outpatient visits in its large, and well staffed department.

Unless hospitals are eliminated (as hotels and other facilities are eliminated) the direct wage cost increase to Bluefield Sanitarium the first year will be over $145,000. Even if the 1960 loss does not increase, the total loss in the first year under the amendment would be over $155,000.

Much more serious would be the loss after the full $1.25 per hour goes into effect. At that time the annual additional direct wage cost would be over $290,000. If the loss sustained in 1960 does not increase, this would mean that under the proposed amendment, Bluefield Sanitarium would be operating at an annual loss of over $300,000.

The above figures do not include the extra cost involved in paying premium overtime rates and obviously the overtime cost would increase these loss figures.

It is apparent that no hospital can continue to operate and serve the public under such a staggering annual loss. There would be several alternatives.

First, the hospital could attempt to continue its operations by making drastic reductions in its service, which means materially reducing the number of persons employed.

The second alternative is to close the hospital.

The third alternative is to attempt to find some public group that would purchase and operate the hospital. This appears unlikely, due to the previous year's loss, and the uncertain future of this depressed area.

A fourth alternative is so impractical that it deserves no real consideration. To increase charges to meet an annual loss of over $300,000, is out of the question. Even in boom times in a growing section, this would be difficult. Under present conditions, in this depressed area, it is impossible.

In view of these matters it is respectfully requested that the same exceptions which are properly applicable to hotels and restaurants, motion picture theaters and similar services should also apply to hospitals. It is assumed that Congress has carefully considered the economics involved in attempting to render services of the type supplied by hotels and restaurants and has determined that an exemption of such facilities is essential if the public is to have such services. More vital to the public is the need of a hospital of the type operated by Bluefield Sanitarium.

The concern of Congress with appropriate medical service has been demonstrated by other bills now before this Congress. To curtail or eliminate hospital service by imposing costs which are impossible to meet would be directly contrary to the need for added medical services.

It is believed that this committee and this Congress would not want to discriminate against patients in these 30 hospitals. In the Bluefield area alone (approximately 200,000 people) the bill, as presently drawn, might force the closing of a hospital that admits over 9,000 patients and has more than 70,000 outpatient visits annually.

The Secretary of Labor's position in presenting this bill indicates that it would exempt nonprofit organizations. On that basis the following facts are of interest:

According to the latest statistics there are 5,364 (short term stay) general hospitals in the United States, containing 619,877 beds. Eight hundred and ninety are proprietary or profit hospitals containing 36,210 beds, or 5.8 percent of the total. Assuming that each hospital with 200 or more beds would exceed $1 million a year in gross business, there are only 12 proprietary hospitals with 200 or more beds in the United States which would be affected. These 12 hospitals have 3,327 beds, or five-tenths of 1 percent of all beds in general hospitals. Bluefield Sanitarium is one of these 12 hospitals and the only one of this category in West Virginia.

In addition, there are a few proprietary hospitals of less than 200 beds which are presumed to gross more than $1 million a year. The total number of such proprietary hospitals in the United States grossing $1 million a year or more (regardless of the number of beds), according to the most careful estimate we can make, would not exceed 30.

Approximately 70 percent of Bluefield Sanitarium's total cost is in payroll expense, which is near the average for the United States. It remains open 24 hours a day. Under the proposed law, increases in salaries, additional cost for overtime and being on call, would increase Bluefield Sanitarium's total payroll expense more than 38 percent.

In the final 3 months of 1960 the Bluefield Sanitarium Hospital expenses exceeded the income by more than $25,000. If it had been able to collect all the charges made to patients during this period, it would have operated at a small profit. It is located in a distressed area where there is a great deal of unemployment which accounts for a sharp reduction in the percentage of collections.

Bluefield Sanitarium has never turned down an emergency case which required hospitalization, regardless of the patient's ability to pay.

The act would penalize and discriminate against approximately 30 hospitals throughout the United States, making them subject to forced wage increases while the remaining 5,334 hospitals continue to operate without wage increases.

Seventy percent of a hospital's total cost is payroll expense. This is, we believe, a larger percentage than any other business now covered by minimum wage or to be covered under the proposed amendment. Therefore, an overall increase in hospital wages would result in a larger percentage increase in total expenses than any other business now covered or to be covered under the act. This means that a hospital would have to raise its prices more than any other industry.

Hospitals are receiving criticism from the public, including many unions, on constantly increasing rates. Blue Cross plans are under fire in numerous States for their requests for permission to increase rates to their subscribers brought on by increasing hospital costs. Increasing wages would only add to these problems.

It is our opinion that hospitals should not be classed with other covered businesses when considering the extension of the wage-hour law, particularly since only one-half of 1 percent of the hospitals would be covered. Certainly, no other business would give a customer every available service it had to offer for an indefinite period, knowing the customer would never be able to pay anything on the bill.

This hospital is located in a depressed area with a large unemployed population. It seems that any law which would increase the cost to any patients, and particularly those in depressed areas, is unreasonable and discriminates against the very people the Federal Government is trying to help. The continued operation of Bluefield Sanitarium, which has provided care in the Bluefield area since 1902, would be extremely doubtful under the load of this increased cost, and it is assumed that the other 30 hospitals are faced with the same problem.

Surely the number of proprietary hospitals in the United States and their employees which will probably not exceed 9,000 newly covered employees, are not of sufficient number to justify including these few hospitals and employees in the proposed amendment to the wage-hour bill. It would be a terrible blow to the sick people who are affected and particularly to those who live in a depressed area such as now exists in southern West Virginia and southwest Virginia.

As suggested by the Secretary of Labor's statement, the exemption of nonprofit organizations, including hospitals, is essential. It is apparent that the same reasons exist for exempting proprietary hospitals. Exempting all hospitals, as has been seen, actually prevents discrimination against the 30 hospitals which would be affected by this bill. Putting them in the category of hotels, and other businesses serving the public, by exempting all hospitals, will permit these 30 hospitals to continue to serve the people in their areas at minimum medical costs.

It is urgently requested that hospitals be eliminated from the proposed amendments to the Fair Labor Standards Act of 1938 (S. 895).

CHART 1

This chart is a part of a statement of Bluefield Sanitarium to the Senate Labor and Public Welfare Committee.

This chart shows the actual loss by Bluefield Sanitarium in 1960, due to depressed economic conditions in a depressed area, and the projected loss unless hospitals are exempted from the amendments to the Fair Labor Standards Act of 1938 (S. 895).

Wages	Additional direct wage costs	Additional miscellaneous costs (social security, unemployment, gross sales, etc., taxes)	Annual loss
(1)	(2)	(3)	(4)
1960			$10,547.27
At $1 per hour	$145,161.84	$11,146.44	166,855.55
At $1.25 per hour	290,867.28	22,251.36	323,665.91

I. The above loss figures include, in the projected losses, the same loss sustained in 1960 ($10,547.27). However, this basic loss will probably be greater because of declining economic conditions in this depressed area.

II. The additional costs (col. 3) are minimum because they do not include premium wages for overtime and the necessary increases to employees who are now paid $1.25 per hour and up.

CHART 2.—*1960 statistics of Bluefield Sanitarium*

Annual payroll	$936,356.64
Hospital admissions (does not include 1,084 births)	9,447
Hospital days	68,245
Outpatient visits	70,372
Estimated population in area served	200,000

CHART 3.—*Chart showing number of persons affected unless hospitals are exempted from the Fair Labor Standards Act of 1938 (S. 895)*

1. Number of patients admitted to Bluefield Sanitarium in 1960	9,447
2. Number of outpatient visits to Bluefield Sanitarium in 1960	70,372
3. Proprietary hospitals in United States with gross income of $1 million (estimated)	30
4. Number of patients admitted annually to 30 proprietary hospitals (estimate based upon Bluefield Sanitarium experience)	173,000
5. Number of employees affected by wage-hour increase (average 300 per hospital, estimated—Bluefield Sanitarium with 211 beds has 257. Only 12 of the 30 hospitals have more than 200 beds)	9,000

NOTE.—The above figures (except for Bluefield Sanitarium) do not include outpatients treated by these hospitals.

Administrative Conservation Policy and Public Land Moratorium

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. ASPINALL. Mr. Speaker, for the information of Members and under leave to extend my remarks, I set forth below a new set of land conservation administrative policies in the Department of Interior with respect to land classifications and dispositions by the Bureau of Land Management which were announced recently by Secretary of the Interior Stewart L. Udall. Immediately following this departmental administrative policy statement there is set forth the text of an 18-month moratorium that was simultaneously announced by Secretary Udall on most types of nonmineral applications and petitions for public lands.

I am in general agreement with the administrative policies enunciated and hope that the moratorium can be lifted before the expiration of the 18-month period that has been estimated by the Department of the Interior as the time within which pending applications may be acted upon. In this connection, Mr. Speaker, I am pleased to advise the Members that the Secretary of the Interior has informed me that it is the Department's intention to lift the effect of the moratorium as opportunity permits in areas, one by one, as the problems are overcome or as remedial legislation may become available.

The documents referred to are:

LAND CONSERVATION POLICIES OF THE DEPARTMENT OF THE INTERIOR WITH RESPECT TO LAND CLASSIFICATIONS AND DISPOSITIONS BY THE BUREAU OF LAND MANAGEMENT

1. The Government must receive a full return for its property in terms of money or other values. No party to a transaction with the Government should receive a windfall. To the extent that the law permits and in the absence of a binding contract, (a) no transaction will be entered into by the Bureau of Land Management where it is not clearly shown by competent evidence that the Government will receive full value and (b) no transaction will be consummated where, in the course of processing, evidence develops that the Government will not receive full value.

2. Private exchanges will not be entertained or consummated except where it is shown that there are compelling reasons to acquire the offered lands to augment long-range Federal resource management programs. Leases, sales or other dispositions of public lands will not be made unless the lease or disposition will serve a sound public purpose, including the satisfaction of bona fide needs of the general economy and improving the administration of the public lands. Leases, sales and other dispositions of public lands will not be made when they would encourage or promote speculation in public lands.

3. Public lands which are marginal for agriculture or which are more valuable for uses other than agriculture or which under national agriculture policy would not be found proper to be reduced to cultivation will not be classified for entry under the public land agricultural development laws.

4. Lands which cannot properly be developed under existing public land laws, taking into consideration such things as full return for the lands, requirements of State, county and other local agencies, and the needs of the local economy will, wherever feasible, be retained in Federal ownership, pending the enactment of appropriate legislation.

5. The Director, Bureau of Land Management, will establish procedures which will insure the full implementation of these anti-speculation policies. Among other things, he will institute procedures to determine, at the time or times just prior to the actions whereby commitments would be made, that positive and convincing evidence exists that the Government will receive full value from the transaction under consideration and that discretionary actions leading to disposition or lease of public lands made pursuant to the public land laws will meet the test of serving the public interest.

MORATORIUM ON APPLICATION AND PETITIONS FOR PUBLIC LANDS

Whereas the public lands administered by the Bureau of Land Management constitute an important segment of the economy of the West and of Alaska and their proper and efficient administration is important to the expansion of that economy; and

Whereas the privilege of filing of applications and petitions under the public land laws has been abused by unethical land locators and promoters at the cost of millions of dollars to the public; and

Whereas the unrestricted privilege of filing of applications has seriously impeded both the orderly and expeditious disposal of public lands suitable therefor to States, local governmental units, private organizations, and individuals and the orderly and efficient management of those lands best suited for continued Federal administration in the public interest; and

Whereas the processing applications and petitions under current procedure is wasteful of public funds; and

Whereas the Executive and the Congress are considering legislation to promote the efficient management of the public lands, therefore—

1. Pursuant to the authority granted to the Secretary of the Interior by sections 453 and 2478 of the Revised Statutes (43 U.S.C. 2 and 1201), as amended, and otherwise, it is hereby directed that, until September 1, 1962, all petitions for classification and applications for rights and privileges described in paragraph 2 hereof, submitted after the date this order is published in the Federal Register, except those submitted by or for States and local governments and by or for holders of scrip rights, will not be accepted, will not be considered as filed, and will be returned to the petitioner or applicant, together with all documents and remittance submitted therewith, unless or until the lands described in such petitions or applications have first been classified by the authorized officer and opened to such petitions or applications.

2. The petitions and applications referred to in paragraph 1 of this order are those which require for their allowance classification and opening or offer under or pursuant to sections 7, 8, or 14 of the act of June 28, 1934 (48 Stat. 1272; 43 U.S.C. 315f, 315g, and 1171), as amended, or the act of June 1, 1938 (52 Stat. 609; 43 U.S.C. 682a–e), as amended, or the act of June 14, 1926 (44 Stat. 741; 43 U.S.C. 869 et seq.), as amended.

3. Pursuant to the authority cited in paragraph 1 of this order, it is further directed that all petitions and applications of the types referred to in paragraph 2 of this order and pending in the various land offices of the Bureau of Land Management as of the date this order is published in the Federal Register will, as promptly as possible, be considered on their merits by the appropriate land office manager. Where such manager approves such petition or application, the lands will be opened or offered at the earliest possible time. Where such manager rejects such petition or application for reasons involving the proper classification of lands, the decision of the manager will be sustained by the Director, Bureau of Land Management, on appeal if the appellant does not submit to the Director positive and substantial evidence that the classification is in error. Where the Director sustains decision of a manager on the grounds that the appellant had not submitted positive and substantial evidence that the classification is in error, the decision of the Director will be sustained by the Secretary of the Interior if he finds that the appellant had not submitted to the Director, in his appeal to that official, positive and substantial evidence that the classification is in error.

STEWART L. UDALL,
Secretary of the Interior.

Strike of Flight Engineers

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. BRIDGES. Mr. President, I recently noted in the February 22 edition of the Fort Lauderdale, Fla., News, an editorial written by editor and publisher Jack W. Gore regarding the recent flight engineers' strike.

I believe this article is worthy of widespread distribution; and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIDICULOUS THAT 3,500 FLIGHT ENGINEERS COULD CRIPPLE AIRLINE INDUSTRY

Once again the people of this Nation are seeing a perfect example of how one small labor union can cripple our economy and exert influence far beyond the scope it should have.

As this is written virtually the entire airline industry in this country has ground to a halt because some 3,500 flight engineers don't like a decision that has been handed down by a Government agency and are refusing to work until they can have things more their own way.

As a result, 81,000 other airline employes have already been laid off, thousands of people are being seriously inconvenienced, and millions of dollars a day are being lost by businessmen and others who are dependent upon the maintenance of adequate air transportation service.

People might better understand this strike if it involved a dispute between the flight engineers and the airlines concerned. But the flight engineers are not at odds with the airlines to any great extent. Their primary objection seems to be they don't want to be forced into another, bigger union where they feel they might be swallowed up and lose their entity.

While this may be important to them, is it of great enough concern to deprive the whole Nation of vital air transportation at one of the busiest travel times of the year? Does it warrant depriving thousands of other innocent people of their jobs and causing untold financial loss and inconvenience to millions of others?

We don't think so. As badly aggrieved as the flight engineers might feel, we do not think this gives them any moral right to punish the public because they haven't yet been able to get what they want.

Here in Florida the effects of a prolonged airline shutdown can be disastrous at this particular time. Only in recent days has our seasonal business begun to hit a peak tempo and we are going to need all the business we can get in the remaining weeks of the season to have this year measure up to previous years.

Should this airline shutdown continue long enough to seriously affect travel to and from this area it will add up to an economic setback that will be felt for months to come.

We have never been one to argue for taking away from labor unions their right to strike when they have exhausted all other remedies. But the strike weapon, particularly in essential industries, is not a weapon that should be used indiscriminately or just for the sake of a union flaunting its power.

In this airline dispute it seems to us that the flight engineers are only hurting their own cause by forcing the public to become any unwilling party to their troubles. There is nothing that will antagonize people faster or more effectively than depriving them of an essential service when they need it the most and, in this particular instance, that antagonism is going to be aimed not at the airlines but at the flight engineers who have brought on this airline shutdown.

A long shutdown is certain to bring a renewed public clamor for legislation to outlaw strikes in essential industries such as transportation and public utilities. In the past few years there has been a definite upturn in public sentiment in favor of such legislation, and the more people are inconvenienced and victimized by such strikes the more pressure they are going to exert on the Congress to take action to ban such strikes.

Organized labor in this Nation has come a long way since the days when it had to fight long and bitterly for any kind of recognition. But with recognition and power also comes a certain amount of responsibility toward the public, and the best and the quickest way for labor unions to lose their power and their recognition is to ignore this responsibility.

People are seldom inclined to take sides in labor disputes until they happen to get caught right in the middle of one. Then their apathy and disinterest can vanish in quick order and they can be mighty demanding in their appeals to their elected officials to put an end to strikes that are against the public interest.

There is no question in this airline shutdown about who is being made the primary victim of the dispute. It is the traveling public and those who are dependent upon good airline service for their livelihood.

This includes millions of our people and it stands to reason that these millions of people are not going to be inconvenienced and hurt for very long without demanding a quick end to such nonsense.

It is ridiculous to think that in a nation this big some 3,500 individuals possess the power to bring a giant industry like our airline industry almost to a complete halt. If they persist in wielding this power they are going to lose it for sure and the mourners outside the ranks of organized labor are going to be few and far between.

Pro-Belgian Tag?—He'll Accept It

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. DERWINSKI. Mr. Speaker, with the spotlight of world attention now focused on the Congo and the abuse that has been heaped on the Belgians by Soviet Russia and all its stooges, I felt that the column by William S. White, which appeared in the Chicago Sun-Times on February 25, 1961, merits attention:

PRO-BELGIAN TAG?—HE'LL ACCEPT IT

(By William S. White)

WASHINGTON.—Sometimes a columnist who utters the smallest "yes, but" in all the current evangelical clamor against any and all forms of colonialism—even where the clear alternative may be Communist chaos—finds himself put down as pro something which he should not be.

This is the age not only of instant coffee but also of instant classification by label. There is a proper tag for everybody, and everybody properly falls under this proper tag.

One must be "for the Africans," whether these be honest patriots or merely murderous gunmen on hire to Kremlin agents. One must be against "the colonial powers," even in those not rare cases where "the colonial powers" have made decent and costly efforts to aid an orderly transition of Africa into the new independence.

If, for example, one doubts the total rightness and wisdom of all that has been going on in the Congo against its erstwhile Belgian rulers, one finds, pretty quickly, that he is "pro-Belgian" and "anti-independence."

Very well, then. This way of labeling at least has the advantage of ignoring all the awkward shadings in an immense problem. If a fellow has simply got to be one or the other—absolutely against the Belgians or absolutely in favor of all African "independence" movements, even the Communist ones—then this correspondent makes his choice.

In this sense he is "pro-Belgian." For, from years now long past, he remembers, in an intimately personal way, some things which others perhaps have forgotten. He remembers 1944, when this small country of Belgium was slowly and bitterly being liberated by the U.S. 3d Armored Division.

This was the forward, the breakthrough division in the thrust across Belgium and into Germany. Mons was the first Belgian city we entered, with the most-forward tanks of this most-forward division.

This is a mining area, and the countryside was not unlike that around Pittsburgh and Wheeling, W. Va. France had welcomed General Eisenhower's warriors with wine and flowers. Mons, in the gloomy half-light of a glowering day, was something else altogether.

Here, as our tanks and armored cars trundled along through the main street, stood the people of Mons in long, quiet lines. Many of them had faces black with the grime of the pits; on many of these faces tears cut paths down the cheeks of men as well as women. There was no shouting, no hurrah.

They were hungry people, desperately hungry and long driven like cattle. But, unlike cattle, they had never for an instant been broken. They crowded forward to hand us, still in almost unbroken silence, all that they had—little, doughy cakes whose name I never knew. We had far better food than this, even in our K rations. But we forced down the little cakes. "You'll eat the damn things," said a colonel, a break in his voice, "and that's an order."

From captured German officers themselves we learned that night in Mons something of what these Belgians had done during the far longer night of their Nazi captivity. We were to learn much more as the campaign for Belgium went on: The unbreakable spirit of the Belgiques. Their quiet, hopeless gallantry—and that of the Belgian white army partisans who fought with us. Their bleak, untalking, absolute, total, final faithfulness to their allies.

Among all the heroes of the last war, in simple truth, the indomitable Belgians need take no second place. For my own part, therefore, I think they have long since worked their passage with us—and more. I think they have earned the right—among their old friends, anyhow—even to be wrong.

Community Officials in Wisconsin Decry Pornography

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. WILEY. Mr. President, recently I introduced a bill S. 1195, to provide stiffer penalties on distribution of obscene literature in violation of Federal laws.

Across the Nation, the traffic in obscene materials represents a serious threat to the moral standards of the country—particularly those of our youth. The battle against such trash, of course, cannot be solely by the enactment and enforcement of Federal laws. Rather, it will require vigilant efforts by parents, local officials, responsible dealers in publications and others, to cut off this flow of degenerative obscenity.

Recently, the Green Bay Press Gazette published an informative article entitled "Community Officials Decry Pornography," by Joan Schaupp.

Constructively, the article reveals the splendid way in which individuals in the community are cooperating to combat the distribution of obscene literature.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMMUNITY OFFICIALS DECRY PORNOGRAPHY—PROBLEM EXISTS IN GREEN BAY, BUT IS UNDER CONTROL

(By Joan Schaupp)

What is the pornographic literature situation in Green Bay?

There is not any peddling of literature that has been defined as obscene by law—at least not to the knowledge of the police department.

Capt. W. R. Gilsdorf, head of the detective division, is rather proud of this.

He stated that about 5 years ago a man came into town with two suitcases of it.

"We intercepted the guy, locked him up, then handcuffed him and took him back to the distributor in Chicago."

TROUBLE REDUCED

"Since that time we haven't had too much trouble—they know we don't fool around in Green Bay," Gilsdorf added.

William Sinkler, postmaster, praised the work of local citizens in helping to squelch a rash of obscene literature that was being sent through the mails.

"The job of the citizen is to turn it in so the post office can report it to Washington. And the Green Bay citizen has been doing this," Sinkler said.

"Lately it seems to have quieted down," Sinkler remarked.

He also explained: "I sent clippings about COMBAT to the Post Office Department, Washington, so they know how we're handling it in Green Bay."

But what does Green Bay have?

BORDERLINE CASES

Currently borderline literature is being sold to anyone, including teenagers, on several area newsstands. Magazines examined are described as filled with nudes, or almost nudes, vulgarly displayed.

The Reverend H. H. Toonen, O. Praem., principal of Premontre High School, says that there isn't any question that the teenagers are getting this literature. "They just go down and buy it," he said.

"But we don't see it every day," he pointed out.

The schools handle this problem if and when the literature appears by confiscating it, calling the student to the office and calling in the parents.

This keeps the appearance in the schools at a minimum.

Does this literature affect the students?

STUDENTS CONCERNED

Father Toonen replied to a questionnaire sent by COMBAT to all area educators: "We have had good students come to us truly upset by the immoral pictures and articles that were shown them and I feel that our experience has been the same as that of other persons having to deal with students."

Walter Zahn, principal of Franklin Junior High School, replied to the questionnaire: "It is unquestionably true that much of the filth being dispensed to the youth of our community via immoral, indecent literature in various forms does much to warp and distort the sense of values and moral precepts of these immature minds."

Edward Blecha, guidance director, Preble High School, answered: "Indecent literature that is flooding the market is without question the greatest single problem that young people face today. This type of literature strongly suggests it is right and proper to do the things that have been contrary to acceptable moral standards, because times and standards have changed."

CALLED UNHEALTHY

Dr. Bernard Kalina, psychiatrist and director of the child guidance center, terms it "unhealthy."

"It just isn't healthy," he said emphatically.

"It's the children who have certain deficits who will be affected," Dr. Kalina pointed out.

James Hogan, an Apostolate social worker, is so concerned about the effects of this literature on the boys under his supervision that he became an active member of Combat.

He has been instrumental in organizing the public rally Monday at 8 p.m. at the Elks Club with Charles J. Keating as the main speaker.

Hogan states that about three-fourths of the boys he works with read the type of indecent literature now being sold on the newsstand. And he goes further to say that this has seriously contributed to the delinquency of a few of them.

INDIFFERENT PARENTS

Dr. Thomas Bassett, clinical psychologist at the reformatory, repeated a common theme. "It's not going to do the impressionable teenager any good. What is difficult to determine is how much harm it is doing."

Many educators feel that the greatest problem is parental indifference.

Francis L. Sundberg, vice principal of East High School, wrote in answer to the questionnaire:

"It seems to me that the most difficult thing to combat in this matter is apathy and parental indifference. The public tends to adopt a complacent attitude toward indecent and obscene books, magazines, and movies; and generally seems to feel that the situation isn't really too bad."

And Burton Rosefelt, former guidance director at East High School, wrote:

"I feel most wholeheartedly that the parents are the ones to act in behalf of their children. Educators have long been on the bandwagon and parents have continually assumed the school would take care of all their problems and discipline, which are rightfully theirs."

Should the New Haven Go Bankrupt Again?

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. BUSH. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the Hartford Courant of Friday, March 3, 1961, entitled "Should the New Haven Go Bankrupt Again?"

The editorial refers to an emergency in which the New Haven Railroad finds itself, and rather supports the position I have taken, to wit, that the action of the New England Council suggesting receivership for the New Haven Railroad must now receive very serious consideration.

I make this conclusion with much reluctance, for various reasons; but I believe anyone who studies the situation closely and deeply must come to the conclusion that the things that need to be done simply will not be done without the intervention of court-appointed trustees.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHOULD THE NEW HAVEN GO BANKRUPT AGAIN?

First came doubts in the general assembly over whether tax relief for the New Haven Railroad would do any good. Not that anyone saw anything wrong with the almost universally approved idea of keeping the trains running by means of such relief. Rather the question is whether, even granted such relief, the road can keep its head above the financial waters. Now comes the New England Council, which after a detailed and thoughtful study says that what is needed is both tax relief and bankruptcy.

Perhaps the council's most useful service is to put the question of bankruptcy into perspective. Bankruptcy is, of course, a last resort. It puts the burden of loss not on the enterprise that fails but on its creditors—which here include Uncle Sam. But as the council points out, bankruptcy would not mean that the trains would stop running. Rather it might hasten the day for rehabilitating them, and for returning the enterprise as nearly as may be possible to the ideal of a private enterprise that gives good service and make a profit. And bankruptcy's greatest service, once the hard decision has been taken, would be the regeneration that would come with it, the employee morale and public satisfaction.

An even more persuasive argument than the council's is the history of the New Haven's previous forced reorganization. On that day in 1947 when the trustees, after a 12-year effort, turned the road back to private management it was at its high point in its modern history. It had new equipment, it was safe, sure—and ran a lot more and cleaner trains than it does today. There followed the proxy fights, the battles for control over the descent into decay, that were a disgrace to private enterprise.

Surely one need, no matter what happens, is for qualified, professional management. And here the council's report points to testimony from Mr. Alpert himself that the presidency had been offered in vain to 18 professionals. Clearing away the burden of debt, adds the report, would give the railroad what it needs most—competent operating management, and working capital.

It may be that our society has grown so complex—and so motorized—that our railways can never again give good passenger service and make money too. Certainly all but a few of them aren't what they used to be. And they have before them the spectacle of the urban mass-transportation systems, many of whose ills the New Haven shares. Few of them, from the subways of New York to the buses of the Connecticut company, can make the grade without subsidy in one form or another. It may be that the tax relief agreed to by the four Governors, and the fact that only a 100-percent guarantee of loans by the Federal Government has kept the New Haven solvent thus far, are only samples of the artificial aid from the outside that will be needed to keep this essential public utility going. If so, then so be it. At the moment anything is better than today's gloomy prospect of mounting debt and decaying service.

Campaigns Should Be Clipped

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. MONAGAN. Mr. Speaker, in further support of my campaign to limit the time of presidential elections, I append herewith a very pertinent editorial from the Waterbury Republican of December 15, 1960:

ABBREVIATION NEEDED; CAMPAIGN SHOULD BE CLIPPED

The weather, Mark Twain is supposed to have said, is something everybody talks about but nobody does anything about. So,

too, with the seemingly interminable election campaigns.

The memory of the stifling repetition and endless parade of political officeseekers throughout the land is still fresh in our minds, but 4 years hence we will probably suffer from the same overdoses of buncombe and pageantry as have only recently been concluded.

Believing that some relief is needed from the extended campaign period, however, and getting politicians to relinquish chances to sound off, shake hands, and kiss babies, are two very separate and distinct considerations. And yet, due probably to the vast and swift news coverage of the campaigns, there seems to be an increasing discontent with the surfeit of words and crowdmaking performances of the national candidates.

The weariness such prolonged campaigning produces was more than evident in the recent canvass and the imposition of a semiparalysis on the policymaking bodies of Government has been frequently lamented by our allies abroad. Is it all necessary?

"If crowds were votes," the late Al Smith said, "William Jennings Bryan would have been thrice President." Personal appearances are seldom little more than just that, and supporters of both candidates tire of hearing their man mouth the same catchphrases and shibboleths day in and day out until the national campaign staggers to a close.

A special House Committee To Investigate Campaign Expenditures is holding hearings in Washington, D.C., on whether the presidential campaign period should be shortened. We don't know who will defend the excessive duration of the campaigns, but we know of one man who will advocate their abridgment: Representative JOHN S. MONAGAN.

Representative MONAGAN has repeatedly pressed for a more sensible campaign time allotment and in May presented his arguments in an article in the magazine section of the New York Times; arguments which were seconded on this page at that time.

Representative CLIFFORD DAVIS, Democrat, of Tennessee, chairman of the Campaign Committee, has issued Representative MONAGAN a special invitation to testify before the committee today as one of the initial witnesses of the hearings.

We know and support what Representative MONAGAN will have to say. We can only hope the committee listens attentively.

The Pedestrian Point of View

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. KEATING. Mr. President, the Pedestrian League of America, located in New York City, is working very hard to restore the right to walk. For those of us who are forced—or even at times deliberately choose—to exercise our once unchallenged right to perambulate, the hazards in these days of throughways and superhighways are immense.

Mr. President, I ask unanimous consent to include in the Appendix of the RECORD an account from Newsday, on the activities and objectives of the Pedestrian League of America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WALKER OFFERS PEDESTRIAN POINT OF VIEW
(By Doris Herzig)

A small army of valiant foot soldiers is out to regain a lost kingdom for the American pedestrian.

Less than 200 strong, but armed with statistics and sharp verbal barbs, the Pedestrian League of America (Box 1308, Church Street Post Office, Manhattan), is fighting against overwhelming odds to restore the right to walk.

In defending the American pedestrian, the league inevitably finds itself attacking the American automobile. It charges the motorcar with gobbling up the countryside, poisoning the air we breathe and curtailing our civil liberties, besides killing and maiming our citizens.

"We are not antiautomobile. We're just propedestrian," said Leo Wilensky of Brooklyn, the nonmotorized director of the league. "We are dedicated to the interests, health, safety, and welfare, including the scenic welfare, of the American pedestrian.

"At one time," Mr. Wilensky pointed out, "the pedestrian was king of the road. Now the pedestrian is more and more deprived of space by the automobile. With the Federal highway construction program, roads will occupy an area equivalent to that of 8 or 10 States by 1965. At the rate we're going, America will be all road."

The dethroned king of the road is also being deprived of his civil liberties, the league believes. "He is told where and when and how to walk and how long it should take him to get across. As the city and State move in to control traffic and congestion, more and more police are required and our rights are curtailed."

The timing of traffic lights, he emphasized, works a special hardship on women, because of high heels and tight skirts. "We have found that women cross streets at a slower pace than male pedestrians. We have suggested to traffic engineers that lights be adjusted at shopping centers where there are large numbers of women walkers."

The league not only begrudges the automobile the land underfoot but also the money lavished on society's mechanized pet.

"Many authorities claim that building sidewalks is not economically justified. But they're always finding money for the motorists—roads, parking areas, lights, signs, and traffic police."

The league's spokesman reluctantly conceded that "in some areas" the automobile will always be needed. "We're not against the individual motorist, we're only concerned with the automobile where its massive, social, total effects adversely affect the pedestrian.

"In rural areas, we believe that sidewalks should be put up wherever possible. In fact, we go even further. We believe sidewalks should be put up before roads instead of vice versa."

The only group of its kind in the United States, the league was organized a year ago. Its formation was inspired by the British Pedestrian Association in London, which has 50,000 members.

Among the league's members, who are lightly scattered throughout 12 States, are a retired auto engineer from Detroit, a woman student from California who rides a bicycle to college, a nonmotorist from Hempstead, an architect from the Bronx, and a Manhattan physical culturist who believes cars are making people fat, lazy, and subject to heart ailments.

At first, the league advocated fingerprinting of motorists to prevent their getting licenses under false names from other States, but, Mr. Wilensky sadly recalled, public opposition forced the organization to abandon this policy temporarily at least.

The league favors stiffer license tests, stricter enforcement of traffic laws, and the banning of driving and parking near schools.

Its attitude toward small cars is almost benign. "The smaller the better," Mr. Wilensky said.

It likes lots of open space for strollers, preferably enriched with flowers and equipped with benches. It doesn't like parking lots or billboard advertising. The league's officials are not permitted to own cars, lest their purely pedestrian point of view take on a vehicular taint.

Railway Mail Service

EXTENSION OF REMARKS
OF
HON. QUENTIN N. BURDICK
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. BURDICK. Mr. President, the previous administration's policy of taking away mail service from the railroads has proved markedly unsuccessful in my State of North Dakota. Explaining this is a fine editorial in the Minot, N. Dak., Daily News of March 4, 1961. I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ECHO OF MR. SUMMERFIELD

We have no idea of going into ecstasy with the final announcement of the Great Northern to take off passenger trains Nos. 9 and 10, Minot to Fargo. The company contends it has lost $20,000 a month on the operation west of Fargo since Postmaster General Summerfield discontinued mail contracts.

It was this eminent Republican official who gave birth to the idea that the way to move mail was on the highways. As a result contract after contract with railroads has been cancelled and following such action passenger train after passenger train has been withdrawn.

For the service he rendered the Democratic party, this man Summerfield should have been awarded the iron cross by President Kennedy.

Everyone knows that it is cheaper to operate a car or truck than a train and that savings could be effected.

But almost everyone knows that the winter weather in North Dakota is not conducive to scheduled operation on the highways. People desire and have a right to expect the regular movement of mail. For decades the railways have been employed. Now but a fraction of the mail goes over the rails.

A factor that probably never occurred to Mr. Summerfield is that people living on branch lines have learned to expect mail and express service daily from the railroad. The train has become a part of their life. In some respects it is their connection with the outside world.

Conceded the passenger patronage dwindled, but the service was important. It was there when the people needed it.

But with the loss of mail there is no question what is bound to happen on every branch. It has hit the main line and has also been felt in just about every corner of the State.

The News owns no stock in the railways. But we recognize the great job they did in the settlement of North Dakota, pioneering the movement of homesteaders.

Currently the pattern seems to be to subsidize competitors of the railways and take mail contracts from them as fast as possible,

leaving remote sections with no service when highways are blocked.

North Dakota has been rendered a disservice by Mr. Summerfield from which recovery may be all too slow.

Democracy Limited

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. DERWINSKI. Mr. Speaker, the action in the House to enlarge the membership of our Rules Committee has attracted nationwide attention. The events which have followed this action by our body have also merited many comments. Following is an editorial from the Chicago Sun-Times of February 27, 1961, entitled "Democracy Limited" which I think is a most interesting commentary:

DEMOCRACY LIMITED

In the words of Alice, the goings on between Speaker SAM RAYBURN and the House Rules Committee are getting "curiouser and curiouser."

Not long ago, RAYBURN won his fight to enlarge the Rules Committee to prevent a conservative coalition from blocking legislation bound for the Chamber. As we understood it, the idea was for the full House to have the chance to vote measures up or down, rather than have the decision made by a handful of Congressmen on the committee.

Among other things, the Nation was told at the time, the Kennedy administration's entire legislative program was in danger as long as measures could be bottled up in the committee which controls the flow of bills to the House floor.

Nobody ever accused SAM RAYBURN of being a flaming liberal but he was clearly on the side of the angels as he led the drive to restore democratic procedures to House deliberations.

However, latest advices from the banks of the Potomac suggest the results were a bit more than Mr. SAM bargained for.

Committee Chairman HOWARD SMITH, Democrat of Virginia, who used to lead the roadblocking coalition, was seized with a sudden fervor to move legislation, all legislation, to the floor. The 217 to 212 vote by which control of the committee was wrested from him was a "mandate," said the 78-year-old Congressman dryly, not to hold up bills from House consideration.

Thus it was that RAYBURN spent the better part of last week lining up votes on the committee—to bottle up legislation he didn't want the House to have the chance to consider. And with the help of the members he added to the committee to prevent it from bottling up legislation, he succeeded.

Killed by the Rules Committee was a proposal to allow TV broadcasts of House proceedings, and a bill to curb Federal spending without direct appropriations, both opposed by RAYBURN. A third measure lacking the Speaker's approval was amended to meet his objections.

It appears that democracy, in SAM RAYBURN'S view, is a fine thing. It just shouldn't be carried too far.

Wisconsin Farmers Union 1961 Action Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. WILEY. Mr. President, in face of serious economic problems, the farmers of the Nation—individually and through their organizations—are vigorously attempting to find solutions which will brighten the economic outlook.

Recently, the Wisconsin Farmers Union News published the Union's 1961 Action program. The program outlines the views of this fine organization on a wide variety of problems confronting not only farmers but the people of the whole country.

In the past, I have differed from time to time with the policies of the Union. However, I have also had the gratifying experience of working shoulder-to-shoulder with it on many challenges confronting the American farmer and the country.

Believing the views of the Wisconsin Farmers Union warrant the consideration of the Members of Congress, I ask unanimous consent to have the Action program printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WISCONSIN FARMERS UNION PREAMBLE

Thirty years ago Wisconsin Farmers Union received its State charter and joined the National Farmers Union family. Born in the midst of a great depression, Wisconsin Farmers Union has survived to become a growing force for constructive action in agriculture as well as in other related fields.

During this span of three decades, revolutionary changes have taken place in farming and in the American standard of living. Agriculture progressed from the horse and buggy stage to an era of new technology. The United States moved to a position of world leadership and its expanding economy became both the wonder and envy of the world.

Wisconsin Farmers Union came into being at a time when agriculture's role in the national economy was being reassessed. The great depression convinced the country's leaders that the prosperity of farmers and the entire Nation were inseparable. A new policy was pursued to use the powers of the Federal Government to help maintain a sound and healthy agriculture in the public interest. This was a drastic departure from the past when the farmer was forced to shift for himself the best he could.

Under the leadership of Government and agriculture, our family farmers have become the most efficient in the world. Their great productive capacity has stood the test of two armed conflicts. The eyes of the hungry the world over have turned to these shores for hope and sustenance.

Now as the decade of the 1960's unfolds, our country's claim to world leadership is being challenged by a power whose beliefs are alien to ours. The Soviet Union has dedicated all its efforts to surpassing the United States as a world society. Significantly, Soviet regimentation has produced rockets to the moon but barely sufficient food to feed its masses.

The immediate years ahead are fateful ones for our Nation. Millions of the earth's peoples grow impatient under the specters of poverty and illiteracy, hunger, and disease. New nations, emerging from the disintegration of colonial empires, seek political and economic self-determination. Satisfaction of these human needs and aspirations can mean the difference between war and peace—the difference between freedom and slavery.

We as farmers must accept our responsibility to help keep America the bulwark of freedom and democracy in the world. The programs we support in these perilous times must not arise out of selfish interests or seek narrow goals. We believe that to strengthen the farm economy is to strengthen America. And a strong America, a compassionate America in the world community of nations, is man's greatest hope for peace and freedom.

WISCONSIN FARMERS UNION'S 1961 ACTION PROGRAM

We believe that family-type farming is fundamental and basic. It is the cradle of American freedom and democracy. American prosperity can never be secure without a prosperous agriculture.

We believe our economic system can and must be so adjusted to give farm families full opportunity to earn and receive a parity income equal on the average to the incomes of Americans in other walks of life.

We shall support adoption and use of workable combinations of farm commodity income improvement methods such as: loans, purchase agreements, market surplus diversion purchases, parity income deficiency payments direct to farmers limited to family-size operations, increased regulation of imports, export incentive payments, expanded development and use of marketing agreements and orders, marketing premium payments for sale of livestock at desirable weights designed to keep supplies in balance with demand, marketing standards and scheduling, cooperative storage and marketing practices, and a system of market supply management devices, subject to producer referendum, to help balance farm production to existing demand.

We urge the organization of a centralized and federated nationwide producer cooperative marketing organization for dairy products, and we favor State enabling legislation to develop cooperative marketing organizations which can fit into such federated nationwide cooperative marketing of agricultural commodities.

We favor the expansion of co-op processing, marketing, and storage facilities, including terminal markets, through REA-type loans and technical assistance to farmer-owned and controlled cooperatives.

We favor the elimination of interstate barriers to the free flow of quality dairy products between markets. For this purpose we favor Federal legislation for establishing uniform sanitation standards and practices in the production, processing, transportation and sale of fluid milk and milk products shipped in interstate commerce.

We urge consolidation of the conservation reserve with the ACP program and that the total program be expanded. Greater emphasis and attention should be given to the soil and water conservation aspects of the program. In any future land retirement program, we reaffirm our opposition to the placing of entire farms in reserve. Closer supervision and enforcement should be exercised by the Department and the farmer

committees to see to it that land conservation and care requirements are strictly carried out in the conservation reserve and ACP programs.

All possible measures to expand consumption of farm commodities should be undertaken, consistent with good soil conservation, before resorting to production restrictions. We recommend that the national food stamp plan as recently enacted be used to supplement the diets of underprivileged persons, and we favor a more aggressive export program to undernourished peoples of the world. We commend the University of Wisconsin and its extension service for its leadership in basic and applied farm research, and urge the State legislature to provide sufficient funds for an expanded program. We recognize that the University of Wisconsin College of Agriculture and its extension service have pioneered in spreading the results of farm research throughout the State, and the university has achieved great success in increasing efficient production on Wisconsin farms. These technological advances on the production side have now outstripped improvements in the distribution of farm commodities. The emphasis in such an expanded research program should be placed upon studies concerned with marketing and new uses of farm commodities.

We favor the enactment of a State food stamp plan in Wisconsin by which surplus food commodities would be made available to low-income families and the recipients of State and county welfare aids through the normal channels of trade. Such a plan should be supported by a Federal contribution equal to the value of the surplus commodities consumed through the plan's operation. A dairy food stamp plan would prevent the waste of surplus food commodities, insure a more adequate diet for needy persons, save on public storage and handling costs, and channel this trade through the local retail food merchant.

We favor an adequate school lunch and special milk program, and that it be continued on a Federal basis. We favor the use of more dairy products by our Armed Forces.

We recommend that the healthful benefits of milk be fully promoted, and that inconclusive research on the butterfat-cholesterol relationship to heart disease be withheld from the public until positive proof has been established and agreement between medical authorities has been reached.

We favor legislation to establish and maintain stockpiles of storable farm commodities as a safety reserve in the overall program of national defense.

We are opposed to the sale of Government-owned agricultural commodities on the market for less than market price plus 5 percent and carrying charges. We believe in rotating the commodities in storage, especially perishable commodities, with new crops or produce to avoid deterioration, but the commodities so marketed should be replaced with an amount equal to that taken out so as not to add to the amount normally marketed.

We demand representation of family-type farmers on all governmental boards and agencies involving agricultural programs.

We advocate a return to the democratic practices formerly used in the establishment and in the authority of farmer committees in the administration of the ASC program.

We favor the establishment of a comprehensive farm credit yardstick program built around the Farmers Home Administration to serve all family farmers, with minimum interest rates, increased size of allowable loans, and repayments geared to the borrower's ability to pay.

We continue to support the development and use of farmer-owned production credit and farm loan associations and the banks for cooperatives.

We endorse the methods being employed by soil conservation districts to help farmers across the Nation solve their soil and water problems. We recommend an acceleration in the planning and installation of watershed protection and flood-prevention projects under soil conservation district leadership. And we commend the U.S. Soil Conservation Service for its contribution of technical assistance to these activities.

We continue to favor the adequate program now operating in Wisconsin for the eradication of brucellosis (Bang's disease); and we support the tuberculosis program work being done by the Wisconsin State Department of Agriculture and the College of Agriculture in further improving the method used to identify tuberculin reactors and commend the use of the new diagnostic laboratories to find cures for new diseases.

We favor further development of the REA-financed electrical and telephone programs. We are opposed to legislation which would increase interest rates on REA loans. We protest any discrimination against co-op applicants in making loans for the telephone program.

We urge Farmers Union members to give all their patronage to Farmers Union cooperatives and their Farmers Union insurance program and to build more cooperatives in Farmers Union territory to provide services where they are needed, and to fight the rising tide of operating costs. Building the strength of cooperatives also requires the full support of cooperative patrons through membership in the Farmers Union, which carries on the educational and legislative program in their behalf.

We have always taken the position that taxes should be levied according to the ability to pay. We oppose any proposal for either State or Federal sales taxes.

We favor the present method of computing taxes on qualified farm cooperatives and are opposed to discriminatory double taxation of cooperative refunds.

We favor the taxing of excess profits in corporate income.

We favor the elimination of depletion allowances and accelerated tax amortization, where they are excessive, and other tax loopholes.

We favor an increase in State aid to provide additional funds for adequate schools serving the rural areas, such additional funds to come from taxation in accordance with the ability to pay.

We favor increased Federal aid for education. We oppose the proposal to withdraw Federal aid from vocational agriculture and domestic science.

We favor and recommend that bona fide, working farmers be represented on the governing bodies of the State university and colleges and on the Board of Vocational and Adult Education.

We are opposed to any plan which would destroy the segregation of highway tax income. We favor a more liberal policy in classifications of primary and secondary roads in the townships.

We favor a State and Federal program of investigation and regulation of monopolies and vigorous prosecution of all illegal practices.

We recognize and support labor's right to organize and bargain collectively for adequate wages and improved working conditions. We are opposed to the efforts to sabotage these fundamental rights of labor under the guise of so-called "right to work" legislation. Full employment in the cities at good wages is vital to the farmer's market.

We favor a medical aid to the aged program under social security.

We favor an immediate program to expand facilities for training more doctors and other medical personnel.

A Federal scholarship program should be made available to provide financial assistance to qualified students.

We favor realistic programs of aid for veterans.

We favor a reappraisal of our national defense needs in the light of recent development of new weapons and techniques of warfare, with particular reference to the need for trained manpower. Technological advances and training required for military personnel appear to require emphasis on longer enlistments of trained professional personnel with sufficient incentives for such, with more emphasis on quality than quantity.

We believe that in time of national emergency, industry and wealth should be drafted as well as manpower.

We favor greater participation in the present rural civil defense program in which every effort should be made to acquaint farm families with the necessary measures to be taken to protect themselves and their crops and livestock against radioactive fallout.

We favor new State legislation, governing the use of our water resources, which is adequate for the needs of our changing technology and population.

We support recently strengthened State legislation on eminent domain and urge farmers to avail themselves of all the protection the law provides when their rights or title to land are affected.

We endorse the principle of selective cutting and reforestation. We urge that public works in reforestation and cooperative logging and processing plants be established.

We believe that the use of State marketing orders and agreements should be encouraged and extended to all crops practical, and that wood products be included. We favor close cooperation with the Wisconsin State Department of Agriculture in implementing these orders and agreements.

Farm and highway safety is becoming increasingly important. We favor training programs and tightening of drivers' licensing to promote more safety.

We favor strengthening the United Nations and enlarging its functions for the purpose of peace. We support the Food and Agricultural Organization, the International Labor Office, U.N. Educational Scientific and Cultural Organization, and the World Health Organization and the establishment of a World Food Bank. We enthusiastically support the international exchange of farm trainees and urge the continuation and expansion of this program for better understanding among nations.

We favor economic aid to less developed nations of the world.

We favor a National Science Foundation to control all patents developed by public agencies to the general welfare of all people.

We are opposed to the control of atomic energy research falling into private hands or into the hands of the military.

The Wisconsin Farmers Union is opposed to all forms of totalitarian dictatorship, regardless of whether these dictatorships be political, economic, religious, or intellectual in character. We believe in political, economic, religious, and intellectual freedom with justice for all, and we shall oppose the efforts of any group to change this fundamental philosophy with the aim of subverting our program and organization to their ends.

Bolster Farm Income

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I

wish to include a resolution adopted by the Hamilton County Farmers Union, at Syracuse, Kans., on February 23, 1961;

RESOLUTION BY MEMBERS OF KANSAS FARMERS UNION

Farmers income has been declining for the last 8 to 10 years. By the same token cost of labor, machinery, and supplies have constantly increased since that time.

It should be pointed out that every dollar of declining farm income since that time has been that much less net profit for farmers. Business and farm purchasing power are measured in terms of net profit.

We, the members of Farmers Union, Hamilton County, meeting at Syracuse, Kans., this 23d day of February 1961 request the following resolution be sent to the Honorable Congressman J. FLOYD BREEDING and the Honorables Senator ANDREW SCHOEPPEL, and Senator FRANK CARLSON:

"Whereas the farmers net income has decreased to a disastrous low; and

"Whereas farmers are aware that excess production has contributed immeasurably to depressed farm commodity prices to farmers; and

"Whereas farmers in general, regardless of some farm organizations policies, do believe that agriculture must manage its supplies in order to receive an equitable income from the farm; and

"Whereas farmers do believe that referendums in regard to supply management and prices of various commodities should be held; and

"Whereas farmers have generally agreed that bargaining cannot be attained without control of supply by quotas or other methods; and

"Whereas this Nation's economy shall not remain healthy with a contagiously sick agricultuire in its midst; and

"Whereas farmers are being forced from the land not because of inefficiency but because of economic distress to join the jobless laborers in the city: Therefore be it

"*Resolved*, That the Congress and the Senate of the United States support this administration in its drive to bolster farm income during this session of the Congress by whatever legislative devices, tools, and mechanisms necessary to attain an income for farmers as the Congress so righteously has done for this Nation's industry and labor."

A. C. Westerman, Murlin Carter, Arthur E. Carter, Charles Van Eddy, Fred Westeman, Gene Schwerdfege, I. L. Wickerson, Marion Wickerly, Walter L. Westeman, E. L. Hatcher, L. J. Eddy, H. A. Forber, Mrs. Murlin Carter, Mrs. I. L. Nickerson, Roy H. Dunagan, Basin W. Crist, Legislative Committee of Hamilton County, Kans., Farmers Union.

The Dollar and Our National Purpose

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following remarks of Alfred Hayes, president of the Federal Reserve Bank of New York, before the 33d annual midwinter meeting of the New York State Bankers Association which was held at the Waldorf Astoria Hotel, New York City, on January 23, 1961:

THE DOLLAR AND OUR NATIONAL PURPOSE

When I spoke to you just 2 years ago, most of us were preoccupied with the difficult problem of checking pronounced inflationary tendencies, which were evident throughout our economy, without at the same time inhibiting desirable economic growth. By and large the efforts of monetary policy along these lines during 1959 were working not only in behalf of a healthy domestic economy but also in the direction of an improved balance of payments. While monetary policy can take only a part—perhaps a small part—of the credit, the objective of checking a dangerous inflationary psychology was very largely accomplished. Unfortunately the twin objective of full use of our resources was not achieved. To what extent this was due to the disrupting influence of the steel strike may never be measured accurately. In any case, full recovery was not attained before new recessionary tendencies began to appear, and therefore monetary policy began to swing over early in 1960 from restraint to ease.

As softness in business conditions persisted and became more accentuated, the resultant weakening of credit demands, together with a Federal Reserve policy of monetary ease, brought a substantial decline in short-term interest rates. And as this was reflected in a considerable flow of short-term capital from this country to Europe, reaching a peak in the summer and early autumn of 1960, it was demonstrated that monetary policies that were clearly helpful from a domestic point of view were having some effects that were not helpful to our international financial position. The result was that we were led to devise a policy that would assure ample availability of credit for as long as it was needed, but would at the same time hold the outflow of short-term capital from our shores to a tolerable limit. This is still the basic frame of reference for our current actions.

During the past few months the position of the dollar has been subject to more questioning and eyebrow raising, here and abroad, than at any time in the last quarter century. I shall try to show a little later on why I think these doubts on the dollar have been unwarranted. But the mere fact that they exist is of the utmost importance to us. After all, the dollar is the foundation on which all of our international economic relationships—and in fact many of those of the entire free world—have been based throughout the period of postwar reconstruction and development. We cannot allow any cloud on the dollar's reputation to persist.

In a sense this concern about the dollar has come at an appropriate time, for the Nation is apparently in a healthy mood of self-examination, of reappraisal of our broad objectives and our means to attain them. For lack of time and knowledge, I shall not dwell on the political and military aspects of this self-examination. But in the economic sphere the primary fact confronting us today is the urgent need of the underdeveloped areas of the world for sound advice and tangible assistance in achieving a better standard of life. I believe there is general recognition in this country that we cannot shirk this obligation—to ourselves as well as to the world we live in—and that the total economic assistance forthcoming from the industrialized nations must increase rather than decrease. The average man's commonsense tells him that a country rich enough to afford our standard of living is rich enough to do its part in this world task—and I am confident that the same feeling exists, and is in fact increasing, in the more prosperous countries of Western Europe. But where this popular understanding breaks down is in drawing the necessary conclusions as to the need for self-discipline—in the matter of costs and prices, and in fiscal and monetary policy—if we are to translate this inherent ability to create a better world into practical accomplishment.

We bankers and central bankers are often accused of placing too much stress on financial soundness, to the detriment of human objectives. Yet most of the bankers I know are no less mindful of these human needs than is the average citizen; they are, however, often better acquainted with the limitations set by our economic and financial structures—and with the choices to be faced if monetary stability, a basic requirement of sound growth, is to be preserved. They are aware that if the Nation wishes to do more in the public sphere, either at home or abroad, its citizens must be willing to pay for these outlays through taxation. And while it would be pleasant if this taxation could be made painless by having economic growth provide these additional resources automatically within our present tax structure—or better still within a lower tax structure—we must also recognize that in periods when needs outstrip growth there will have to be conscious choices and perhaps conscious, but purposeful, sacrifices to meet these needs. At such times, given the already steep rates of taxation on income, additional revenues might well have to come from taxes on some of the less essential types of spending that now compete for our resources. Furthermore, when the question involves provision of assistance abroad, we must recognize that theer is an additional hurdle—the hurdle of our international balance of payments—which must be overcome before resources available in this country can be made available abroad in a form that will not do violence to the dollar's stability.

So much has been said and written about the U.S. balance of payments that I shall try to be mercifully brief on this tortured but vital subject. For purposes of this discussion, I shall assume that in present circumstances the "hard-core" balance-of-payments deficit—exclusive of short-term capital movements—is in the neighborhood of $2 billion annually. As is inevitable when a large number of items of inflow are lined up against an equally large number of items of outflow, there is no mathematically valid way of attributing the difference between total inflow and total outflow to one or more specific causes. Thus, our balance-of-payments deficit could be ascribed to inadequate exports, excessive military outlays, too much foreign assistance, or excessive U.S. investments abroad, depending entirely on the analyst's point of view.

Just as there is no single cause, there is also no single or easy cure for the deficits of recent years. A solution must be pursued vigorously along many different paths, not only by ourselves but also by our major trading partners, for whom the preservation and strengthening of the international payments mechanism is no less vital than for ourselves.

As to our exports, we can at least point to a very healthy rate of expansion in the past year, with the favorable merchandise trade balance recently running at an annual rate of better than $5 billion. This is a high figure historically, even after allowing for the favorable effects of a European boom; but it is not high enough, in view of the continuing heavy demands on our resources. My own judgment is that our position in the world obliges us to strive for even larger exports, and this means above all a need to keep our costs and prices as competitive as we can make them. Fortunately, our effectiveness in attaining this goal should also contirbute importantly to achieving substantial economic growth with reasonable price stability.

The various measures announced by the President last November to reduce American military expenditures abroad, and to tie our aid to developing countries to our own exports, should have a salutary, if gradual, effect on the favorable balance for total trade and services. There are other measures which can help to achieve a better trade balance, such as removal of quantitative import restrictions abroad, lowering of excessive foreign tariffs, and removal of special unilateral incentives to American tourists to import duty-free foreign products (such incentives having been initiated largely as a conscious aid to closing the late-lamented "dollar gap"). In a parallel situation in the immediate postwar years, when the United States ran a stubborn payments surplus, we took the lead in reducing tariffs and extending aid to others, in order to bring about a better international balance. While I recognize that "tying" has no place in normal private international trade and lending, large-scale public assistance probably does justify "tying" for balance-of-payments reasons—and help "in kind" under such circumstances seems clearly preferable to a reduction in the amount of assistance.

There is no doubt in my mind that greater sharing of the burdens of foreign assistance and the defense of the free world offers one of the most promising possibilities for betterment in our balance of payments. Here we are up against the difficult problem of finding appropriate "yardsticks" for dividing such burdens. Granted that there will never be complete agreement as to the relative importance, for this purpose, of the various countries' domestic national income and of their ability to handle the burden from a balance-of-payments standpoint, I am sure that a reasonable compromise can be achieved among men of good will seeking a common objective. The very persistence of large surpluses in some countries' balance-of-payments positions could, in some circumstances, be taken as a rough indication that they might equitably undertake more of the burdens of defense and foreign aid. Already I have been impressed by the fact that many responsible leaders in Europe recognize that something along these lines can and must be done; and I believe that we shall see tangible progress on this front in the coming year, possibly centered around the coordinating activities of the new Organization for Economic Cooperation and Development.

Perhaps the most puzzling aspect of our whole balance of payments is the role played by private long-term investment. Many of you are probably familiar with the analysis wherein the U.S. payments deficit is equated with our outflow of funds on private long-term capital account, leading to the conclusion that the problem is not too serious, since we are acquiring productive investments which will ultimately provide a heavy return flow of interest and dividends. Recognizing the validity of this argument from the longer term standpoint, we must still face the problem of how to meet the balance-of-payments deficit here and now. One aspect of the matter that deserves study is the effect of existing United States and foreign tax laws on the flow of such investment and on the transfer of earnings to this country. There is the related question whether our tax laws should not differentiate between the less developed and the more industrialized countries, since special incentives are still appropriate for the former.

Another significant problem of our international private investment program is the growing tide of nationalism in countries which have been major recipients of long-term American capital. Granted that long-term private investment on a worldwide scale remains a most promising source of higher living standards everywhere—just as it played a major role at one time in developing our own country—we should be rethinking some of these related problems which seem to be diluting some of the great mutual benefits of international investment. Perhaps some vehicle for the internationalization of private equity investment might have fruitful possibilities, although direct investment by corporations will probably continue to be the mainstay of private investment.

Assuming as I do, that by various means we can soon eliminate our "hard core" deficit, two related questions may still remain unanswered: First, will we thereby remove a necessary source of world liquidity? Second, will the dollar still be in an unduly vulnerable position in the event that short-term capital outflows, and induced gold outflows, should threaten confidence in our currency?

On the first point, it has been argued that the United States should deliberately continue to run moderate deficits in its balance of payments—averaging, say, one-half a billion to a billion dollars annually—in order to add to total foreign reserves of gold and dollars over the long run. This would tend to follow from the fact that U.S. balance-of-payments deficits over the past decade have in fact been a major source of needed additional monetary reserves of European and other countries, and hence have helped to fill a need for world liquidity that could not have been wholly met from limited new gold production. There may be some force in this argument, if we take the long view, although I am persuaded that for the near future there is ample international liquidity and no need for us to incur deficits to meet such a need. Moreover, in the longer run, U.S. constributions to world liquidity should be the result of deliberate decisions made at our discretion, rather than the chance by-product of excessive spending and lending abroad in relation to our resources. The final answer to the tenability of such deficits depends on whether we can maintain sufficient faith in the dollar so that modestly higher aggregate short-term liabilities in relation to our gold holdings are supportable. This leads to consideration of the second question.

If our basic balance-of-payments deficit is virtually eliminated—except for cyclical fluctuations that might cause deficits in some years and offsetting surpluses in others—I can see little reason to fear periods of serious loss of confidence in the dollar, provided we are pursuing policies at home, both in Government and in the private economy, which are calculated to keep our costs and prices competitive. The balance-of-payments deficit having been corrected, our present gold holdings of about $17½ billion seem ample, both in relation to the world's total monetary gold stock and in relation to the $19 billion of our liquid foreign liabilities (excluding liabilities to international institutions, but including foreign countries' holdings of U.S. Government notes and bonds, which are of course readily convertible into cash). In a sense the situation is comparable with that of a bank, and a better than 90 percent ratio of cash to deposits should instill confidence in the minds of the banks' customers. By this crude yardstick, even a considerably lower ratio would probably be feasible. Two objections may be raised to this analogy, however. In the first place, the total of liabilities could be increased suddenly and substantially if large numbers of Americans sought to shift their funds abroad. Secondly, it might be contended that there is no readily accessible central bank, like the Federal Reserve System in the case of a domestic bank, to whom this Nation may turn automatically to replenish its reserves in the event of unusually heavy withdrawals. To meet the first objection I believe it will suffice to eliminate the balance-of-payments deficit and to pursue policies at home which guard against long-term erosion of the dollar's purchasing power. To meet the second, it may be pointed out that, besides holding such massive gold reserves, the U.S. Government is a very heavy creditor on long-term account and that some of these assets could become more quickly available through accelerated repayment by debtor governments; and furthermore it should be borne in mind that the liquid resources of the United States could be readily reinforced through sizable drawings on the International Monetary Fund.

Let me add at this point that, despite the existence of the 25 percent gold reserve requirement against Federal Reserve notes and liabilities (which requirement is subject to suspension in the event of emergency), there is no doubt at all in my mind that the primary purpose of our $17½ billion gold stock is to assure the international convertibility of gold and the dollar at the fixed price of $35 an ounce.

I have not yet spoken of ordinary international flows of short-term capital to take advantage of higher rates of return available in foreign centers. To a large extent I think we must look upon these as a fact of life—a natural concomitant of the restoration of external convertibility in most of the world's great trading countries. There is undoubtedly a place, however, for the kind of orderly policies already practiced by many leading central banks—both in framing their own monetary policies and in avoiding abrupt shifts in the proportion of their reserves held in the form of gold—with a view to minimizing heavy flows motivated solely by the attraction of a temporary rate of return. In any case, it seems to me that our present gold holdings provide an adequate cushion to absorb short-term flows of this kind without any appreciable disturbance; but in saying this, I am not unmindful of the desirability of our trying to prevent the spread between our short-term rates and those abroad from becoming unduly wide.

This leads us to a consideration of some of the criteria of domestic monetary policy. At a time such as the present, with large unemployment and unused productive resources in the economy, it is clearly incumbent on us to pursue a general policy of ease that will put the Nation's banks in a position to respond to all worthy credit applications, and in fact to seek out worthwhile investment opportunities. On the other hand, I can see no reason whatever, under current conditions, to flood the banks with reserves. For one thing, while this could conceivably have a beneficial influence on longer term market rates, it could do so only at the cost of driving short-term rates to much lower levels, needlessly accentuating the relative attractiveness of interest rates overseas. Furthermore, excessively "sloppy" credit might well discourage the desirable improvements in efficiency and adjustments in costs which tend to accompany any lull in economic activity. As I have said before, we should not expect monetary policy to do more than it can do; and it is very probably too much to expect it to create—all by itself—a new upward movement in business activity. If the inadequate use of our resources should long persist, the time might come when fiscal policy could perform a useful stimulating function. But we should certainly not forget the highly adverse effects on our whole credit mechanism of the unduly large and protracted Federal deficit of the fiscal year 1958–59—and especially the adverse effects of this deficit on foreign appraisals of the dollar's stability.

In closing, it seems to me essential to emphasize the need to avoid all remedies for our balance-of-payments deficit which would be inimical to the kind of world we have been trying to establish, with the aid of

our friends and allies abroad, ever since the war—a world of maximum freedom for international trade and international investment. This means that we should shun protectionism in all its forms, with all that it implies in the way of lower standards of living both here and abroad. Further, we should firmly resist any suggestion of exchange controls over the international flow of capital funds or other international payments. Such action would not only be futile but would also defeat the whole purpose of our international economic policy. But above all, as I am confident both the outgoing and the incoming administrations would agree, there must be no tampering with the present fixed relationship between gold and the dollar, at $35 per ounce, and the readiness of this country to deal freely in gold, at this price, with foreign central banks and governments. I am certain that only harm could come from any depreciation of the dollar in terms of gold; and I am equally certain that this country has the will and the necessary resources to maintain this firm foundation of our whole international financial structure.

The beginning of 1961 is appropriately a time for reexamination of our objectives and our national programs for attaining them. I hope that no conservative will be so unbending as to deny the need for a constructive approach toward the full use of our resources both at home and in the world at large; and I hope that no liberal will be so rigid as to deny the vital importance of conducting our affairs in a way that assures firm confidence in the dollar. If we can adopt such a constructive approach, I am sure we can avoid panicky or unwise actions—and we shall be able to look back at the international problems of these days as providing a useful discipline for the shaping of sound and imaginative programs.

Favor Health Care for Needy Only

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. SCHWENGEL. Mr. Speaker, the current drive to provide a medical care for the aged program under social security even though we have a program on the books which has not had a chance to work is one of the typical approaches of the new frontier to provide something for everybody, regardless of need.

It was interesting to note the reaction to this proposal among the respondents to a recent Iowa poll conducted by the Des Moines Register. It is obvious from this poll that in Iowa, at least, there is no grassroots support for any approach which does not take into consideration the need factor.

I hasten to bring this poll to the attention of my colleagues by having it printed in the Appendix of the RECORD. The poll follows:

FAVOR HEALTH CARE FOR NEEDY ONLY

A majority of Iowans favor a medical-care-for-the-aged program based on need. They reject the idea that all aged persons should be covered regardless of their financial situation.

This is shown in a recent Statewide Iowa poll which reports that 68 percent of Iowans approve of some form of Government medical for the aged, but 74 percent feel that such a program should cover only those who cannot afford to buy their own health insurance.

This indicates a majority would not approve President Kennedy's proposal for medical aid through social security.

The survey shows that one out of five Iowans opposes any form of Government medical aid for the aged. About one out of five supports President Kennedy's idea that a Government program should cover all aged persons regardless of need.

Opinion does not vary much among city, town, or farm residents, although farmers generally show less interest in a Government aid program. Nor does opinion vary much according to age.

Among Iowans over 65 years of age, 71 percent think such a program should be based on need; 25 percent feel all aged persons should be covered and 4 percent express no opinion.

Sentiment remains about the same among the low- middle- and high-income groups—all strongly favoring a plan based on need.

Before Kennedy's medical bill was presented in Congress, Iowans in all age groups and from all parts of the State were asked the following question:

"Do you think the Federal Government in Washington should provide some form of hospital and medical care for persons over 65 years of age?"

[In percent]

	Total	City	Town	Farm
Yes	68	74	66	60
No	23	19	26	29
No opinion	9	7	8	11

All Iowans were then asked: "Suppose the Government decided to provide some form of medical care for the aged. Do you think this Government care should cover all persons over 65 years of age, or just those who can't afford to buy their own health insurance"?

[In percent]

	Total	City	Town	Farm
All persons	21	20	17	26
Only who can't afford	74	76	78	65
No opinion	5	4	5	9

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. RAY. Mr. Speaker, the tragic history of the Bulgarian people and especially the observance of their liberation day serve a significant reminder that freedom must always be guarded and strengthened, or it will always be in jeopardy. Otherwise sacrifices made in the name of national independence will be in vain. The gallant Bulgarian warriors of freedom, the best fighters in behalf of liberty, had vouchsafed all their worldly possessions and their lives for their freedom. And after centuries of struggle against their formidable Turkish foes, they finally succeeded in attaining their goal 83 years ago. Thenceforth they worked hard to safeguard their richly deserved prize, their independence. But unfortunately they were fated to suffer the worst consequences of the past two World Wars. In both they were on the losing side, but in the last one, they not only lost the war, but their freedom and independence.

Since 1945 Bulgaria has been drawn into the Soviet orbit, and has become practically a Soviet colony. Just as in the past the Bulgarian people fought the Turks for their freedom, now they are struggling in their homeland against Communist tyrants. March 3 was the 83d anniversary of their liberation day and I wish them fortitude and the courage to bear their trials which some day must assuredly pass away.

The Penalties of Responsibility

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column from the February 27, 1960, issue of the Evening Press of Binghamton, N.Y., by Mr. Larry Hale, an able reporter who specializes in problems of county government:

U.S. WELFARE AID ISN'T EQUITABLE

(By Larry Hale)

Nearly 30 years ago, local governments in Broome County and throughout the State were rocked by the depression.

Not only did the local governments lack the tax resources to meet the vast problems caused by the economic rupture, but the governments of New York and other States found themselves in the same boat.

The Federal Government moved in.

What started out to be emergency aid from the Federal Government has become habitual. If anything, Federal controls over State and local affairs are being increased.

Last year, the total amount spent by the Federal Government in grants-in-aid to State and local governments was more than $7 billion.

In many instances this money is used wisely and for the best of purposes. Just as certainly, a lot of it is ladled out in a too casual manner and under circumstances which make little sense.

Take the manner in which the Federal Government hands out money to States for public welfare aid to the needy who are 65 years old or older.

Every welfare recipient in the old-age assistance class, in every State, is entitled to receive 80 percent of the first $30 of total aid from the Federal Government. In addition, the Federal Government pays 50 percent of the next $35, for a maximum Federal grant of $41.50 for each recipient each month.

But very wide—and expensive—differences exist between States in other aspects of Federal aid to the old-age assistance program.

New York State and Illinois, for instance, are among States which require children to support aged parents when such children are capable of doing so. New York and Illinois also provide recovery provisions against real estate owned by aged welfare recipients.

Under these circumstances, only 5.5 percent of New York's population of the 65-and-over age group received old age assistance during 1959. In Illinois, the ratio was 9.3 percent.

Not all States require that children support their parents, whenever possible. California is one of these, and in 1959 it provided old age assistance, with Federal help, to 21.5 percent of its senior citizens.

California has no provision for recoveries of real estate owned by old-age welfare recipients. It permits an old-age recipient to own a home assessed for $5,000, which in true value can go as high as $25,000 or more.

In 1958 Louisiana was providing old-age assistance to 58.6 percent of its aged population, Mississippi was taking care of 46.4 percent, and Texas 33.7 percent. The three southern States, just as California, do not require support by children, nor do they have lien or recovery provisions against real estate.

You can probably guess how the Federal Government spreads its grants-in-aid for old-age welfare recipients around. You're absolutely right.

During fiscal 1958, California received $132 million in Federal funds for old-age assistance. New York received $45 million.

During 1958, Federal funds paid 37.9 percent of all federally supported public assistance programs in New York State. In Illinois, the Federal Government contributed 40 percent. It contributed 78.6 percent in Mississippi, 69.7 percent in Texas, and 58.6 percent in Louisiana.

Raymond M. Hilliard, director of the Cook County Welfare Department in Chicago and a former New York City welfare commisisoner, contends that the Federal Government should require each State to adopt child-support and property recovery provisions in order to obtain Federal aid.

"The dollar which is saved in Illinois and New York by restricting the (old-age) program to the genuinely needy aged is dissipated in other States on the nonneedy aged and their defaulting children," Hilliard once said.

Hon. Joseph R. Grundy

EXTENSION OF REMARKS
OF
HON. WILLARD S. CURTIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. CURTIN. Mr. Speaker, last Friday saw the passing of a very prominent man who had long been a powerful figure in the Republican Party. I refer to the death of the Honorable Joseph R. Grundy. This former U.S. Senator and business and political leader was a resident of Bucks County in Pennsylvania. He was a power in both Pennsylvania and national politics for many years. His life was well exemplified by a statement he once made in which he said that his beliefs were rooted in his old-fashioned ideals of doing right, fearing no man, and loving my country.

Under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Levittown Times, of Levittown, Pa., on March 7, 1961, about this illustrious man, which reads as follows:

A TOWERING FIGURE

Senator Joseph R. Grundy had become a legend even before death ended a full and remarkable life.

How greatly he influenced local, State, and National destiny may be a question for another generation, or even another, to determine.

His role during a crucial period of political, social, scientific, and technological change was that of an apostle of ultraconservatism, a role he played to the hilt and one of which he was proud "as a way of life."

Who can say, in retrospect, that such an unequivocal position of strength as opposed to dangerous trends toward socialism and governmental paternalism did not serve a purpose far above and beyond the vision of his critics of his day?

Senator Grundy was a controversial political figure. That Grundyism meant conservatism during those years when "isms" of every character flourished, including socialism, liberalism, and a lot of other flossy and foolish "isms," may in time to come represent one of the brightest commentaries on the career of Bucks County's most illustrious citizen.

Curiously, the caution and conservatism identified nearly a quarter of a century ago as the cornerstones of the Grundy political philosophy are again receiving sober consideration by more perceptive elements of both the Republican and Democratic Parties in this perilous day.

Be all of this as it may, Senator Grundy represented for nearly a half century a towering figure on the industrial and political scenes of the county, State, and Nation.

Yet he was inherently a humble man who personified in his own way of life the life of his forebears who helped fashion America into the great Nation that it is.

This way was one of hard work, thrift, simplicity, integrity, and love of neighbor, community, and country. Whether his causes were popular or not, he pursued them in the light of his own conviction of what was right.

We don't know that more can be expected of a man, whatever his estate.

Whatever his triumphs, however, through 98 years of living, and whatever his disappointments, we have an idea Senator Grundy was perfectly at peace with himself and with the world as he was cradled back into the arms of his Maker.

Red China and the United Nations

EXTENSION OF REMARKS
OF
HON. ARTHUR WINSTEAD
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. WINSTEAD. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I wish to call your attention to a very significant newspaper article in the form of a letter to the editor of the Clarion-Ledger, Jackson, Miss. It is written by Mrs. Duke Thornton, of Jackson, Miss. Mr. and Mrs. Duke Thornton for many years owned and operated my hometown newspaper. Both are outstanding Christians and loyal Americans.

The letter follows:

RED CHINA AND THE UNITED NATIONS

DEAR EDITORS: Americans must think straight if we are to deal straight with the subject of Red China.

From the Supreme Court bench, from leaders in the new administration, from respected representatives of the press, one sees the American people being wooed and lured toward the recognition of Red China. The reasonable-sounding argument presented that "you cannot ignore 600 million people" and that their Communst leaders are a "fact of life."

There is twisted logic in these simple statements which is intended to advance world communism and to firmly establish the oppressive rule of China's tyrants. It is because we do not intend to ignore those 600 million people that we must not give official recognition to the regime which is holding them in slavery.

If Communist China were admitted to the United Nations, it would greatly strengthen all the Communists in the yet-free nations of southeast Asia. Japan, the Philippines, Malaya, Thailand, Burma, Indonesia, South Vietnam, and South Korea—these would be swept away like a deck of cards.

We must fight to secure true freedom for China's people so that they can be represented in the United Nations by honest leaders whom the Chinese people have chosen. If now we give our blessing to China's tyrants and oppressors by according them our official recognition in the councils of freemen, we shall certainly destroy the one last hope of the suffering millions.

We should rather turn our energies in the direction of finidng an ideology which can unite the free nations and answers the causes of communism in our free society. When freemen live a quality of life which demonstrates that freedom under God is a stronger force than slavery under man, then the tide will turn in the world. The millions who suffer are living, hoping, longing, and enduring for that hour. Surely we cannot murder the spirit which keeps them alive.

Peace is a coward's goal. Freedom is the goal for a man, as it always has been. As freemen we must stand and fight for what is right in the fact of whatever threats there are. Fear of annihilation must never make us play the coward's game, else all that America ever stood for will be lost. The issue in 1776 was freedom—not peace. This issue in 1961 is not peace or war—it is freedom or slavery.

We must choose aright for ourselves, for our Nation and for the world. That is America's destiny. Each of us is responsible for the clean living, straight thinking, and inspired action which will achieve that goal.

Sincerely yours,

MRS. DUKE THORNTON.

Pay Increases for Personnel in the Veterans' Administration Department of Medicine and Surgery

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mrs. KEE. Mr. Speaker, I have today introduced two measures which seek to increase the pay of doctors, dentists, and nurses in the Veterans' Administration.

Both of these bills are based on a survey which the committee made of all Veterans' Administration hospitals—170 in number, plus 3 independent domiciliaries. These hospitals provide medical care for approximately 114,000 veterans each day, plus 17,000 in domiciliaries.

The managers of all the installations were asked for their suggestions as to the salaries which should be paid to the doctors, dentists, and nurses within this system. My first bill represents the recommendations of these managers and

the second proposal represents the thinking of the seven area medical directors.

It is essential, Mr. Speaker, that we give consideration to providing a salary structure and scale which will recruit and retain badly needed professional personnel in the Department of Medicine and Surgery of the Veterans' Administration.

Cliches of Socialism—No. 3

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. ALGER. Mr. Speaker, following is the third of a series of published articles, "Cliches of Socialism," by the Foundation for Economic Education, Inc.:

CLICHES OF SOCIALISM—NO. 3

"The Government should do for the people what the people are unable to do for themselves."—Lincoln

If it be consistent with right principle to have a formal agency of society of delegated, limited and specified powers—government—it follows that there are principles, if we could but find them, which prescribe the appropriate limitations.

The search for these principles has proved elusive, as history seems to attest. Failure to find them has led some distinguished thinkers—sometimes called philosophical anarchists—to decide against any government at all. It has led others—sometimes called Socialists—to resolve in favor of the omnipotent State; let government control everything.

Other thinkers, who refuse to approve either anarchism or socialism, settle for what is more a plausibility than a principle: "The Government should do for the people what the people are unable to do for themselves." Thus, unwittingly, some avowed conservatives lend support to the Socialists. In practice, this plausibility works as follows:

The people express inability in that they will not voluntarily invest the fruits of their own labor in an enterprise that promises to deliver mail to those who choose to isolate themselves. So, let the Government deliver the mail—with rural free delivery.

The people, when organizing railroads, will not voluntarily extend their services to communities with few passengers and little freight. Therefore, have Government compel unprofitable operations on the private roads or, as in many other countries, form a Government road to perform such services.

The people will not willingly reclaim land for agriculture at a time when Government pays people to withdraw good farmland from production. Therefore, let the Government carry out uneconomic irrigation and reclamation projects.

The people will not willingly and with their own funds build huge hydroelectric projects to serve areas that can be served more economically by other forms of generated power. Hence, we have TVA and a growing socialism in the power and light industry.

The most up-to-date example of this system of determining governmental scope is in the field of astronautics. People simply will not, on their own, invest billions of dollars for astronautical weather reporting, for photographs of the moon's hind side, or for radio conversations—a century or more hence—with a people who might possibly exist in interstellar space. Ergo, let Government do these things the people are unable to do for themselves.

This formula for governmental action implies that the people lack the resources to perform such services for themselves. But, Government has no magic purchasing power, no resources other than those drawn from private purchasing power. What we have here is a rejection of the market, a substitution of pressure group political power for the voluntary choices of the individuals who vote with their own dollars. This criterion for the scope of the state leads away from private enterprise toward the omnipotent state, which is socialism.

The enormity of a project is no excuse for governmental interventionism. When the market votes "yes," capital is attracted, regardless of the amount required, to do the job. Witness our larger corporations, bigger than Hoover Dam or what have you?

Government has no right to use force or coercion for any purpose whatsoever that does not preexist as the moral right of each individual from whom the Government derives its power and authority.

LEONARD F. READ.

Postmasters and Politics

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following editorial from the Nyack Journal News of March 2, published in my district, is a very clear and factual study of what is going on in the Post Office Department.

Mr. Speaker, either we are to have a Civil Service or we should frankly revert to the old spoils system, always dear to the heart of the politician. We cannot have it both ways. The Post Office Department is a perfect example of what happens when we try to apply both systems. The Post Office should be under Civil Service, utterly and completely.

The editorial is as follows:

POSTMASTERS AND POLITICS

A continuing hazy political mystery is the status of postmasters under the appointment plan currently in vogue, an appointment further fogged by civil service regulations that purportedly apply yet that are somehow apparently sidetracked. The postmastership is supposedly a Presidential appointment with congressional approval but there's political fencework apparent when the two branches of Government have opposite party affiliations, seems as if. Patronage remains a great institution for the politicos, we know, and a postmastership is little more than a surviving remnant, but it's hardly in the interest of efficient operation.

Usually a postmaster appointment is of mysterious origin and most often an utter surprise to the community served. Normal procedure is to discover some fine morning there's a new man in charge when nobody had the least idea a change was pending. The party officials who handle such things with the greatest secrecy aren't surprised because they have pulled the strings while the general public remains completely ignorant. By the time the public is aware of what's in the wind, it's too late to do anything. It's only occasionally that the public gets into the act, even then without much success.

Maybe there's no mystery involved in the appointments and the political jockeying that goes into them but the public feels there is, just as it remains confused over the understanding Civil Service enters into the designation and how far it is effective. A better understanding of the whole process would help and after a full explanation has been absorbed we wouldn't be at all surprised to see some changes demanded and made. Maybe it's a last stand of the political plum orchard in operation of a Government function but it's not a particularly desirable condition.

The post office career employee has long been under civil service status, seldom getting beyond that next-to-last step, usually from lack of political activity such workers stay away from. No doubt the original thought when Civil Service took over the Post Office operation was that the top man was administrative in function and therefore should reflect the thinking of the Postmaster General, a place determined by the party to which the President belonged. It has become a practice, also, to have the successful candidate's campaign manager appointed Postmaster General.

Well, that's partially all right but, in passing years, local post office administration hasn't had to reflect the thinking of the top man in the Department. Instead, it's purely a business operation handled according to set rules and regulations that a career man who has worked up through the ranks can best handle from a wide background of practical experience. Frankly, we'd like to see the patronage plan thrown right out of the post office window, have the Department run from top to bottom on a business rather than a political basis. That might alter the Cabinet job but why would it retain the status it now has? It's not at all the same kind of operation it once was.

The only argument about Post Office Department policy is whether it's to be a Government service that's subsidized by taxes or a self-supporting operation in which the public pays according to the use it makes of the facilities. That can be determined easily enough by Congress without Cabinet direction, and it should be fixed as policy rather than fluid from one year to the next. We continue in the belief that it should be self-supporting rather than subject to all sorts of pressures for special privilege, as it would be under the Government service program. And maybe, if it were a business operation, politics would be removed from the process of appointing new postmasters as the need arises.

The Brotherhood Week Ideal Must Be Kept Alive All Year

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. SCHWENGEL. Mr. Speaker, during Brotherhood Week, many fine things were written and said in the interest of better understanding not only between the countries of the world but between the divergent factions in our own country. One of the most eloquent of these was written by a constituent and friend of mine, Mr. Paul Ryan, Davenport,

Iowa, who has served as Brotherhood Week chairman in his own community and is on the board of directors of the National Conference of Christians and Jews in Scott County, Iowa.

Under leave to extend my remarks, I consider it a privilege to bring Mr. Ryan's statement, which appeared as a guest editorial in the Davenport (Iowa) Times-Democrat on February 25, to the attention of the Members by having it appear in the Appendix of the RECORD. The editorial follows:

THE BROTHERHOOD WEEK IDEAL MUST BE KEPT ALIVE ALL YEAR

We are nearing the end of another Brotherhood Week.

The idea of having weeks dedicated to various causes is typically American, so it is right and indeed the natural thing to devote a week to considering the ideal that is encompassed by the word "brotherhood."

Thus brotherhood would seem to have attained a status equal to that achieved by hot dogs, the smile, national safe boating, insurance, better homes, and various other phases of modern life. Yes indeed. It has a whole week devoted to it.

In this, you might think, it is better off than mothers and fathers, who are only worth 1 day each to our special events calendar-makers. But many mothers and fathers, of course, go on for years and years, and it is quite difficult to forget about them even though it is not their "day."

Not so with brotherhood—that is easy to forget, and it is frequently forgotten.

But this is Brotherhood Week and it does us no harm to be reminded that we have an obligation to our neighbors, acquaintances—yes, and to strangers, too.

And brotherhood is not something to be observed on just a day or during a single week, anyway, it is something that we should have in our minds 365 days a year.

So as Brotherhood Week of 1961 draws to a close, let us consider seriously for a few minutes just what brotherhood is, and what it should mean to all of us.

In our U.S. democracy where every one of us enjoys so many freedoms that are denied to so many people throughout the world, it should not be necessary to make any special plea for brotherhood. Yet it's important that we should keep reminding ourselves not only of the great freedoms we enjoy, but of our need to share the brotherhood, man-to-man, that these freedoms permit.

Just what is brotherhood? It's something we hear from pulpits throughout the country; we're exhorted to practice it. But do we? Frankly, I think we have a long way to go before it is so ingrained in us, so inculcated in us that it becomes an outstanding national characteristic of the United States.

The National Conference of Christians and Jews continues to assert its great leadership throughout this country with the spotlight on this special week dedicated to brotherhood. Everywhere you have been made increasingly aware of this national dedication to brotherhood—the way keystone of real democracy.

And brotherhood should know no international borders either. It must become worldwide. Despotisms and tyrannies will disappear whenever any national group bradly accepts and practices it.

To those of us identified with business and industry, let us discover how, in practice, the ideal of brotherhood not only builds efficiency but even more, adds a joyous dimension to our daily lives. The regard for the other fellow—his welfare—induces an inner glow of deep happiness and satisfaction that is the priceless ingredient in any design for living.

Brotherhood: Say "Yes" and practice it. The Golden Rule is so simple, so sound, so worth while.

Racism in Reverse

EXTENSION OF REMARKS
OF
HON. ARTHUR WINSTEAD
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. WINSTEAD. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I submit for the Appendix of the RECORD a most thought-provoking editorial "Racism in Reverse," by Mr. W. K. Prince, Newton, Miss. Mr. Prince is editor and publisher of the Newton County Record, an outstanding weekly newspaper in my congressional district. I strongly recommend that all Members of the Congress read this fine editorial:

RACISM IN REVERSE

Discrimination in 1961, if against the white race, is approved as legal, moral, and permissible by many colored peoples of the world. For example, under Liberia's Constitution no white man can own land.

It is considered all right for Negro groups to force their way into churches where they disrupt worship, into theaters where they see the same shows that are offered in their own theaters, into privately owned businesses where hard-working businessmen owe them nothing.

But—it is all wrong if a white man owns land in Africa, industries in Cuba, and belongs to associations where membership is limited and dues are required.

Fortunately, the Lord does not judge man as a race, a group, or a nation. He judges man by his individual motives and actions—with greater emphasis on motives, the Bible teaches.

Motives of the violent and the nonviolent differ widely. To the underprivileged, motive seems to be escape from exploitation, and hope of raised standard of living, often unearned and ill gotten. For peoples who have earned their freedom, motive is responsibility, economic justice, political security.

In international life, there are a great many questions that have no certain Christian significance. They represent conflicts of commercial interests and prestige. It must not matter greatly to God whether the African or the Belgian has greater prestige. It must matter to Him when Christian values are involved in such issues as human dignity, colonialism, the United Nations, atomic power.

In colonial problems, the colored people of the world assume that foreign rule is bad regardless of the purpose and method of the government. However, self-determination is not necessarily a Christian purpose. Modern colonialism seems to have outworn its historical necessity, in many areas, though by no means all. Africa was self-ruled for centuries while colonialism covered only a small era of her history. Yet Africa made more progress under colonialism than during all the preceding ages.

The demand for change by colonies may reflect a love of liberty, or it may reflect fierce hatred, undisciplined and irresponsible. Colonialism must be viewed with detachment and compassion for both sides. God's trust should not be abused by invoking His judgment on one or the other side.

In the competition of the United States with Russia, one cannot conclude that every measure of communism is bad, nor that every measure of capitalism is good. The world is not that simple. If the United States allows herself to copy Russia's methods as a means of combating them, she has lost the battle before she starts.

The totalitarian state in its nightmarish horror must be an abomination in the sight of God. Yet no American can say that his Government operates ideally. Everything the United States wants does not reflect God's purpose, nor does everything Russia wants reflect the purpose of the devil. There must be some areas of conflict in this cold war that cause a Divine Power to contemplate both sides with pity and disgust.

There is no particular Christian sanctity lent to decisions in the United Nations by the fact that they represent views of a majority of governments. Little countries are not necessarily more virtuous than big ones, colored people are not always more virtuous than white, and an international majority does not always reflect the Christian answer.

However the U.N. represents the germ of something necessary and hopeful for this endangered world; a sense of conscience higher than the national one. It should not be belittled nor desecrated, because of the idea it symbolizes. Desecration of the U.N. building 2 weeks ago may be termed un-American, un-Christian and subversive, and racism in reverse.

Long Island Firm To Build Research Station for Atomic Energy Commission

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. DEROUNIAN. Mr. Speaker, it gives me sincere pleasure to report that the Atomic Energy Commission has chosen a nuclear design company in Garden City, Long Island, in the Second Congressional District of New York, to prepare plans for a new food irradiation experimental center to be built for the U.S. Army Quartermaster Corps.

The company is Associated Nucleonics, Inc., a division of Stone & Webster, Inc. As many of my colleagues know, both Associated Nucleonics and its parent company have been extremely active in designing and building atomic installations for civilian and military purposes.

Dr. Wilbur E. Kelley, president of Associated Nucleonics, is known to many of us in Congress as a highly respected pioneer in the new and exciting field of nuclear power. Among other accomplishments, Dr. Kelley was awarded the Legion of Merit for his outstanding work in the Manhattan project, which developed the atomic bomb that sealed the fate of freedom's aggressors in World War II.

Members of Congress, of course, recall that the food-irradiation studies conducted earlier by the Quartermaster Corps generated differences of opinion in the executive branch that resulted in temporary suspension of the program some months ago. I am pleased that the Army is resuming its experiments

to determine the effects of controlled radiation on various kinds of food. Obviously, the findings of the Army scientists could have extremely significant applications in our national defense effort and in the business community.

Under previous consent, I offer here the text of two news stories announcing the selection of Associated Nucleonics to design the new research station and providing additional details concerning the Quartermaster Corps unique studies:

NEWS FROM STONE & WEBSTER, FEBRUARY 8, 1961

Associated Nucleonics, Inc., of Garden City, Long Island, has been chosen by the Atomic Energy Commission to design a research station for U.S. Army Quartermaster Corps experiments in the preservation of food by atomic radiation.

Negotiations on final contract details will take several weeks, a company spokesman declared. In the meantime, the AEC has authorized the company to proceed with preliminary planning.

The research station will house the largest cobalt 60 radiation source in the United States. It will also be equipped with a large linear accelerator to irradiate foods with high velocity electrons.

Dr. Wilbur E. Kelley, president of Associated Nucleonics, a subsidiary of Stone & Webster Engineering Corp., New York, said the research post will be built at the Quartermaster Research and Engineering Center at Natick, Mass. It is expected to cost approximately $1.8 million.

Construction will begin this spring, and target date for completion is August 1962.

Army scientists at Natick will continue earlier pioneer studies to learn if controlled radiation can preserve all kinds of foods in safe and edible condition for indefinite periods. They also want to learn how, and to what extent, radiation affects the taste, color, and cooking requirements of different foods.

The experiments are expected to yield valuable data for evaluating the two methods of irradiation. In one process, food will be exposed to gamma radiation emitted by the cobalt 60 source, which will contain more than 1 million curies. In the other process, test foods will be bombarded by electrons shot from the linear accelerator, which will have a maximum energy of 24 million electron volts.

The cobalt 60 installation is being designed by Curtiss-Wright Corp. Varian Associates of California, specialists in accelerator design and production, is building the linear accelerator.

Associated Nucleonics has participated in many nuclear projects, both military and civilian. The company assisted in the mechanical and electrical designs for the newly completed Yankee atomic electric plant built in Rowe, Mass., by the parent firm, Stone & Webster Engineering, for 10 New England utilities.

Dr. Kelley said his staff has now undertaken a similar assignment for the Carolinas-Virginia nuclear powerplant to be constructed at Parr, S.C. The company has also conducted extensive design studies for the Nation's atomic-powered aircraft program. It designed a medical irradiator for the AEC and a radiation laboratory for Continental Oil Co.

Dr. Kelley, educated in engineering at the University of Louisville, holds the Legion of Merit for his work as a member of Gen. Leslie Groves' original team in the Manhattan project, top secret World War II program which developed the atomic bomb.

James J. Byrnes, a chemical engineer who has worked at the Oak Ridge and Brookhaven Atomic Laboratories, has been named project manager for design of the Natick station, Dr. Kelley announced. Mr. Byrnes educated at Columbia University and the University of Tennessee, joined Associated Nucleonics in 1952.

[From Newsday (Long Island), Feb. 9, 1961]

LONG ISLAND FIRM TO AID ARMY MAKE C-RATION STEAK LIKE STEAK

(By Leonard Baker)

WASHINGTON.—A Long Island firm will build a $1,800,000 research plant designed to replace the Army's C-rations with beefsteak.

The Atomic Energy Commission announced yesterday that a contract will shortly be signed with Associated Nucleonics, Inc., of 975 Steward Avenue, Garden City. The facility, to be built at Natick, Mass., is the first designed specifically for experimentation in the preservation of food by irradiation. The Garden City company was 1 of 28 which submitted bids on the project.

The food will be sterilized by irradiation from atomic or electronic waves. Once completely sterilized, it can be kept for indefinite periods of time without refrigeration or canning. It must only be wrapped in an airtight container such as a plastic bag. The rays used come from a different source from radiation generated in nuclear reactions which could contaminate the food. The waves will pass through the food leaving it uncontaminated.

This means, according to the Army Quartermaster Corps, that eventually the foot soldier will be able to reach into his knapsack and pull out a "fresh" steak or chicken leg rather than the canned rations which are now his lot. The plant will be built at the Quartermaster Corps Research and Engineering Center at Natick, and will be completed by late summer of 1962.

The facility represents a further step in a program the Quartermaster Corps has been conducting for 6 years. According to an Army spokesman, research has already demonstrated that "the system works" but, he added, "You can't eat the food."

In sterilizing the food, he explained, the irradiation process changes its texture and taste. The problem which will be tackled at the Natick plant, he said, is to discover what kind and what levels of irradiation and what treatment of the food are necessary to keep the steak tasting like steak.

Politics Foils Judiciary

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. ELLSWORTH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Kansan under date of March 5, 1961. Lest there be those who believe that the public is unaware of the situation, the very political situation, I must say, involved in the creation of new Federal judgeships, I want to call the editorial to the attention of my colleagues:

POLITICS FOILS JUDICIARY

No judicial bill was passed last year by Congress for political reasons, Representative EMANUEL CELLER, Democrat, of New York, admits, saying that the Democratic leadership gambled on a change of administration and won.

It is clear to all that the judicial system has been fouled up by political maneuving as indicated by CELLER. Republicans have reason to cry "unfair."

The public, as usual, is the loser in the delaying tactics. Particularly in big city areas from coast to coast, the dockets of our U.S. courts (not to mention the State courts) are clogged with tens of thousands of untried, unheard cases.

The backlog goes on piling up despite much streamlining of court procedures. Every year 60,000 or more new cases are dumped in. In the most populous centers, it can take 3 to 4 years for a case to move from filing to final decision.

President Kennedy has now included among his "must" bills for 1961 a proposal to create 59 new Federal judgeships—9 at the appeals level.

No one interested in justice, in the sound functioning of our judiciary system, is likely to question the need for urgent action. Every month that passes aggravates the problem.

But it seems fair to say that should action now come, no great credit should reflect on the ruling Democrats in Congress. For in recent times their inaction has become as chronic as the delays in the courts. No new Federal judgeships have been created since 1954, and virtually all of that time the Democrats have controlled Congress.

Judgeships are, of course, rich political plums. The effect of inaction was to deny to the Eisenhower administration the opportunity to dispense these.

In a free society justice must be had with some speed. A fair disposition of all conflicts and other matters relating to citizens' rights and properties lies at the heart of democratic liberties.

Address by Abraham Ribicoff, Secretary of Health, Education, and Welfare

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. DADDARIO. Mr. Speaker, the National Education Association called a special legislative conference in Washington last Saturday night concerning the program of President Kennedy. It was the occasion for a report by the new Secretary of Health, Education, and Welfare, Gov. Abraham A. Ribicoff, which sets forth many facts which we must keep in mind as we prepare to consider this program in the coming months.

Governor Ribicoff is no stranger to the problems of education. In his administration in Connecticut, he faced a rising school enrollment and dealt with a sharp rise in educational costs. Alert and imaginative, he spurred attention to these problems at the local level which was marked by progress all along the line. He supported a higher minimum for all teachers and signed into law a statewide tenure act.

His speech underlines the important fact that all Americans want an educational system adequate to our needs, but that differences among us arise over how best to attain it. And he makes clear what is often forgotten in this discussion—that Federal aid to education is as old as the republic itself.

There are many controversial aspects to the education program which has been presented to this House. We will all be undertaking close study of this measure in the days ahead, and I am hopeful that reasonable men will find a workable solution fair to all our citizens. Governor Ribicoff's speech offers some eloquent argument in support of the measure which is before us; I believe it deserves thorough consideration by the Members of the House:

President Kennedy has sent to Congress the most significant proposals in the field of education ever to have the support of a U.S. President. He has pledged his personal support of these proposals because of a basic faith that education is a key to the progress of all mankind.

It is a privilege for me to speak tonight on behalf of the President's program. I am proud to be enlisted in the cause to which he is so firmly dedicated. And I appreciate this opportunity to meet with distinguished representatives of an organization which so deeply shares the President's aspirations for the progress of American education.

Our total progress as a nation has always gone hand in hand with our progress in education. We cannot expect for long to have one without the other.

By the same token, if we move ahead in education, we will continue to move ahead as a nation. For education engenders progress in all aspects of our national life. This has been demonstrated from our beginning as a young nation to our emergence as a world power.

The National Education Association, the State Education Associations, and the Department of Health, Education, and Welfare share these dual goals—progress of American education and progress of America. And so do the American people.

The question is not whether we should have an educational system adequate to our needs but how we can attain it. And these needs must be considered not only in the light of today's problems but of tomorrow's as well. Tomorrow's problems must not be left for tomorrow. They must be dealt with today. For the lead time in all things concerned with education is long. And we cannot afford the price of delay.

Today's needs in education are well documented. And there has been ample forewarning of the potential crises of tomorrow.

What should demand our whole attention at this point is the solution.

During recent years and months—and especially in recent weeks—there has been a growing awareness that greater public support of education is essential. At the same time there has been a developing realization of what the Federal responsibility should be in this total effort.

But too often, it seems to me, the proponents of Federal aid have been off the real target.

At times the argument has been entirely negative, based solely on the obvious fact that Federal assistance has never meant Federal interference or control. I suggest that quite enough time and energy have been devoted to this point. Nobody, so far as I know, wants Federal control of education. Nobody, so far as I know, seeks it. You and I don't want it. The States don't want it. The Congress doesn't want it. Clearly, the President doesn't want it. So let's agree once and for all that we're not going to have Federal control of education.

At the other extreme, some advocates, in an excess of enthusiasm, seem to suggest that Federal aid is a bold new concept that all by itself can reshape the whole course of American education. This, of course, is also wide of the mark.

So the practice and principle of Federal aid to education needs to be protected not only from its enemies but sometimes also from its friends.

The simple fact is that the Federal role has been a legitimate and accepted part of the American educational experience since the founding of the Republic. It has neither subverted education nor produced the millennium. It is neither that bad—nor that good.

For 175 years, Federal aid has helped to serve the national interest. This, as I understand it, is what the Federal Government was set up for in the first place.

In proportion to other sources of support, the Federal share, of course, has always been modest. But the amount of dollars has been significant. The total of all Federal funds devoted to educational activities in fiscal year 1960 was $2.7 billion.

The point is, the Federal Government already is helping education in what can only be termed a big way.

This has not come about by accident or simply to demonstrate a theory. Congress has authorized Federal aid to meet certain specific needs, when other solutions were not deemed adequate in the national interest.

That is all the President is proposing be done today. That is all he was advocating in 1957 when, as a Senator, he told the Maryland State Teachers Association that "* * * the race for advantage in the cold war is * * * a race of education and research" as well as a race of armaments, production, and propaganda.

The situation confronting both American education and the Nation today is different in degree and kind than any that has confronted us before. The question of Federal aid to education, therefore, needs to be viewed in a modern context.

The basic ingredients of the American concept of education are, of course, unchanged. There are in education all the hallmarks of our Nation's progress. There is effort, imagination, and growth. There is a firm belief in the virtue of local control of public education. There is a sound and workable relationship between Federal and State Governments—backed up by a long record of solid achievement. All this and more remains the same.

The problems, however, are not the same. New challenges require more of American youth. National requirements, economic progress, the rapid advance of science and technology have combined to raise the sights of the present generation of students. The Nation expects much of them, and there is evidence throughout the Nation of an eagerness to live up to these expectations.

And they will live up to our expectations, given the opportunity. For the Federal Government to lend a measure of assistance in providing adequate educational opportunities for the coming generations of Americans is only a recognition of what we as a Nation expect of that generation.

The job, therefore, is up to the American people as a whole, working through the established instruments of government, to see that no American youth is denied the opportunity to realize his full potential.

More and more young Americans will be denied that opportunity—to their own and the Nation's loss—unless action is taken to supplement State and local efforts. There are a number of reasons why this is so.

Of prime importance, of course, is the uneven financial capacity of the various States. Despite increased efforts, many States simply do not have the tax resources to do what needs to be done for education. Nor will they be able to do in the foreseeable future. And those that are better off are confronted with a host of pressing demands on their resources.

While Federal tax dollars have doubled in the postwar years, State and local governments have had to increase their tax revenues by more than 300 percent. From 1946 to 1959, while the Federal debt increased by 9 percent, State and local debt soared by more than 350 percent. Property taxes, the traditional source of revenue for education, are in many areas rapidly approaching the limits of reasonableness.

In the meantime, the costs of education are going up and up and will continue to for some time. First there is the added expense of increased enrollments. Our public school enrollments have been increasing at the rate of more than 1 million a year for the last several years. Then there are the increasing costs of buildings, books, and salaries—all the goods and services that go into the operation of our school system. And finally, there is the drive toward better education. This involves more and better laboratory facilities, expanded libraries and all sorts of modern teaching aids.

All told, just in the past 10 years the cost-per-pupil in our public education system has jumped from $284 a year to $496—an increase of 75 percent.

Even where the situation is not yet desperate, efforts to raise real estate, personal, and business taxes still higher are meeting with more and more resistance.

This is not just a problem for the hard-pressed States. It is a problem that should concern us all. For when education is short changed anywhere it is an unseen drag on our national strength everywhere.

The uneven pattern of State and local tax capacity is aggravated by other factors which seriously affect our total progress in education. One is the uneven geographic distribution of our school-age population itself. As of 1957, no less than 44 percent of the Nation's children under the age of 18 were concentrated in seven States. And this concentration has probably increased since then.

Another problem confronting many a school district, is the rapid increase in the mobility of our population. Each year, more than 5 million people move from one State to another. In a decade, no less than a fourth of our people go to live in other States. Today's resident of a high-income State with a better-than-average school system may well find tomorrow that his children attend a less-than-average school in a low-income State.

Dominating all other factors is the momentum of the Nation's interest in education. This has taken the American people higher and higher up the educational ladder in larger and ever larger numbers. In the lifetime of many of us in this room, a grade school education was the norm, a high school education the exception. That rarity, a college education, was for the fortunate few.

As recently as 1920, only about 20 percent of our youngsters went on to high school. Today, more than 40 percent of our high school graduates go on to college.

This kind of momentum must not be denied. On the contrary, it is in the Nation's interest that it be encouraged.

I do not mean by this that the Federal-State relationship in education should be in any way modified or changed. No such change has been advocated. What is being advocated is a further application of old approaches to the problem of education in this country. Scholarship assistance is not new. The use of Federal funds for school construction is not new. Contribution to teacher salaries is not new. All of these

principles have been put into practice successfully in a long line of experience, going back to the Northwest Ordinance of 1785 and extending on through the land grant college program, the GI bill, aid to federally impacted areas, and the National Defense Education Act.

Those who came before us were ready and willing to use the instruments of government to promote the cause of education. They were not deterred by shibboleths or false fears.

Those stanch advocates of Federal interest in education—Washington and Jefferson—would agree, I think, that there is greater justification for Federal support of education today than ever before.

The Federal role in education is a proud one. Both its potential for good and its accepted limits derive from the firm tradition of mutual respect for true Federal-State cooperation. It draws strength from the deep sense of responsibility that the American people have for education.

The Federal Government can, and I believe must, play a significant role in the vital process by which the next generation of Americans prepares itself to meet the challenges of the 1960's, the 1970's, and beyond.

Political Gamesmanship

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1961

Mr. HOSMER. Mr. Speaker, campaign trail promises loaded with political sex appeal are as important in winning elections as gapsmanship. But they have a noticeable capacity to turn up later as frightening haunts to winners gaining office with their lure. What seemed to November campaigners to be bold moves ahead often appear to January officeholders as enormous budget-busting millstones around extended political necks. This need not, however, prove catastrophic. All need not be lost. There is a way out. It involves combining political gamesmanship, the art of appearing to produce on campaign promises without actually doing so, with the old parliamentary axiom "kill it with controversy." The specific technique is to put a promise in bill form, making sure the bill also is loaded up with lots more items so unpalatable to large numbers of legislators they must vote against it. The skilled political gamesman can achieve an additional unpopularity bonus for the bill by leaving out numerous other items, the omission of which is wholly unpalatable to another bloc of legislators. Almost surely the bill will be defeated and the haunt exorcised. In the process the political gamesman has appeared to work with selfless devotion to produce on his promise. He remains glorious in defeat. He can sanctimoniously blame the outcome on evil, ignorant, selfish, corrupt, unhuman forces and/or including even the other political party. Unlike touch football, political gamesmanship is not a spectator sport. One of its basic rules is never to admit the game is being played. Only the players themselves are supposed to know. Sometimes bystanders can piece together enough impressions to form an opinion the sport is being indulged in, but they can never be sure. Persons and events hereinabove portrayed are entirely fictional and any similarity to actual persons, living or dead, is purely coincidental.

Praise for Patterson Army Hospital, Fort Monmouth, N.J.

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. AUCHINCLOSS. Mr. Speaker, I am pleased to have permission to insert in the CONGRESSIONAL RECORD a letter dated March 5, 1961, which I have received from Mr. James E. McDonald, 53 Martin Drive, Red Bank, N.J., a constituent of mine.

Mr. McDonald's letter is in high praise of the excellent treatment which he received when he was a patient in the Patterson Army Hospital at Fort Monmouth. It is too often that citizens take for granted the excellence of work done by men in the Government service who are in responsible positions and so when outstanding work is recognized I believe it should be widely circulated. I think my colleagues are well aware of the fact that people frequently are given to criticism and that in many instances the criticism is based on inadequate knowledge of circumstances and insufficient information.

I am very proud of the accomplishment of Fort Monmouth, which is operated by the Signal Corps of the Army. In this age of new developments in the electronic world it has been in the forefront in the discovery of new methods and means of communication, and American citizens may be well satisfied with the way this Army post is conducted.

Mr. McDonald's letter is as follows:

RED BANK, N.J., *March 5, 1961.*

Mr. JAMES C. AUCHINCLOSS,
House of Representatives,
Washington, D.C.

DEAR MR. AUCHINCLOSS: Although I have visited with you in your House office on several occasions I doubt that you will be able to recall me. As a resident of Lincroft, I am one of your constituents and as such I would like to relate a recent experience of mine.

As a result of injuries sustained in an enemy air raid in Italy, I was retired from the Army in 1944. Recently I was confronted with the necessity of undergoing surgery. Despite the fact that I have full hospitalization coverage I decided to enter Patterson Army Hospital at Fort Monmouth. This decision was based solely on my profound belief that Army medicine is unexcelled and this conclusion was reached as a result of the excellent treatment I received during wartime confinement. I can assure you, sir, I made an extremely wise decision.

Starting with the first minute of my initial visit to Patterson Hospital and continuing through my entire stay, the treatment I received exceeded even my optimistic expectations. This statement can be applied to the medical, dietary, and morale routines. It is extended from the hospital commander down through the lowest ranked corpsman. I can assure you that the competency and efficiency that prevails at this facility is such that the Congressman representing this district should justifiably take pride. I would like to single out one man in particular but in such a situation this would not be wise.

Mr. AUCHINCLOSS, I wish to express my deepest gratitude to the Congress for having extended such privileges to retired personnel who held only temporary commissions.

I am positive that if the tenor of this letter was critical, you would take prompt action to correct the complaints. I trust that you will take similar action in passing along the feelings I have expressed. It should be very comforting to parents with children in the Army to know that they can be certain that they are protected by the most competent medical care when required.

With best wishes and kindest personal regards, I am,

Sincerely,

JAMES E. MCDONALD.

The Race in Space—A Communications Satellite in Orbit Proposed by the Bell Telephone System To Improve Our Communications System on Earth

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1961

Mr. McDONOUGH. Mr. Speaker, Project Echo which was used to bounce the voice of President Eisenhower across the Nation in a matter of seconds demonstrated the practical use of a communications satellite which could be placed in orbit and used as a relay for voice communication to all parts of the earth by radio bounce.

The proposal by the Bell System to finance the building of their own communications satellite and to obtain permission for its use through the Federal Communications Commission for voice transmission indicates the rapid progress we are making in the use of outer space for practical purposes.

In order to make this possible, it will require the cooperation of the Federal Government to fire the Bell System satellite into orbit and to grant them permission to use our tracking stations in order to prove that this system of voice communication is possible and may become an everyday operation for voice communication to all parts of the earth.

Public interest requires development of a satellite communications system as rapidly as possible.

Heavy use of present oversea cable and radio circuits reflects the rapidly growing need for an expanded and more flexible oversea communications system. Satellites are ideally suited to supplement existing facilities. They offer the most practical means of providing oversea television service and

would afford highly desirable alternate routes for other oversea services, many of which are extremely important to our national security.

Project Echo, one of our Nation's most dramatic space achievements, demonstrated our leadership in satellite communications. In an age when national prestige is so important, we should keep that leadership.

Privately owned common carrier industry should do this job.

The usefulness of any space communications system will depend upon the extent to which it can be integrated into existing domestic and international common carrier networks. The Bell System already has a vast domestic network with worldwide links to communications systems abroad. Placing a satellite system in operation would simply be adding another important group of international communications channels through what amounts to microwave towers in the sky.

Furthermore, the Bell System has an unmatched fund of experience in communications research, in systems engineering and in working agreements with other American international carriers and foreign telecommunications administrations.

The Bell System hopes to move forward with an active satellite trial in about a year.

Following the highly successful Echo experiment, the Bell System proceeded at its own expense with development and construction of experimental active satellites. These satellites are designed with repeaters to amplify and relay radio signals with power generated from solar energy. They utilize broadband microwave techniques and are of the type ultimately required to provide commercial telephone, television, data and global communications of all types. The Bell System has been assigned frequencies for experimental use. tI has also asked for launching facilities so the trial can get underway within a year.

It has offered to pay for satellite, for launching it, for building ground stations in the United States, and is confident that the communications agencies of other countries will cooperate by providing ground stations abroad.

It will make the satellite facilities available to NASA and U.S. international telegraph common carriers for experimental use.

Bell System space program is in line with national communications policy and with the aims and purposes of NASA.

Long-standing U.S. national policy places the responsibility for efficient public communication, both domestic and international, on the common carrier industry. Throughout its existence the Bell System has accepted this responsibility and has pioneered in all phases of communications research and development.

NASA has broad responsibilities to advance peaceful use of space, making most effective use of scientific and engineering resources of the United States to avoid unnecessary duplication of efforts. Its emphasis should be on research and development. Combination of Bell System communications experience and NASA space technology can avoid duplication of effort and result in fastest possible development.

Bell System efforts and plans are, in all major respects in accord with the views expressed in the December 4, 1960, staff report of the Senate Committee on Aeronautical and Space Sciences.

The Bell System is prepared to move rapidly, shortening the span between experiment and the goal of a fully operative commercial system of satellite communications.

In October, 1960, the Bell System applied to the FCC for an experimental grant for conduct of this trial. Frequencies were assigned in January 1961.

The Bell System has discussed with NASA the provision of launching facilities at Bell expense. Launching date of the first Bell satellite will be determined by the availability of suitable rocket vehicles.

NASA has taken the position that the Bell System satellite trial should wait until after experiments with a proposed new NASA active satellite.

It has called for bids on this satellite, expected to be launched as Project Relay in mid-1962. The first launching vehicles available to NASA for space communications tests will be used in this project.

The Bell System position is clear: We are ready to proceed with trial of an active satellite at our own expense at the earliest possible launching date.

Provision of satellite communications by common carriers is in line with U.S. national policy and does not conflict with the aims and responsibilities of NASA to foster rapid development.

Unnecessary delay could be harmful to our national security, to U.S. prestige and would postpone international television and other forms of communications not feasible today. Furthermore, the results of trials pointed as directly as possible toward a commercial satellite system are urgently needed to prepare the U.S. position for international space conferences in 1962 and 1963.

Only the cooperation of our Government—by making available launching and tracking services—is needed to get the trial underway.

Has the Farmer Been a Ward of the Government?

EXTENSION OF REMARKS
OF
HON. GEORGE A. GOODLING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. GOODLING. Mr. Speaker, an editorial in today's Wall Street Journal attempts to place every American farmer in the "ward of the Government" category. Nothing could be further from the truth, and most farmers will resent the implication. To use the word "farmers" in connection with the fast-buck boys referred to in the article is doing a disservice to every responsible person in the profession. By and large, farmers are an honorable group, do their own thinking, want to do their own planning, and are willing to take their chances on results.

As a dirt farmer with 40 years' experience, I am certain I voice the sentiment of a large percentage of Pennsylvania farmers in suggesting the Government get out of this business of farming and allow those who know far more of the answers than any Government agency or any politician to conduct their own affairs. Thousands of Pennsylvania farmers have never received one penny in farm subsidies and want nothing more than to be let alone.

I personally resent being placed in the "ward" class, and I know my farmer friends do also.

The editorial follows:

SOIL BANKING

Several weeks ago, in his Economic Report, President Kennedy noted that "recession in agriculture has been chronic" over the past decade, and he sounded the familiar keynote of Federal farm policy:

"The American farmer should receive for his managerial skills, his labor, and his capital investment returns that are similar to those received for comparable human talents and resources in other types of enterprise."

At first blush, that sounds fair. Who, after all, begrudges the farmer the harvest of his honest toil? But, on second thought, the farmer has been a ward of the Government for a generation, and the cost of farm subsidies and surplus storage has grown fantastically. If agriculture has suffered chronic slump despite this lavish bounty, who, then, has been reaping the benefits of farm aid?

Senator WILLIAMS of Delaware shed some light on this mystery the other day. He disclosed that a group of Coloradans had turned the Federal soil bank into a veritable bonanza. It seems a 7,000-acre ranch was purchased for $139,200, then cut up into small units, leased to tenants, and put into the soil bank. Over a 10-year span, the Government was prepared to pay a subsidy of $271,000 on this deposit in the soil bank. So, Senator WILLIAMS notes, at the end of 10 years these operators stood to gain a $131,800 windfall and a debt-free ranch—all paid for by the American taxpayer.

What were the "managerial skills" and the "labor" to be thus rewarded? Only the instinct for a fast buck and the effort of signing a few papers, it would appear. And what other type of enterprise could conceivably give such a return on capital investment? None that we can think of offhand, unless it be bank robbery.

Tribute to Adm. Bartholomew W. Hogan

SPEECH
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. KIRWAN. Mr. Speaker, it is my pleasure today to pay tribute to one of the finest gentleman I have ever known. A man who has dedicated his

life to the service of humanity through the proud traditions of the Navy.

Rear Adm. Bartholomew W. Hogan, Surgeon General of the Navy was awarded the Distinguished Service Cross by Secretary of the Navy, the Honorable John B. Connally, Jr., on February 28, 1961, at his retirement ceremony at the Naval Medical Center. A fitting tribute to climax a career that began on June 6, 1925, when Bartholomew W. Hogan was appointed lieutenant (j.g.) in the Medical Corp of the U.S. Navy. As Admiral Hogan stated, "on that occasion, the gold on my sleeves was bright. The fabric of my uniform was colored by the deep blue of the sea. It would only be human to admit that I was proud to be a doctor, and proud to be an individual unit as an officer in the U.S. Navy." I say to you today, Admiral Hogan has added new luster to the gold on the sleeves of all naval officers and his career is a symbol to guide all fledgling officers, in particular his son who has chosen to follow in the footsteps of his illustrious father.

The distinguished medical career of Bart Hogan spans 36 years, beginning with service as a junior medical officer at the U.S. Naval Hospital in Boston, Mass. Prior to World War II, he served as an instructor at the Naval Medical School in Washington; associate professor of psychiatry at Georgetown University Medical School and served as chief of medicine at the Naval Hospital, Annapolis, Md.

Early in World War II he was assigned as senior medical officer aboard the aircraft carrier, U.S.S. *Wasp*. While serving aboard the carrier in the South Pacific in 1942, a Japanese submarine torpedoed and sunk the *Wasp* on September 15, 1942. The record of Bart Hogan speaks for itself on this disastrous occasion. His citations read:

Silver Star Medal:

For conspicuous gallantry and intrepidity * * * when the *Wasp* was torpedoed by enemy Japanese submarines * * * with his carrier swept by flaming gasoline and rocked by explosions, Commander Hogan, despite his own wounds, worked tirelessly, caring for the injured until forced to abandon the stricken ships.

Navy and Marine Corps Medal:

For outstanding heroism * * * on September 15, 1942. Rescued from the flaming oil-covered sea by personnel of the U.S.S. *Duncan*, (he), in spite of serious burns on both hands and several fractured ribs, immediately took active charge of caring for the many painfully injured carried aboard the *Duncan*.

Purple Heart Medal for wounds received in enemy action on September 15, 1942.

The dedication to duty, exemplified by Bart Hogan during this emergency period was typical of his devotion to his chosen profession of medicine, performed in the Navy blue and gold throughout his life. The many command posts he held in recent years reflected this esprit de corps.

I would like to take this opportunity to salute Adm. Bartholomew W. Hogan on the occasion of his retirement from the Navy, and extend my very best wishes for health and happiness to him and his family.

Magazine Writer Publishes Three Books

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an article from the Washington Evening Star of March 7, 1961. The article is about Frances Spatz Leighton, Washington correspondent of the American Weekly, who has had three books published in recent weeks. Her three books are discussed in the article.

Mrs. Leighton is a very able and prolific writer. She devotes herself primarily to magazine writing, but has had considerable experience in news writing. I have always enjoyed reading her articles in the American Weekly and now look forward to reading her books. The article about her in the Star reads as follows:

WHITE HOUSE BAN BOOSTS NEW BOOK

(By Amelia Young)

The recent White House announcement that members of the domestic staff are pledged to silence on the subject of the First Family was—ironically—cause for rejoicing in a certain publishing house.

The Kennedys' new policy has made an overnight success of the latest keyhole report on life in the Executive Mansion, "My Thirty Years Backstairs at the White House."

The book, just published by Fleet, will be the last such report for at least 4 years.

Fleet's delight is shared by Lillian Rogers Parks, the former White House maid and seamstress who tells all in these 346 pages, and Frances Spatz Leighton, the as-told-to author who took down Mrs. Parks' memoirs.

Mrs. Leighton is becoming something of a genius at eliciting salable stories from other people. This is her sixth such as-told-to production, the first of which was "White House Chef."

TOO BAD, HISTORICALLY

An ebullient platinum blond, Mrs. Leighton assumed a serious look when she commented on the White House announcement:

"Historically speaking, I'm sorry," she said. "You know, these kinds of books are great source material for historians. But, selfishly speaking, the timing couldn't have been better."

The ban which is serving to promote "My Thirty Years Backstairs at the White House" is obliquely winning attention for two other Leighton books—"Bum Voyage," reminiscences of a European tour by a 10-year-old boy, and "I Married a Psychiatrist," the revelations of a one-time neighbor of Mrs. Leighton.

The three books, published within a week of each other, were written over a 3-year period. Mrs. Leighton turned them out in spare hours while holding down a full-time job as Washington correspondent for a magazine.

David Greer, the 10-year-old traveler of "Bum Voyage" (he's 13 now), stopped into the office last week to tell a few things on Mrs. Leighton.

BRIBED BY TOAST

He, too, was a neighbor of the journalist-author. When she invited him to write a book in collaboration with herself, David thought she was kidding. But he went along with the joke, chiefly, he explained, because "she used to feed me cinnamon toast."

Also, Mrs. Leighton promised him $20 spot cash on publication of the book, to go toward a track rabbit (miniature racer) which he dearly wanted.

David's unorthodox travelogue was produced in 3 months of afternoons at Mrs. Leighton's house. "I'd go over after school and mess around," he reported. "We might get an hour's work in every day. She'd ask me questions about the trip, what I liked the best, what I had most fun at, that sort of thing. It would be just like we were carrying on a conversation."

"I liked it," he added. "Well, I liked the cinnamon toast."

David has his track rabbit now and with returns from the book (he and Mrs. Leighton will split the 10 percent royalties) should be able to afford a few racer accessories.

He's a celebrity among his school chums and teachers (at Thomas Jefferson Junior High in Arlington) but takes it casually, has read only "some of" the finished work himself—"I'm no bookworm" he explained.

THINKS AT EASEL

Since the days of their collaboration, Mrs. Leighton has moved into an apartment at the Woodner, which is her office, as well as residence. There, she said, she does much of her literary thinking at an easel, while turning out abstract and primitive paintings that "actually sell." A week or so ago someone offered her $200 for one of her offhand abstracts and another painting, called the Blue Madonna, will be reproduced on a commercial Christmas card.

Brought up on a farm outside Cleveland, Mrs. Leighton entered journalism via the International News Service, where she worked for 2 years as a dictationist. "The desk got kind of sick of me," she said—"I gave a feature slant to every story and furthermore I was the world's worst typist." She left INS to go with the magazine about 15 years ago. She's been there ever since.

Life for a woman like Mrs. Leighton—who seems to run, not walk through it—is always pretty exciting. But no year has matched this one.

"This year," she bubbled, "it appears I can't do anything wrong. Everything's going right."

Hon. David J. Ward

EXTENSION OF REMARKS
OF
HON. THOMAS F. JOHNSON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. JOHNSON of Maryland. Mr. Speaker, it is with great humility that I take the floor this afternoon to eulogize the late Honorable David J. Ward, of Salisbury, Md. The Honorable David J. Ward was formerly a Member of this august body.

In June 1939, he won election to the 76th Congress of the United States representing the First Congressional District of Maryland. He was reelected to the Congress for two additional terms in 1941 and 1943. He thus served our Nation during the crucial war years. Some 20 years earlier he served the State of Maryland with distinction, and I had the honor of serving with him at that time in the Senate of the State of Maryland.

David Ward left an indelible imprint on the First Congressional District. He sponsored legislation which enabled the city of Salisbury to obtain an excellent airport. Through his efforts, drainage

legislation was passed which reclaimed thousands of wasted acres on the lower Eastern Shore. His service to his constituents while a Member of Congress will always be cherished.

David Ward was active throughout his life in many phases of public and civic work in Wicomico County, the First Congressional District of Maryland, his State, and the Nation. His interest continued unabated until the time of his death, February 18, 1961.

To the devoted members of his family, I extend my deepest sympathy, and I share their great grief. A great American was called to immortality, February 18, 1961, at the age of 90 years.

I would like to have incorporated in the RECORD at this time the following resblution adopted by the State Senate of Maryland:

SENATE RESOLUTION 22

Senate resolution expressing deepest sympathy on the passing of David J. Ward, of Salisbury

David J. Ward passed away at the age of 90 years on Saturday, February 18, 1961, at his home in Salisbury.

He was born in Wicomico County on September 17, 1871. He received his education in the public schools of his native community. He engaged early in farming, and he also had interests in the mercantile and lumber business in which he was successful.

He has had an illustrious career in politics, spanning the period of two World Wars. He entered public life in 1915, when he was elected as a delegate from Wicomico County. During this term of office he served at the extraordinary war session of the general assembly. From 1918 until 1926, he was chairman of the Democratic State Central Committee of Wicomico County.

In 1926 he was elected to this honorable body representing Wicomico County, and he was reelected in 1930 for a second term of 4 years. He ran again for the senate seat in 1938 and was elected to an additional 4-year term.

In June of 1939, he won election to the 76th Congress of the United States representing the First Congressional District. He was reelected to Congress for two additional terms in 1941 and 1943. He thus served our country during the crucial wartime years as he had served the State some 20 years earlier.

David Ward was active throughout his life in many phases of public and civic work in the county. His interest continued unabated until the time of his death. He had the rare opportunity of serving his county, his State, and his country during important and stirring times of progress. The activity closest to his heart was in the care of the indigent aged and infirm. During the 1939 general assembly he sponsored a resolution asking for a study of the needs and care of the indigent. As a result of the study resulting from the resolution, funds were appropriated to build the first chronic disease hospital in the State. This was Deer's Head State Hospital, located in Salisbury, which was dedicated and opened in 1950. From this beginning the chronic disease hospital system has expanded to include two other hospitals, one in Baltimore and one in western Maryland. David Ward can rightfully be called the father of the chronic disease hospitals of Maryland.

David Ward was a modest and humble man. He had a great love and affection for his family and his fellow man. He was always the first to call when a friend was ill or in sorrow. No road was ever too long to the home of a friend. His work and his friends were his life.

He was married on November 22, 1897, to Edith Perdue, of Parsonsburg, who predeceased him. He leaves surviving him three sons and two daughters.

In his death we feel a sense of profound shock that an active and vigorous life has departed from us: Now, therefore, be it

Resolved by the Senate of Maryland, That we express our deepest sympathy on the passing of David J. Ward of Salisbury; and be it further

Resolved, That copies of this resolution be sent to Stella L. Ward, David J. Ward, Jr., and Edward J. Ward, of Salisbury, and Albert W. Ward, of Baltimore; and be it further

Resolved, That when this body adjourns on Monday, February 20, 1961, it stand adjourned in memory of David J. Ward.

Admiral Merrill

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks I should like to include the following editorial which appeared in the New Orleans Times-Picayune at the time of the passing of Vice Adm. A. S. Merrill, a brilliant naval officer, a great American, and a true patriot:

ADMIRAL MERRILL

Vice Adm. Aaron Stanton Merrill, of Natchez, New Orleans, and the seven seas, probably would like it recorded that he sailed away. During 35 years in the U.S. Navy he seldom missed a chance, off duty wtih shipmates, to sing "Old Sailors Never Die They Just Sail Away."

The retired officer's passing Tuesday in a Natchez hospital not far from the plantation where he was born closed a distinguished career. During its military phase it was the career of a brilliant fighting man. After his retirement, it was a career of continued fighting for educational opportunity for young men.

No task force had a beter record in World War II than did Task Force No. 39, commanded by then Rear Admiral Merril in the dark days when the Japanese enemy threatened to drive U.S. forces from the South Pacific.

Throughout his active service, from the time he won his first decoration for destroyer duty in World War I until his retirement, in 1947, after serving with distinction as commandant of the Eighth Naval District, he discharged large and small responsibilities in a way to win unqualified commendation by his superiors and the real devotion of his men.

The Deep South particularly and the cause of good will among men generally benefited when he returned to his old home, became president of Jefferson Military College and saved that 159-year-old school from death by neglect.

In all his good works, it seems to us, Admiral Merrill was at his best when odds against him were greatest. He was a reminder of an express by the British naval hero, Lord Nelson: "I am not come forth to find difficulties, but to remove them."

To use a sailor's language, "Tip" Merrill had a good trip.

This newspaper joins his many friends and admirers in expressing sympathy in their loss to his widow and to his colleagues at Jefferson College.

Area Redevelopment Bill, S. 1—Comments of Brice A. Eldridge

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr OSMERS. Mr. Speaker, a distinguished citizen of Bergen County, N.J., Brice A. Eldridge, is now serving as executive vice president of the Bergen County Chamber of Commerce. Brice Eldridge is a citizen who has made a great contribution to the business, civic and cultural life of his State. I have a high regard for him as a friend and business leader.

While I do not agree with some of the statements which he makes in his letter to me regarding S. 1, the area redevelopment bill, his thoughts are clear and well expressed and should be available to all of us considering this subject matter. For that reason, under unanimous consent, I include his letter in the Appendix of the RECORD:

Hon. FRANK C. OSMERS, Jr.,
Representative from New Jersey,
House of Representatives,
Washington, D.C.

DEAR FRANK: We learn with a great deal of apprehension of the effort to push for fast Senate action, Senate S. 1, which deals with industry relocation.

It would seem to us that this is another step—and a big step—toward the socialistic state to which we have been riding hell bent since 1929. We don't believe that any amount of legislation short of complete domination by a central government can keep the economic index on a perfectly even keel. The economic pattern cannot be static; it must rise or fall; the most we can hope for is that the hills are not too high nor the valleys too deep.

It just so happens at this time, one of the normal recessions being in progress, that manmade laws are trotted out to correct the natural law of supply and demand.

There will always be depressed areas; certain groups of people either through circumstances, lack of initiative, poor planning, stupidity, laziness, change of style, or many other reasons, will be unable to keep up with the aggressive leadership of other groups. While certain consideration and assistance should be given to them, we see no reason why the successful areas should be penalized and forced to contribute, by sacrifice and money, in reestablishing better conditions in the areas which did not do so well, especially if it was their own lack of foresight which brought on their condition.

It is no news to anyone that the foreign competition with our manufacturing plants is a situation of grave concern. The President of the United States has given recognition to this by drawing attention to the drain on our gold reserves, aggravated particularly by the intense competition from Germany and Japan. It would seem to us that dictating the location of an operational unit certainly would not be conducive to efficient productivity and lower production costs.

As we study the reports on this contemplated legislation, the cost of carrying out the program would be fantastic, and it would also seem to us that the vast organization that would be necessary to carry out this program would certainly be a haven for many new employees on the Federal payroll.

This bill is a radical departure from the proper role of the Federal Government. The state should not proceed a step further than is necessary for the mutual security and protection against foreign enemies, for with no other object should it impose restrictions on freedom. Consideration should be given to solicitude for the welfare of its citizens, but not in such a way as to jeopardize the freedoms which have been so gloriously won and zealously guarded.

We beseech you to oppose any further restrictions on the liberties of our citizens.

Cordially yours,

BRICE A. ELDRIDGE,
Executive Vice President, Bergen County Chamber of Commerce, Hackensack, N.J.

The Race in Space—A Close Look at Mars Through a Telescope Satellite

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. McDONOUGH. Mr. Speaker, the possibility of a telescopic televised view of Mars from a telescope satellite shot into the vicinity of Mars and the telescope view televised back to earth is approaching rapidly in the U.S. race in space.

Here is a short item by Dr. Dan Q. Posin, professor of physics, De Paul University, in which he outlines how this can be accomplished.

As an original member of the House Science and Astronautics Committee, I have kept in close touch with the practical possibilities of space exploration as a means of bringing closer to people on earth the knowledge of what exists on our neighboring planets in the vast universe surrounding earth.

The following article by Dr. Posin will prove both interesting and informative:

AN EYE ON SPACE

(By Dr. Dan Q. Posin)

The canals and moons of Mars may be man made.

To solve the canal puzzle it is possible to put telescopes above the earth's atmosphere in an earth satellite. The telescopes would have to be of considerable power, and the satellites of a high degree of stabilization. Also needed is a sensitive alining system and a radio transmission installation.

However, to solve the problem of the Martian moons, a space device has to be fired to the vicinity of Mars—a Mars probe. This probe must contain a camera adapted to a telescope, and also a rather intricate TV transmitter. Needless to say, the televising of views from the region of Mars, some 40 or 50 million miles away, is not a simple task; but it can be done. The principal item of equipment on the probe would be a paraboloidal transmitting antenna (like an automobile headlight) which would be constantly pointing toward Earth. Such an antenna of aluminized plastic would go up folded, but would inflate in space to a diameter of about 40 feet. It would be able to form and transmit detailed views of Mars and its moons.

But a more breathtaking space device to Mars will be an actual spaceship carrying earthlings to Mars. An eight-man spaceship is within the capabilities of today's science and engineering. In fact, a design has been worked out by the Boeing engineer, Philip Bono, who showed that everything depends on the development of one engine type, a special 1½-million-pound thrust engine, using hydrogen and oxygen as propellant. A total of seven such engines would be needed for all three earth-escape stages. The spaceship would be 248 feet tall and 82 feet wide, with a launch weight of 8,300,000 pounds. This spaceship would contain a hugh 80,000-pound payload, including about 4 tons of exploratory equipment and a 2-ton land vehicle for touring Mars.

The spaceship could lift itself nonstop to Mars. There is no need for assembling the ship at an orbiting space station. With the coming of powerful fuels and engines, space stations are fast losing their appeal.

As the giant spaceship nears Mars, a cluster of four 20,000-pound reverse-thrust engines would fire to slow the ship down. These engines would also be needed on the return trip to earth.

The journey to Mars, mostly a coasting operation, would take 259 days. The time to launch a coasting spaceship to Mars is the first few days of May 1971. If this is done, the relative positions of Earth and Mars will permit a launch and coast to occur in such a way that 259 days later the spaceship will snuggle up to Mars, matching its speed in space with a few fuel-burning maneuvers. At landing time, moreover, in January 1972, Mars will be close to the Sun, and so its temperature will be fairly pleasant.

The explorers will have to remain on Mars 479 days until it again is in proper space relation to Earth for the economical launch-and-coast journey. Another 259 days would bring the travelers back to Earth. The spaceship would carry its own launching platform for leaving Mars, devised from the landing glider.

Millions of dollars, years of work, risk and suffering, are all part of the project. But think of the moment when the earthlings land on Mars and look upon its canals, then gaze upward and divine the nature of the Martian moons. Did someone put them there? What sort of being inhabit, or may once have inhabited, that world of Mars?

Statement by Charles W. Colson in Behalf of the New England Council

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting statement by Charles W. Colson, counsel for the New England Council, on the subject of legislation to aid chronically depressed areas:

STATEMENT BY CHARLES W. COLSON, COUNSEL FOR THE NEW ENGLAND COUNCIL, BEFORE THE SENATE BANKING AND CURRENCY COMMITTEE, TUESDAY, FEBRUARY 28, 1961

Mr. Chairman, I appreciate very much this opportunity to appear briefly before your subcommittee on behalf of The New England Council to discuss legislation to aid chronically depressed areas.

The New England Council was established in 1925 at the behest of the six New England Governors. It provides today a number of services to the New England States, including its function as secretariat for the New England Governors Conference. It is made up of representatives of industry, labor, the State governments, educational, and farm groups. The council is concerned solely with regional development and with improving the New England economy.

In recent months, a council committee made up of State, community, and private industrial development directors, conducted a detailed study of the various versions of area assistance legislation which have been offered in this and in past Congresses. Rather than to discuss in detail their analysis, I ask your permission to have the digest prepared by this committee printed at this point in the record of these hearings.

It would not be appropriate for The New England Council to suggest to this committee whether or not area assistance legislation should be enacted. This, of course, is a judgment to be rendered by the Congress and the President. We do feel, however, that certain conclusions which we reached as a result of our detailed study may be helpful to the committee at this point. While our study was concerned with the effect of this legislation upon the economy of New England, these comments, I might add, are relative not only to New England but to other well established industrialized areas of the country.

The council feels that S. 1, in common with most of the bills filed, contains one provision in particular which should be amended. The antipirating restriction as it now is written in section 6 beginning on page 9, line 5, we believe to be both inadequate and incapable of successful administration.

We in New England are particularly sensitive to the dangers of pirating by other regions. We have seen other areas in the past lure our industries away with tax concessions and low cost labor. In fact, most New England depressed areas can trace their recent economic ills to the exodus of a once prosperous textile industry.

Older industrialized regions like New England which have pioneered progressive social legislation and undertaken improved governmental services must of necessity impose heavy tax burdens upon industry. Moreover, wage rates are generally higher in these regions. It is both unsound and unfair to offer the inducement of Federal financing for the relocation of industries from these established areas to less well developed regions. To do so would clearly place the great industrial States of our Nation in a particularly disadvantageous competitive position.

It is the intent of depressed area legislation to stimulate America's economy and to create new employment opportunities for citizens in depressed areas. New industrial development is an essential goal to sustain America's economic growth. Without adequate antipirating protection, however, depressed area legislation could result in a mere transfer of jobs from one area to another with no net gain to the Nation's economy. Effective antipirating protection is thus essential if depressed area legislation is to realize its commendable objectives.

Moreover, the language of the present bill, Mr. Chairman, imposes an unreasonable burden upon the administrator. To determine what is or is not "substantial detriment" can only result in arbitrary determinations and in the exercise of this responsibility, the administrator would be subjected to unceasing pressure from all sides. Certainly in the eyes of any Member of Congress, the removal of any industry from his district would constitute "substantial detriment". The Congress should unequivocally spell out its intent and establish clear guidelines for the administration of this provision.

We feel that the amendment offered by Senator BUSH in the past Congress would

afford full protection against the removal of industry from one area to another while at the same time permitting the establishment of branch plants, subsidiaries, or the expansion of existing operations from the area of their original location. We are very hopeful that an amendment of this character, perhaps spelling out the precise prohibitions and permissible activities, will be enacted.

There is ample precedent for the inclusion of this kind of provision. Most of the States which have adopted redevelopment programs along similar lines to the program suggested by S. 1 have incorporated protection against the transfer of industries within their States. Certainly it is only logical that the Federal Government would take a similar attitude with respect to transfers between States.

In closing, Mr. Chairman, we believe that depressed area legislation without effective antipirating protection could undermine and devastate the economy of New England. I emphasize, however, that this is not exclusively a regional problem; rather it affects the very substance and purpose of this legislation. We are convinced that it is not the intent of Congress to encourage federally subsidized raiding of industries—nor is it the intent of Congress to make the Federal Government in the final analysis the "court of last resort" for industrial location. Rather we believe that distressed area legislation, to make its full and worthwhile contribution to a growing economy, must stimulate new job opportunities for our citizens and must encourage genuine economic growth.

Youth Peace Corps

EXTENSION OF REMARKS
OF
HON. THOMAS G. MORRIS
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. MORRIS. Mr. Speaker, I want to bring to the attention of my colleagues an editorial which appeared in the Albuquerque Journal under the heading of Youth Peace Corps:

YOUTH PEACE CORPS

President Kennedy did not act upon his advice alone in initiating a peace corps of trained young men and women to help backward peoples by living and working with them.

Congress in 1960 authorized a study of such a project. It was undertaken by the University of Colorado's Research Foundation. The preliminary report recommended creation of the corps, and the President acted upon it on a temporary basis until Congress can by law create a permanent corps.

This country has been sending technicians abroad. But the basic difference between them and peace corps will be this: Peace corps members will get no salary—just subsistence wages. They will speak the language of the backward people and work side by side with them, helping to do what the technical advisers only suggest.

Kennedy ventured no guess as to the cost of the program for 500 persons he had in mind. But the Colorado researchers figured a 5,000-member Peace Corps might cost about 50 million a year.

It's an intriguing program. One that could build up goodwill for this country as well as benefiting the backward peoples. It well merits a modest trial.

The 58th Annual Savings Conference of the American Bankers Association

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. MULTER. Mr. Speaker, yesterday, March 6, I had the pleasure of addressing the 58th Annual Savings Conference of the American Bankers Association at the Roosevelt Hotel, New York City.

Following are excerpts from my remarks on that occasion:

EXCERPTS FROM REMARKS OF HON. ABRAHAM J. MULTER, OF NEW YORK, BEFORE THE 58TH ANNUAL SAVINGS CONFERENCE OF THE AMERICAN BANKERS ASSOCIATION AT THE ROOSEVELT HOTEL, MARCH 6, 1961

GOLD

Before touching upon several specific pieces of legislation that will be dealt with by the 87th Congress, I would like to discuss briefly a matter of more general interest and probably of even more importance. We have heard and read a great deal of late about gold and the possible devaluation of the dollar. Some of it has been irresponsible, some of it inaccurate and little of it more than half the story.

Let me put it as strongly as I can: No part of this administration, executive or legislative, has any intention of devaluing the dollar, by increasing the price of gold or otherwise.

There is no need to do so. Furthermore, doing so would accomplish no good.

We do not intend to succumb to the pressures of the gold miners, of the gold speculators, or of the Communists. The latter alone are said to own one-half of the world's supply, the value of which must be increased by every addition to the price of gold on the world market. We need no gold for our domestic economy. Americans cannot buy or hold gold except by license for manufacturing purposes. There is no need for a gold reserve for our currency. Nevertheless, the law requires a reserve of gold equal to 25 percent of the total of our outstanding Federal Reserve notes and liabilities.

We can repeal that law, and much respectable authority has urged that we do so, without in the slightest impairing our credit standing or our economic situation. The primary purpose of our gold stock is, and should be the international convertibility of gold and the dollar at the fixed price of $35 an ounce.

Please understand that I am not urging that we ignore our balance-of-payments problems. They probably will be with us always. Keeping prices competitive, increasing our exports, creating incentives to bring money into our country, removing the incentives that send or keep money abroad, and a readjustment of the contributions we and our allies make to world development and stabilization, are all matters of importance. They all enter into the volatility of the flow of gold on the international scene.

It seems to me that Mr. Average American Citizen has a great deal more confidence in the dollar than many alarmists who should know better. As proof of that statement, I direct your attention to the fact that for the first time in any month in 8 years, more U.S. savings bonds, E- and H-bonds, were sold during the month of January 1961, than were redeemed, with the Treasury reporting that this new trend apparently will continue.

With only one exception, I have yet to hear or see a single statement to the effect that the so-called outflow of gold from the United States has not been that at all. It has been merely an increase in the amount of the claims by foreign governments against that gold. The difference is important, if for no other reason than that there is no safer place to store gold than in the United States.

Let me emphasize that while foreign claims on our gold have increased, the gold has not left our shores. As a matter of fact, the total gold supply in our country has increased. During each of the years 1950, 1951, and 1952, our gold stock hovered around the $22 billion mark, and earmarked gold (that is, gold in the United States held for foreign and international accounts) did not exceed $5,600 million.

From 1953 to 1957, inclusive, the amount of the U.S. gold varied between $21 billion and $23 billion, and claims against that gold by foreign and international accounts ran from $6 billion to $7 billion. The last 3 years the gold we owned outright has dropped by about $5 billion, and the amount set aside for foreign and international accounts has increased by about the same amount.

The total gold on hand at the end of 1950 was $28,446 million, and 10 years later at the end of 1960, it was $29,648 million, a net gain of $1,202 million.

But says our alarmist friend: On demand, we may be required to pay out $11 billion of that gold.

That is theoretically correct, but just as absurd as saying that on demand every bank in the country may have to pay out all of its deposits in currency. Unlike the depositor who may stuff his pockets or his bag with the money and walk off with it, no foreign claimant would be willing to pay for the attendant cost of cartage, freight, insurance, security, and storage, assuming a safer place could be found for the gold.

Even that, however, is not the full story. Foreign claimants would just about have completed the transit of the gold when they would be compelled to reverse the process and pay the same costs all over again to get the gold back to us to pay their debts to us. What most of the theorists have overlooked apparently, is that foreign claimants owe the United States an aggregate sum equal to about the same amount of gold we hold for them.

Are the debtors and the creditors and the amounts identical? Of course not. But neither are they identical in any banking system.

I am sure that none of you would deign to call anyone a sound banker who suggested anything near a 100 percent reserve for any purpose.

Now for a few specifics. I will not discuss today any of the bills which soon will be law covering extended unemployment compensation, increased minimum wages, aid to depressed areas and housing. Although none of those bills will satisfy everyone, I am certain satisfactory legislation will be enacted which will improve our economy and assure our economic progress and our general welfare.

FEDERAL RESERVE BOARD

Some time ago Mr. Martin, Chairman of the Federal Reserve Board, recommended that the term of office of the Chairman of that Board should coincide with that of the President of the United States.

This does not mean that the Chairman should be subservient to the President. But it does mean that he should be his spokesman, when he needs a spokesman.

It would have been destructive of public confidence in the system, to have sought to accomplish such a change while there was vigorous difference of opinion about fiscal and debt management policies between the Board, the President and/or the Legislature.

Today, for the first time in 10 years, we have substantial agreemeent between the Board, the President, the Treasury and the Legislature.

I suggest this is the time for Congress to amend the Federal Reserve Act accordingly.

FEDERAL DEPOSIT INSURANCE CORPORATION

It is my hope that this Congress will consider and enact a bill to reconstitute the Board of the Federal Deposit Insurance Corporation.

Without casting any reflection upon our good friend, Ray Gidney, the incumbent Comptroller, for whom I have the highest respect and regard, it is my firm conviction that no chartering and supervising authority should be a part of an insuring agency. The two functions are separate and distinct, and should be kept so.

A more basic objection is the double burden placed on the State banks, savings and commercial, that the national banks are free from under existing law. If we believe in a dual banking system, then we must make it work. Such a system can succeed only if there is true duality. I am sure that the national banks would rise up in arms against any proposal to amend the National Banking Act to provide that they must submit to the additional examinations, supervision and authority of the banking supervisors of the States in which they operate. Yet that is precisely what happens when the national banking supervisory authority serves as a member of the FDIC Board.

My bill seeks to eliminate the Comptroller of the Currency from that Board. I want to emphasize it is not directed against Mr. Gidney. It does not and cannot affect his term of office. It will apply, if enacted, only to his successors.

An alternative proposal that has been offered and will be considered by the Congress is that the Board be increased from three to five, with a provision that the savings banks and the commercial banks each be represented on that Board. The objection to that proposal—and there is some merit to it—is that a board of five is too cumbersome.

What I would like to see accomplished is the enactment of a bill which would combine FDIC and the Federal Savings and Loan Insurance Corporation into one agency, with each of the segments of the banking industry represented on the new Board.

The objection that immediately appears is that there are many differences between the two funds as to assets, as to premiums paid, as to liability, both type and amount, and as to the basic difference of operation of the institutions whose accounts are insured.

To my mind, these are not differences in principle, but rather differences in technique of operation. All of this can be satisfactorily covered so as to assure maximum protection to all concerned—and I now include stockholders, shareholders, depositors, and the general public—in their individual capacity as well as in their aggregate capacity as the U.S. Government.

NATIONAL MUTUAL SAVINGS BANKS

As most of you know, for many years I have been introducing bills to extend the dual banking system to mutual savings banks. We have a dual system as to commercial banks. We have a dual system as to savings and loan associations, and we have a dual system as to credit unions. We even have a dual system as to regulation of the sale of stocks to the general public.

There is no sound reason why we should not have a dual system as to savings banks. If we read the legislative history of the various enactments on these subjects, we find in every instance the same objections were raised against the enactment of the Federal legislation, that are now being urged against this proposed legislation.

The trouble with most objectors is that they overlook the fact that when the law established a quasi-monopoly in the banking industry, it was done not for the purpose of throttling competition, but for the sole purpose of safeguarding, first the money of the public, and second the money of the stockholders. A sound banking system is more than vested with the public interest, it is identical therewith.

Those who oppose this bill by saying that it will weaken the State banking system, and that those States which have no mutual savings banks can enact legislation to establish them if they so desire, are begging the question. The dual banking system is either good principle or bad. If it is bad, then those who are objecting to this bill because it weakens the State systems, or will create undue or unfair competition to the State systems, should forthrightly launch a movement to eliminate the dual system. If the dual system is good in any area of banking, it is good in every area, and should be uniform throughout the country.

Other objections raised to the bill go not to the principle, but to the details thereof. To those who oppose this bill because they don't like one or more of its provisions, or think that those provisions should be improved, or that the author has overlooked some internal operational or management problems, I suggest to them that they quickly come forth with suggestions for the improvement of the bill.

Last year my bill had bipartisan sponsorship in the Senate as well as in the House. It will have such sponsorship again this year. I am now working on a new draft of the bill which I hope will be an improvement on prior drafts. After that bill is introduced, I am certain that we will proceed to hearings, and I hope bring out a good bill. This bill will not be defeated because some people think some of its provisions are bad, and it will be easier to eliminate those bad provisions and make corrections before the bill is enacted rather than after. I can assure you that if the principle of this bill is good, as I believe it is, a bill will be enacted.

TAXATION

The strongest objection urged against the bill is that the bill will enlarge and expand practically tax free mutual institutions, whereas the American Bankers Association has gone on record for eliminating such tax free advantages. The answer to that objection is the same answer I have been giving over the years to the ABA on that subject, and to all who have voiced their opinions to me with regard thereto.

The proponents of this tax legislation are barking up the wrong tree. The complaint is based primarily upon an alleged inequity. Assuming that the inequity exists, I do not intend to compound the inequity. I suggest that we eliminate it. There are two ways to accomplish that. Assuming that there is a different tax base for commercial banks than there is for mutual banks and associations, then if the commercial banks can make out a case, it should be to equalize the base. The only inequality that any commercial banker has thus far pointed out to me is that the amount of reserves a commercial bank may charge off before computing its tax liability, is less than that permitted to the mutuals. The simple way to remove that inequality is to permit the commercial bankers the larger reserve deduction if they are entitled to it. Mutual institutions, like every other individual or group of taxpayers will never be heard to complain about the reduction of taxes, if it is done fairly and without discrimination.

But the tax inequality or inequity that is basic in the financial systems of our country is precisely the same throughout our economy. Except in wartime, or dire emergency, there is no excuse for taxing earnings twice. Except under such circumstances, there is no excuse for a so-called surplus, or excess-profits tax. When an individual puts his money to work, he files a return and pays a tax on his earnings. When he puts his money to work through the instrumentality of a partnership or a joint venture, or a trust, he may file two returns, but he pays only one tax.

When he puts his money to work through a cooperative organization or a mutual institution, he again very properly is called upon to pay only one tax. The one place in our tax system where that does not apply, is when an individual or corporation invests money by the acquisition of corporate stock.

Only under those circumstances do we find the profits being taxed twice, first when they are earned by the corporation, and then when they are received by the owner of the corporation, that is the stockholder. Worse yet, if the corporation doesn't pay out its net earnings as required by law, a severe penalty is imposed and taken out of the earnings that were left after payment of taxes.

When the Congress granted a small tax deduction for a percentage of dividends, I hoped we were making a real start toward the eventual repeal of all taxes on dividends.

The project of the ABA and of all persons who are interested in corporate enterprises, both public and private, should be to fight the effort to repeal that dividend exemption. They should unify their forces in support of extending the exemption, until we see the eventual complete repeal of the dividend tax. What I have just said applies with equal force to those misguided souls who each year write me and urge the enactment of a tax upon cooperatives.

I have carefully analyzed the arguments pro and con advanced on this subject by the financial institutions. I am convinced that the inequities that the commercial bankers attempt to establish, add up to a strawman, which is blown away by the first slight breeze. If there should be a tax on the mutuals before they pay the net earnings to their shareholders and depositors, then the interest which commercial bankers pay on their thrift and time accounts should not be a deductible expense before arriving at the taxable income of the commercials. The fact of the matter is that the total amount of interest and dividends paid to savers and stockholders of commercials, is far less than the total amount paid as interest and dividends to depositors and shareholders in the mutuals. If the commercials are serious in their contention for equality—let's go all the way. Let's impose upon them the same requirements we impose upon the mutuals by requiring that time and savings accounts in the commercials may be invested only in the same investments permitted to the mutuals and let's require that for those funds the commercials must carry the same high reserves as are required of the mutuals. If this demand by the commercials for equity continues much longer, it would not surprise me to see the mutuals come forward and say that they too can render every service that a commercial bank can render, and seek the authority to do it. Let us not overlook the inequality that exists, that requires the mutuals to pay for the use of almost every dollar with which they operate (at least 93 percent thereof), while the commercials are permitted to use 70 percent of their resources (that is their demand deposits) free of cost.

My final word to you is that there is no need for businessmen, whether bankers or industrialists, small or big, to fight each other. They should stand together fighting to eliminate unfair and discriminatory practices in business and in government.

Resources: Top Rating

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. ULLMAN. Mr. Speaker, the following editorial from one of the leading daily newspapers in Oregon comments favorably on the President's recent message concerning natural resources. The plaudits of the Oregonian are particularly noteworthy in that it has not always editorially supported the Democratic Party and its nominees:

[From the Oregonian, Feb. 27, 1961]

RESOURCES: TOP RATING

President Kennedy's message to Congress on natural resources is the most comprehensive and knowledgeable statement of America's needs in this field and the responsibility of the Federal Government ever made by an American President. At least, the White House has caught up with the citizens who have been fighting a frustrating holding action to preserve and develop the Nation's natural wealth since Teddy Roosevelt left office a half century ago.

Whether or not one agrees, point by point, with all the proposals made by the President for the conservation and development of water, land, forest and minerals, one may not reasonably dispute the breadth of his understanding nor the critical need for intelligent action in each field. Mr. Kennedy's great contribution is his packaging of these resources and their needs in a master program recognizing their relationship and the critical necessity for a frontal attack on all the problems involved—right now, not 20 years from now.

Intelligent management of our resources has been hampered and hamstrung not only by economic and political conflicts amnog users but by conflicts among Federal agencies themselves. The President mentions some of these. It will be a test of his determination to see whether he can knock out the bureaucratic roadblocks.

In our own Columbia Basin, for example, there is a long standing conflict between the economic and recreational need to maintain a salmon fishery and the economic pressures for high dams. The President calls for a comprehensive study of each river basin. We have a reasonably comprehensive study by the U.S. Army Corps of Engineers for the Columbia Basin. It rules out a high dam at the Nez Perce site in the Snake River, blocking passage of anadromous fish into Idaho's Salmon River. But the Federal Power Commission has a hearing in progress on an application by Washington public utilities districts to build such a high dam at Nez Perce. Will the President intervene?

The President finds wholly inadequate the progress made in efforts to control pollution of water—use of which will double in the next 80 years—and of air, which is costing the Nation $7.5 billion annually. He proposes more Federal aid to communities for sewage plant construction, and asserts that industry has lagged in its responsibility. But in the Oregon Legislature, industry-sponsored amendments would cripple the State sanitary authority's power to clean up our water and air and keep them clean. We can only hope that our legislators read and ponder the President's message.

Mr. Kennedy, in the power field, not only favors reasonable multiple-purpose development of hydrosites but urges greater Federal-private cooperation to achieve economic, competitive nuclear power by 1970. But will he vigorously support the proposed plutonium-power, dual-purpose reactor at Hanford which would add 700,000 to 850,000 kilowatts to the Northwest power supply at low cost? Some utility spokesmen have lobbied backstage against this project, fearing Federal entrance into the nuclear power field.

The President approves continued financing of Tennessee Valley Authority power projects by sale of revenue bonds, as accomplished by Mr. Eisenhower. Will he also support a bill to allow the Federal power system in the Columbia Basin to finance power facilities, including nuclear plants, by revenue bonds instead of appropriations from a burdened Treasury? He has advanced programs to cost billions in tax revenues. Power facilities could be put on a self-liquidating basis.

The President's forest and range proposals will need detailed study but his recognition of the alltime values of these resources and the need to obtain maximum production under the best conservation practices is enlightened and stimulating. On the whole, we applaud the President's position. He will find great support for these policies in the Pacific Northwest.

Hoover Will Be Around

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. SMITH of California. Mr. Speaker, I wish to include in today's RECORD, the text of an editorial written by Jack Carley of the Memphis Commercial Appeal which appeared on February 25, 1961.

HOOVER WILL BE AROUND

A flat FBI denial that J. Edgar Hoover intends to resign should put the quietus on all the rumors and gossip to that effect which have been going the rounds since President Kennedy was elected.

Mr. Hoover was the first official asked to serve under the present administration and "quitting" is not one of the words in his extensive and sometimes colorful vocabulary.

One so-called newsletter circulated recently throughout the country, in commenting on a prediction that the FBI's Director would "be out by summer," made the unequivocal statement that "He and his boss, Attorney General Robert Kennedy, disagree too much, particularly on the FBI's proper role."

That, we feel sure, will be "news" to both.

The FBI's role is defined by statute and by Executive orders based either on constitutional authority, or statute. Mr. Hoover's basic requirement for his agency is that it enforce the law. There has been no deviation from that precept in the more than 30 years he has headed the FBI. And vigorous law enforcement, his record shows, is an enthusiasm which Attorney General Kennedy shares.

Only the Nation's enemies and its criminal underworld will regret that Mr. Hoover is still going to be around officially to give them a hard way to go. We have an idea that the Attorney General and he intend that it shall be an even harder way.

Enslavement of Rumanians

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, March 8, 1961

Mr. BRIDGES. Mr. President, I ask unanimous consent that a letter I received from Mihail Farcasanu, president of the League of Free Romanians, Liga Romanilor Liberi, be printed in the Appendix of the RECORD.

March 6, 1961, marks the 16th year that Rumania and its citizens have been behind the Iron Curtain. Mr. Farcasanu calls to our attention the fact that the people of Rumania are enslaved and their human and political rights completely suppressed in their Sovietized country.

It is essential that we offer hope and encouragement to the Rumanian people in their enslavement so they will know that they have friends among the free nations of the world, and Mr. Farcasanu reminds us of the obligations we have in this regard.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE LEAGUE OF FREE ROMANIANS,
New York, N.Y., March 2, 1961.

Hon. STYLES BRIDGES,
U.S. Senator From New Hampshire.

DEAR SENATOR: This 6th of March we Rumanians are mourning the loss of our country's freedom. Sixteen years ago, in 1945, the Soviet armies installed in Bucharest a puppet government obedient to the will of Moscow. This nonrepresentative government, agent of the Kremlin, has violated the peace treaty granted by the United States and completely suppressed human rights in Rumania.

On the 7th of March this same government takes its place in the United Nations along with the United States and Great Britain and will play its part in the Soviet campaign to unseat Mr. Hammarskjold.

This sort of incongruous situation passes almost unnoticed as do many others, because of the Soviet propaganda barrage of nuclear threats used to promote their political aims. It is necessary that such incongruities as that in the United Nations should be kept in sight if the right political answer is to be given to Russian maneuverings.

We will be profoundly grateful and appreciative if you could remind the Senate of the tragedy of an enslaved people and the farce of their being represented by the agents of Moscow. These circumstances could throw a certain light on some of the current issues. In the first place, it was a political error to accept the establishment of Russian domination in Eastern and Central Europe, but it was an even greater and more dangerous one to cooperate in the Russian scheme of presenting their puppets as sovereign and independent members of the international community.

The Rumanian stooge government as the other satellite governments, is acting under the false pretense of representing the people, which it does not, it is in fact representing exclusively the interests of the Soviet Union. Through this operation, all Eastern

European nations have been deprived of any voice in the international forums, whereas the Soviet Union has become a hydra, chanting through its many mouths the identical Russian tune. This has greatly contributed to falsify the character of the United Nations. It has been amply demonstrated—and is now again evident in the Congo issue—that these fake governments under Russian control will never abide by any international decision not furthering the Soviet interests.

To give an example, when the United States and Great Britain brought before the World Court a complaint of the nonimplementation of the peace treaties by the Governments of Rumania, Hungary, and Bulgaria, the said Governments refused even to appear before the Court, although they were obliged to do so by the treaties. The Court was impotent and unable to impose the law. So was the General Assembly of the United Nations with its resolution to investigate the circumstances of the Hungarian uprising. In the case of the World Court it is particularly obvious that the law-abiding free countries are at a great disadvantage as compared with the Communist countries.

Unfortunately the Rumanian puppet government, in spite of its crimes and unlawfulness, has been accepted in the United Nations and in international conferences and is the second government after its master, the Soviet Union, to enjoy cultural exchanges with the Government of the United States, despite the fact that Rumanian culture has been, like the people themselves, crushed in the Russian straitjacket. The liquidation of political opposition and of those considered not reliable goes on through imprisonment, forced labor, unemployment and extreme subalimentation.

Meanwhile the Rumanian Communist government is aiding North Vietnam with large credits for its industrial development and participates in other of the Communist bloc's "Council for Mutual Economic Aid" ventures. In the United Nations the Rumanian Government is working hard, hand in hand with Castro's Cuba and Guinea, assisted by Poland and Czechoslovakia, to obtain the resignation of the Secretary General. Czechoslovakia is at the present moment furnishing arms to the Communist supported groups in the Congo, to Castro, etc.

Having in view all these facts, the idea which is still cherished here, of using financial aid in Communist countries—aid which is to the benefit of no one except the Communists themselves—is hopelessly unrealistic. The real help for the peoples behind the Iron Curtain and which would also improve the position of the United States, would be a change in the present policy of the American Government toward the subjugated countries. This change should aim at weakening their oppressive puppet governments instead of strengthening them by economic aid.

After 16 years of slavery many Rumanians still put their hope in such a change.

Anything you can say on behalf of the aspirations for freedom and independence of our unfortunate people will meet with the gratitude of Rumanians everywhere.

I remain yours respectfully,

MIHAIL FARCASANU,
President.

Nonvoting Representative for Guam

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. O'HARA of Illinois. Mr. Speaker, at this time when the national interest demands that we restore and rebrighten throughout the world the image of the United States as the champion of free government, truly representative of all the people, it seems to me most important that we should give to our fellow Americans in Guam nonvoting representation in the Congress.

Guam and the Virgin Islands are our two remaining unincorporated territories. They are not candidates for statehood. They are, however, part and parcel of our United States of America, and it is in the American tradition that the Americans who live in Guam and the Americans who live in the Virgin Islands should have nonvoting representation in the Congress. To withhold from them that representation would seem to me to be an abandonment of the fundamental principals of representative government.

Guam is our most far distant possession. In this small bit of American territory, far off in the Pacific, is a legislative body similar to that in the States on the mainland. It is fortunate for us that in recent years the distinguished speaker of the Guam Legislature, the Honorable A. B. Won Pat, has been commissioned by the Guam Legislature to visit us here in Washington. He has industriously spent his time in his mission of seeing that in the drafting of many laws, implementing the many activities of the American people, our fellow Americans in Guam should not be forgotten. He has rendered a great service to Guam and a great service for our country.

As a member of the Committee on Foreign Affairs, I feel strongly that our position in the eyes of the world, especially that part of it in the Pacific in the Far East area, would be immeasurably helped if we gave a nonvoting representation to Guam, and of course what is true as regards Guam is equally true as regards the Virgin Islands.

Mr. Speaker, by unanimous consent I am extending my remarks to include the statement of the speaker of the Guam Legislature, the Honorable A. B. Won Pat, before the House Subcommittee on Interior and Insular Affairs, and I trust that my colleagues will give to Speaker Won Pat's forceful presentment of his case the thoughtful reading that it deserves. Speaker Won Pat's statement follows:

Mr. Chairman and members of the committee, as speaker of the Guam Legislature, I am here pursuant to the authority of Resolutions Nos. 1 and 106 of the Sixth Guam Legislature which authorized and empowered me as such to present before congressional committees and/or Federal officials in Washington, D.C., the various problems relating to Guam, and also to represent the views and interest of the people of Guam on matters of vital concern to them before both Houses of Congress and various departments of the executive branch of the Federal Government. I ask, Mr. Chairman, that the text of resolutions 1 and 106 appear in the record at the conclusion of my testimony this morning.

In this capacity, I deeply appreciate the privilege and opportunity to appear before you today in support of the proposal to authorize Guam and the Virgin Islands to be reresented in the Congress through nonvoting deputies, or by whatever name you may decide to call them. Last year, as you will recall, I was privileged to appear before this same committee to urge enactment of similar legislation, and I would like to take this occasion to thank this committee for its favorable action upon that bill, H.R. 6791, by the distinguished chairman of the Territories Subcommittee, Hon. LEO O'BRIEN. Unfortunately, the 86th Congress adjourned without taking final action on the measure.

Today I am appearing before you categorically to reiterate the earnest desire and petition of the 41,000 American citizens of Guam to accord us this measure of self-government consistent with our democratic system and tradition. Your favorable action and active support on this important and vital legislation would not only be applauded and appreciated, but would demonstrate to the world our faith and conviction in the concept of our American democracy.

I am aware, of course, that this measure, despite its plausible merits will give rise to some objection: First, the question concerning the cost of the office looms in the minds of some Members of Congress as too high, but I understand that this cost will be less than 60 percent of the cost of the office of a Congressman which is figured to be approximately $75,000 a year. Further, the cost is insignificant compared to the intrinsic value that will inure to the benefit of our national posture before the eyes of the world. Are we not spending billions of dollars every year in order to protect and preserve our American way of life? And are we not spending also millions of dollars every year to propagate the ideals and worth of our American democracy?

Secondly, the question of statehood will be inevitably injected by opponents of the bill, namely, that if Guam and the Virgin Islands were authorized representation in Congress, it will follow that they will press next for statehood. Nothing could be further from the truth than this assumption. Guam and the Virgin Islands are unincorporated territories and the granting of representation by Congress as provided in the proposed legislation to these territories will not change their status as such. Historically, only organized incorporated territories have been admitted into the Union. I can neither believe no conceive that Guam and the Virgin Islands can possibly grow sufficiently, economically, or in population during our lifetime to a point where statehood could even be considered.

The third issue, and this is really the key one, is whether or not the people of Guam are ready to assume this greater responsibility, and whether they merit it. I firmly believe that the answer to both is an unequivocal "Yes." In support of this affirmation, I would like to review for you succintly our historical and political background.

Guam was discovered for Spain by Ferdinand Magellan, March 6, 1521, and remained a Spanish colony until the Spanish-American War in 1898 when it was ceded to the United States by the Treaty of Paris. It is the largest of the Marianas Islands, located in the western Pacific, on the edge of the continent of Asia, 3,000 miles west of Hawaii, 1,500 miles east of the Philippines and 1,100 miles south of Japan. It has been under American sovereignty for more than 60 years with the exception of the occupation by the Japanese during World War II. In 1950 the Congress of the United States passed the Organic Act which bestowed American citizenship to the people of Guam and provided for a limited degree of self-government. Because of its strategic location and the establishment of civil government, Guam has been a major defense base and at the same time a showcase of American democracy in the western Pacific.

Although it has been a little over 10 years since the people of Guam have enjoyed the blessings of American citizenship, they have been Americans at heart since 1898. During the past decade that they have exercised some measure of self-government, the

record will show that we have maintained a sound, stable, and progressive local self-government. This is further attested by the observations of some of our national leaders in Congress and the Executive Board who have a responsible interest in the development of our offshore areas.

The Honorable JOHN P. SAYLOR, a distinguished member of this committee, in his extension of remarks in the CONGRESSIONAL RECORD of April 2, 1958, said in part:

"The people of Guam are not only assuming the responsibilities of citizenship in the American tradition but are displaying a notable degree of political maturity. During these few years they have made remarkable progress economically, socially, and politically within the framework of our American democratic system."

Senator GRUENING of Alaska, who visited Guam last November with Senator LONG of Hawaii, as members of the Senate Select Committee on Interior and Insular Affairs, stated before the elected leaders of Guam in their conference:

"I am heartily in favor of having an elected representative of the people of Guam sit in the House of Representatives in Washington and I shall work to that end and cast my vote in that direction. We in the United States believe in the basic principle that was enunciated by our forefathers in the Declaration of Independence that government derived their just powers from the consent of the governed, and the United States has moved certainly in that direction. It is our hope and purpose to extend the maximum of self-government to the remaining areas that are under our flag, and I think the step of having an elected representative of the people of Guam sit in the House of Representatives to be able to voice the feelings and desires and aspirations of the people of this beautiful island is a step forward and a step that is now due."

Senator LONG of Hawaii stated on that occasion: "There must be voices that can speak with authority from a little greater firsthand information than a Senator from California or Maine or a Representate from the State of Washington or the State of Florida might have. So I think in addition to the possibilities of worthwhile contribution in relation to domestic affairs, national affairs, this proposal has a ready possibility in relation to the affairs of the Pacific in meeting successfully the problems that now exist and the problems that will come up at a future time."

President Eisenhower in his budget message to the 86th Congress last year recommended that Guam and the Virgin Islands be given nonvoting representation in the United States Congress. Again in this year's budget message to the 87th Congress he said:

"To promote further the development of democratic institutions and in keeping with the growth of local self-government, the Congress should authorize the representation of the Virgin Islands and Guam in the Congress through nonvoting territorial deputies."

It might be said on the other hand that Congress has not been remiss of its responsibility to Guam by the fact that a number of Federal laws have been extended to Guam to the great benefit of the people. These we gratefully acknowledge and we also want to thank especially this committee and other Members of Congress who have unselfishly given their valuable time and effort to promote the welfare of the people of Guam. We do recognize that Members of Congress do not get any votes from Guam nor can they afford to spend so much of their valuable time listening to a Delegate without portfolio or accreditation by Congress. It is apparent therefore that only a duly accredited representative as provided by the bills now before this committee can satisfactorily fulfill the services needed and desired by the people of Guam.

In urging you to support the passage of this legislation, we feel that we are not asking for something which we are not entitled to nor are we asking too much from our National Government. As citizens of this great Nation, the people of Guam wholeheartedly do agree with the principle enunciated by President Kennedy in his inaugural address when he said: "Do not ask what your country can do for you, but ask what you can do for your country." As Americans and as an integral part of the United States we recognize our obligations to support the American Government not only in military matters, but economically and morally. We have proved, during the war, that we are ready at any time to sacrifice our material possessions and lives if need be in defense of our democratic way of life. However, it should be borne in mind that the ability of the people of Guam to fulfill their economic responsibilities is conditioned upon a wide variety of factors beyond their power and control. I am convinced that this proposed legislation would be of inestimable help in these matters as well.

Again, I thank you on behalf of the people of Guam for your courtesy and kind attention, and on their behalf bespeak your favorable action.

David B. Sullivan, Winner of the George Washington Honor Medal Award

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. LANKFORD. Mr. Speaker, recently the Freedom Foundation at Valley Forge selected David B. Sullivan, 18, son of Mr. and Mrs. David L. Sullivan, of Ferndale, Md., to receive the George Washington Honor Medal Award and a $100 prize for his essay "Viewpoint." David graduated last June from the Glen Burnie High School and his essay appeared in the school's 1960 yearbook.

David's essay was termed "an outstanding achievement in helping to bring about a better understanding of the American way of life." At present David is a freshman at the University of Maryland where he is president of his class and a member of the freshman orientation board.

Because David's essay is a message which all of us need to receive frequently, I include the complete text of his award-winning essay at this point in the RECORD:

"Warning to Teenagers." Have you seen that notice lately? Certainly these words of admonition have been viewed variously in the recent years. High school students have smiled and said, "We are in for another lecture." Adults have nodded in affirmation: "Good idea to warn them before it's too late." The warnings can be applied to every topic imaginable, ranging from tastes in music, and dating customs to a demand for increased responsibility on the part of those who will in the near future exercise the privileges and responsibilities of citizens. As a high school senior, keenly aware of the many opportunities soon to be placed before us, I accept the warning.

My country stands today on the razor's edge of a precipice. At the bottom lie the crumpled empires of yesterday. The problem is double edged. Not only must the United States maintain amicable relationships with other countries, but she must also fight internally to check sliding standards and morals. Our blueprint for the future cannot ignore the records of the past. Too many nations have failed to recognize the need for brotherhood. Too many nations have confused prosperity and progress with corruption and decay. Early in our schooling we learned of the beauty that was Greece and the grandeur that was Rome. The parallel cannot be ignored.

By inheritance Americans are a proud race. We have come of a stock which fought valiantly to establish a nation conceived in liberty. These great ones became stronger as they accepted the challenges of life. Each obstacle faced and overcome strengthened the fabric of democracy.

Too many of us today feel that the race has been run, the goal has been reached. Too many of us are willing to be kept by the state; too many of us shrug off examples of intolerance we see about us.

Most young people enjoy pursuing an ideal. Let this be ours: save the American way of life before it is lost. We must be willing to give of ourselves and of our time. Through the benefits of education given us, we must raise our standards of living and our moral values. We must insure the American way of life for the future generations. Those born into a world of freedom must be taught to respect the price paid for it.

Initiation and Procedure for Public Works Projects

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. ROBERTS. Mr. Speaker, the following article from the World Ports publication for the month of February 1961, which was written by T. A. Young, industrial and governmental consultant here in Washington very ably presents the manner in which various ports, States, cities, and local groups must proceed in an order to obtain legislation for the development of an area. It is one of the few articles I have seen on this subject that I believe that serves a useful purpose to those planning on development of areas of the Nation:

INITIATION AND PROCEDURE FOR PUBLIC WORKS PROJECTS

(By T. A. Young)

Attracting industry to port and river areas has become a major undertaking in recent years. It is an understatement to say that competition is becoming very keen. Many areas employ full time industrial development managers in an effort to entice industry to their areas. To be considered by industry the areas must be able to offer ample water, electric power, rail and highway connections as well as a favorable tax situation, employment practices and living accommodations.

Helpful, indeed, to many progressive port and river areas has been the initiation of

projects for port expansion and for the development of river systems which ultimately bring the desired industrial growth to the community.

How are these projects born? They are started by individuals, community groups or progressive city, county, or State officials having industrial development foremost in their minds.

The initial step is to contact the Senators and Representatives of the area in an effort to obtain Federal consideration for assistance. The district engineer of the Corps of Engineers is in a position to furnish advice in this connection.

The preliminary step having been taken, it is necessary for the Members of Congress to request the Public Works Committees of the House and Senate to authorize the Chief of Engineers to make a survey of the area in question. In the event the area has been the subject of a previous report, the House and Senate committees may adopt a resolution authorizing a review of previous reports of the Chief of Engineers to determine whether any modification would be advisable. If no previous report has been made, a request can be made to include the authorization for a survey in either an omnibus river and harbor and flood control bill, or in a separate bill.

Once the Public Works Committees are convinced of the need for a review of a previous report (or the need for an original report), they either pass an appropriate resolution calling upon the Board of Engineers for Rivers and Harbors to make a review and refer it to the Chief of Engineers for action; or, when an original report is necessary, the requested project will, if approved by the committees, be included in either an omnibus river and harbor and flood control bill or a separate bill for action by the Congress.

Projects that have once received the approval of the Public Works Committees, as a general rule, are passed by the Congress with little or no opposition.

However, this is only a faltering first step toward the ultimate goal. The second is more difficult.

Before any further action can be taken, funds must be requested, either by the administration (Corps of Engineers) or by Members of Congress so the district engineers can make the necessary surveys. To obtain these funds not only must the administration be aware of the importance of the project, but Members of Congress as well must be informed.

Everyone will recognize that many areas of the country request, every year, projects that are considered vital to the development of the given area. However, the administration in the preparation of the annual budget, and the Congress, in an effort to keep the budget in line, must screen projects carefully. Resultingly, many requests for funds for surveys of projects are deferred. (This is where constant vigilance by local groups may be of assistance.)

When the Congress has authorized and appropriated funds for a survey of the project, the district engineer will undertake the necessary action. In many cases, it has proven valuable for the area to obtain a responsible engineering firm to make preliminary studies of the area and its potential. This information may be made available to the district engineer responsible for the survey. Further, such information, made available to the committees involved, can assist in a large measure during the course of the public hearings that must be held to obtain the views and the desires of the local people.

Local interests are afforded full opportunity to express their views on the proposed project.

The employment of a responsible engineering firm is most desirable during this preliminary step since the data furnished by the firm can be of considerable value to the district engineer, who must analyze all data received from local interests as well as devising a plan of improvement that will best suit the area in question.

The district engineer makes a report. If it is favorable (depending upon whether the benefits to be derived through the plan of improvement exceed the costs incurred), the report is submitted to the division engineer for review and transmittal to the Chief of Engineers for approval.

At the same time a proposed public notice is forwarded to the Chief of Engineers. This notice will be mailed to all interested parties detailing findings of the district and division engineers, their recommendations, and advising those concerned that they may appear before the Board of Engineers for Rivers and Harbors to present their views.

The steps mentioned above are a matter of routine once the Congress has authorized and appropriated moneys for the survey of the projects. As mentioned before, considerable assistance and the possibility of more favorable action by the engineers lies in assembling for the district engineer all possible information of a constructive nature. This is not easy for the average layman to do. For this reason, an engineering firm should be obtained by the local interests to furnish a plan of development.

Now, we arrive at the gateway to the accomplishment of the project that, let us say, has been 2 years in the making. We must now obtain the authorization and the appropriations from the Congress to commence actual development.

After the River and Harbor Board has approved the project the Chief of Engineers must recommend the inclusion of the project in a public works bill.

If this is not done immediately, the congressional Members or local interests may request a hearing before the committees of the Congress hoping, as a result, to obtain the necessary authorization. In this connection, the committees hold hearings for a relatively short period of time in the spring of each year to hear private-interest groups. At that time all interested parties appear, and possibly for the first time, the committees members other than the Members from the area in question learn about the project.

Therefore, it is essential that any locality seriously interested in a project have someone constantly making information available to all members of the committees and the committee staffs and to assist the local groups when they are in Washington to attend the hearings.

With persistent diligence and constant promotion, the project is finally authorized by the Public Works Committees and the Congress. Now, prior to the initiation of the project one faces the necessity of obtaining funds from the Appropriations Committees and Congress. If the project is a most favorable one, it is possible that it may appear in the budget submitted to Congress by the President. In this very fortunate event, the problem is somewhat easier. An indication of this possibility is, however, the budget for the fiscal year 1961 where the President recommended 42 new construction starts out of some 402 authorized projects. In this connection, it may be noted that some projects have been authorized for over 15 years and still funds have not been made available for development.

As you may see the authorization and appropriations for a project is not a routine procedure but one that must be constantly followed up by local interests. A once-a-year visit to the Nation's Capitol at the time of hearings before the committees of Congress is not enough. The wheels of Government move slowly and with the numerous projects which must be considered, not only by the Chief of Engineers and the administration but the Congress as well, a certain amount of push and constant followup must be exercised.

Not reflecting on any individual in Government nor in Congress, I should like to state those persons in a local area who visit Washington only a few times a year are at a disadvantage. I say this since persons in Government realize that they must meet with them only on rare occasions. This is not true, of course, with your elected representatives who are always endeavoring to obtain the funds necessary for development. However, they are only a few of many and have only a small voice.

This brings up an important, and an essential requirement for any area desiring to develop and obtain the industrial development resulting from the completion of a project in the area.

First, the area must have obtained, initially, an engineering firm that is able to construct a plan of development which proves the economic benefits exceed the cost. Secondly, the area must have a representative who can be in or make frequent trips to Washington. This representative's job is to keep the project uppermost in the minds of each of the agencies of Government having to pass upon the project, and to maintain constant contact with Congress and staff members of committees of Congress. Thus one can insure that the project will be given every possible consideration at every level and step in the process of development.

Okinawa Called Most Important Base in Pacific

EXTENSION OF REMARKS
OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1961

Mr. CHAMBERLAIN. Mr. Speaker, the situation in Laos reminds us of the need to keep our defenses in constant repair and alert in that part of the world. The recent Communist inspired riots in Japan for the sole purpose of preventing President Eisenhower's visit, and demanding that our bases be removed, illustrates that need graphically. I have recently read a news story by Robert N. Branson, of Federated Publications, which appeared in the Lansing (Mich.) State Journal on January 8, 1961, and which provides an interesting impression one of our bases made upon that reporter during his recent tour of the Far East.

Under leave to extend my remarks in the RECORD, I should like to make available to my colleagues that story entitled "Okinawa Called Most Important Base in Pacific," which gives a rather comprehensive and vivid profile of the operation of that important installation:

OKINAWA CALLED MOST IMPORTANT BASE IN PACIFIC—IT'S BLUE CHIP FOR UNITED STATES IN FAR EAST, MORE VALUABLE THAN PEARL HARBOR, SAYS MILITARY OFFICIAL

(By Robert Branson)

OKINAWA.—The land of "Teahouse of the August Moon" has become the land of the Sunday punch, a billion-dollar U.S. fist rising from the green waters of the east China Sea.

Asia's shifting war clouds and political gusts have made Okinawa today America's most vital base beyond Pearl Harbor. For:

Japan's uncertain politics make our military future there doubtful at best.

Chiang Kai-shek's star has waned on Formosa.

The Philippines, beset with internal ills, would be a shaky U.S. springboard if war came.

South Korea has its hands full watching North Korea.

"That leaves Okinawa our best jumpoff point in Asia," a high U.S. military official said. "It's a blue chip worth all our other Far East positions put together—more valuable than Pearl Harbor itself, in my opinion."

MODERN LOOK

Many an air traveler reaches Okinawa expecting to find GI's and sailors in a Rodgers and Hammerstein setting of palm trees, ukuleles and teahouses. Word of our massive buildup here doesn't seem to have gotten through to U.S. newspapers and the public, our military people say.

Instead of tropical languor, the newcomer finds a military powerhouse spread farther than the eye can see with more concrete and steel pouring day by day into hard new shapes across the island.

Jet fighters and practice gunnery shake the air. Okinawa's night music is a mighty blend of engines, electricity, and steam—plus the jangle of slot machines at the biggest layout of military clubs this side of Honolulu. Some 60,000 Americans are based here, including dependents.

World War II left Okinawa a wasteland where 13,000 Americans had died in combat. For 5 years it remained a minor outpost manned by a temporary U.S. garrison.

Then Red thunderheads loomed. Chiang Kai-shek's forces were routed from the mainland. War broke in Korea. Our Far East allies started changing political complexion, all at once Okinawa's new importance dawned on defense planners.

CRITICAL SPOT ON MAP

Our Okinawan buildup began in 1950. At the Pentagon a new phrase sprang into use—"Keystone of the Pacific."

Okinawa's map location is almost equidistant from Japan, Korea, the Philippines and Red China. It is no more than 600 air miles from any of them and even closer to Formosa.

Okinawa is regarded as the best spot in the Far East from which to jump into any southeast Asian brushfire war. Better yet, the United States had inherited Okinawa as an orphan from World War II and held firmer political control than any place in the Far East.

Okinawa, part of the Ryukyu island chain below Japan, had belonged to Japan. Tokyo wanted it back, but John Foster Dulles put such skillful wording into the 1951 Japanese peace treaty that the United States won control of the islands indefinitely.

Our administration here has been gentle, but Washington made it plain we have no thought of being pushed off Okinawa and will resist anti-Yankee pressure of the sort that plagues us elsewhere.

Our hold is strengthened by power of veto over any action in the Ryukyuan parliament. The veto threat is rarely raised, however, since no serious political opposition exists.

Okinawans, by and large living higher than they dreamed of 10 years ago, appear contented with their generous Uncle Sugar.

Okinawa's growth into a billion dollar base (a tag fast growing obsolescent as more dollars gush) has brought a concentration of nuclear-age might that cannot be revealed in detail.

TROOPS AND VOICE

A partial catalog of units based here may help convey the idea:

The 2d Airborne Battle Group and 3d Marine Division, ready to leap anywhere from here to Burma.

Thirtieth Artillery Brigade with two Nike-Hercules battalions.

The Army's supersecret First Special Forces Group, airborne cloak and dagger specialists, headed by the legendary Col. Frank Mills of wartime Ranger fame.

Three Hundred Thirteenth Tactical Air Force, packing such supersonic hardware as F–100 super sabres, F–101 photo recons and F–102 Delta Daggers.

An Army psychological warfare unit whose fingers extend across Red China and Siberia, plus a million-watt Voice of America transmitter.

The high-flying U–2 plane of espionage fame is believed to be no stranger to Okinawa, though our Government has denied officially that any U–2's are based here now.

In case of war, our present punch could be multiplied fast by battle reinforcements from Hawaii and other points. Okinawa has lots more room, including naval anhcorages bigger than Pearl Harbor.

Lt. Gen. Donald Booth, top Okinawa commander who also serves as high commissioner, devotes as much time to Okinawan welfare as to military affairs because we must keep the local population content if we are to operate effectively.

Booth and his civil administrator, Brig. Gen. John G. Ondrick, have mixed benevolence so shrewdly with firmness that Okinawans kicked five Communists out of their legislature last November and elected the biggest pro-American majority ever.

FADING OPPOSITION

Communist-sponsored rallies drew 30,000 to 40,000 people 4 years ago, but Booth and Ondrick cut the ground from under them by promoting local labor movements instead of obstructing them, by seeing to it that no Okinawan lacked food or shelter or education, by spending heavily on disease control.

The opposition rallies that used to draw thousands attract around 300 today.

Okinawans who lived in caves at the end of the war are well housed now, many in pastel bungalows. They consume as much electricity in 4 weeks as they formerly used in a year.

Average income was $191 per Okinawan in 1960—which sounds miserable but is more than double the figure 10 years ago.

Ondrick keeps on the go by helicopter, visiting 48 inhabited Ryuku islands to see what he can do for villagers who need such things as pumps, generators, DDT, medicine, new roofing, and fences to keep wild boars out of the sweet potatoes.

Just Plain Jack

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include three columns written by Art Hoppe which appeared in the San Francisco Chronicle of February 14, 15, and 16:

PRESENTING A NEW CULTURAL SERIES

(By Art Hoppe)

What this column needs is more drama. So I've made up a soap opera. It's about this lovable, rollicking, heart-warming Irish family. They've made good, see, and they now live in this big white house on Penn avenue in what could be any typical American town. Like Washington.

And it's got these wonderful characters. Like Father Joe, a crusty old gentleman with a heart of gold and a basement to match. And Mother Rose, who isn't happy unless she's bustling around the kitchen. And all the kids—Bobby and Teddy and Eunice and Pat and Jack. Jack's kind of the hero.

I was thinking of calling it "One Man's Family." Only that sounded familiar. And, anyway, I wanted a title that would more or less sum up both the hero himself and the story line. I think I've got it: "Just Plain Jack."

You'd think at first it wouldn't have much drama. Just Plain Jack's at the top and the family's happy. But they've got Problems. Jack, see, is married to this beautiful Society Girl. And you can always get a couple of episodes out of Will Dad Embarrass Just Plain Jack? Like in Stella Dallas.

And there's Brother Teddy. The family sent Teddy out West last fall as sort of sales manager for the family concern, which is Just Plain Jack. And Teddy lost every Western State but Nevada to the opposition. So now they've made him Assistant District Attorney up in Boston. Will Teddy make good on his own?

And there's a great flashback. Brother Bobby wants this job with Just Plain Jack. But the opposition is whispering: "Would you like a man who practices nepotism with his brother?" But Jack is fearless and he says: "I cannot discriminate against my own brother." Meaning when it comes to nepotism. So Bobby get the job and everybody's happy.

Then we have sister Pat, a wonderful girl. But she's married this sort of ne'er-do-much Englishman named Peter, who's very charming. But he lives in Hollywood and runs around with these strange characters—Frankie and Dean and Sammy in a clan or something. So when Jack gets this new job all Peter's friends come swarming in to have a ball. But Just Plain Jack sticks by them because he's loyal to the family.

Will the Clan Move into the Big White House? Tune in tomorrow, folks, for the first thrilling episode of Just Plain Jack, the story of a typical American boy's struggle to overcome the handicaps of brains, good looks and several million dollars.

Only I'm having a little trouble lining up a sponsor. The agencies say it's a great script. Except it isn't very believable.

JUST PLAIN JACK, VOLUME I, CHAPTER I

(By Art Hoppe)

Good morning, friends in radioland. It's time once again to visit with that rollicking, heartwarming Irish family in the big White House on Pennsylvania Avenue for another episode of Just Plain Jack—the story of how any typical American boy can reach the top with the guidance of a typical American father who has $100 million.

As our episode opens, we find Just Plain Jack and the society girl he married making their first visit to the rustic little 47-room week-end cabin in the Hunt Club district of Virginia, which Just Plain Jack bought so his children, Caroline and Jack Jr., can lead a normal life.

As we join them, Just Plain Jack and the beautiful society girl he married are just finishing breakfast in the rustic west wing. She is saying:

"BEAUTIFUL SOCIETY GIRL. Don't you just love it here, dearest? It's so wonderful for us to be alone again with only Caroline, Jack Jr., 32 servants, the Army Signal Corps, the Secret Service, and the helicopter pilots. And it will do you so much good to get away from the cares and worries of the family-owned business, United States of America.

JUST PLAIN JACK. Where are the photographers? You know, darling, that I don't like to eat breakfast without photographers.

"BEAUTIFUL SOCIETY GIRL. Dearest, I've kept out the photographers and I've can-

celed all your appointments. I want you to forget your business troubles and have fun with your family. You know, relax.

"JUST PLAIN JACK. That's a great idea, darling. I think I'll just curl up with a good book. Hand me that 1,472-page report on the gold crisis. We seem to be $16 billion on the shorts and the United States of America may fold up at any moment.

"BEAUTIFUL SOCIETY GIRL. No stuffy old reports for you, dearest. There, I've thrown it in the fireplace. Darling, why are you so green?"

(The telephone rings.)

"JUST PLAIN JACK. I'll get it. Hello? Oh, hi, Dad. Nothing much. Well, there is one little problem, $16 billion. You would? That's awfully good of you. No, I don't think I could sell you the whole thing. Just what's west of the Rockies? I don't know, Dad. How about a first mortgage instead? Great; and, Dad, thanks."

Will Jack last out the weekend? Will Caroline be mad there are no photographers? Will togetherness ruin this marriage? Join us again next week, friends, for another episode. And in the meantime, remember: As you go down the byways of life, there are no problems so insurmountable that they cannot be solved by Just Plain Jack.

JUST PLAIN JACK BUILDS UP PIERRE

(By Art Hoppe)

Good morning, friends in televisionland. It's time once again for another episode of Just Plain Jack, the typical success story of a typical American boy. With money.

As we join the rollicking heart-warming family in the big white house, Just Plain Jack is relaxing in the study doing one-handed pushups while writing Executive Order No. 10572 and dictating a speech. His aid and confidant, portly Pierre, enters puffing a cigar.

"JUST PLAIN JACK. Pierre, boy. How does this speech sound? 'We don't want a nation of spectators. We want a nation of participants in the vigorous life.'

"PIERRE (shuddering). Sounds great, Chief. Absolutely great.

"JUST PLAIN JACK. # 98, # 99, # 100." (He leaps to his feet and begins deep knee bends.) "Which reminds me, Pierre. I see Time describes you again as 'burly, belt straining.' Throw me the medicine ball.

"PIERRE. Could I roll it?

"JUST PLAIN JACK. Nonsense. We must move forward with vigor. Ready now. One-two-three-four * * *.

"PIERRE (panting). Chief. Look out the window. The cops have taken their ball away and are chasing them off the lawn again.

"JUST PLAIN JACK. Well, it's time they all got in here for the Cabinet meeting anyway. What's on the agenda today?

"PIERRE (sighing with relief as he puts the medicine ball away). Chin-ups, Laos, Indian wrestling, the Congo, 100-pound barbells, Berlin and handstands. And, oh yes, you've been invited to attend the opening game of baseball season.

"JUST PLAIN JACK (chinning himself on the mantel). Great. Do three laps around the grounds, Pierre. And about the game, which side am I playing on?"

Can Pierre do three laps? Will Washington win the opener? Is Adlai losing his paunch? Tune in next week, friends, for another episode. And in the meantime, as you go down the byways of life remember: nothing builds you up like Just Plain Jack.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The 111th Anniversary of Birth of Thomas G. Masaryk

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, March 9, 1961

Mr. HRUSKA. Mr. President, Tuesday, March 7, marked the 111th anniversary of the birth of Thomas G. Masaryk, the founder and the first President of Czechoslovakia, and a philosopher of world renown.

The interest of U.S. citizens in this historical figure arises from at least two sources: One is that he married an American girl. The second is that his life and his memory have a sustaining influence on the ideology of real democracy. This is proved by the fact that about a year ago there was issued a commemorative stamp in memory of Thomas G. Masaryk, as one of the champions of liberty. His influence in Czechoslovakia and elsewhere in central Europe is considered so detrimental to the cause of the U.S.S.R. that whenever letters bearing his likeness on the stamp attached thereto were mailed from this country to Russia, they were either turned back or were destroyed.

Mr. President, I have prepared a brief statement covering some of the things for which he stood and his biography. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HRUSKA

Tuesday, March 7, marked the 111th anniversary of the birth of Thomas G. Masaryk, founder and first President of Czechoslovakia.

In this era of uncertain relations with an ideology bent on burying us, it is especially appropriate for us to pay honor to this champion of liberty and to heed the example of those, like him, who would not rest until the cause of freedom prevailed in their land.

Masaryk's name is linked with the cause of freedom, as once his country was. He remain, however, an inspiration to all freedom-seeking peoples, just as his country now is a tragic reminder that his work must be done again.

The life of Thomas Masaryk has been closely associated with our country. He married an American girl and took her family name, Garrigue, as his middle name. The democratic ideals he advocated were influenced by American concepts. During his years of exile and fight for independence for his homeland, he resided and taught here. In America he first obtained a formal declaration of sympathy with the cause of Czechoslovak independence. And with that sponsorship, the new Czech nation emerged in 1918 out of the ruins of the Austro-Hungarian Empire. Within a few years, Czechoslovakia became a prosperous and respected country in the European Continent.

Today the principles he espoused have been uprooted in his country. This rejection was emphasized in recent days by the change in title of the government to include the word socialist, so as to identify the state even more closely with the Soviet sphere. In keeping with that program, even the name of Masaryk is to be expunged. American letters carrying a postage stamp issued in his honor have been denied entrance into the country. The historic words which embody the philosophy of Masaryk's life, "truth prevails," are now whispered and hardly heard in his homeland.

On the occasion of the anniversary of his birth it is exceedingly important that we pay honor to the memory of Thomas Masaryk and to renew our assurance to his oppressed countrymen that their cause of freedom continues to be the objective of liberty-loving peoples everywhere.

Feed Program for 1961

SPEECH
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 4510) to provide a special program for feed grains for 1961.

Mr. HOEVEN. Mr. Chairman, in answer to the argument of the gentleman from North Carolina in opposition to the Harvey amendment, I simply want to say, that if the Secretary of Agriculture means what he said on many, many occasions covering his intention to fix the price support on corn at $1.20 per bushel, I cannot see any harm in spelling it out in the legislation so that there will be no misunderstanding and no misapprehension on the part of anyone, as to what the Secretary intends to do. The Secretary of Agriculture, has positively said that he would fix the price support on corn at $1.20 per bushel. That statement was made by him in the transmittal letter sent to the Speaker of the House and to the Vice President of the United States, urging feed grain legislation. His intention was again set forth in the Secretary's prepared statement before the Committee on Agriculture in which he specifically said that the price support on corn would be $1.20 per bushel; later, at a press conference held last week when the question was asked of the Secretary as to the price support on corn, he specifically said again that it was his intention to fix the price of corn at $1.20 per bushel.

Now what is wrong in adopting the amendment offered by the gentleman from Indiana? It fixes the support level at from 65 to 75 percent of parity. This in reality is $1.20 or approximately 74 percent of parity. In fact, the Harvey amendment provides for an additional point over and above the 74 percent of parity figure. Personally I have no fear about the Secretary of Agriculture not keeping his word, but the fact is that the present wording of the section dealing with price support on corn leaves the sky as the limit. This leaves it open for pressure groups and others to prevail upon the Secretary of Agriculture to raise price support to any figure he desires over and above 65 percent of parity. This could go to 110 percent of parity and even beyond. I do not think this will be done by the present Secretary but there is nothing to prevent another secretary tomorrow to do something else. Such uncertainty should not be permitted.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. HOEVEN. I yield to the gentleman from Indiana.

Mr. HALLECK. Mr. Chairman, I make the point of order that the committee is not in order, the gentlman from Iowa, the ranking Republican member of the committee is making a very important statement, and I think he is entitled to be heard.

Mr. HARVEY of Indiana. Mr. Chairman, will the gentleman yield?

Mr. HOEVEN. I yield to the gentleman from Indiana.

Mr. HARVEY of Indiana. Would the gentleman from Iowa agree with me that this in essence is simply not a matter of questioning the Secretary's word, but it is a matter of protecting him insofar as the views of the Congress are concerned on this issue.

Mr. HOEVEN. I agree with the gentleman. His amendment is a protective measure to protect the Secretary of Agriculture, and I think he would welcome it. I think this legislative body should protect him when he says that he wants a price support of $1.20 per bushel on corn.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. HOEVEN. I yield to the gentleman from North Carolina.

Mr. COOLEY. I just want to remind the gentleman of the fact that the bill that the Secretary sent up here had these words in it, "the level of price support for the 1961 crop of corn shall be $1.20 per bushel." I think the gentleman objected, as I did, to that language and we put in the language which we now have before us. Further, I want to point out to the gentleman what the final report of the committee says. We are making legislative history at this moment.

The Secretary indicated in his memorandum to the President and in his testi-

mony before the committee that at the level of conservation payments recommended in his memorandum, which has been reduced by the committee, it was his intention to set the support price of $1.20 per bushel. There cannot be any misunderstanding about it. Why can we not have confidence in the gentleman who has just now taken office? This is the gentleman's first promise to this Congress, that he would fix it at $1.20 a bushel, or 74 percent of parity.

Mr. HOEVEN. I would advise the gentleman that on yesterday I gave the committee history of this particular amendment. The first figure presented to the committee in the bill sent up by the Secretary was $1.20 a bushel without relation to the parity formula.

Mr. COOLEY. Right.

Mr. HOEVEN. I objected to pegging the price as did the gentleman from North Carolina. Subsequently we considered fixing a support price from 65 to 90 percent of parity. That again was objected to because there was apprehension on the part of some members of the committee that the figure 90 might have some magnetic significance so as to weaken the bill. So we came up with the compromise provision now in the bill.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

(By unanimous consent Mr. HOEVEN was allowed to proceed for 2 additional minutes.)

Mr. HOEVEN. I simply want to say that the Secretary, without equivocation, on many occasions said that he was going to fix the support price at $1.20 a bushel. What harm, therefore, can there be in writing the Harvey amendment into law so there will be no misapprehension and no question about the Secretary intentions? I am not questioning the honesty or integrity of the Secretary for one moment and am sure he would favor the amendment as a protective measure to himself.

This amendment, in fact, tests the honesty and sincerity of those who want to support their own Secretary of Agriculture in his announced intention of supporting corn at $1.20 a bushel, which is 74 percent of parity. I do not question the motives of anyone, and do not charge anyone with ulterior motives, but I cannot understand why anyone should object to writing into law the very thing the Secretary said he wants, in this regard.

The Harvey amendment should be adopted.

Useful Service of Mississippi National Guard During Recent Floods

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, March 9, 1961

Mr. STENNIS. Mr. President, the Mississippi National Guard has always occupied a high place of useful service in the lives of all Mississippians.

The recent disastrous floods in south Mississippi, resulting from prolonged heavy rains that overran many rivers and streams, left widespread destruction in many areas, particularly in the Hattiesburg area.

Perhaps no single organization came to the aid and relief of flood-stricken Mississippians as did units of the Mississippi National Guard.

These citizen-soldiers, ready to act in peace and in war, in military and civilian distress, responded promptly and effectively with men and equipment to relieve suffering and hardship.

An editorial in the Jackson, Miss., Clarion-Ledger of Saturday, March 4, 1961, spells out in a commendable fashion the manner in which the National Guard performed its services.

Mr. President, I ask unanimous consent that the editorial entitled "Guard's Flood Relief Duties Are Timed Most Appropriately," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GUARD'S FLOOD RELIEF DUTIES ARE TIMED MOST APPROPRIATELY

Many organizations have helped in the relief of distress from the Mississippi floods, and we would not want to single out any one or any set of them for special distinction. But the fact remains that of all the contributing groups, the timing of the situation came most appropriately for our Mississippi National Guard.

February 22 was to have been a day of special observances for the Guard, as Washington's Birthday is traditionally "Muster Day" for the citizen-soldier organization.

But by that date last week, flood waters had already displaced hundreds of people from their homes, and the Guard was on duty in several areas, rescuing people and housekeeping for them, in concert with other agencies.

The presence of the Guard both men and equipment has been an invaluable asset to the people of areas devastated by floods, and these emergencies have afforded dramatic proof of the Guard's ability to react instantly and efficiently when the public interest demands it.

In this connection the Hattiesburg American has said editorially: "The National Guardsmen commanded by Col. John Fishel have worked above and beyond the call of duty to lessen the tragic impact of the invading waters. They have been cooperative and helpful, volunteering services not required of them in many cases, struggling against a powerful and unusual force almost to the point of exhaustion. * * *

"The guardsmen with their big trucks, boats, and amphibious vehicles evacuated the stranded, no doubt saving many of them from drowning. City police, firemen, and volunteer rescuers played big roles in this operation, but the job could not have been done without the National Guard's equipment and organization. The Hattiesburg area can be proud of and grateful to its citizen soldiers."

All Mississippians share this pride and gratitude. Our Mississippi National Guard ranks among the State's major assets. Organized and trained for Federal service in wartime, the guard in peacetime enjoys dual status as a State force. As such it is an organized and trained force immediately available in local emergencies—floods, fires, riots, explosions, and storms.

The Mississippi National Guard's present strength is approximately 11,500 members. Nationally, the force numbers 472,000 officers and men. Every guard member is trained to do his job and it is this training that makes all the difference in the world.

As citizen soldiers, guard members are motivated by a patriotic conviction that citizenship demands more than payment of taxes and obedience to the law. They believe that a good citizen must put into his country at least as much as he has taken from it.

Modern warfare requires the National Guard to be closer to battlefield readiness than ever before. It has become so coordinated with the active military establishment that it is instantly available—as proven by lightning-fast "Muster Day" exercises in the Nation during the recent observance of the Guard's 15th anniversary of reorganization after World War II.

The Clarion-Ledger gratefully again salutes all units and members of our Mississippi National Guard, and the entire Guard organization from coast to coast.

A Letter to the Joint Committee on Internal Revenue Taxation

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. BROYHILL. Mr. Speaker, a letter from Mr. W. S. Whitehead, president of Ives, Whitehead & Co., Inc., of Washington, to the Joint Committee on Internal Revenue Taxation was brought to my attention recently. I believe this informative and interesting discussion of the problems involved in the operation of the Renegotiation Act of 1951 will be of interest to my colleagues, and therefore I commend it to you for inclusion in the RECORD:

IVES, WHITEHEAD & CO.,
Washington, D.C.,
December 21 and 28, 1960.

Mr. COLIN F. STAM,
Chief of Staff, Joint Committee on Internal Revenue Tax, New House Office Building, Washington, D.C.

DEAR MR. STAM: This is in response to press release dated November 23, 1960, inviting submission of views in connection with the renegotiation study which the Congress directed the joint committee to undertake pursuant to section 4(b) of Public Law 86–89. It is noted that the congressional directive provides for a "full and complete study of the Renegotiation Act of 1951, as amended, and of the policies and practices of the Renegotiation Board," and to report the findings with recommendations to the Congress not later than March 31, 1961.

In 1956, when your staff conducted a similar undertaking under congressional mandate you will recall, no doubt, that representatives from this firm met with your aids on more than one occasion. We offered what were believed to be worthwhile and realistic suggestions for change not only with regard to certain provisions of the act, but with respect to its administration, as well.

It is sincerely hoped that the sound comments and substantial suggestions for change included herein, and also those submitted from all other experienced sources, be given thorough consideration and impartial treatment and study by your group, prior to the submission of preliminary data with recommendations to the joint commit-

tee. We believe there should be public disclosure and wide dissemination of all pertinent statements, emanating from any source whatsoever, which your staff receives in response to the invitation referred to above. In this connection we plan to make known the contents of this communication to the members of the Senate Finance Committee, the House Ways and Means Committee, and to our many friends in private industry.

In forwarding our comments and observations they should be construed as having been developed from an impersonal and objective point of view. They represent some of our major findings based on nearly 10 years of assisting contractors with their renegotiation problems, and on over 18 years of experience in this area by Mr. Stephen B. Ives. You may remember that Mr. Ives was one of the prominent members of the War Department Price Adjustment Board (predecessor of the Renegotiation Board) for several years during World War II, and its first accounting adviser. He also was one of five select specialists who were drafted by the late Secretary of Defense Forrestal to promulgate the rules and regulations for use under the Renegotiation Act of 1948, and which furnish the basis for those used under the 1951 act.

I. CONSIDERATIONS REGARDING EXTENSION OF THE ACT

Among the 1956 recommendations which the joint committee made was one which stated, "Evaluation of renegotiation in its operation and results leads to the conclusion that renegotiation should not become a permanent part of the law. * * * The emphasis in the current defense program on rapid technological improvement in weapons makes pricing difficult. For these reasons it is believed that a temporary extension of renegotiation is necessary."

If the Joint Committee has any remote thought of encouraging Congress to enact permanent renegotiation legislation we wish to be most emphatic that such a move should not be favorably considered. Renegotiation is just as repugnant to honest contractors as are wage limitations to honest labor groups, and it should remain in the expediency category. We believe the House Armed Services Subcommittee on Procurement not only was presumptuous in recommending that the present act become permanent, but also exceeded the scope of its study on military procurement, as directed by the Congress in section 4(a) of Public Law 86–89. Therefore, its position on this point should be disregarded by the Joint Committee.

On the question of extension of the act we believe this to be prudent for a period not in excess of 2 years, providing the remedial suggestions to reflect improvements set out elsewhere herein, are adopted. It must be pointed up that the argument that renegotiation is required because "pricing is difficult" long since has become shopworn and certainly cannot be expected to reflect credence ad infinitum. In other words, temporary continuance of the act cannot be made to hinge on this observation, but rather it must rely on the premise that a "repricing" responsibility exists, if such be the case. That, in essence, is what the renegotiation process originally was intended to accomplish.

II. PROCEDURES, PRACTICES AND POLICIES

Before discussing each of the above subjects under this section we wish to quote from a report prepared by the five specialists chosen to implement the 1948 act. After one carefully comprehends these few lines of wisdom, it becomes abundantly clear that there is room for substantial improvement in the administrative responsibilities and duties of the Board and its regional operations. The quotation to which we refer states:

"No one has ever been able to devise a formula on precise measurement of excessive profits. Essentially renegotiation is a judgment matter and must remain so. Thus, the caliber and character of the renegotiation personnel is of the utmost importance—far more important than any formal rules and regulations. The Board should always maintain that flexibility of rule and procedure which is necessary to fair and equitable results in the wide variety of cases which will come before them. If renegotiation settlements are to be made palatable, they must be justified and explained in a satisfactory manner.

"Every effort should be made to negotiate with the contractor on all phases of his case including the allocation of sales, the allowance and allocations of costs and reasonableness of profits. Unilateral action should be taken only in those cases where fair and reasonable results can be obtained in no other way. Cooperation between the Government and contractor is essential to the success of the renegotiation process. The gears of renegotiation should be well lubricated with courtesy, patience and restraint on the part of the renegotiation personnel.

"Full and complete hearings, careful consideration of all pertinent facts and factors and adequate review before fresh minds are the safety valves of renegotiation. In every case the person making a decision on behalf of the Government should meet with the contractor, if the contractor so desires, and explain his decisions and the reasons therefor. Not only should all arbitrary and capricious action be avoided but cases should be conducted in such a manner that no appearance of such action can be created in the contractor's mind.

"In the review of any case great care should be exercised to eliminate grounds for any possible criticism that bias or prejudice at one level is being carried forward to the next. Fresh minds should examine the case de novo to guard against any such possibility and this procedure should be made clear to the contractor."

A. Procedures, practices, and policies of the Board

In the case of each of these subjects reference will be made to a major situation or condition which it is believed will support our contention that there is room for improvement in the administrative techniques of the Board.

1. Subsequent to the disastrous effects resulting from poor administrative direction during the first several years of operation under the 1951 act, both Mr. Ives and the writer strongly urged the Board to get a fresh start and engage a private management firm to review its entire operation. These overtures fell on deaf ears; and it appears that the Board has initiated few, if any, major improvements in its overall procedures since that time. For instance, in the five annual reports which the Board has issued since 1956 it is stated in each that there have been no significant changes in its operating procedures; the exception being that in the 1957 report slight changes were noted due to the passage of amendments to the Renegotiation Act.

Today there exists (as there has since inception of the act) a backlog of unfinalized cases awaiting renegotiation action on some contractor fiscal year reports dating back to 1956. There has been some improvement in this area over the past year or two, but drastic revision of the Board's entire procedural operation must be accomplished if a more positive current adjudication is to be realized in those instances where renegotiation action is required. In order to assure success in this direction it seems appropriate that the Congress should adopt legislation requiring the Bureau of the Budget to engage a nationally known management engineering firm to conduct such a survey. Similar action in the case of other executive agencies in the past has proved highly beneficial, both to the Government and to the public interest.

2. Over the past decade or two the Congress has ever increasingly encouraged, and in some instances directed, executive agencies to divulge more and more details of their practices to the public. In the case of the Renegotiation Board it appears to be the only important agency in the executive branch that fails to provide the public with current information on its practices and activities.

In March 1958 the Small Business Administration (SBA) requested our firm to proceed with the preparation of a manuscript entitled, "Suggestions for Contractors Subject to Renegotiation." The agency planned to publish the end result in the form of a management aid, to be widely distributed and made available to all businesses subject to renegotiation. This practice has been followed by SBA in the case of many other technical subjects of basic interest to business. Thus, no precedent was set in our instance.

In accordance with the agency's request we provide a complete and apparently acceptable manuscript, which dwelt for the most part on how to prepare a statement of contractors' performance in relation to the statutory factor. In turn SBA referred the document to the Renegotiation Board for review as is the required governmental procedure. In the following June, SBA informed our firm that the Board would object to publication of the manuscript concerned, and therefore SBA was not in a position to go ahead with the project. No objection was raised as to the contents of the presentation and SBA informed us that "the Board's action came as a complete surprise," and that it (SBA), "deeply regretted this development."

This instance is cited not for the purpose of pointing up the Board's refusal to permit another executive agency to assist contractors faced with renegotiation, but simply to note that since June 1958 the Board itself has failed to initiate any constructive suggestions for contractors subject to renegotiation. The Board has publicly released excerpts from opinions by its General Counsel from time to time, but to our knowledge it never has clearly pointed out how a contractor might come away from a division meeting with a "better break," had a succinct statement of performance in relation to the statutory factors been presented. This, we have found in the past, has been of substantial benefit to the contractor in some instances. And certainly we subscribe to the present Chairman's remark that such a statement of performance is the "omega" of renegotiation.

In view of the foregoing it appears highly desirable that positive action be taken to correct the Board's practice of failing to make disclosure of certain of its operations and policies which would be helpful to contractors. It is hoped that this can be accomplished in part, at least, by the Congress writing into any pertinent legislation, a requirement that the Board employ on its staff a highly competent public information officer, with qualified assistants. If this is not the proper approach then the Joint Committee should make a finding that when the 1962 budget request for the Board comes before the respective Appropriation Committees, that it be increased to provide for staffing such an office.

3. On file with the Tax Court at the present time are several renegotiation appeals which, simply put, pivot around a contentious policy of the Board of refusing to review the renegotiable profits of the several nonconstruction contractors on a completed contract basis, rather than on a fiscal year basis. The act directs the Board in section

105(a) therein, "to exercise its powers * * * during the fiscal year * * * except that the Board may exercise such powers separately * * * under any one or more separate contracts * * * at the request of the contractor or subcontractor."

Now comes the General Counsel to the Board and informs that body on March 30, 1959, that it "is without power to compress two or more fiscal years of a contractor into a single renegotiation." The Board in turn so informs the contractors and in one late instance arbitrarily directs that such action is "neither warranted nor appropriate and that, were it empowered to accede to your request, it would decline, in its discretion, to do so." On its face this position hardly seems to connote the maintenance of "flexibility or rule and procedure which is necessary to fair and equitable results * * *" in renegotiation.

The General Counsel seems to rely on certain points he considers sound and cogent in this matter. Basically, his position appears to rest on the absence of any legislative history which would permit the Board to take the action requested by the contractor. We are not versed in the law and, therefore, are not in a position to argue the issue. However, from privileged notes of the five renegotiation specialists which drew up the rules under the 1948 act, this whole matter was thoroughly studied historically by that group. They took the firm position that "if a loss or inadequate profit occurred at the end of a procurement program due to the discontinuance of renegotiable business, consideration should be given to methods to alleviate the hardship of the fiscal year basis." What, in effect, this appears to mean is that upon completion by the contractor of a contract for the production of, let us say, shell cases of a specific millimeter, and no further requirement thereafter exists, and the contractor has sustained a loss or subnormal profit from this particular production program, then consideration should be given by the Board to determining the company's renegotiable profits on other than a fiscal year basis. We believe that this is equitable and sound thinking, and we strongly urge that the Congress favorably consider legislation to spell out such accepted policy in unequivocal language.

B. Practices and procedures before the Tax Court

It is known by so few that the Tax Court is not a part of the judicial system of the country, but an independent executive agency. From long experience with the court we have found that its basic judgment and efficiency are not open to question. On the other hand, consternation is justified at the incredibly long delay contractors encounter in obtaining appellate action on renegotiation assessments. This, we appreciate, is due primarily to the exceptionally heavy docket, and a minimum of personnel to facilitate its handling. However, such condition discourages contractors from appealing levies made by the Board, which in turn, of course, defeats the objective of assuring the contractor of a de novo hearing.

Specifically, renegotiation is neither a tax matter, nor a legal matter, but is essentially a judgment matter, to be resolved by qualified specialists. Some interested parties (including former judges of the court) have regarded these de novo reviews of renegotiation determinations as foreign to the established purpose of the court. However, there appears to be no other central appellate group which appropriately could handle such type pleas, and we believe that this responsibility should remain where it has been since the inception of price adjustment action.

In subscribing to this conclusion we do, however, strongly feel that immediate action should be taken to assist the court in accelerating the disposal of all types of cases before it. Therefore, it is recommended that the Congress amend the Internal Revenue Code so as to provide for at least one additional judgeship. Such legislation should provide that this added division concentrate primarily on renegotiation appeals, and that the vacancy, if created, be filled by appointment from outside the present court, and by one qualified and fully cognizant of all major phases of the entire renegotiation process.

III. SUGGESTIONS FOR IMPROVEMENT OF THE ACT

A. Exemptions to the act

Since the joint committee's first report on renegotiation in 1956, a considerable amount of experience has been gained by the principal procurement agencies in pricing and repricing techniques on technological improvements in weapons. Likewise, very strict standards on costing practices recently have been established by the military departments. Thus, it is not too much to expect that these agencies should now rely on their own talent to a great extent, in order to assure the elimination of real excessive profits from defense contracts.

In addition, since 96.5 percent of the refund determinations during fiscal year ended June 30, 1960, were derived from renegotiable sales volume of over $1 million, it appears appropriate to broaden the exemption applicable to comparatively small independent contractors. It is believed such action would be healthy for the national economy and would encourage many enterprises to utilize their talents and techniques in defense work. As it stands now the Government is deprived of the know-how of many businesses because of their fear of being unable to retain profits normal to their operation.

It is recommended, therefore, that the Congress affirmatively consider the following changes to the act in addition to those referred to hereinbefore:

1. Exempt from renegotiation, (a) fixed-price contracts which contain provisions for price revisions downward, and (b) contracts obtained from open competitive bidding;

2. Increase the floor beneath which contractor sales cannot be renegotiated from $1 million to $1,500,000, effective for fiscal years ending after June 30, 1961; and

3. Exempt all independent and nonaffiliated contractors and subcontractors from renegotiation which qualify as small business under criteria established by the Small Business Administration.

(B) ACCOUNTING MATTERS

No specific comments regarding this subject matter are offered at this time. However, it is strongly urged, in the event a management survey is conducted covering the Board's operation as recommended above in paragraph II A, that approval likewise will be given to having a firm of nationally known public accountants survey all accounting procedures of the Board.

In the event you or Mr. Wickham wish to discuss any part of this presentation, I will be glad to arrange a meeting at a mutually agreeable time.

Sincerely,

IVES, WHITEHEAD & CO., INC.,
W. S. WHITEHEAD, *President.*

Pact in Dress Industry

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of February 28, 1961, which comments on the contract agreement reached recently between the International Ladies Garment Workers Union and five associations of employers, such agreement affecting some 9,000 workers in the Greater Wilkes-Barre area.

The editorial follows:

PACT IN DRESS INDUSTRY

Good news came to the Wyoming Valley garment industry last night.

The approximately 9,000 workers in the Greater Wilkes-Barre area will not strike as scheduled, but will receive a pay increase. This came about from a contract agreement reached between the International Ladies Garment Workers Union and five associations of employers who manufacture women's garments.

And the Wyoming Valley economy will receive a shot in the arm, for the workers will get an average increase of 5½ percent. Because of the piecework nature of the industry, and the variety of rates hinging upon the value of the garment being manufactured no definite figures can be given. Perhaps the best criteria is that operators for basic pay will go from $56 to $61 a week and pressers from $67.50 to $72.50 a week.

The increases will mean more money in the pockets of the 9,000 men and women who have become an important part of the Wyoming Valley economic picture. And the raises will filter into the businesses of the grocer, butcher and, if we have any, the candlemaker.

Coming at the time when Wyoming Valley is breaching into new plateaus of economic progress, the new contract for the International Ladies' Garment Workers' Union is an important contribution.

Two Top-Ranking Texas Newspapers Laud Appointment of Ed Murrow as USIA Chief

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 9, 1961

Mr. YARBOROUGH. Mr. President, upon several occasions recently I have stated my views that it is mandatory that the Congress vastly strengthen America's overall information effort to carry the message of freedom to many troubled areas of the globe.

President Kennedy took a strong first step in this direction when he appointed Mr. Edward R. Murrow as head of the U.S. Information Agency.

Recently two of Texas' best daily newspapers have editorialized on Mr. Murrow's appointment. I ask unanimous consent to have printed in the RECORD Appendix the editorial entitled "Murrow and the USIA," from the February 1, 1961, issue of the Beaumont Journal; also an editorial entitled "Voice of America Should Carry Around the World," from the February 4 issue of the Corpus Christi Caller.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Beaumont Journal, Feb. 1, 1961]

MURROW AND USIA

An apt choice has been made in naming Edward R. Murrow to head the U.S. Information Agency. The television pundit is known to millions in this country and is said to be a popular commentator abroad.

Too, Murrow is an experienced newsman with an eye trained to differentiate between the important and the trivial. He is, in addition, highly articulate and his voice carries the sobering sound of conviction.

Having been on the outside of USIA for so long, and looking in, Murrow should know what makes it tick and should have some suggestions for making it more effective. And, since the information agency is so important to our defense effort and to our foreign relations, the better it ticks the more we benefit.

For this reason, we believe, everyone—even non-Murrow fans—wishes him well in his new job.

[From the Corpus Christi Caller, Feb. 4, 1961]

VOICE OF AMERICA SHOULD CARRY AROUND THE WORLD

Why has the Communist world, in the words of the late John Foster Dulles, been able to articulate a bad policy better than we have been able to articulate a good policy?

This question may have occurred to many Americans in recent years as they watch the rising propaganda tide of Red China and Soviet Russia. They cannot help but wonder how this Nation that produced advertising techniques which make it almost possible to sell ice boxes to Eskimos cannot make a better showing in the field of international propaganda.

The answer lies partly in our distaste for propaganda. The word has a devious, sleazy connotation for the average American. They were reluctant even to accept propaganda warfare in wartime. Hence the field of shaping international opinion has never apepaled to our best propagandists. They found a much more pleasant and financially rewarding life on Madison Avenue.

Another inhibiting factor is the congenital dislike of Americans for foreign policy and foreign affairs. They would much prefer to be left alone. The mantle of world leadership of the free world continues to sit uneasily and uncomfortably on their shoulders.

Then, too, the U.S. Information Agency, this country's foremost propaganda voice, has always been something of a stepchild. Congress has never had much confidence in the USIA and has kept its appropriations almost at the bare subsidence level. Even as serious, the Agency has never been represented in policy councils. It has had to be content to accept orders passed down from on high, while the field of agency policy has been left fuzzy and obscured. The many dedicated men and women who work for the USIA have fought disillusionment and frustration from the beginning.

Now the hopes of the Agency have been raised again by the appointment of a new head, Edward R. Murrow, one of the foremost and most eloquent reporters of his time. If, as James Reston of the New York Times suggests, Murrow is given a voice in policy matters then the transformation of the USIA into a strong instrument of Western public relations may be at hand.

It is about time. A unified voice of America, under flexible direction to take advantage of every break in the cold war, is essential to a successful propaganda offensive. Americans had better get over their squeamishness over the word propaganda and proceed with the task of portraying the free world in the best light possible.

John Ericsson Republicanism

EXTENSION OF REMARKS

OF

HON. ELMER J. HOFFMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. HOFFMAN of Illinois. Mr. Speaker, recently much has been said as to what we can do for the country, not what the country can do for you. In our two-party system of Government it is well to reflect what the two major political parties can do for our country. The Republican Party offers opportunities for sound representation which are aptly set forth in an address by Illinois State Senator Joseph R. Peterson before the 87th annual State convention of the John Ericcson Republican League at Kewanee, Ill., on Saturday, March 4.

The address follows:

JOHN ERICSSON REPUBLICANISM

On this 87th annual convention of the John Ericsson Republican League of Illinois, it is not only appropriate, but mandatory that we consider for a few moments the great Swedish engineer, inventor, and patriot, John Ericsson. Much has been said about his keen interest, his indominable courage against adversities, his skillful draftsmanship of designs, his engineering sagacity, his epoch-making and history-changing inventions, and his patriotism to the cause of the North in the Civil War. Always the crowning achievement credited to him by historians, and wherein lies the immortality of the name of John Ericsson, is the rebel-crushing defeat in Hampton Roads of the *Merrimac* by his "cheese box on a raft" now enshrined in the hearts of Republicans—Lincoln Republicans—as Ericsson's ironclad *Monitor*.

Great men are the product of a great people. Born in Sweden in 1803, he lived there until 1827 when he went to England. Born under a monarchy, he learned of kingly ways. In these formative years he experienced social unrest, aggression, wars, and their resultant consequences. He left the land of his birth for England, the land of promise—the promise of the development of the steam engine and greater individual liberty. Here for 12 years his inventive mind flourished but the fruits of his efforts were rejected. The reform bills had placed the middle class in control, but a radical discontent was arising among the lower classes. He was becoming a respecter and admirer of individual liberty expressed through representative government. An American interested him in the United States arguing that his new and revolutionary ideas would appeal to the ever-aggressive Americans. On April 13, 1839, at the age of 36, he set sail for the United States, landing in New York 46 days later.

This causes us to pause and reflect—what are the political forces at work in our Nation today doing to John Ericsson's political descendants? Is the climate of liberty as warm, friendly and receptive today to his political descendants, as it was in 1839, when he arrived? Is the opportunity here now as it was then? Has the United States kept alive the forces that encouraged Ericsson?

These questions are soul-searching questions—not cheap bread-and-butter questions. The answers are not found in the sewers of political chicanery where selfish, self-perpetuating officeseekers promise to open the public treasury to fill the pockets of each selfish interest in exchange for the votes of the selfish interests to perpetuate that politician in public office. The answers must come from the plateau of honest statesmanship which values beyond all else the liberty of the individual citizen. The answer cannot be found among a people so enslaved by oppressive taxation and a resultant high cost of living that they have become no longer conscious of the dignity of the individual, or so numbed as to lose their spirit or initiative and industry, content to feed at the troughs of government doles. It must be found among a self-reliant people who regard government as the servant—and the people as its master. Neither can it be found in a political philosophy that none other than a Federal bureaucracy possesses the intellectual know-how to cope with the complexities of modern life, complexities either imposed by or made to seem so by the alarmists. It must be discovered in that brand of thinking, which orders the bureaucrats to do the will of the people. Nor will it come through deceit or class division. By that I mean selling the unfortunate on the idea of soaking heavy taxes upon the more prosperous; the employee on the idea of oppressing the employer, or by hidden taxes that increase the cost of living. Candor suggests that whatever taxes or oppression is laid upon the latter must be borne by the former. It must be conceived in the mind of Christian statesmen who practice truth, who honor honesty and who deal with all fairly. It will not be found in catch slogans such as "New Deal," "Fair Deal," or "New Frontiers," but in the everyday actions of honest, candid, truthful citizens who lay aside personal, competitive, selfish interests and look to the common good, not only of their own, but future generations.

As a citizen you must answer these questions in charting this Nation's course. You cannot avoid it, nor pass the buck. Are you willing?

Which of the major political parties of 1961, the Republicans or the Democrats, provides the encouragement for today's John Ericssons?

Do the John Ericssons of today find the same incentive and opportunity that John Ericsson found here 122 years ago? Are the fires of individual liberty glowing as brightly, or are they but ashes from a burnt-out fire?

What about the Democratic periods of war and its cost in human life and ensuing national debt? Was it a deceptive solution of the unemployment problem, or a necessary price to pay for the purchase of freedom? What then about the treaty of Versailles, or the betrayals at Potsdam and Yalta? What about the postwar period of high taxation and skyrocketing cost of living? Are these akin to those that drove Ericsson to leave Sweden?

What about our foreign policy—foreign aid—dabbling into the affairs of other nations—our stationing of military forces all over the world—our African policy—and our traveling soap man—our diplomatic espionage? Are they akin to the foreign intrigue that disgusted Ericsson with the Sweden of 1827?

Was the action of the dominant party in Sweden in calling a foreigner as crown prince related to the coddling of Communists in high places in our Government, and the persecution of a McCarthy who dared to expose it—and the defeat of a Nixon in 1960?

What about the progressive income tax in the New and Fair Deal eras, the rates which were raised and the exemptions which were lowered, and publicly designed for confiscation in the name of taxation? The Federal estate tax, if you survive to die with an estate? The gift tax, if you try to dispose of your estate before you die? Are they builders of individual incentive? Would they encourage an inventive genius such as Ericsson to produce, or would they prompt an-

other American to encourage an inventive genius to produce and market his product? Is there any American today who does not take inventory in November and December to determine whether he can afford to make any more income? Is this the proper atmosphere for a nation's growth, or does it earmark a nation's decline?

What about the national debt, and the annual interest loan of a billion dollars? Is this a millstone around the neck of our youth? Have we passed on to our sons and daughters a financial obligation we were strong enough to incur, but too puny to carry? Can a John Ericsson carry it and establish his home, family, and business in the pursuit of happiness?

What about social security? Which is right—that the old should assist the young in making their start in life—or that the young and active must carry the burden of our aged in retirement? Are our aged so weak as to require the imposition of that load upon our youth? If so, is that very weakness caused by too heavy taxation and too high a cost of living during our active years? Have the irons of tax bondage and skyrocketing prices brought us to our knees in submission and abject surrender by the time we reach the age of retirement? In the guise of the general welfare have we come to a general farewell? Are our youth strong enough to carry that burden? Would a John Ericsson of 18 years see a better future with 47 years of ever increasing deductions from his pay under public control, or with that sum privately saved under his own control? Does it destroy or create incentive in a young John Ericsson?

What about Federal aid to the States? Do we not lose freedom and pass into bondage when, through the power of Federal taxation, the moneys of Illinois citizens in the Federal Treasury are given away by the votes of Congressmen to other States?

What about State aid to local governments? Is it taxation without representation when the taxes raised in our local governing units are distributed to other local units by a general assembly of 235 senators and representatives, only 4 of which were elected by the people? How can 4 votes against 231 protect the people's money and assure its distribution to the place from which it was paid?

What about a proposed revenue article in Illinois? Is it to supplant or to be in addition to the property tax? Will it contain the safeguards built into the property tax; that every dime of it will be spent in the county, township, city or school district of its origin? Or will all or the larger part thereof be given to other counties, as now with the sales tax? That could happen under an income tax.

Is charity by government right? Is or is not charity a voluntary act resulting from the individual yielding to or resisting the goading of his or her conscience? Does it not depend on the decision of each individual to give or withhold? When government gives our money away, has it not taken that money from us in the form of taxes by compulsion? Under this system, does not the majority impose its will under threat of compulsion upon the minority? What has happened to the freedom of choice? Is not charity to others under compulsion of government akin to or actually socialism? Does this appeal to a freedomloving John Ericsson of today?

What about unemployment compensation? What right does any government have to require employers to compensate for idle time to those who are no longer identified with such employers? Is this conducive to growth or is it a sign of decay? Can the buying public afford to pay the skyrocketing price of the products as a result of this? Is this system, labeled as a boon to employees, actually not a boomerang which robs the buyers, mostly employees, of the added cost which such a system creates?

What about our greater dependence upon government? In our everyday contact with the Federal Government, through income tax, social security, unemployment compensation, military service, and presently envisioned medical assistance, are we the equal of the Federal Government in the courts to seek enforcement of our rights? What resources do we have to pit against the Nation's resources? Through that disparity, don't we accept the interpretation by bureaucrats of the maize of Federal laws and regulations, or do we stand up and fight for our rights? In that process have we strengthened or weakened the spirit of individual liberty? Do we become enslaved, or are we free?

These are the questions—the counterpart of which plagued John Ericsson in his day.

These are the questions of freedom, the dignity of the individual and equality through justice. Do these questions plague you? Can the John Ericssons of 1961 find that freedom, that equality under law and that dignity they ever seek? Is the political climate such as to encourage or disgust?

I challenge you—not as reactionaries or conservatives, but as true liberals. Search your hearts, minds, and consciences. Seek truthful, abiding answers to these questions and then give us the political climate that John Ericsson sought and found, and fought for, as a liberal Republican. That is the challenge of John Ericsson, a great early Republican, which echoes down the corridors of time to the Republicans of 1961.

The Space Generation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 9, 1961

Mr. WILEY. Mr. President, today the Nation is searching for ways to more effectively utilize the talents, energy, imagination, and ingenuity of our youth.

This is essential for the young folks themselves. As well, it is important to the progress of the country, particularly in providing the kind of leadership needed for tomorrow.

The scientific-technological revolution has had a dramatic impact upon our social-economic system. As a result, a need has arisen for adapting to these far-reaching changes. Problems, too, have arisen. Juvenile delinquency, for example, continues to be a blight on our society for which we need to find realistic antidotes.

Eleven years ago, there was formed the Junior Engineering Technical Society, better known as JETS. The organization, for high school students, aims at cultivating engineers and scientists needed for America's future.

Today, the society has grown to 762 chapters, including 19,000 members in 46 States and 7 countries.

The JET program represents a splendid example of the kind of activities which we need more of for channeling the energies and interests of youth in the space age.

Recently, the Superior Telegram, of Superior, Wis., published an article on the formation of a new chapter of JETS in that fine community. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JETS, FORMED BY EX-SUPERIORITE, NOW NUMBERS 19,000 MEMBERS

A space age high school program, keyed to promoting interest in science and engineering among students, which was initiated at Michigan State University by a former Superiorite, Harold P. Skamser, is the subject for an article in the current issue of the Saturday Evening Post. Skamser started the program, now known as the Junior Engineering Technical Society (JETS), while he was professor of the College of Engineering at MSU. Since then he has become dean of engineering at California State Polytechnic College.

The JET Society was started 11 years ago when college officials here and at other similar institutions, were worried about the manner in which high school students carefully avoid the tough, hard core subjects which are the foundation for the nuclear space conquering age." It began as a State program with the idea in mind of attracting high school students with talent in applied science.

Professor Skamser and Lorin G. Miller, who was at that time dean of engineering at MSU, developed the plan.

Citing the 4–H Club program as an example of successful youth clubs, Skamser and Miller unblushingly borrowed the 4–H pattern," the Post article states. The name, JETS, was though up to indicate speed and action.

"Sputnik," the Post writer reminds readers, "had not yet blazed through the skies, or the professors might have figured out an acrostic that would have added up to Rockets. The club emblem, however, turned out to be a rocket and a streak of lightning. Skamser's plan was that the students would "learn by doing" through school projects applied physics, chemistry, and math. He organized the first club in 1950 in "his own backyard in East Lansing, not far from Michigan State." During the next 2 years only nine clubs were chartered, the program moving slowly. Then as the program caught on through help from engineering and educational concerns, it spread fast into other States.

Skamser, as an MSU emissary, began visiting high schools throughout the country, and organized JET societies wherever possible. He visited Superior while his program was in its infancy and mapped plans for the JETS in our local high schools. JETS are also set up at Spooner.

He made it a point to be present at high school career days, and reported after these visits that he had found many students with excellent scholastic records who wanted to go into the engineering or science fields, but were unable to qualify.

"These young people had followed the course of least resistance," the Post story says, quoting Skamser. "Their realization that their training was useless for a career in applied science came too late for them to take corrective action."

"A club newsletter called the Jets-O-Gram was started," the Post points out. "New ideas came along. Michigan State set aside a few entrance scholarships especially for JETS. An official pin was adopted and Kuffel & Esser Co., of Hoboken, N.J., manufacturers of engineering instruments, agreed to provide these to all members. Companies such as General Electric made their educational literature available. The

Consumers Power Co. of Michigan assigned several of its engineers to work in their spare time in organizing and advising the clubs."

Although Professor Skamser is no longer at Michigan State, he has left a permanent mark at that college through the JET society which had mushroomed by 1958 to 365 chapters in 35 States and is today a national, nonprofit society with an impressive board of directors drawn from various parts of U.S. industry, education, and government. Dean J. D. Ryder of Michigan State College of Engineering is president with the national headquarters located at East Lansing.

Today, according to last count, there are 762 chapters made up of 19,000 members in 46 States and 7 countries.

FIT TOGETHER

According to Dean Ryder, "JETS has helped show students how science and engineering fit together. And we know that students from these clubs are better scholastic risks than the average. They've been preselected. This is highly important today because what we need in the coming age is not just engineers but good engineers."

Dean Skamser is the son of Peter Skamser, 2030 Baxter Avenue, and the late Mrs. Skamser. He has authorized and had published in leading professional journals as many as 45 articles on engineering and other subjects. He has done designing of V-8 engines and much research work.

Born in Superior, he attended the Cooper School, McCaskill Training School, graduated from Central High and Superior State College before earning his master's degree in mathematics at the University of Minnesota and a bachelor of science in electrical engineering at Michigan State where he was professor of engineering for about 16 years. He was appointed dean of engineering at the Kellogg Voorhis campus at CSPC in April of 1958.

Quick Buildup Forecast for Armed Forces

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the Washington Evening Star of Saturday, March 4, 1961:

QUICK BUILDUP FORECAST FOR ARMED FORCES

An immediate buildup in this Nation's combat troops—involving three more Army divisions and 25,000 more marines—is being forecast by congressional sources.

Leaders familiar with a reappraisal of this country's defenses ordered by President Kennedy said they expected him to ask Congress for funds and authority for the expansion.

The manpower additions would lift the Army to 925,000 men and officers in 17 divisions and the Marine Corps to 200,000 for the 3 divisions and 3 air wings now required by law.

Both moves would involve strengthening U.S. ability to fight limited wars.

Both would require revisions and additions in the $42 billion defense budget sent to Congress by former President Eisenhower.

Mr. Eisenhower had asked an Army of 870,000, now fitted into 14 divisions, and a Marine Corps of 175,000.

Mr. Kennedy and Defense Secretary McNamara have delayed announcement of their new defense policies pending a detailed review of strategy and capability in both the nuclear weapons and conventional arms fields.

Earlier this week, Mr. Kennedy said he had received Mr. McNamara's recommendations for an increase in conventional forces.

Members of Congress familiar with this survey said the increase request they expected would win easy congressional approval.

Address by Hon. Elvis J. Stahr, Jr., Secretary of the Army

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 9, 1961

Mr. McCLELLAN. Mr. President, on Monday of this week the Honorable Elvis J. Stahr, Jr., Secretary of the Army, addressed the Army-Industry Liaison Seminar in New Orleans.

I find his speech to be most informative and interesting. The Secretary demonstrates a keen knowledge and understanding of the vital mission of the Army both in the event of so-called limited or brushfire wars and in the situation where our country may be faced with an all-out, global thermonuclear conflict.

It is very gratifying to note Mr. Stahr's remarks regarding the industrial-business community and the tremendous role it plays in partnership with the Army in keeping our country girded and prepared to meet any threat to the Nation's peace and security.

Mr. President, I ask unanimous consent that the Secretary's excellent address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY THE HONORABLE ELVIS J. STAHR, JR., SECRETARY OF THE ARMY, ARMY-INDUSTRY LIAISON SEMINAR, SHERATON-CHARLES HOTEL, NEW ORLEANS, LA., MARCH 6, 1961

I count it a special privilege to meet so many members of the Army-Industry defense team at a point this early in my service as Secretary of the Army. Our mutual dependence is such a real and dynamic thing that I know we shall be seeing a great deal of each other as time goes on, and there is no better way to make firm progress together than by getting to know one another at this early juncture.

Nothing is more encouraging to me as I contemplate my new responsibilities than to find a foundation of common understanding and cooperation, so evident in this seminar, existing in an important segment of the broad activity for which I am responsible. In a field where it is normal for one challenge to crowd in on the heels of another, it is reassuring to find a team already in harness and hardened to the task of plowing stony ground.

Though still relatively new to my present position, I bring to it not only the kind of acquaintance with the Army gained as an Infantry officer for more than 4 years during World War II, and later as a civilian Special Assistant to Secretary of the Army Frank Pace, but, above all, an unshakable faith and confidence in the men and women of the Army. In war and peace they have proved themselves worthy of the high trust the Nation has reposed in them, and I know that they will fully live up to their constantly broadening responsibilities. In simple terms, America can count on her Army, for it is made up of Americans who are among the finest and most loyal of all our citizens.

I know that the Nation can count with equal assurance upon the capability and dedication of its industrial leadership, which through the years has proved equal to the mighty tasks imposed upon it by the demands of national security in war and peace.

You gentlemen from industry have made personal sacrifices to be with us today. When I read the list of people attending this conference and considered the industries they represented, I was struck with the thought that few, if any, nations in the world could muster so much industrial talent and experience under one roof, and that no nation could call so many men of your caliber to a voluntary assembly for discussing common problems in open forum. On behalf of the entire Army, I thank you for coming, and thus affirming once again industry's appreciation of its heavy responsibilities for national security.

We are competing for survival with a nation that has demonstrated a will and a rapidly expanding ability to excel in all fields. Its leader has repeatedly pointed to all manner of achievements as evidence of the superiority of the Soviet system of strict regimentation. He has prophesied that the nations of the world will hasten to adopt his precepts because they offer the surest path to progress and prosperity. He has hurled numerous challenges at us to compete with him in any and all endeavors, so that the world may see the superiority of communism over capitalism.

The time has clearly come to demonstrate our faith in free and democratic enterprise with achievements surpassing anything we have done before. We fortunately have no reason to emulate the Soviet Union to the extent of applying so large a part of our industrial capacity to the creation of military might that our citizens are deprived of the comforts of life, but we can and must tighten our belts and gird ourselves with the determination to leave nothing undone to insure the basic safety of our Nation.

Industry plays a principal role in national defense all along the line. In addition to producing the necessary hardware for defense, our national leaders look to it more and more to contribute to our strategic planning. So deeply have the roots of technology sunk into the fundamentals of modern military activities that a presentday military planner without solid liaison with industry would be like a commander without a staff. This dependence on industry's finest minds will increase with the ever-ascending technological spiral, and it presents industry with a ringing challenge.

Industrial leaders must focus their attention not upon the factory alone, but upon the battlefield as well; not upon profit as the primary end, but upon the national interest as the transcendent consideration. They must have a thorough understanding of the entire range of factors which are involved in national security. It is the purpose of this seminar to contribute to that broad view.

A lot of people don't realize that the Army has a deep appreciation for both the problems and contributions of American busi-

ness because the Army is a major business itself. As a matter of fact, it is bigger both in annual budget and in the number of people it employs than United States Steel, General Motors, A.T. & T., and DuPont all put together—and you could add a few more without breaking even.

While it is true that the Army is a nonprofit organization, any notion that it doesn't appreciate the value of a dollar is completely unfounded. Given the missions which the Army is called upon to perform and the resources which are provided to it, it does one of the most remarkable jobs of sheer efficiency that you can find in our society.

One of the major programs of the Army is to place in the hands of our troops the results in cold steel of the brilliant and imaginative programs of research and development in which many of your companies have been involved which bring within practical reach the ability to equip our Army with better and more modern tools than those possessed by any army on earth today.

In my judgment we are much more likely to find ourselves in situations of so-called limited war in the years just ahead than in a situation of all out global thermonuclear war. The Army is much more likely to be called upon to put out what some people call "brush fires" than is the Nation to be faced with all-out conflict. If the brush fires are promptly and effectively dealt with, they will not mushroom. I am a firm believer in massive retaliation if the true occasion for it should unhappily develop but we must not permit ourselves to be maneuvered into a position in which our choice would be limited to all-out thermonuclear war on the one hand or piecemeal surrender on the other. We are rapidly approaching a nuclear stalemate but this does not mean that the world Communist conspiracy is changing or will change its objectives.

It is highly significant that while progressing with long-range nuclear weapons andn defenses against them, the Soviets also continue to push the modernization of their land, sea, and air units. The Soviet Army clearly intends to be able to fight with or without nuclear weapons, and, under the "umbrella" of the coming nuclear stalemate, to be prepared to foster and exploit weaknesses in the free world wherever they may sense they exist.

Soviet military modernization is making available large numbers of effective weapons for other Communist nations, including Communist China. Meanwhile, Communist China, with other bloc nations, is producing weapons of its own. Communist Chinese manpower equipped with modern weapons would constitute a formidable foe indeed. In the light of the emphasis which Red China has placed on the use of force to attain its ends, we would do well to recognize that we cannot wisely afford to ignore its steadily developing military posture.

When we consider, even thus briefly, the worldwide threat, the major actions our Nation must take to defend itself become relatively clear.

First, we must maintain the strong alliances we now have. Alone, we can expect to contain the Communist empire only at tremendous risk of global nuclear war. Our alliances contribute enormously to maintaining the frontiers of freedom in Europe, Asia, and Africa.

Secondly, we must maintain a balanced and diversified military posture which will enable us both to deter any enemy from initiating a general thermonuclear war and to confront him with powerful reason not to initiate other forms of war.

Thirdly, in the event of long-range nuclear attack on us, we must be able to endure, and to minimize its effects upon our homeland, and to deliver devastating long-range nuclear counterattacks on the enemy. We must also be able to carry on successfully the prolonged conflict which might follow such exchanges.

Fourthly, in the event of the outbreak of other forms of war, such, for example, as occurred in Korea and Indochina and could recur on smaller or larger scales, and in more than one place at once, we must be prepared to win—and the more quickly, the better from every standpoint. This means highly modern, dual, capable forces and the ability to move and support our forces in a hurry.

Fifthly, to achieve these ends, our posture should include modern land, sea, and air units which can fight quickly and effectively with or without nuclear weapons and sustain the fight as long as necessary; the best possible air defense and antimissile systems; an adequate command and control system; powerful, long-range nuclear delivery systems of minimum vulnerability; and truly ready military reserve forces—together with stockpiling programs which will provide the essential base both for our postattack recovery and for assisting in the military exploitation of the strategic opportunities resulting from a thermonuclear exchange.

The military posture I have just outlined will insure the capability to deal with concrete situations, against whose actual occurrence we have no guarantee whatever. I have the feeling that the need for the forces and systems I have described is becoming more generally recognized every day. I earnestly hope so.

Now I would like to examine very briefly the contributions of the Army, as a member of the all-services team, in fulfilling the needs I have described.

In an all-out war the Army will have a most significant role, which may not be as generally recognized as it needs to be. From what we know of the doctrine and the composition of Soviet forces, it is clear that while they place great emphasis and reliance on achieving a powerful, long-range nuclear system, they do not depend on any one element of military power to achieve final success. Our Army must have the capability in general war to meet and defeat Soviet forces in the wake of the damage caused by nuclear exchanges. It must then be prepared to exercise direct, full-time, and comprehensive control over the land, the resources, and the peoples of the enemy.

The Army will also play a key part in the defense of the United States from enemy attack through the air. In this connection, I submit that we must continue, as a matter of high priority, to develop an effective antimissile defense.

In preparing for any kind of war—all-out nuclear war or anything less—it seems obvious to me that we must maintain U.S. combat-ready forces overseas. The American serviceman on the ground is a living symbol of our readiness to contribute to the common defense—a symbol that allied peoples and the Communists can both see—a visible and effective deterrent against so-called limited aggression and an indispensable element in meeting it if it occurs.

A vital element of this forward deployment is the Army's contribution to cold war—a contribution made not only by Army units stationed overseas, but also by MAAG's and missions stationed in more than 40 countries of the free world. These activities range from civic actions aimed at increasing mutual understanding and the betterment of human relationships, to the critically important provision of training, advice, and equipment to improve the capabilities of various free world nations to deal with challenges to their security. Of particular importance now—and in my opinion, most likely of increasing importance in the years ahead—is the task the Army is doing to improve substantially the capabilities of selected countries to meet challenges to their internal security—challenges presented in the form of subversion and guerrilla action. This is primarily an Army job.

Another essential element in our forward strategy is the ability to reinforce rapidly our forces overseas. This capability would be required in all forms of war. Our Active Army maintains forces in the United States for this purpose, three divisions of which are in the Strategic Army Corps, the Army's fire brigade. Beyond that, we have the forces of our Army National Guard and Army Reserve. These Reserve forces, I am convinced, must be kept at a very high state of combat readiness to beef up our Active Army in an emergency. We must also have available sufficient airlift to get our combat reinforcements where they have to go with all possible speed.

I have sketched with a very broad brush the picture of the Army's role and requirements. It seems evident to me that the attainment of virtually every objective depends to a major extent upon the complete, perceptive, and sustained cooperation of American industry and the Army. If the phrase "the Army-industry team" is to have any meaning at all, it must express a fundamental relationship based on a thorough, mutual realization of the identity of interest which exists. The urgency of the missions with which the Army is charged in these perilous times more than ever requires that industry live up in all respects to its responsibilities as a member of the team. I would like to leave you with two thoughts concerning those responsibilities.

First, it is not enough merely to fill orders. It is imperative that industry play an active role in every phase of materiel development. As a full partner in defense, it should apply itself with foresight, initiative, and imagination to the evolution of new ideas which will contribute to the Army's effectiveness. It should, if possible, go forward even further and faster than the Army itself in anticipating demand by applying its own great resources, on its own volition, to the exploration of every field of science and technology in search of better methods and means for carrying out the Army's tasks.

Second, it would be impossible to overstress the importance of reducing to a minimum the time which elapses between the development of an idea and its translation into a useful piece of military hardware. In view of the scientific and technological "explosion" of our age, this time lag is the most critical factor in the maintenance of military capability adequate to dissuade any enemy from making war. No weapon or item of equipment—no matter how great a "breakthrough" it represents—no matter how much better it may be than what a potential enemy possesses—is of any value whatever on the drawing board. Only when it is actually placed in operational use, and in sufficient quantity, does it enhance the security of the Nation.

The level of understanding and cooperation between the Army and American industry which we enjoy today is the product of growth and experimentation, of lessons learned the hard way in three wars and years of strenuous efforts to preserve the peace in the face of the ominous threat of Communist aggression. I am confident that this seminar will help to increase the vigor of the Army-industry team, and to spark it with new enthusiasm. Let us go forward together with unselfish dedication to the well-being of our beloved country.

Admiral Hogan

SPEECH
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. PHILBIN. Mr. Speaker, I am pleased to join with my valued colleague and good friend, Congressman BARRATT O'HARA, in his able and most gracious laudatory remarks touching upon the retirement of Rear Adm. Bartholomew W. Hogan, distinguished native of Massachusetts who has just completed 35 years of brilliant, outstanding professional medical service with the Navy.

Admiral Hogan has close and warm ties with the Commonwealth and his many friends in Massachusetts have noted with great pride the extraordinary honor which the Secretary of the Navy, the Honorable John B. Connally, conferred upon him at the February 28 retirement ceremony when he was awarded, in the name of the President, the Distinguished Service Medal.

Admiral Hogan, who was born in Quincy in 1901, received his medical degree from Tufts College in 1925. He interned at the U.S. Naval Hospital in Boston and St. Elizabeths Hospital in Washington, D.C.

He served with distinction during World War II as senior medical officer aboard the carrier U.S.S. *Wasp* and among his awards are the Silver Star, a decoration received for heroic duty in continuing to treat the wounded on the *Wasp* while suffering himself from badly burned hands and fractured ribs, the Purple Heart and the Navy and Marine Corps Medal. I earnestly hope that this great naval hero and his family may enjoy good health, success, and happiness for many years to come.

Mr. Speaker, under unanimous consent I include as part of my remarks the fine speech of Secretary Connally at the retirement ceremony for Admiral Hogan. The Secretary's remarks follow:

REMARKS BY THE SECRETARY OF THE NAVY, THE HONORABLE JOHN B. CONNALLY, AT THE RETIREMENT CEREMONY FOR REAR ADMIRAL HOGAN ON FEBRUARY 28, 1961

Admiral and Mrs. Hogan, distinguished guests, ladies, and gentlemen, we are here today to observe the retirement of Adm. Bartholomew W. Hogan after a naval medical career of 35 years. It has been a most distinguished career, a career marked by professional achievement, high valor, and great service to the Nation and to the Navy.

Let us look back for a moment over Admiral Hogan's past 35 years.

When he was graduated in 1925 from the Tufts' Medical School in Boston he was awarded the Phi Lambda Kappa Medal for highest achievement during his term as a medical student.

Prior to World War II he served in various billets afloat and ashore including tours of duty as chief of neuropsychiatry at Philadelphia and Washington, D.C.

In World War II he was serving as senior medical officer aboard the aircraft carrier *Wasp* when she was sunk by a Japanese submarine. In this action Dr. Hogan sustained badly burned hands and several fractured ribs. Nevertheless he continued to treat the wounded of the *Wasp* until the order came to abandon ship.

For his courageous devotion to duty, Admiral Hogan was awarded the Silver Star and the Purple Heart for this action.

Once in the water after abandoning ship, Admiral Hogan was rescued by the destroyer *Duncan*, and there, in spite of his own painful injuries, he continued to treat the wounded until the small hours of the morning. For this he was recommended for, and received, the Navy and Marine Corps Medal.

After the war he was executive officer at the Naval Hospitals at Philadelphia and Bethesda, and later commanding officer of those at Mare Island and Bethesda. Subsequently he served as Fleet Medical Officer of the Pacific Fleet, and as Deputy and Assistant Chief of the Bureau of Medicine and Surgery.

For the last 6 years, as Surgeon General of the Navy and Chief of the Bureau of Medicine and Surgery, he has been the Navy's senior medical officer.

His has been a distinguished career indeed. In the course of it he has been awarded honorary doctor of laws degrees from Mt. St. Mary's College and Villanova, and doctor of science degrees from Boston College, Tufts College, and Marquette University. His professional writings are well known in the literature of medicine.

In addition to the fine full professional life he has had as a physician and a naval officer, Admiral Hogan and his lovely wife are known to us all as a very pleasant couple and as fine friends.

This ceremony today marks the termination of Admiral Hogan's active naval career, but in another sense it is a beginning, a beginning for Admiral Hogan in new fields of achievement, and it is an opportunity to enjoy some well-earned rest and relaxation.

I know that we all join together in expressing to Admiral Hogan our own thanks and the thanks of the Navy for his distinguished service, and in expressing to both him and Mrs. Hogan our warm wishes for continued achievement and pleasure in retirement, and the satisfaction that they both deserve in looking back on their Navy years.

In recognition of his outstanding service as Chief of the Bureau of Medicine and Surgery it is my privilege to award to him in the name of the President the Distinguished Service Medal.

Gen. Casimir Pulaski

EXTENSION OF REMARKS
OF
HON. CHARLES S. JOELSON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. JOELSON. Mr. Speaker, under leave to extend remarks in the RECORD, I take pleasure in presenting an editorial that appeared in the Paterson Evening News, Paterson, N.J., on March 4, 1961:

A TRULY GREAT MAN

Today is the 214th anniversary of the birth of Gen. Casimir Pulaski, patriot and Revolutionary War hero.

The occasion is being observed and celebrated here and in many lands where the great deeds of really great men are cherished and appreciated.

Casimir Pulaski, when barely out of his teens, fought for liberty in his native Poland against Russian armies, which then, as today, and in World War II, overran his homeland. At 24, already a veteran of the unsuccessful uprising of the Confederation of Bar, he was famous throughout Europe for his gallantry, bravery, and military talent; for his character, humanness, and that romanticism which caused him to seek exile in France, and then to lead a small expedition of Poles to fight beside Turkey when that nation went to war against Russia. Failing in this venture, he returned to France, where he met Benjamin Franklin, and offered his services to the American Revolutionary cause.

He came to America when freedom was trampled in Poland by her powerful neighbors with Russia in the lead. He was at Valley Forge with Washington. He distinguished himself at Brandywine, Egg Harbor, and elsewhere, as leader of the first American cavalry units. Later he organized, and led, the famous Pulaski Legion. He died nobly in the Revolutionary cause at Savannah, Ga., while leading a charge of his legion, on October 11, 1779.

His was a great career and the life of a true idealist. Liberty and freedom were all important to him. He never compromised in his belief as to the importance of these ideals. He gave all that he possessed for them, his fortune, and his life.

America remembers Pulaski as a dauntless defender of liberty, and martyr to the cause of our independence. His memory lives on.

The Inescapability of History

EXTENSION OF REMARKS
OF
HON. QUENTIN N. BURDICK
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 9, 1961

Mr. BURDICK. Mr. President, I am very proud of one of my young constituents, Dean Conrad, of Bismarck, N. Dak., a student at Lake Forest Academy at Lake Forest, Ill. On January 22, he gave a talk in the academy chapel that was considered one of the finest ever given there. This young man has an outstanding ability to articulate his convictions. I ask unanimous consent to have printed in the Appendix of the RECORD Dean Conrad's talk entitled "The Inescapibility of History."

The address follows:

THE INESCAPABILITY OF HISTORY

"Continuity with the past," Justice Holmes once wrote, "is not an obligation. It is a necessity." We are not free to choose our past. It is there and its influence on us is powerful and undeniable. To a large extent we are what we are today because our fathers were what they were. The past of any man or any nation contains inevitably both glory and shame, heroism and cowardice, truth and self-deception. We cannot change this mixed heritage even slightly. It remains what it has been, whatever we think or say; it is responsible for the circumstances and for both the hopes and the fears which are a part of our life today.

People beset by illusions and fears sometimes attempt to remake the past. Not long after the disappearance and death of the late and not generally lamented Lavrenty Beria, the chief of Soviet police, the Soviets published a new edition of their official encyclopedia. According to reports, the most significant change was the substitution of an extensive article on the Bering Sea, disposed of in a paragraph in previous issues, and the

disappearance of Beria's name from the book and thus from official history. His name and work are to be erased from memory. For all the future readers and students of Soviet history, he never existed. This trick, also described by George Orwell in his novel "Nineteen Eighty-Four," is so blatant, so wildly irrational that it is difficult for us to imagine how a government and a people can thus deceive themselves; however, it is not such an unusual practice. There is much in the past of any man or any nation which at some time or other it would be convenient to forget, to blot out as never having happened.

We cannot change the past. We are continuous with it, not by duty or choice, but by necessity. It works upon us for good and for evil; it shapes our ways of thought and life more than we care to admit. But still we have a measure of freedom and while we cannot change the past, there is always an area of choice in the present, within which we are free to decide whether our thoughts and ways shall be continuous with the best in our past, or with the mediocre and second-rate; whether we shall throw that strength and faith we possess on the side of fulfilling our fathers' noblest dreams or merely repeating their failures; whether we shall reaffirm in the present the highest meaning of our heritage or some lower meaning of it. We are continuous, unfortunately, with much in our past that we might wish to deny and expunge from our history, as the Soviets tried to expunge Beria. There is a history of narrow, arrogant nationalism in the United States as well as a history of the growing spirit of brotherhood, equality, and the sense of fellowship with all peoples and nations the world over. There is a history of demagogues and of low politics as well as a history of enlightened and far-sighted statesmanship. There is a history of bigotry as well as a history of expanding liberty and democracy. There is a history of the enslavement of the individual in mind and body as well as a history of the individual's steady liberation. There is a history of fear and hate and a history of hope and love. There is a history of adventurous change and experiment and a history of black reaction.

All these histories have gone into the ground we stand on and have played their part in producing our present strength and weakness, our hopes and anxieties, triumphs and failures. The past is never simple. It contains the entire range of man's spirit and all his attitudes and experiences, good, bad, and indifferent. Any man can prove any point from history; it is merely a question of which examples he wishes to emphasize.

This is not to say that history has no meaning and direction. Over the years the history of a people does reveal certain consistent, dominant themes, sometimes out of sight momentarily or forgotten, but continually reborn and reaffirmed from generation to generation. In spite of the golden calf, the priests of Baal, the false prophets, and the cowardly kings, Old Testament history remains the story of the triumph of one universal God, just, righteous, and loving in all His ways. The history reveals opposing forces, minor negative themes, and many failures, but there can be no question of its majestic major theme and of its long-range meaning and direction.

Likewise, one can discern in the American past, relatively short as it is, certain enduring meanings which are at once a source of hope and a summons to loyalty in the chaotic present. Indeed, the very fact that these major meanings of our tradition have been opposed bitterly, sometimes corrupted and frustrated, sometimes forgotten, sometimes even halted and defeated for a time, only to reappear with new strength and beauty, gives one reason to be confident today that they have not been lost or forsaken. The best meanings in our historic past are not bright, untarnished ideals, they are tough, battle-hardened ways of thought and life which have stood the tests of criticism, opposition, even occasional setback and failure, and are still alive and at work today.

One of the most important of these meanings is to be found in a document which may claim to be the first written constitution in the New World. When the Pilgrims anchored their vessel off the shores of Cape Cod, they drew up and signed a brief statement called the Mayflower Compact. Far from any source of authority they drew up an agreement among themselves on which they proposed to establish the life of their community. It was not in any sense a code of laws. It was simply an affirmation of the mutual respect, understanding, and trust which is the basic foundation of laws and government. They declared their intention to frame such laws as the good of the colony might require, and they pledged themselves to give "all due submission and obedience" to the demands of the general good. They made explicit a principle which is in danger of being forgotten today: that the strength and health of a free community rests upon the consent of its members. A free community is possible because people can count on one another, trust one another, and confidently expect from one another honesty and human consideration. The individual free conscience in cooperation and fellowship with other free consciences is the guarantee of freedom and order in a community. Laws, police, and the other ordinary methods of enforcement check the occasional transgressor, but the strength of the free community rests upon the fact that most people play fair and deserve the confident trust of their fellow men.

If this foundation of mutual trust and consent were to be destroyed, no amount of external force, no laws, no exhortations, or threats could prevent chaos. It is amazing to reflect that our complex, free society, with its innumerable checks and balances, its network of rights and obligations, has as its foundation the faith, the spiritual insight that on the whole we can and must trust one another. As long as this trust is present, the free community can stand almost any amount of argument and controversy as to how its common problems and challenges should be met and mastered. Not only can it stand argument and controversy, it is stronger and healthier for their presence. For out of honest, intellectual conflict, the clash of opposing opinions, the understanding of different doctrines, learning takes place and the collective wisdom and faith of the community is increased. But if we permit the existence of differing opinions among us to become an occasion for calling into question the basic integrity of those whose opinions differ from our own, then we are attacking the very foundation of a free community.

Hence, the real subversives today are those people who, willfully or not, have mistaken honest differences of opinion for basic disloyalty to the covenant of trust on which the free community rests. The real subversives are those who by gossip, slander, libel, publicity, spying, and even the misuse of the legal power of Congress to investigate and the executive power of high office are driving us toward an American conformity by insisting that difference from prevailing opinions or policies must be a sign of evil motives or basic disloyalty. The real subversives are the frightened people who dare not imagine that their opinions may be mistaken and so have tried to make it appear that criticism of their opinions is an attack on the American way of life.

These people are nothing new in American life. They have always been with us, and sometimes, though never for long, they have been highly successful in communicating their fears and hatreds to large numbers of others. In the 17th century they were afraid of the rebels, the French Revolution, and Napoleon; in the 19th century they feared Charles Darwin, the abolitionist movement, foreigners, and organized labor. Now, in the 20th century, they fear the Soviets, world organization, social and economic change, intellectuals, even ideas themselves.

These fearmongers cannot win in America today. They are without faith in themselves or in others, and hence they lack courage or any deep spiritual strength. Already there are signs that they are being swept away, as they have been swept away before, by the massive sanity and fairmindedness of most Americans. But it is time to revive our appreciation of and devotion to that tradition of our historic past which was first expressed in the Mayflower Compact and many times thereafter. The free society rests upon the continuous acts of mutual trust and confidence among men and women of good conscience.

It has always been understood in our society that neither personal liberty nor social order can be absolute in its claim. Each must be balanced by and adjusted to the other. Yet we have made the welfare and happiness of persons the test of the worth of social order. We have never hesitated to change our social order when the welfare and happiness of any significant group of persons seemed to require it. We have always cherished the faith that the social order or state exists to serve the person, not the person to serve the state.

Hence, we have loved our rebels and individualists with a fierce, proud affection. We have honored Jefferson, Paine, Washington, Adams, the little group of gentlemen who undertook the most ungentlemanly business of promoting a revolution against English crown and law. We admire Thoreau because he went his individualistic way without caring what society thought. We are proud of Theodore Parker for promoting disobedience to the Fugitive Slave Law even though it was the law of the land. And we all but worship the tall, uncouth man from Illinois who upset the respectable predictions and brought to a high office a rare combination of simple humanity and sorrowful greatness.

Always in Americans there has been a feeling that there is something in the spirit of man that is properly above all laws and institutions. Our national heroes are a curious group, and many of them would have little in common with one another except a certain rugged independence of mind and spirit, a boldness in thought and action, a willingness to stand up and be counted for what they believed in, no matter who said "yea" or "nay". This tradition of the nonconformist, the adventurer, the pioneer, the thinker of new thoughts has been very important in our history. Few American demagogs have been assassinated, most have been simply outgrown and cast aside when the people got tired of their antics.

In the same process we have given a free field and great encouragement to people of skill and ability who had some real contribution to make. From the penniless immigrant who found here a chance to build a new life, to the scientist with a new theory, the artist with a new form, the writer with a new thought, the businessman with a new product, we have actually practiced free enterprises, not only in economics but in all human activities, and it has been, on the whole, a magnificent success.

With this tradition behind us it is essential to our health and strength as a nation today that we do not go back on it, but honor it all through our common life. We could use some free enterprise in ideas and experiments today, not only in business but in foreign and domestic policy, in education, and even in religion. We have limited

free enterprise to a definition which is much too narrow. It means essentially the human mind alive, growing, thinking, experimenting, and transforming itself and the world around it. It means respect and opportunity for the individual man with a fresh idea in any field. It means that with open eyes we take the risks of freedom, because the creative possibilities of it are so great.

We have, in recent years, permitted ourselves to be pushed onto the defensive among the dynamic forces at work in the world today. We talk of security, counterattack, and retaliation. We wish to defend civilization against the new barbarians. But a civilization which is alive and both worthy and capable of survival does not retire behind prepared defenses, congratulating and admonishing itself and the world about its achievements to date. Rather, it seeks to offer the world hopes and possibilities long desired and yet to be realized. It does not retreat from its dreams. It restates them in terms clear enough for all humanity to understand. It meets the challenge of the new barbarians with a positive program. Do the new barbarians offer the poor and oppressed masses liberation from poverty, corrupt colonial government, and exploitation?

The great civilization sets out to prove that it can move toward these ends without the sacrifice of personal freedom and dignity of the individual. Do the new barbarians promise an end to racial and religious persecution? The great civilization dares call all the people of all the races and nations to an adventure in human brotherhood. Do the new barbarians summon men to a world enveloping conflict? The great civilization declares its faith that by patience, firmness, justice, and compassion, conflict can be avoided and the energies of men turned to the struggle against age old enemies of poverty, disease, and oppression wherever they are found.

These are the basic principles for which our great Nation stands, and their bases are found in the ideals our forefathers set decades ago. I urge you, my fellow students, to reaffirm these doctrines, so they will not be lost sight of for too great a time.

Let us give thanks. The great themes of our historic past, our trust in one another, our trust in the individual with all his variety and creativeness, our trust in the dream of justice, liberty and brotherhood as the safe and proper guide of a great, free people are not spent and lost today. They have survived many and severe challenges in the past. The men of mediocrity and fear will seek, as they always have, to persuade us that the situation is too dangerous, too complex, that the cost is too high for moral and spiritual greatness.

But we cannot renounce these meanings without renouncing the best in our past and the best in ourselves, and in spite of the frightened voices which plead and the strident voices which threaten, we will not do it. Rather, we will reaffirm the best that is in our past, add to it the skill and vision that is in our present, and move forward with renewed trust in ourselves, in one another, and in our God.

Youth Conservation

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the State of California, Department of the Youth Authority, for the interest of my colleagues:

STATE OF CALIFORNIA,
DEPARTMENT OF THE YOUTH AUTHORITY,
Sacramento, February 15, 1961.

Hon. JAMES ROOSEVELT,
House of Representatives,
Washington D.C.

MY DEAR CONGRESSMAN: I am delighted to hear that you have introduced a bill in Congress to establish a Youth Conservation Corps. I am very much interested in this program as I have had to do with camps in California the last 30 years, having established the first youth camp in America in 1931 and later as an adviser to the CCC program in 1933.

If there is any information we can provide or any service we can be to you on this matter, please do not hesitate to call upon us.

I have discussed this matter with Governor Brown, and he is thoroughly in accord with the aims of your measure. Both of us believe that some such program is essential if we are to take a lot of young men who have dropped out of school off the streets. Certainly with the average crime age in America at 19½ years, a work program for this type of boy would hit at the heart of our national crime and delinquency problem. At the present time I have to do with operating 31 camps in California and could give you the benefit of our experience here.

Best personal regards.

Sincerely,

HERMAN G. STARK,
Director.

Columnist Sylvia Porter Reports Japanese Can Visit Russia Easier Than the United States

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 9, 1961

Mr. YARBOROUGH. Mr. President, as one of the cosponsors of S. 610, a proposal to establish an Office of International Travel which was introduced by the senior Senator from Washington, I was especially interested in the following statement:

It's tougher for an educated, desirable Japanese tourist with loads of cash to spend in hotels, restaurants, shops, etc., to get an entry visa for the United States than for Soviet Russia.

This statement was written by nationally known columnist Sylvia Porter and was published in the Sherman, Tex., Democrat. In the article she gives a number of specific examples of governmental policies which discourage tourists from visiting our country. Since one objective of the proposed Office of International Travel would be to cut redtape on the issuance of visas, this article should be of keen interest to the Congress.

I ask unanimous consent to have published in the RECORD Appendix the column from the March 1, 1961, issue of the Sherman Democrat entitled "Bars to Tourists Are Rigid," by Sylvia Porter.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BARS TO TOURISTS ARE RIGID
(By Sylvia Porter)

It's tougher for an educated, desirable Japanese tourist with loads of cash to spend in hotels, restaurants, shops, etc., to get an entry visa for the United States than for Soviet Russia.

We ask so many embarrassing questions of unmarried women who would like to visit our land as tourists for a couple of weeks (sample: "Have you engaged in, or will you engage in, immoral conduct?") that countless numbers decide they won't tolerate the ridiculously personal questions and they decide to take their vacations in Europe, Canada, South America—anywhere but here.

An Australian who wants to come here as a tourist must make three separate visits to the consulate at Sydney—one to get a visa application, a second to return the application, a third for a final appointment. The expense and delays repel many would-be visitors.

A citizen of Denmark often may not obtain his visa until just before his scheduled departure—no matter how long in advance he has requested the visa. The annoyance makes many give up their plans.

A naturalized citizen of Venezuela may have to wait 3 or 4 months for a visa, go through discouraging expense and redtape.

Wealthy Spanish and Greek tourists who place great emphasis on courtesy say frankly that they are revolted by the lack of hospitality at our consulates. The financial questionnaires, the long delays, the need for appearing in person at the consulates have slashed tourism from Madrid and Athens at least 25 percent below the present potential.

The President of the United States has called for a stepped up drive for tourism in our country. The foreign travel market, says Kennedy, is "virtually untapped" and a strong "promotion effort by this country can be expected to yield significant results."

The Senate only last week passed a bill to create a travel service in the Department of Commerce and to provide a system of American tourist offices abroad to stimulate travel to our country. Legislation along these lines is just about a certainty during this session.

But as Washington's Democratic Senator WARREN MAGNUSON said during discussion of the bill, "It's sometimes harder to get into the United States as a tourist than it is to break into jail." As a Department of Commerce committee appointed to investigate the situation reported a few weeks ago, "The tests involved in the issuance of visitor visas to the United States do much to discourage visitors from friendly countries."

We will get next to nowhere with our sound, timely, and potentially highly important drive for more tourists unless we simplify our visa practices and use our commonsense in differentiating between a person trying to immigrate here legally or illegally and a foreigner who just wants to see our country, spend money in it and go home.

We will continue not only to repel hundreds of thousands of visitors but also to make enemies out of those who want to be our friends unless we drastically amend our present procedures.

The plain fact is that in 1960 only 779,000 foreign nationals visited us and, excluding tourists from Canada and Mexico, only 450,000 of all the business and pleasure visitors in the world came here.

The shocking truth is that only 75,000 tourists came from all South America, only 198,000 from all of prosperous Europe.

The informed estimate is that a minimum of double last year's visitors here have the leisure and means to come to our shores, but lack the desire because of their objections to our visa practices.

The fault lies in our obsolete Government regulations and in our laws which subject a pleasure tourist to the same rigid requirements as an immigrant. The fault lies in our

State Department which pays lip service, but nothing more than that, to simplifying the rules.

The fault lies in our consultates abroad—all too often badly staffed, understaffed, deliberately inhospitable.

Conflict-of-Interest Crackdown

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, March 9, 1961

Mr. BEALL. Mr. President, I have followed with great interest the efforts of Mr. Benjamin A. Javits in organizing America's 13 million shareholders. As president of the United Shareholders of America, Inc., Mr. Javits is seeking to unify this economic group as an effective voice in national affairs.

The millions of stockholders in our country represent diverse economic, cultural, and political views. In the words of Mr. Javits:

If the stockholders ever worked as a cohesive force, they could change the course of our history.

Mr. President, the success of the United Shareholders of America will represent a victory for the millions of Americans, in all walks of life, who by investing the fruits of their labors in American industry have affirmed their faith in our free enterprise system.

Mr. Javits, a noted attorney and author and the brother of the senior Senator from New York, will no doubt be successful in his efforts to organize an economic electorate in our country.

Last fall the Shareholders of America, Inc., conducted an inquiry with respect to conflict of interest in America's corporations.

I ask unanimous consent that an article published in the September 24, 1961, issue of Business Week relating to this inquiry be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONFLICT-OF-INTEREST CRACKDOWN: ALTHOUGH MOST COMPANIES SAY CONFLICTING INTERESTS IS NO PROBLEM, MANY, NEVERTHELESS, ARE RESTATING THEIR POLICIES OR REVISING PROCEDURES TO MAKE SURE IT DOESN'T OCCUR

The supplier tieins that cost Chrysler President William C. Newberg his job (Business Week, July 30, 1960, p. 30) are having repercussions far beyond Detroit.

"It couldn't happen here" is the typical reaction from top managements of other companies. But some are taking steps to make absolutely sure. And many would agree with Daniel F. Gerber, president of Gerber Products Co., who wrote in reply to a survey just conducted by the United Shareholders of America, "I believe that the affair * * * has had a very good effect on a lot of companies in making them a little more alert to the possibility of any remotely similar situations that might exist in their own organizations."

Hot subject: The U.S.A. survey provides plenty of evidence of management alertness. In fact, the volume of replies alone demonstrates that conflict of interest is a hot subject in executive suites today.

Benjamin A. Javits, the New York attorney who runs the 800-member stockholder group, sent a questionnaire about purchasing and conflict-of-interest policies to all of the some 1,500 companies listed on the New York and American Stock Exchanges. It went into the mail August 26. Within 3 weeks he had more than 500 answers, most of them from presidents or board chairmen.

All the executives assured Javits that they had no conflict-of-interest problems in their companies. But a number of them noted that they were rechecking anyway. And some said they were revising or restating their policies.

Varied policies: Under Securities and Exchange Commission regulations, if officers and directors have substantial interests in organizations doing business with their companies, these facts must be reported in proxy statements. Beyond that, company policies and practices vary widely.

Some ban any such interests except for minor stock investments in publicly owned corporations. ACF Industries, Inc., for example, prohibits any employees either directly or through family connections from having a financial or other interest in companies with which ACF does business.

Montgomery Ward & Co., Inc., bars all officers, managers and buyers who have a responsibility for our purchases from supplier interests.

Others, instead of flatly barring all potentially conflicting interests, require that they be reported. They have to be eliminated only if higher executives feel they might prejudice the company's interests.

Disclosure requirements: And there's plenty of variation in the levels to which such policies extend and in the kind of interests that are forbidden or must be reported. Columbia Gas System, Inc., insists on complete disclosures from all employees of any financial interest in any company or enterprise that might result in a conflict between their personal interests and their obligations to Columbia. Vanadium-Alloys Steel Co. has a disclosure requirement for officers, directors, and department heads; Douglas Aircraft Co., Inc., for supervisory employees; Westinghouse Electric Corp., for all employees. At Carrier Corp. every employee must report any large interest in publicly owned customers or suppliers; interests in privately owned customers and suppliers are banned.

Most companies rely on more informal procedures. Plenty of presidents, particularly in smaller companies, simply say they know their executives well enough to keep up with what they are doing.

Revised procedures: Since the Chrysler affair, however, there have been some second thoughts about the need for formal policies and procedures.

Some have felt the need to spell out policies for the first time. A. D. Dennis, secretary of Allis-Chalmers Manufacturing Co. reported his company has issued a statement of policy. Executives, managers, and employees involved in purchasing were told they could not own interests in a supplier, apart from listed stocks acquired as part of a normal investment program.

Others like May Department Stores Co., are reasserting their existing policies. And some are wondering whether policies—and enforcement procedures—need tightening.

The board of American Chicle Co. is considering a comprehensive review of policies and practices. Allied Chemical Corp. is studying its existing procedures. Cutter Laboratories is weighing a formal procedure of regular review, so is Consolidated Natural Gas Co.

Questionnaires: Ohio Edison Co. President Walter H. Sammis has written each of the company's officers, general office department heads, division managers, and division department heads, asking them about their interests in any corporation doing business with the company. H. L. Green Co., Inc., is now collecting such information from all key employees. Dorr-Oliver, Inc., is preparing a questionnaire for directors, officers, and employees. Allied Stores Corp. and American Radiator & Standard Corp. also have extended their reporting requirements to executives below the officer level.

Cerro de Pasco Corp. is questioning "all personnel whose positions are such as to give rise to transactions with other business entities." President Robert P. Koenig reported that "we have not and are not limiting ourselves to purchasing in our inquiry procedure."

In General Foods Corp., Chairman Charles G. Mortimer reported at the last annual meeting, officers, directors, and "a number of other selected executives have signed statements that they have held no material interest in any transaction with suppliers of goods or services."

Company declarations: A number of 1960 annual reports will contain declarations that the company "does its purchasing through a fully controlled and carefully checked system of competitive bidding wherever and whenever possible." This step was suggested by Javits, who (in preparation for a United Shareholders membership drive) wanted to show that a stockholder organization could influence management policy.

He thinks that point is proved by the fact that some 40 percent of the executives who replied said they "would be willing" to make such a statement in their annual reports or would consider it. A dozen or so definitely promised to publish the statement.

A number of chief executives, however, were strongly opposed to Javits' suggestion. Some said competitive bidding wasn't applicable to their businesses; other warned that it was "no panacea." Many felt, with Wisconsin Electric Power Co. President L. F. Sybold, that "any statement which in effect merely says that the officers are doing the job they were hired to do would be self-serving."

Many executives doubted the value—internal or external—of any sort of procedure embodying loyalty oaths. Lyle L. Shepard, president of Columbian Carbon Co., believes "our cost controls and the loyalty of our employees are such that to ask for a detailed statement would create a morale situation that would be detrimental to our shareholders for a long time to come."

Strawberries and Stories

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. EVERETT. Mr. Speaker, we in the Eighth Congressional District of Tennessee are certainly happy with the wonderful success of Peter Taylor, formerly of Trenton, Tenn., and Jesse Hill Ford, of Humboldt, Tenn., as short story writers.

A fine article appeared in the Commercial Appeal of March 5, which tells of

their literary accomplishments. This article follows:

STRAWBERRIES AND STORIES

(By Paul Flowers)

For half a century or more, especially since strawberries became an important fruit crop, Gibson County, Tenn., has been known far and wide as one of the most prosperous agricultural counties in the United States.

Gibson County in more recent years has come into another realm of prominence, for the production of short story writers. It is of note that two of the dozen entries in "Prize Stories of 1961—the O. Henry Awards," were written by Gibson Countians.

Gibson County claims:

"Heads of Houses," by Peter Taylor, Trenton-born son of Mr. and Mrs. Hillsman Taylor of Memphis.

"How the Mountains Are," by Jesse Hill Ford, of Humboldt, who won the Atlantic first award in 1959 for his short story "The Surest Thing in Show Business," and a $2,500 grant which enabled him to complete a novel which will appear this year. One of Mr. Ford's plays was produced on the CBS Television Workshop.

His O. Henry award-winning story appeared first in Atlantic.

FREQUENTLY IN NEW YORKER

Mr. Taylor, frequently a visitor with his parents in Memphis, is a member of the faculty at Ohio State University now. His story appeared first in New Yorker.

It is of note that another of his stories, "Who Was Jesse's Friend and Protector," appearing first in the Kenyon Review, comes again in "The Best American Short Stories of 1960," edited by Martha Foley and David Burnett, from Ballentine Books, a paperback at 75 cents.

Peter Taylor is remembered also for his books, "The Long Fourth and Other Stories," "A Woman of Means," "The Widows of Thornton," "Tennessee Day in St. Louis," and "Happy Families Are All Alike."

Other Southern fiction writers included in the books are Reynolds Price of North Carolina, and Jackson Burgess, who has lived both in Georgia and Florida. Texas is represented by John Graves.

In the O. Henry collection are:

"Tell Me A Riddle," by Tillie Olsen.

"The Nickel Misery of George Washington Carver Brown," by Ivan Gold.

Medical Care

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. ANDERSEN of Minnesota. Mr. Speaker, I would like to call to the attention of the House membership the following letter from Dr. J. A. Cosgriff, Jr., of Olivia, Minn., and the accompanying substantiating evidence which he produces concerning medical care in Renville County located in my congressional district. This comment and tabulation by Dr. Cosgriff is well worth a few minutes of the time of all Members of the House, in which to study a typical average American community's handling of medical care:

OLIVIA CLINIC,

OLIVIA, MINN., *February 24, 1961.*

DEAR MR. ANDERSON: I am enclosing for your information the report of a survey which outlines the costs of medical care to older people in our own community.

We believe that circumstances such as exist here are more typical of the average American community than are the extreme situations in poverty-stricken areas which are presented by some as justifying full Government financing of medical care costs. Most people, we find, can provide for themselves. This fact is borne out in our present study.

We have always been ready to help people who cannot provide their own necessities. Existing legislation adequately covers these people, who are a relatively small segment of the population. Adding now upon Government a social security financing of medical costs is completely unwarranted and unwise.

Sincerely yours,

J. A. COSGRIFF, Jr., M.D.

A COMMUNITY SURVEY OF HOSPITAL AND PHYSICIAN COSTS FOR MEDICAL CARE TO PATIENTS OVER 65 YEARS OF AGE

With the cooperation of members of the medical staff and the administrator of Renville County Hospital, Olivia, Minn., a study was made of the costs of medical care to those patients over the age of 65 years who were hospitalized in this typical community hospital during the year 1960. Ours is a general hospital of 41 beds and 10 bassinets, located in an agricultural community of west-central Minnesota. The majority of patients treated here are residents of Renville County.

This information is provided for consideration in the current discussions concerning financing the costs of medical care for the aged. We believe that our own data furnish sound basis for the conclusion that this particular problem is being well met under existing circumstances. Members of our medical staff know of no individual in this area who is not receiving proper medical care because of financial inability to pay for such care.

The data now presented summarize the findings of our study of those patients receiving care in the Renville County Hospital.

1. Patients over age 65 admitted to hospital during 1960: 256.

2. Total 1960 hospital admissions for patients over 65: 350 (21.5 percent of the total (1,630) admissions).

3. Patients having multiple 1960 hospital admissions: 63 (24.6 percent of the patients); 1 patient had 8 admissions, 2 patients had 5 admissions each, 5 patients had 4 admissions each, 9 patients had 3 admissions each, 46 patients had 2 admissions each.

4. Admission service division: 52, or 14.8 percent, were surgical admissions; 298, or 85.2 percent, were medical admissions; 47 patients had at least 1 surgical admission.

5. Patient's age: mode, 65 years; median, 74 years; mean, 75 years.

6. Patient's total 1960 hospital bill: mode, $36; median, $226; mean, $350.54.

Figures used here were the total hospital bills rendered a given patient in 1960, regardless of his number of hospital admissions.

The attached tabulation sheet shows that 75 percent of the patients used private resources to pay their bills, 25 percent being paid by Government agency; 84 patients, or 33 percent of the group, had some insurance coverage to aid payment; 21.4 percent, or 55 of the patients, had hospital bills larger than $500, 7.4 percent (19 patients) being over $1,000.

As of February 1, 1961, just 23, or 8.9 percent, of the patients had not paid their hospital bills in full. Yet, only seven of these (2.7 percent of the whole) had made no payment on account, the rest having made some payment.

7. Physician's bills; mode, $30; median, $56; mean, $105.69.

Here we contacted each patient's physician (seven physicians) and requested the total charges for illnesses treated in the hospital during 1960.

Only 1.6 percent, or 4 patients, had physicians' bills over $500; 9.1 percent, or 22 patients, had physicians' bills over $300.

As of February 1, 1961, 15.7 percent, or 38 patients, were known to have some of the physician's bill unpaid.

It was found that just 9.6 percent of the total hospital-physician bills rendered these patients for care during 1960 in these illnesses remained unpaid as of February 1, 1961.

8. A comparison can be drawn between our data and that previously published by the Tarrant County Medical Society of Texas, as contrasted with undocumented figures circulated by Senator CLINTON ANDERSON and others. The latter have stated that the average cost per illness to the elderly is $1,000—$450 hospital bill and $550 doctor bill.

	Hospital	Physician	Total
Compare:			
Senator Anderson's figures (per illness)	$450.00	$550.00	$1,000.00
Tarrant County, Tex. (per illness)	384.51	114.62	499.13
Renville County, Minn. (per 1960)	350.54	105.69	456.23

The data assembled in this survey warrant our agreeing with the members of the Tarrant County Medical Society that "Senator ANDERSON'S figures are fantastic." It is demonstrable that hospital costs far exceed physician costs. But more important, these data provide evidence that 75 percent of those patients over age 65 in our community are able to pay for their medical costs from private resources, and all the others are already adequately assisted by welfare agencies. There is no unmet need which requires the passage of new Federal legislation to pay for health care in our community. There is no warrant here to pass legislation which would compel the workers of America, through increased social security taxes, to

pay the medical costs for the 75 percent of those over 65 who are already able to pay their own costs adequately.

J. A. COSGRIFF, M.D.,
For the Medical Staff, Renville County Hospital.

Voters Tell Legislators What They Want Done in Olympia

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. HORAN. Mr. Speaker, under permission granted me to extend my own remarks in the Appendix of the RECORD I am pleased to include an editorial from the Wenatchee Daily World. While this editorial deals with voter reaction toward issues presently being considered by the Legislature of the State of Washington I do feel that it is of sufficient interest nationally to merit inclusion.

All of us in the Congress appreciate sound and serious thinking on the part of our constituents. It is necessary for healthy States who, together make up our great Nation.

The editorial follows:

VOTERS TELL LEGISLATORS WHAT THEY WANT DONE IN OLYMPIA

The votes are in and counted, and were we surprised.

Not at the outcome, but at the number.

Six-hundred and ninety-one replies to the Daily World's ballot on legislative issues were tabulated through last Saturday. Since then, 43 ballots have come in. That makes 734 people who took this easy way to tell your legislator how to vote.

Statistically, it's a terrific response. Many ballots contained a note of thanks for providing this way of expressing opinions to the legislature. It proves one contention: that most people would like to give their opinions to the legislators, but don't know quite how to go about it, or how to say it.

Legislators should give this ballot the same weight they'd give a personal letter. Almost every one of them is signed, and each one required special effort to fill out, unlike form letters.

The responses provide a good sampling of the entire north central Washington area. Four-hundred and ninety-nine of them were from Chelan County, 96 from Okanogan County, 74 from Douglas County, and 34 from Grant County. The rest were unsigned, or from out of the distrist. They will now be forwarded to the senator representing each county with the request that he pass them on to members of the house from his district.

You may find some surprises going through them—such things as the overwhelming support for making parents responsible for children's acts, the opposition to trading stamps and the support for raising the driver's age to 18.

Many people (and perhaps the legislators) will be surprised at the amount of opposition to a teachers' pay raise. The vote on extension of the sales tax to services may offer a big hint on how the people want taxes raised, and figures show the time ripe for installing a recovery clause and even for backing up on the welfare program.

Of course it's not a perfect poll. Some of these questions can't be answered on a straight yes or no basis. But it's an educated indication. Read the results for yourself.

1. Do you believe parents should be responsible for the malicious acts of their children? Yes, 603; no, 21.

2. Do you favor trading stamps? Yes, 95; no, 582. Do you want the stamps redeemable in cash 48; prizes 75?

3. Should the cities receive 5 percent of sales tax? Yes, 417; no, 221.

4. Do you favor capital punishment? Yes, 383; no, 258.

5. Do you favor increasing teacher salaries? No percentage, 287; 2½ percent, 110; 5 percent, 132; 10 percent, 89; 20 percent, 22.

6. Should minimum driving age be increased from 16 to 18? Yes, 380; no, 279.

7. Do you favor relaxing liquor regulations? Yes, 53; no, 632. Do you favor extension of Saturday night closing to 2 a.m.? Yes, 82; no, 594. Do you favor Sunday liquor? Yes, 43; no, 629. Do you favor relaxing liquor laws during century 21 only? Yes, 29; no, 547.

8. Should Washington State welfare laws be more conservative? 448. Stay as they are? 154; be more liberal? 48. Do you favor recovery clause? Yes, 398; no, 128. Do you favor family responsibility? Yes, 433; no, 147.

9. What is your opinion on the level of State spending? More money should be spent in: welfare, 61; schools, 341; institutions, 281; State departments, 13; highways, 162. Less money should be spent in: welfare, 357; schools, 108; institutions, 164; State departments, 381; highways, 73.

10. If the Governor's budget is approved, $60 million of new taxes will be necessary. Check the area of taxation which would be least objectionable to you if this budget is passed: Increase sales tax, 218; extend sales tax to services (doctors, lawyers, barbers, beauticians), 246; enact State income tax, 110; equalize and raise property tax, 137; tax on intangibles (stocks, bonds, bank accounts), 119.

Additional Judges for North Carolina

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. WHITENER. Mr. Speaker, on March 2, 1961, the members of the North Carolina delegation in Congress presented a joint statement before Subcommittee No. 5 of the Committee on the Judiciary of the House of Representatives. It was my privilege to speak in behalf of the delegation on the important subject of additional judicial manpower for our State.

We are convinced that the proposal advanced by us in this statement is absolutely essential to the proper administration of justice in our North Carolina Federal courts. We believe that the facts fully justify our request for an additional judge for each of the three Federal judicial districts in North Carolina.

It is my feeling that our colleagues will concur in our thinking if they are fully apprised of the difficult situation now confronting our Federal courts in our State. It is because of this feeling that I request that the joint statement of our delegation be printed in the Appendix of the CONGRESSIONAL RECORD:

JOINT STATEMENT OF THE NORTH CAROLINA CONGRESSIONAL DELEGATION PRESENTED ON BEHALF OF THE DELEGATION BY REPRESENTATIVE BASIL L. WHITENER BEFORE THE COMMITTEE ON THE JUDICIARY OF THE HOUSE OF REPRESENTATIVES ON MARCH 2, 1961

The undersigned members of the North Carolina delegation to the U.S. Congress respectfully request that Subcommittee No. 5 of the House Judiciary Committee amend H.R. 2226 entitled "a bill to provide for the appointment of additional circuit and district judges and for other purposes." The bill presently provides for two additional circuit judges for the U.S. Court of Appeals for the Fourth Circuit and for one additional roving district judge for the State of North Carolina.

We heartily endorse the proposal for the two additional circuit judges. The record clearly shows that this increase is desirable and necessary.

With equal fervor we recommend that the bill be amended to provide for the appointment of three additional district judges to serve the State of North Carolina, with each of our present Federal districts in North Carolina being furnished an additional judge.

The Division of Procedural Studies and Statistics of the Administrative Office of the United States Courts recently made a very illuminating study of the Federal court conditions in the State of North Carolina. In this study it was pointed out that in 1960 the criminal caseload per judgeship in the middle district of North Carolina was the highest in 86 districts and that the criminal caseload during the past 5 years had been running 4 to 6 times higher than the national average per judgeship. It was further pointed out in this report that the criminal caseload in the western district of North Carolina for the past 5 years has exceeded the national average from two to four times.

Addressing itself to the situation in the eastern district of North Carolina during the past 5 years, the report pointed out that usually the criminal caseload per judgeship in this district is the highest in the 86 districts, although in 1960 the caseload was the second highest—the first place going to the middle district of North Carolina—and that this caseload in the middle district is from 4 to 6 times greater than the national average.

In the eastern district the civil caseload during the past 5 years has exceeded the national average. In the middle and western districts during the past 5 years the number of civil cases commenced per judgeship has been slightly lower than the national average, but it has been found that the heavy volume of criminal work confronting the judges in those two districts has presented a great problem in bringing civil and criminal cases to prompt trial.

In each of the three districts in North Carolina the records show a larger than normal number of trials begun. In the middle district during 1960, 167 trials were commenced, in the western district 119 trials were commenced, and in the eastern district 132 trials were commenced, as compared to a national average of 40 cases commenced per judge. These figures do not include the number of cases that were disposed of without trial. We would further point out that during 1960 the number of cases filed in our three North Carolina districts far exceeded the national average of 328 cases per judgeship. In the eastern district there were 772 cases, in the middle district 773 cases, and in the western district 567 cases. This gives a combined overload for the three districts of 1,128 cases more than the national average. When computed against the national average of 328 cases, we find that these 1960 statistics justify 3.44 additional judges in our State. Using the same approach to the 1959 experience in North Carolina Federal

courts as compared to the national average, we can justify 3.78 additional judges in our Federal courts of North Carolina.

Using the eastern district of North Carolina as an illustration of the critical situation existing in our State, we would point out to the committee certain interesting and illuminating facts. The eastern district consists of 44 counties having an area of 24,183 square miles. The area of this district is larger than that of either of the following States: Rhode Island, Delaware, Connecticut, New Jersey, Massachusetts, New Hampshire, Vermont, Maryland, and West Virginia.

Furthermore, the population of the eastern district of North Carolina (1,791,880, according to the 1960 census) is nearly equivalent to the combined States of Delaware, New Hampshire, and Rhode Island, with a population of 1,912,701, which three States are served by five U.S. district judges.

The State of West Virginia with an area of 24,080 square miles and a population of 1,860,421 (1960 census) is substantially similar to the eastern district in both area and population. Yet, West Virginia has two districts served by three U.S. district judges.

It is also interesting to note that the States above mentioned, which are comparable in size to the eastern district, have the following available Federal judicial manpower: Rhode Island, one district judge; Delaware, three district judges; Connecticut, two district judges with three additional recommended in H.R. 2226; New Jersey, seven district judges with one additional recommended in H.R. 2226; Massachusetts, five district judges with one additional recommended in H.R. 2226; New Hampshire, one district judge; Vermont, one district judge; Maryland, two district judges with two additional recommended in H.R. 2226; and West Virginia, three district judges.

We would further point out to the subcommittee that the three Federal districts in North Carolina are comparable in the population being served by each of the district courts. In the 44-county eastern district the 1960 population was 1,791,880; in the 28-county middle district the 1960 population was 1,514,918; and in the 28-county western district the 1960 population was 1,249,357. Thus, it will be seen that the total 1960 population being served by these three districts in North Carolina is 4,556,155.

When we compare the judicial manpower available now and as proposed in H.R. 2226 with North Carolina's neighboring States of South Carolina, Tennessee, and Virginia, we see that a great disparity exists. We hasten to explain that in selecting these neighboring States for discussion we have no intention of intimating that they have an excess of district judges under the present law or under the proposals now being made in H.R. 2226. These States are mentioned merely to show the disparity which exists as far as our State is concerned.

In South Carolina, according to the 1960 census reports, there are 2,382,594 people. The State has two Federal districts with a total of three district judges under the present law. H.R. 2226 provides for an additional district judge for that State, which would mean that there would be four district judges to serve a population of slightly more than one-half of the total population of North Carolina.

In the State of Tennessee there are 3,567,089 people, according to the 1960 census. There are three Federal districts in that State with four district judges now serving. H.R. 2226 provides for three additional judges for the State of Tennessee. Thus it will be seen that enactment of H.R. 2226 would result in that State having 7 judges to serve 1 million fewer people than would be served by a total of 4 district judges which North Carolina would have if H.R. 2226 is passed as now written.

The State of Virginia with a population of 3,966,949 now has 5 Federal district judges. There would be no increase in Virginia's judicial manpower under H.R. 2226. Notwithstanding this, however, it will readily be seen that without any increase in judgeships in Virginia there will still be a great disparity in judicial manpower between North Carolina and Virginia even though H.R. 2226 may be enacted as presently written.

We would further call to the attention of the subcommittee that there has been no change in the Federal court structure in North Carolina since the creation of the middle district in 1927 at which time the latest census figures (1920) showed that North Carolina had a population of 2,559,123.

When the 1920 population is compared to the 1960 population it will readily be seen that North Carolina is a State in which there is little likelihood that there will be any reduction in demands upon the Federal judiciary.

The middle and western districts of North Carolina each serve the area known as the Piedmont. A cursory examination of population trends as reflected by the recent decennial census will indicate that it is one of the faster growing areas in our Nation. It must be recognized, therefore, that the caseload situation confronting the district courts in each of North Carolina's three districts will worsen rather than improve in the future.

We have the firm conviction that the three additional judges apportioned at the rate of one for each of our Federal districts are absolutely necessary to the proper administration of justice by the Federal district courts of North Carolina. Furthermore, we feel that even this relief will be only temporary in nature since all trends and statistics would indicate that in the not-too-distant future it will no doubt become necessary to create an additional district or districts in order to cope with the conditions confronting the Federal courts in our State. This will be particularly true of the eastern district of North Carolina.

We respectfully recommend, therefore, that this subcommittee approve an amendment to H.R. 2226 to provide an additional district judge for each of the three Federal districts in North Carolina.

SAM J. ERVIN, JR., U.S. Senator; B. EVERETT JORDAN, U.S. Senator; HERBERT C. BONNER, Member of Congress, 1st District; L. H. FOUNTAIN, Member of Congress, 2d District; DAVID N. HENDERSON, Member of Congress, 3d District; HAROLD D. COOLEY, Member of Congress, 4th District; RALPH J. SCOTT, Member of Congress, 5th District; HORACE R. KORNEGAY, Member of Congress, 6th District; ALTON LENNON, Member of Congress, 7th District; A. PAUL KITCHIN, Member of Congress, 8th District; HUGH ALEXANDER, Member of Congress, 9th District; CHARLES R. JONAS, Member of Congress, 10th District; BASIL L. WHITENER, Member of Congress, 11th District; ROY A. TAYLOR, Member of Congress, 12th District.

Award in International Education

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, March 9, 1961

Mr. KEATING. Mr. President, I have just been informed that the Creole Petroleum Corp., of New York, has been given an award by the Institute for International Education for distinguished service in international education. The valuable contributions which Creole is making in the vital field of international cooperation can be a fine example to other American enterprises in South America and throughout the world. Free enterprise is especially meaningful in other lands when we can show, in such a concrete way, as Creole has done, that its blessings are not restricted to Americans or American businesses but are available also on a generous basis to help other nations and their citizens.

Mr. President, I ask unanimous consent to include the citation received by Creole Petroleum Corp. in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

INSTITUTE OF INTERNATIONAL EDUCATION AWARD FOR DISTINGUISHED SERVICE—CITATION FOR A CORPORATION

To the Creole Petroleum Corp., a U.S. business organization with headquarters in Caracas, Venezuela, the Institute of International Education present its award for distinguished service.

Nearly 25 years ago, in 1937, Creole Petroleum Corp. inaugurated a scholarship program reflecting an early philosophy of service which has guided the company to industrial greatness and to a widely recognized social awareness. By 1960, the corporation's scholarship program had provided a college education to 500 young people, both employees and persons not related to the company.

Creole Petroleum is bringing new dimensions to corporate philanthropy as an investment in human resources. Creole's technical and educational assistance projects in Venezuela, some supported solely by the Creole Foundation and others with private and public agencies, are vital and constructive. For example, the School of Agronomy of the Central University of Venezuela and the University of Florida cooperate in a joint program of agricultural development. The Ministry of Education and the American Broadcasting Foundation work together in pilot educational television programs. The Catholic University Andres Bellos, a private institution, has the help of St. Louis University in its administrative reorganization. Northwestern University and Universidad Central of Caracas pioneered an advanced management program for development of executive talent in Venezuela. The Fundacion La Salle established the first Marine Biology Station to which American and European scientists have come.

Believing that a nation's progress depends upon the availability of schools for its young people, Creole 2 years ago, in cooperation with the Ministry of Education and IIE, initiated a rural teacher training program which promises literacy and education for thousands of Venezuelan children.

The Creole Foundation also has its own scholarship program, not restricted to technical fields. Venezuelans are enrolled, for example, at Yale School of Music, Juilliard and the Ballet Theater School. The collateral Grant program, a unique feature of Creole scholarships, provides supplementary grants to universities in which the fellows are enrolled, to bridge the gap betwen tuition fees and the total cost of instruction.

The Institute believes that the Creole Petroleum Corp. exemplifies enlightened corporate citizenship at home and abroad. The corporation's awareness of the needs and

desires of the nation in which it principally operates, and its wisdom in providing the leadership and financial resources to meet them, merit this award.

More B–58's Needed

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. WRIGHT. Mr. Speaker, in the Air Force's Operation Quick Step recently a B–58, running a closed-course race against time, set six official new world speed records. Two days later another B–58 broke three of these new records. Between them, these two B–58 crews set six new world speed records, five of which were previously held by the Russians.

In recognition of their achievement, Major Confer's crew received the coveted Thompson trophy on February 28 in Washington, D.C.

Americans everywhere are proud of the achievements of these young men and of the recognition they have received.

We in the Fort Worth area are particularly proud because both crews are part of the 43d Bomb Wing and are stationed at Carswell Air Force Base, Fort Worth, Tex.

While there is general knowledge that such records were set, I think few people know by what margins the new records were established. The new records are almost twice as fast as the old records, as shown by the following table:

The "Quick Step" story

	Payload (kilograms)	Miles per hour			
		Old official record		New B–58 record	
1,000 kilometers (USAF airplane No. 441).	None	USAF F–101	700.47	USAF	1,284.73
	1,000	U.S.S.R.	639.18	USAF	1,284.73
	2,000	U.S.S.R.	639.18	USAF	1,284.73
2,000 kilometers (USAF airplane No. 442).	None	U.S.S.R.	596.47	USAF	1,061.80
	1,000	U.S.S.R.	596.47	USAF	1,061.80
	2,000	U.S.S.R.	596.47	USAF	1,061.80

Yet these official figures do not tell the whole story, for the actual average ground speed on these recordmaking runs was 1,330 miles per hour for airplane No. 441 and 1,130 miles per hour for airplane No. 442.

No other strategic bomber we have can approach the speed of sound—yet the B–58 flies at more than twice the speed of sound.

Its ability to penetrate enemy defenses at these speeds is amazing. The difficulty of defending against it can be compared only with that of an ICBM.

General Power, Commander of SAC, was present at the Thompson Trophy award and commented on this penetration ability, and remarked that he was glad such a weapon was included in SAC.

Less than 5 months ago, at their annual convention, the American Legion adopted the following resolution:

AMERICAN LEGION, NATIONAL CONVENTION URGES STEPUP GROWTH

RESOLUTION NO. 595

Convention Aeronautics and Space Committee—"B–58 Program"

Whereas it is the expressed policy of the Nation to rely heavily for its defense posture on a mix of manned-bombers and missiles; and

Whereas the B–58 is the only supersonic bomber available now and will be our first-line bomber until the B–70 eventually replaces it; and

Whereas the B–58 is being produced at a minimum rate due to limitation of funds; and

Whereas greater numbers of this weapon could be produced at every decreasing individual cost: Now, therefore, be it

Resolved, by the American Legion National Convention assembled in Miami Beach, Fla., October 17–20, 1960, That we urge the Department of Defense to continue production of B–58 Hustler bombers, to increase the number of B–58's in our defense inventory and to encourage the development of more advanced versions.

And in conclusion, Mr. Speaker, I would like to insert here a sound and thoughtful editorial which appeared in the Fort Worth press on February 26, 1961:

MORE B–58's NEEDED

For a decade the great Fort Worth-built B–36 was a mighty weapon and one of America's biggest sticks in helping keep the peace.

Then came the faster B–58, missiles were hurled into outer space. And before you could say "Senate Preparedness Investigation Subcommittee," the Hustler was classified as "an older supersonic bomber."

When the 1962 budget was prepared, no money was provided for making more B–58's. Money was included, however, for the projected B–70 program.

But what about the meantime, the lag between B–58 and B–70 production? It's a 5-year vacant spot.

Old and outmoded or not, the B–58 is the only supersonic bomber now in production for the Air Force. We know the B–58 is good. Two times in recent weeks it broke payload and speed records.

And who could compare the destruction caused by a bomb dropped from an "outmoded" jet with one dropped from a plane on a drawing board? Bombers must still be needed. Otherwise there would be no projected B–70 program.

Tooling, overhead and development costs of the B–58 have been paid for. They now can be built for a little more than $7 million each. That's chickenfeed compared to the cost of the first B–70's that will roll off the line.

We're proud of the fact that the B–58 is made here. But whether it's made here, in New York or Sleepy Eye, Minn., the B–58 still is a good buy.

Like the old B–36, it can help keep the peace.

Let's keep 'em flying.

Proposed Minimum Wage Legislation

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, March 9, 1961

Mr. THURMOND. Madam President, two outstanding afternoon newspapers, the Columbia Record, of Columbia S.C., and the Charleston Evening Post, of Charleston, S.C., have recently published editorials on the drive to enact additional minimum wage legislation, and I feel that these editorials should be called to the attention of the Members of this body. One is entitled "Minimum Wage and Compassion," and was published in the March 6, 1961, issue of the Columbia Record. The other, entitled "Behind Minimum-Wage Drive," appeared in the March 2, 1961, issue of the Charleston Evening Post. I ask unanimous consent to have the editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Columbia Record, Mar. 6, 1961]

MINIMUM WAGE AND COMPASSION

A traditional liberal posture, so patently false that it should delude no one, is that conservatives have no compassion for their fellow human beings. Conservatives feel just as deeply about the individual well being of their fellow men as do liberals.

Conservatives realize and know the rich meaning of "inasmuch as ye have done it unto the least of these, my brethren, ye have done it unto me."

Indeed, conservative concern for the weekly paycheck producing the daily bread was shown in the rump session of Congress, and is being felt again now, over the loss of jobs that would be forced by the administration's minimum wage legislation.

Time and again, conservative Congressmen patiently explained to their liberal counterparts how the proposed bill would force curtailment of employment. Time and again, proponents of the measure refused to listen.

We suggest to our readers that they examine the honest statement of a distinguished Carolina businessman, Emert Rice, whose letter is printed on this page. Mr. Rice speaks for many businessmen in this State and elsewhere who, with most profound reluctance, would have to discharge marginal employees.

The alternative to the businessman is extinction. And when the business collapses, not only do marginal employee lose their jobs, but all workers.

Confronted with this situation, Senator Wayne Morse, of Oregon (who coauthored the recent bill with the then Senator Kennedy), was asked by Senator Barry Goldwater what he would do.

Senator MORSE's explanation was quick. The way out, he thinks, is for the Federal Government to subsidize with direct grants all businesses in the United States which could not meet the minimum wage.

No more blatant socialization of American business could be presented.

The Columbia Record believes that every South Carolina worker should be paid an honest day's wages for an honest day's work. But we do sincerely protest that no American engaged solely in intrastate business should want the amount of his paycheck to be determined by the Federal Government.

Nor should any South Carolina firm want to be subsidized, by the Federal Government, which would control, in time, its whole operation.

Freedom, we repeat, of the American worker and the American businessman is at stake in the commerce clause redefinition of the minimum wage bill.

Congress must determine at this fateful hour whether the Federal Government shall control the wages and hours of every laborer and the affairs of the individual business operating within the confines of a single State.

If Congress redefines interstate commerce, it will have transformed American democracy into a welfare state whose borders are marked: "No return."

[From the Charleston Evening Post, March 2, 1961]

BEHIND MINIMUM-WAGE DRIVE

A major objective of the drive to increase the minimum wage was revealed by Joel R. Jacobson, president of the New Jersey State CIO.

Betraying a lamentable ignorance of conditions in the South, he told a Senate subcommittee that the major cause of unemployment in New Jersey was the relocation of industries to "the low-wage, pauperized sections of the South."

To stop the flow of industry to this section, "Congress," he said, "should step up the minimum wage." The Federal Government should, as he sees it, legislate against the industrial development of the South.

There are conflicting figures as to comparative wages of southern and northern workers. We do not know how they actually compare, but we do know that new industries are welcomed in this section and that they have no trouble in attracting willing, efficient employees. And it is a fact, too, that in most southern localities the cost of living is lower than in New Jersey and most other Northern States.

What of unemployment in other northern areas? We presume Mr. Jacobson had in mind the impressive growth of the textile industry in the South. Unemployment is acute in the automobile, coal mining and steel industries, but there has been little or no migration in these lines to the South.

There are various factors which enter into industrial investment. One is the labor-management atmosphere. Virtually all of the Southern States have right-to-work legislation on their books. These are laws under which membership or nonmembership in a labor union may not be a condition of getting or holding a job. It is this protection to workers that accounts for much of the anti-South animus such as voiced by Mr. Jacobson.

The South has attracted only such industries as found conditions here attractive to them. Favorable labor-management relations, the climate, community cooperation, raw materials, power, nearness to markets, transportation, and advantageous sites are among the considerations that have prompted companies to locate here. Such wage differentials as may exist are but a minor factor.

The South, too, has, in some areas, the problem of unemployment, but it is significant that the most acute situations are in States where union membership is widely compulsory, and where labor costs have actually forced some concerns out of business. We cite Michigan, Pennsylvania, and New Jersey as examples. To blame the South for their troubles is as absurd as it is false.

An American Speaks Out

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. CUNNINGHAM. Mr. Speaker, from all sides we hear that the Federal Government must do more in the field of education, to assist our older citizens, to help this segment and that of the economy. We are all sympathetic to these needs, but we must remember that we first take from the people all the money which is used to help them.

We must also remember the rich heritage we have received from the pioneers, the men and women who settled our frontier land, the people who dared to try the new and unknown. We must remember that individual incentive and reward are the cornerstones of our Republic. We must always allow and encourage the individual to provide for himself and his family, keeping the Government role limited to that of assisting those who due to circumstances beyond their control are unable to so provide.

We must never allow the Government through welfare programs or excessive taxation and interference to stifle the individual and his incentives and rewards.

I would like to call to the attention of my colleagues a letter I received from Mr. R. W. Lowe of Omaha. Mr. Lowe is typical of the millions of Americans who do not look to Washington for their care and welfare. They want to be left alone, and they want to be left with enough to take care of their own education, medical care, and other problems.

OMAHA, NEBR.,
February 22, 1961.

Representative GLENN CUNNINGHAM,
Washington, D.C.

DEAR MR. CUNNINGHAM: Frankly, I am fearful about the future. Not because of A-bombs or fallout or missile lags. But because of what the headlines keep telling us about the billions of dollars proposed for socialized medicine, for schools, for the unemployed, for foreign purposes; in fact for everything that can be conjured up that will take money from the taxpayers.

There is no one single thing that will weaken the country faster and more completely than irresponsible fiscal policies.

I have no axe to grind. I'm past 60 years. I am retiring late this year. I've been a public utility worker all my life; consequently, I'm not "well fixed." We have never received any big inheritance. But, we are not poor because we have saved as we went along. We did not ask what someone else—or the Government—should do for us.

Mrs. Lowe and I are both college graduates—by our own efforts and with no Government aid. Our two children are college graduates—by their and our own efforts, too, without Government aid. We have had average sickness and hospital bills and we paid them without Government aid. In fact, I am retiring some early because of a cancer operation about a year ago. We know something about education bills, hospital bills and the expense of operations.

But we saved to meet the requirements of living as we went along. We did not feel we were being punished when we did this. It was our duty as citizens to live so we could take care of ourselves. In fact, it was a privilege and a part of being an American citizen.

However, that privilege is about to be usurped by the great spenders. Why ask, "What you can do for your Government." What's going to be left to do with socialized medicine, federally dominated schools and taxes so outrageously high that the private individual has next to nothing left.

It's plain silly to talk about a strong Nation with prestige and then proceed to weaken it financially beyond recovery. I already know your feelings about this and they are correct. I hope your efforts are successful in keeping the country strong and sound and for the citizens.

Sincerely yours,

R. S. LOWE.

Judicial Patronage

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. WALLHAUSER. Mr. Speaker, under leave to extend my remarks, I would like to include the following editorial which appeared in the Newark, N.J., Evening News on Monday, March 6, 1961, on a very important subject to all American citizens.

JUDICIAL PATRONAGE

A Democratic Congress that for 5 years ignored President Eisenhower's annual plea for new Federal judgeships now, with the haste that only rich patronage can precipitate, is rushing to meet the judicial manpower crisis. And the Senate discovers that the country needs not merely 59 new judges, as President Eisenhower and President Kennedy recommended, but 73 of them.

Like Mr. Eisenhower, President Kennedy accepted the figure set by the Judicial Conference of the United States after a careful survey. The need for 59 new judges can be demonstrated by jammed calendars. But no evidence was offered of the need for 10 more places added by the Senate Judiciary Committee, or for another 4 added on the Senate floor. Indeed, informed opinion is that in most of the areas which will share the extra 14, the volume of business does not justify additional judges.

In his effort to get congressional cooperation in relieving court congestion, President Eisenhower last year offered to divide the nominations between the parties. This would have preserved the nearly equal distribution now existing. The Democrats declined. As House Judiciary Chairman CELLER now candidly admits, they gambled that they would take the Presidency and keep all the new judgeships for themselves, and no nonsense about a bipartisan bench.

President Kennedy has promised to appoint only the best qualified men, a promise reaffirmed last week by his brother, the Attorney General. But the President will be

under heavy party pressure to follow the tradition of victor and spoils, and it will be disappointing, but not surprising, if the best qualified all turn out to be Democrats.

Roosevelt and Fear

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. SCHERER. Mr. Speaker, in view of the current controversy over the film "Operation Abolition," which is a documentary of the riots on the House Committee on Un-American Activities, I think the Members of the House should read the lead editorial in the Indianapolis News of Wednesday, March 1, 1961:

ROOSEVELT AND FEAR

Congressman JAMES ROOSEVELT, Democrat, of California, whose attack on the film "Operation Abolition" and its sponsor, the House Committee on Un-American Activities, was televised in the Indianapolis area last week, recently sang the same song in New York. But there was a difference.

In a taped address beamed over WFBM–TV, ROOSEVELT argued that "Operation Abolition" was somehow sinister because it spread fear. It is wrong, he said, to make people afraid of communism—and, admit it, didn't this film make you just a little bit afraid? This argument is about like rebuking someone who tells you your house is on fire: Don't talk to me about it, I don't want to be frightened.

"Operation Abolition" does indeed make people afraid, or concerned, about the danger of communism in the United States, as well it should. Unless a lot more people become a lot more concerned, and soon, we may well lose our country.

ROOSEVELT topped off his argument by saying he did not call for abolition of HUAC—only for modification.

But in a subsequent speech to the New York Civil Liberties Union, ROOSEVELT did call for abolition, pure and simple—and then proceeded to spread a little fear of his own. HUAC and its counterpart in the Senate, he implied, were saddled with white supremacists, who could not perform their investigative duties fairly. He called the committees genuinely subversive.

The purpose of such a statement is clear: To shift attention from the issue of communism, and to frighten American Negroes and other minority groups with the specter of militant racism. Such fearmongering marks something of a milestone; previously it had been directed against the antisubversive committees only by outright Communists and avowed Marxists. Now we find it in the words of a U.S. Congressman.

ROOSEVELT'S allegation is not only untrue, but the very opposite of the truth. We need only to read the publications of the House committee hearings—which are available for the asking—to find that HUAC has repeatedly praised American Negroes as a group and as individuals for their record of resistance to Communist propaganda.

Only a year ago, Joseph Charles Jones, a Negro divinity student from Charleston, S.C., voluntarily appeared as a friendly witness before the committee to expose American Communist tactics used at the Vienna youth festival. And far from being a pawn of southern whites, Jones happens to be a leader of the student sit-in demonstrations in South Carolina.

By attempting to manufacture a phony racial scare in his attack on the House committee, JIMMY ROOSEVELT has done a disservice not only to the committee, but to his country. In this controversy, it would appear that American Negroes have nothing to fear but ROOSEVELT himself.

Captive Nations Week

SPEECH
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. COLLIER. Mr. Speaker, the observance of Captive Nations Week by the people of these United States demands a renewal of our pledge to the cause of freedom for all peoples in the world. Today the millions behind the Iron Curtain live under the shackles of totalitarian governments. In fact, it is ironical that there are more people living in captive nations today than at any time in modern history. It is ironical because we engaged in two great world conflicts since the turn of the century to insure the freedom and dignity of men everywhere. And yet we who have enjoyed the heritage of freedom too often take it for granted.

The resolution which was presented before this House this week is a true reflection of the deep sentiments not only for freedom-loving Americans but those who detest oppression and its ruthless inconsiderations.

Can we, in our land of freedom, begin to realize how we would feel if we were suddenly to find ourselves a captive nation like Czechoslovakia, Hungary, Poland, Lithuania, Latvia, Estonia, Bulgaria, or the other nations that now stagger under the burden of the Soviet and Chinese Communist yoke? I submit that this would be difficult, but it is something about which we must think.

We must have definitions of the various types of tyrannies inflicted on these unfortunate peoples, who, like so many of us, must at one time have said to themselves, "It can't happen here." We must understand simple things like the fact that Socialist Russia preceded Soviet Russia; know that Socialist Italy preceded Fascist Italy, and that Socialist Germany preceded Nazi Germany. Then, too, we must recall that, for these nations, it was only one short step for them to take before they suddenly found themselves under the yoke of dictators at the best, or occupied and completely subjugated, at the worst. These socialized countries did not realize what was happening to their beloved lands until it was too late to take effective action and free themselves.

Although sad to recall, many of the presently captive nations once enjoyed freedom, and had civilizations of a high order. Czechoslovakia before World War II was regarded as the best-armed nation in Europe and one of the most prosperous and advanced in education, cultural activities, and industrial development. Yet today we face the fact that that great nation is wallowing in the dismal swamp of hopelessness; it cannot seem to figure out a way to extricate itself from this morass of utter discouragement. Yet some of the best brains in all Europe still live in Czechoslovakia.

Other countries too numerous to mention find themselves in the same frustrated situation. I cite the plight of the Czechs only because we seem to have known more about their country than about others and to have been completely shocked when we realized how rapidly the modern barbarians conquered and then occupied and subjugated them. No less have the other, smaller, and less well-known nations suffered than did Czechoslovakia. Our hearts go out to the Czechs in the long and unreasoning tortures they have suffered, and the personal indignities and regimentation which have all but destroyed their individual personalities and which has made them, to all practical purposes, puppets on the strings of their conquerors, leaving them no choice but to do as they are told.

One of the most effective objectives that Captive Nations Week should have is the teaching of other nations how to recognize and counteract the devious and diabolical schemes of those who would use these methods until they had succeeded in enslaving all of the known civilized world. Mere observance of Captive Nations Week in the future will not be enough; we must devise ways and means of halting the hordes of barbarians. The world has faced this same dilemma many times before. Let us not neglect this opportunity—the same kind of opportunity which other civilizations failed to grasp; their reward has been oblivion.

Celebration of Captive Nations Week, although as yet unofficial in the United States, has been a great source of irritation to the Kremlin; it therefore must be a sound proposal and one toward which all of us should bend our every effort to have enacted into law. The practice of freedom can well prove the Achilles heel for the enslavers of so large a part of the world that only recently enjoyed the same freedoms that we now enjoy in the United States.

It is significant that this Captive Nations Week proposal was adopted and we shall make it a cornerstone in our continuing fight for the freedom of all peoples. The stand that the United States has taken is crystal clear; it is written for all to see in our beloved Declaration of Independence; it is part and parcel of our national fabric; an inextricable part of our national morality; let us offer hope to enslaved nations through it.

Project Hope

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. PELLY. Mr. Speaker, it was most gratifying to find tangible evidence that

the mercy ship *Hope* presently in Indonesia is not forgotten in America.

In the congressional district I have the honor to represent, the Seattle Advertising Club, mindful of this human mission of sharing our technological advances in medicine with other peoples of the world, recently contributed $175 to Project Hope. In thus aiding the work of this hospital training ship, the Ad Club passed the following resolution which I know will please the Members of Congress so many of whom have had a deep personal interest in the success of this privately sponsored people-to-people action program:

In recognition of the outstanding contribution of the *Hope* Ship to the betterment of man, to the fulfillment of world peace, and to the building of lasting friendships among the underdeveloped countries of the world, the Seattle Advertising Club and members extend their sincere appreciation and congratulations. It is hoped that this ship will be the forerunner of a "great white fleet" which will extend the hand of fellowship, the precious gift of knowledge, the priceless endowment of hygiene and health, wherever it is needed throughout the world.

Red Slant Reaches 10 Million U.S. Readers

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the March 1961 issue of Nation's Business:

RED SLANT REACHES 10 MILLION U.S. READERS—COMMUNISTS PRINT AND IMPORT MANY TONS OF PROPAGANDA IN EFFORT TO GRAB MINDS

Communist publications are doing a booming business in the United States.

Freedom of the press, along with loopholes in our postal and antisubversion laws, allow Communists to print and import more than 10 million newspapers, magazines, pamphlets, and tracts here each year. This is in addition to the Reds' efforts to infiltrate legitimate U.S. publications.

President Kennedy has ordered a review of some aspects of the problem.

Efforts to stem the tide without violating traditional freedoms are underway in Congress. Representative FRANCIS E. WALTER, chairman of the House Un-American Activities Committee, has introduced legislation to tighten up on shipment of Red propaganda from foreign lands to this country. Other lawmakers have proposed denial of bulk mailing rates to Communist publications.

Businessmen can help stamp out the anti-American publications in several ways. The Federal Bureau of Investigation offers these tips:

Be informed. It's easy to identify the Worker as a Communist newspaper, but some Red magazines, for example, may mislead the casual reader. By learning to identify these publications you will be better able to guard against them.

Send them back. The Communists often mail publications at random, hoping to land a subscription. If you send them back, or write the publication demanding to be dropped from the mailing list, you won't get any more. You might also want to check whether such publications are coming to your company without your knowledge. Incidentally, receipt of Communist material does not necessarily mean you will be suspected of subversion. You might be if you encourage it.

Send no money. While the Communists are more interested in promoting their form of government than making money, they won't continue to send materials to noncontributors over a long period. Refusing to give anything to their publications or organizations is one of the best ways of stopping them.

Both foreign and domestic Communist materials cling closely to the international party's line which seeks to discredit the goals of the U.S. Government. But the two types present entirely different problems, each requiring a different remedy.

Communist publications printed in the United States represent only a tiny fraction of the material circulated here. Because they are tied more closely to American life, however, their impact may be greater than that of slicker materials prepared abroad.

HOW REDS TWIST THE TRUTH

Recent issues of the Worker, the party's weekly newspaper, provide some excellent examples of the Communist tactic of seizing on and distorting news events.

Even the weather is used to make the party's point. "A Good Snow Removal Job Requires City Hall Cleanup" was the headline on a story in the Worker. Here are excerpts:

"One full week after the storm, out on main sidewalks, at the front entrances of tenement houses, all the way from a half-dozen to a dozen garbage cans stood, filled to overflowing, uncollected.

"The only exceptions to this disgraceful and disgusting situation were the modern homes and apartments of the well-to-do."

After citing troubles with unheated apartments and transportation snarls, the Worker concluded:

"These problems will not be solved by dependence on the old parties, representing the vested interests. The city administration representing these interests, will only take steps in the people's interests under the organized pressure of the people. More substantial progress will be made to the degree that the common people act together in a new political coalition. The unions, the Negro people's political movement, the Puerto Ricans, the insurgents and liberals provide the ingredients for such a coalition."

This is the type of news the Worker supplies 14,365 subscribers, by its own count. Experts on communism in the United States warn, however, against judging its readership or influence by the relatively low circulation figure. It's known that copies are passed around among several party members and sympathizers. Moreover, it can be bought for 15 cents a copy at newsstands in some larger cities.

Known as the Daily Worker until 3 years ago, when lack of money and other problems forced the Communists to put it on a weekly basis, the Worker is published in New York.

A similar west coast paper, called the People's World, is published in San Francisco. In other major cities, some newspapers in Russian, Lithuanian, Polish and Croatian carry the party line.

New Horizons for Youth, a newspaper launched in 1960, is aimed at attracting young American readers. An editorial in the first issue proclaims: "We are independent of any group and rely on our own efforts."

However, FBI Director J. Edgar Hoover in his year-end report to the Attorney General last December said: "Under the editorship of their national youth director, the Communists have begun issuing a special publication. New Horizons for Youth, aimed directly at America's young people."

Circulation figures for the chief Communist magazines produced in the United States seem negligible, but they, like the Worker, are usually shared by many persons. The slick, pocketsized Political Affairs claims only 1,028 paid subscriptions, while Mainstream, a cultural magazine, lists only 3,000. Both have been declared to be Communist publications in official statements of Federal authorities.

WHAT RED OFFICIALS WRITE

In the past year, Political Affairs has published articles by such Communist leaders as Gus Hall, chairman of the national party, on "Our Sights to the Future"; Hyman Lumer, its educational director, on "U.S. Imperialism and the Congo"; and Claude Lightfoot, a Chicago party official, on "The Negro Question Today."

Mainstream relies heavily on highbrow articles and poetry by foreigners, and twists selected passages from well-known authors to make the party's point.

Red printing presses also turn out an endless stream of pamphlets dealing with current events or party doctrine.

"The party wants mass readership," Mr. Hoover notes. "Communist literature is today being sold for 5, 10, 20, 25, and 35 cents. Even these prices are considered too high."

Unlike other publishers, the Communists are not interested in making a profit. Their aim is to influence readers and promote Red doctrine. None of the magazines carries advertising, and the Worker generally publishes only notices of meetings, tributes to comrades, and memorials to party leaders or deceased relatives. This ad is typical: "Dinner to help * * * win back his citizenship. Donation $1, musical program."

To make up the deficit in advertising revenue, the Worker conducts a constantly frantic fund-raising campaign. Last November and December, for example, it beseeched readers to send in $25,000 or "the voice of truth" would be stilled. Actually, authorities on communism say the party's general funds must carry most of the financial load of its publications. Just how much is involved is not disclosed, but Mr. Hoover calls the publishing activity a multihundred-thousand-dollar operation.

Government officials, in and out of Congress, concede little can be done to stem the publication of subversive material in this country. The First Amendment's guarantee of freedom of the press protects Communist as well as other publications. But some Congressmen contend that the Red propaganda should at least pay its way in the mails. So far, their efforts to deny such publications the right to use bulk rates provided for other newspapers and magazines have not been successful.

Some of the more arrogant leaflets sneer at the freedoms that permit their circulation here.

Things would be different if Communists gained control of the United States, according to a pamphlet entitled, "The Free Press, Portrait of a Monopoly."

In Russia, it claims, there is real freedom of the press—for "the organizations of the people, such as trade unions, cultural and scientific organizations, etc.

"There is, however, no freedom of the press for rent-collecting landlords, bankers, industrial monopolists. The Soviet press is frankly not a formally democratic press but a press of the working people."

Imported Communist publications present still other problems.

In volume, they far outweigh domestic Red materials. Irving Fishman, deputy collector of customs at the port of New York, reports that approximately 6 million packages containing about 10 million copies of Communist printed matter were imported in 1959.

That's an 18-percent increase over the year before, and about double the 1955 volume. Moreover, it does not include first-class mail, which can't be intercepted without permission of the recipient. Mr. Fishman estimates that 125,000 individual envelopes of this type of material are received each month at New York alone.

TARGET: YOUNG AMERICANS

Much of the foreign Communist material is directed at young people in the United States. In 1959, 380,000 packages, containing about 580,000 items, were addressed to students, schools or colleges. The volume has been increasing at the rate of almost 40 percent a year.

Shipments from Red China and through Latin America also have been increasing rapidly, officials say, while the volume from Europe has dropped. The Customs Bureau had to set up a screening unit in New Orleans to handle the flood of propaganda coming in from the south.

Representative WALTER'S legislation would close some of the loopholes in the present laws covering such imports. Each copy is supposed to be labeled as propaganda, so recipients will be aware of its origin. However, the law does not provide for this labeling before importation, and customs officials are unable to check every shipment, so many items undoubtedly slip through.

In addition, bulk shipments to foreign agents here need not be labeled, and it's believed most of them do not label the individual pieces when they mail them out. Finally, shipments made through friendly countries need not be labeled. The Communists are taking advantage of this loophole to send much of their material through Latin America, Canada, and non-Communist European countries.

Hon. W. F. Norrell

SPEECH
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1961

Mr. RABAUT. Mr. Speaker, the sudden passing of our gentle colleague, Representative W. F. NORRELL, on February 15, came to me as a great shock. BILL NORRELL and I served together on the House Appropriations Committee for many years. During that time, I learned to know him not only as a friend, but as a good Christian and a man of conscience.

This country can little afford to lose a man so dedicated to the public interest as Congressman NORRELL. The years of our association has brought home to me the thought that of my many congressional associates, he was the man to be respected because of his wisdom, admired because of his strength, and loved because of his devotion to God and America.

To his family goes my heartfelt sympathy; to the Nation he so notably served, my prayers.

Amerigo Vespucci

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. BOLAND. Mr. Speaker, I think it safe to assume that when the name of Christopher Columbus is mentioned most of us have a fairly clear idea of the identity of the individual referred to. But I am bold enough to hazard the guess that when we refer to the official name of our country, the United States of America, some of us might be a little vague concerning the derivation of the last word, as applied to the two western continents. At any rate, I feel it will do no harm to refresh our memories as to why we are called the United States of America and hence are Americans and not Columbians.

Amerigo Vespucci was born, probably on March 9, 1451, or 1452, the son of a Florentine notary. A clerk in the commercial office of the Medici, the great banking family of Florence, Vespucci seems generally to have resided in Spain, especially in Cadiz and Seville, no doubt as an agent of the Medici. It is recorded that he acquired "an excellent practical knowledge of astronomy" and was the greatest expert of his day in the calculation of latitude and longitude, and made an avocation of geography and the collection of globes, charts, and maps. As contractor to the Spanish Crown for the fitting out of vessels, it is probable that Vespucci participated in the organization of Columbus' second voyage in 1493.

Our knowledge of Vespucci's voyages are based on his own letters, which are sketchy and generally believed to be unreliable, as they are in part contradictory. All the originals have been lost. Despite his reputation as the greatest expert of his day in the calculation of latitude and longitude, his accounts of all of his four voyages to the New World, beginning with the first one in 1497, are hopelessly confused and there is no telling just what landfalls he made. His letters, it should be added, are cursory and informal and not in the nature of official reports. In a letter written probably to one Pietro Soderini, chief magistrate of Florence, dated September 4, 1504, he gives an account of the four voyages he says he made; in the first, that of 1497, he says that after running to the Canaries, the expedition made land 1,000 leagues to the southwestward from those islands and then proceeded to coast for 870 leagues along a shore so extensive that it was though to be a continent; passed 37 days in a fine harbor and then returned to Spain. It has been surmised that Vespucci possibly might have sailed from Cape Honduras to a point not far from Cape Canaveral, Fla. If this is so, then he did indeed touch the continent which, however, like Columbus a year later, he thought to be that of Asia.

From this letter, supposedly to the Florentine magistrate, of which four printed copies exist, without place or date, but probably written before 1507, a French version was made, and from this one in Latin, printed in Lorraine in April 1507, which was immediately made use of by Martin Waldseemüller, professor of cosmography in St. Dié University. Because in some of the earlier reprints of Vespucci's letters the title, or introduction, bore the words "Mundus Novus"—New World. Waldseemüller made the first suggestion in a printed book that the newly discovered fourth part of the world "should be called America, because Americus discovered it."

But this is by no means certain, in fact, since Alexander von Humboldt, founder of the science of physical geography (for whom the Humboldt Current is named) published his great work in 1837, scientific and scholarly opinion has generally inclined to the belief, according to Sir Charles Raymond Beazley, contributor to the article on Vespucci in the Encyclopaedia Britannica, that the Florentine had no part at all in the discovery of the continents and the isthmus which now bear his name.

Be that as it may, our republic remains the United States of America—and may the name long figure on the maps and in the histories of this our world.

Employment and Unemployment in New England and Northeastern Labor Markets

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following fact sheet compiled by the Area Employment Expansion Committee of New York City which is a complete recapitulation of unemployment rates by areas in New England and the northeastern labor markets, both large and small areas. These figures certainly support the need for early adoption of the depressed areas bill now before the Congress. The Senate is scheduled to turn its attention to this legislative program this week and it is my hope that the House will take action on this bill very soon. All supporters of the depressed areas bill can feel optimistic this year because the President has indicated he will sign the measure, unlike the past when we suffered two defeats by Presidential veto.

The fact sheet follows:

Fact sheet No. 38–G.—Employment and unemployment in New England and northeastern labor markets, 1960

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. RYAN. Mr. Speaker, March 3 was Bulgarian Liberation Day. We in America are blessed with the privilege of commemorating this day in a land where freedom abounds. The greatest danger to this freedom, in fact, may be that we take the precious gifts of liberty and independence so much for granted. I feel confident, however, that Americans of Bulgarian descent will never make this mistake. They feel too deeply the loss of liberty suffered by their friends and relatives behind the Iron Curtain.

For them Bulgarian Liberation Day is more than a commemoration of the events of the past. It is also a symbol of dedication to the task of strengthening freedom in our own country and restoring it where it has been lost abroad. It is an expression of hope that someday all people everywhere will enjoy the material abundance, the human dignity, and the political freedom which are our privileges.

Let us review the events which brought about the day we commemorated. What was the course of history which brought liberation from one alien ruler, only to be later lost to the current Communist tyranny?

The Bulgarian people, let us not forget, enjoyed a large measure of freedom and independence in their own kingdom during the Middle Ages. Theirs was a formidable force to be reckoned with in southeast European affairs. They exerted their full weight in Balkan events. But the uneasy and precarious balance of power in the area changed late in the Middle Ages with the appearance of a new force in the Balkans. This new force was the entrance of the Ottoman Turks in the 14th century. It spelled disaster to all nationalities there. The Balkan countries were overrun and their inhabitants were brought under the yoke of autocratic Ottoman sultans. Bulgaria in its turn became a province of the Ottoman Empire late in the 14th century, and the Bulgarians the unwilling subjects of the Sultans.

Thenceforth for nearly five centuries, until the 1870's, Bulgarians endured the heavy and oppressive yoke of the Sultans. During all that time they were governed by callous and ruthless agents. They suffered hardships, indignities, inequities, insults, and even abject serfdom. The peasants were taxed to the point of bankruptcy, and many families were robbed of their dear male children because the obnoxious and inhuman method of child taxing, imposed on Christian families, seemed the only way of providing the Ottoman army with its elite corps—the Janissaries. From these harassments there seemed to be no escape for the Bulgarian people. They staged many rebellions, but each attempt was suppressed with increased fury, often with barbaric ferocity. It was, however, world reaction to one of these atrocious deeds of the Turks which finally brought liberation to the Bulgarian people.

In the 1870's the Balkan peoples took up arms against their overlords. In 1876 the Bulgarians rose in revolt. As before, Turkish soldiery fell upon the innocent, massacring thousands of youths, men, and women, indiscriminately. When the news of this bloodbath reached the outside world public opinion everywhere was shocked. Russians, under the lead of the czarist government, proposed drastic measures, even intervention, to prevent the recurrence of such terrible deeds. But the governments of other European powers were not prepared for such a step. In the end, Russia actively intervened. It declared war on the Turks early in 1877 and fought them with the help of the Balkan peoples. By early 1878 the Turkish forces were defeated on all fronts. The treaty of peace signed on March 3 provided for Bulgaria's liberation.

But that day did not bring complete independence. Sovereign independence was attained only in 1909. But March 3 of 1878 was a good beginning, and it is appropriate we should mark that day. Thenceforth Bulgarians worked for their full political independence.

Even after independence, however, the Bulgarians were fated to lead a rather stormy life. The Balkan Wars of 1912–13 and the two World Wars proved ruinous and tragic. In the first war they were victorious initially and extended Bulgarian territory. However, their allies turned against them and they lost to their partners more than they had gained. I need not recount how in both World Wars Bulgaria was on the losing side. Nevertheless, after 1918, even though their land was truncated, many Bulgarians were reconciled to their situation, hoping to make some gradual territorial adjustments with their neighbors through peaceful means.

Then came the Second World War, bringing with it more misery and misfortune and eventual enslavement under Communist totalitarian tyranny. Once drawn behind the ever-tightening Iron Curtain, Bulgaria became, for all practical purposes, part and parcel of the Soviet Union. The Bulgarian people were completely cut off from the outside and the free world, and were compelled to orient their government, their lives, even their thinking to that of the Soviet Union. Liberty has been denied to them by the Communists tyrants in their own homeland.

Here in America, Bulgarians of U.S. nationality enjoy a very different sort of life. We respect the contributions they have made and are making to our great country; and we know they will continue to join with all of us in building this great democracy. And we join them in looking forward to the day when Bulgaria will be master in her own house.

Wales, the Cradle of Liberty

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. RHODES of Arizona. Mr. Speaker, under leave previously obtained to extend my remarks in the Appendix, I include herein an address entitled "Wales, the Cradle of Liberty," delivered by Benjamin Owen, a member of the Welsh Cambrian Society of Arizona.

March 1 is the day upon which persons of Welsh ancestry celebrate the birth of St. David, the patron saint of the Welsh. It is fitting at this time of the year that contributions of Wales and the Welsh people to our way of life and to the cause of freedom of the mind and body be recalled and properly appreciated. Since I am half Welsh and very proud to be, and since I am also a friend of Ben Owen, and proud to be, I am glad to share his work and his words with the Members of the House.

The address follows:

WALES, THE CRADLE OF LIBERTY

(By Benjamin Owen, member, Welsh Cambrian Society of Arizona)

The calendar tells us that it is February 28 in Phoenix, Ariz., but for the purpose of our gathering here this evening, it is March 1 in the land where you and I, our parents or ancestors first saw the light of day, and if I possessed a magic carpet, I would use its supernatural powers to transport everyone here to that land 3,000 miles away—"Wales, Mae Hen Wlad Fy Nhadau" where we would blend our voices with thousands of other Welsh sons and daughters, in singing some of the great Welsh hymns such as "Beth Syd Imi Yn Y Byd," "Delyn Aur," "Rachi," and others, and listen to the inspired oratory of our bards as they pay homage and tribute commemorating the life of our patron saint, "Dewi Sant" (St. David).

St. David was the greatest patriot and reformer that Wales ever produced, and, as history has proven, he established a pattern that has served to inspire other great leaders who came after him, and did much to make us the Bible-reading, liberty-loving and law-abiding people we are today.

St. David devoted his life in a militant leadership of his people from out of the foul darkness and superstition of paganism, and gave to us a newer concept of God as the Father of all men, and in whose holy light all men were equal, an equality they had never known, and a sublime and courageous faith in the love of God.

St. David displayed great courage when he proclaimed what he believed to be the "truth of God" in an age of darkness and superstition, condemning the evil deeds of kings and the evil ways of those who sought to govern the land. His course of action at all times was inspired as well as fortified by the old Druidic adage "Y Gwir Yn Y Byd" (the truth against the world) a pattern of faith that has stood the test of centuries, and is as immortal and eternal as the heavens.

It is not much we know of the life of St. David, as the making of such records was not the custom of that day, rather we must depend upon stories handed down from father to son, and which were often embel-

lished in order to glorify the subject, but that proves there was a worthy subject to glorify. We do know however, that St. David was born in Cardigan about the year A.D. 520. His mother's name was Nonnita or Better Non. She was an exceptionally devoted woman, and many churches were consecrated to her name not only in Wales, but in Cornwall, Devon and Brittany.

Dewi Sant's father was the King or Prince of Cardigan, something like a Governor of our State, but with no Federal power to overrule him. St. David was educated at Menevia in South Wales by Catholic monks, and at an early age went on a preaching tour of the peninsula. He was a great and inspiring preacher and soon became noted as a priest. He was later made a Bishop and virtually the head of the Catholic Church in Wales. He was canonized by Pope Calixtus in the year A.D. 1120 at the request of Henry the First.

There are 53 churches in Wales that claim him as founder. After his death about A.D. 588 he was buried at St. David's. There is a belief however that both St. Patrick and St. David were buried at Glastonbury Abbey, which during the life of St. David was the Mecca for Christians from all parts of the world.

In line with our subject it is appropriate to indulge in an historical survey, and in skeleton form, briefly sketch the contribution of Welshmen to America in statesmanship, education, industry, and religion—great and essential services on which, in the eyes of the civilized world a nation's reputation is built. For our purpose we will continue on our magic carpet and journey to the famed city of Aberystwyth, Cardiganshire, a most beautiful seaside resort, and where the College of Wales is situated.

From there we will take a hike up a nearby mountain, from the top of which—on a clear day, we can see the whole of Wales—12 counties in all. Six to the north and six to the south. This little section of country is referred to by Welsh historians as "The Cradle of Liberty," and some of us are egotistical enough to think that had there been no Wales, there possibly would have been no United States of America.

Over there in a northwest direction was born Howell Dda (Howell the Good), a Welsh king, the great law giver of the ninth century. Howell's laws, among other regulations, provided for the protection of life, liberty, and property from arbitrary spoliation; trial by jury, and the right of a wife not to be compelled to testify against her husband. They also redressed numerous grievances connected with laws then in force in the principality of Wales, and elsewhere.

Howell's law became a part of the Magna Carta, the great charter granted by King John at Runnymede, June 15, 1215, and the man who forced King John to sign his name on the dotted line was none other than William Marshall, of West Wales, Earl of Pembroke. As you know, the Magna Carta was written into, and became a part of, the Constitution of the United States of America.

Pointing in the direction of Snowdon, "In that farmhouse on our right was born Peter Jefferson, the father of Thomas Jefferson, the man who wrote the Declaration of Independence and who later became President. Over yonder is Tynton, where, on the 22d of February 1723, was born Richard Price, son of a dissenting minister. In 1766, Dr. Price published his 'Observations of Civil Liberty' and the 'Justice and Policy of the War With America'."

Dr. Price was a preacher of the gospel of human liberty and human rights. Benjamin Franklin held him in unbounded admiration, and said it was Richard Price who precipitated the American Revolution, by advising that if King George put that tax of a penny a pound on tea in Boston Harbor, the colonists should rise in their might and dump the cargoes into the sea. So, you will observe, the famous Boston Tea Party had its origin, not in a Massachusetts indignation meeting, as people were led to believe, but in the quiet precincts of a humble Welshman 3,000 miles away, and almost under the very nose of King George III, in London.

Tom Paine wrote "Common Sense," and the "Age of Reason," but it was Dr. Price's book on "Civil Liberty" that roused public opinion on both sides of the Atlantic and determined the Thirteen States to take issue with the then King of England, George III.

Jefferson said it was Price who convinced the world of the iniquity of George III.

That little booklet of Dr. Price's, "Civil Liberties," found its way across the Atlantic and was circulated throughout the length and breadth of America. It inflamed the whole people of our land, and in Britain transformed public opinion to an extent which divided Parliament. It was Richard Price who forced the issue. Price's little book was the most powerful deciding factor in determining America to declare its independence. He advised both Jefferson and Franklin to call Congress or Convention and announce to the world their position, their reasons, and their purposes. The result was the Declaration of Independence, the Fourth of July, and the birth of our great Nation.

Here is an extract from Dr. Price's book. I quote: "Every member of a free state, having his property secure, and knowing himself his own governor, possesses a consciousness of dignity in himself his own governor, and feels incitements to emulation and improvement, to which the miserable slaves of arbitrary power must be utter strangers. In such a state the springs have room to operate, and the mind is stimulated to the noblest exertions. But to be obliged, from our birth, to look up to a creature no better than ourselves as the master of our fortunes; and to receive his will as our law—what can be more humiliating? What elevated ideas can enter a mind so situated? Agreeably to this remark: the subjects of free states have, in all ages been most distinguished for genius and knowledge. Liberty is the soil where the arts and sciences have flourished; and the more free a state has been, the more have the powers of the human mind been drawn forth into action, and the greater number of freemen has it produced. These are reflections which should be constantly present to every mind in this country. As moral liberty is the prime blessing of man in his private capacity, so is civil liberty in his public capacity. There is nothing that requires more to be watched than power. There is nothing that ought to be opposed with more determined resolution than its encroachments. Sleep in state, as Montesquieu says, is always followed by slavery."

On October 6, 1778, the American Congress resolved as follows: "That the Honorable Benjamin Franklin, Arthur Lee, and John Adams be directed forthwith to apply to Dr. Price and inform him that it is the desire of Congress to consider him a citizen of the United States, and to receive his assistance in regulating their finances; that if he shall think it expedient to remove with his family to America and afford such assistance, a generous provision shall be made for requiting his services."

So you will see, this ancient and forgotten tale of America's greatest and best of friends puts a new phase on things. Franklin declared that the resolution I have just read to you was the very embodiment of the voice of wisdom, and was the call of the United States to the ablest man of the day to come to America and assist in the formation of a government which would establish the policies of equal justice and the fundamental rights of the people, together with a sound constructive yet conservative financial policy.

A little north of where Dr. Price was born, is the birthplace of Robert Morris, who financed the Revolution, and of whom General Washington said "he doubted if the Revolution would have been carried out had it not been for this same Morris."

South of us was born in 1559 Roger Williams, founder of Rhode Island, who gave America its first law on "The Liberty of Conscience," that law held the power of the civil magistrates only to the bodies, goods, and the outward state of man, and not so their souls or consciences.

Roger Williams founded the city of Providence in 1635, and established there a government of pure democracy. He actually set up a government which served as a model for the form of government which was ratified by the American Colonial fathers nearly 150 years after. It is not generally known, but Williams was aided by four other Welshmen, namely, Thomas Harries, Richard Williams, William Reynolds, and Thomas Hopkins. These men showed their inherited love of liberty all through the years which followed in Rhode Island's history. I used the word "inherited" advisedly, for I know with the Welsh people the love of liberty is born and bred in the bone.

From the same section of country which gave us Jefferson, came William Penn, who stands among the first as a lawgiver. William Penn was the founder of Pennsylvania, and a certain writer once said of both Roger Williams and William Penn: "If Welsh influence in New England and Pennsylvania had been that of Williams and Penn only, the Nation that gave them birth might well feel proud, and the Nation, the United States of America, whom they served with distinction, might well feel thankful."

The ancestors of Patrick Henry came from yonder little village. Patrick Henry is reputed to have been one of the most eloquent of American orators. One of the speeches Patrick Henry made in the year 1775 is on par with that of Caractacus, the great Welsh chief, given before the Roman Emperor Claudius, 55 B.C. Patrick Henry asked, "Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, almighty God, I know not what course other may take but, as for me, give me liberty, or give me death." Identical language used by Caractacus in defiance of Emperor Claudius.

Among the signers of the Declaration of Independence were 17 men who were of Welsh birth or origin. Let me mention a few: Stephen Hopkins, of Rhode Island; William Williams, of Connecticut; Francis Hopkinson, of New Jersey; John Morton, of Pennsylvania; John Penn, of Virginia; Arthur Middleton, of South Carolina; Button Gwinnett, a native of Swansea, South Wales and delegate from Georgia; Benjamin Harrison and Richard Henry Lee from Virginia; Francis Henry Lightfoot, another signer from Virginia was also of Welsh origin. Of the four delegates sent by New York to the Continental Congress in 1776, a native of Long Island, Francis Lewis, was born in South Wales, and the third was Lewis Morris, born of Welsh parents.

I might also mention that of the 34 Presidents of our United States, 8 of them were of Welsh ancestry: John Adams, Thomas Jefferson, John Quincy Adams, James Madison, James Monroe, William Henry Harrison, James A. Garfield, Benjamin Harrison, and Abraham Lincoln.

And in the field of education, let us look toward the north of Wales. One of the founders of one of our great American universities, Yale, bears the name of its founder, Elihu Yale of Plas Newydd, North Wales, and whose body now reposes in a churchyard at Wrexham. I could name other famous educators who had Welsh blood in their veins, such as John Harvard after whom

Harvard University is named; the Reverend Morgan Edwards and Dr. Samuel Jones who founded Brown University; Colonel Williams whose name lives in the institution at Williamstown. The Phillips Academy at Andover and the Phillips Academy at Exeter also attest the interest of Welsh blood in the cause of education.

We could spend profitable hours extolling the lives of many other illustrious Welshmen who have contributed much toward the industrial social, and cultural life of our adopted country, the United States of America, such as Charles Evan Hughes, Chief Justice of the U.S. Supreme Court; Owen Roberts, Justice of the U.S. Supreme Court; Joseph Davies, author of the book "Mission to Moscow" and special Ambassador to Moscow; James J. Davis, U.S. Senator, Secretary of Labor and founder of "Mooseheart"; and many others, but time is of essence, so reluctantly, we bid farewell to Gwalia, and descending from our imaginary mountaintop, we take a last gulp of the free air of our beloved Wales, and climb aboard our imaginary carpet to return once again to the land where freedom is a reality, and with the profound and prideful belief, that the view we took from our imaginary mountaintop, provided us with enough facts to justify the title of our subject: "Wales, the Cradle of Liberty."

Nos Dach.

Alaska and New Federal Judgeships

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1961

Mr. RIVERS of Alaska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement, which I submitted last week to Subcommittee No. 5 of the Committee on the Judiciary of the House of Representatives in support of H.R. 2226, the so-called omnibus judgeship bill, to provide for the appointment of 63 additional district court judges. This statement highlighted the need for an additional district court judge for the U.S. District Court for the District of Alaska. The statement follows:

STATEMENT OF HON. RALPH J. RIVERS, OF ALASKA, ON MARCH 1, 1961, BEFORE SUBCOMMITTEE NO. 5 OF THE HOUSE COMMITTEE ON THE JUDICIARY ON H.R. 2226

Mr. Chairman, I appreciate the opportunity of being heard on the matter of H.R. 2226, the so-called omnibus judgeship bill, to provide for the appointment of 9 additional circuit court judges and 63 additional district court judges. I speak in support of this measure, but shall confine my comments to the need for an additional district court judge for Alaska, as is provided for in this bill.

The U.S. District Court for the District of Alaska came into existence on February 20, 1960, pursuant to Alaska's becoming a State. Prior to that time, the District Court for the Territory of Alaska, which was composed of four divisions, served as the only judicial establishment in Alaska. According to a report prepared by the Division of Procedural Studies and Statistics of the Administrative Office of the U.S. Court, 3,048 civil cases were pending on the date that the district court for the territory ceased to exist. As might be expected, a large percentage of these cases were of a local nature and as a result were transferred to the new State courts. The remainder, totaling 214 civil cases, were transferred to the newly created U.S. district court. Between February 20, 1960, and December 31, 1960, a total of 101 cases were commenced and a total of 111 cases were terminated by the court. Therefore, at the start of 1961, a total of 204 civil cases were still pending before the court. To be sure, this figure is below the national average of backlogged cases pending before other U.S. district courts, and might not be considered impressive except for the unusual conditions prevailing in Alaska.

To vividly illustrate these unusual conditions I would like to quote several paragraphs from the statement of the Honorable Walter H. Hodge, U.S. District Judge for the District of Alaska, before the Committee on Court Administration of the Judicial Conference of the United States, at Seattle, Wash., August 16, 1960. At that time, Judge Hodge stated:

"First there was the problem of the very considerable backlog which faced the former U.S. district court at the time of the transition. At this time there was pending in the third division at Anchorage some 2,200 cases and in the fourth division at Fairbanks some 900 cases. The criminal cases had been kept fairly current but the civil cases were far behind, having been pending between the date of issue and possible date of trial for as long as 5 years and a great majority of them over 3 years."

"Facing this problem we attempted first to hold pretrial conferences in all civil cases throughout the circuit so far as we could reach them, covering the cases pending at Anchorage up through 1957 and those at Fairbanks through 1958. We were amazed to find that out of 54 such conferences held only two cases were immediately disposed of, one by confession of judgment and the other by order of the court, which of course is far below the national average."

"Travel involved is the next most serious problem. Alaska is by far the largest district in the Union, being approximately 2½ times the size of the State of Texas. The distance between Ketchikan, farthest point southeast where the judge is required to hold court, and Nome, the farthest point northwest, is slightly over 1,300 air miles. More appropriately, the distance from our headquarters at Anchorage to the four places where we are required to hold court, as given by the airlines, is as follows: Ketchikan, 768 miles; Juneau, 578 miles; Fairbanks, 263 miles; and Nome, 535 miles."

"The cost of travel is also significant, where we find that our cost as extending through September 30, 1960, is $10,839. These costs would not be eliminated by the addition of a second judge but would be substantially reduced. In this connection we find it necessary to take with us our clerk or deputy clerk as an in-court deputy for the reason that at the four places other than Anchorage we have the assistance of the State superior court clerks who also serve as deputy clerks of our court without compensation, and we find that we cannot justly require them to appear in court. We also need the services of a reporter, my secretary, and a law clerk, whose services I find invaluable in doing research work."

"It is my firm belief that the task cannot be adequately accomplished by one judge. I am not thinking so much of the burden upon the judge as the burden upon litigants who have been so long awaiting disposition of their cases."

By now, I have the latest figure showing that by December 31, 1960, the total cost for travel, including subsistence expenses, has risen to $18,859.13. Furthermore, the travel by air has frequently been delayed by bad weather, resulting in delays in court schedules, and increased travel expenses. It should also be mentioned that Alaska is growing rapidly so that the volume of business will increase apace.

Inasmuch as the U.S. District Court for the District of Alaska is not as yet a year old, no record of cases filed or terminated, or of the time required to dispose of cases covering a full year has been compiled. However, attached to this prepared statement is a copy of the statistical study and general information summary prepared by Judge Hodge covering the first three quarters of operation of the U.S. District Court for the District of Alaska. These statistics demonstrate the need for an additional district judge.

In closing, Mr. Chairman, I would like to emphasize that the existence of the need for additional judgeships throughout the United States in the Federal courts, both district and appellate, has been amply proven and documented both in the records of previous congressional hearings and in the press of the Nation. We all know that the existence of court congestion and consequent delay in the disposition of cases causes serious hardship to the litigants. It also places heavy burdens on the judges so serious in nature as to impede the efficient performance of judicial functions. This is so in Alaska and in every other Federal district. Therefore, I respectfully urge that the committee report H.R. 2226.

Thank you, Mr. Chairman and members of this committee.

February Monthly Change Indexes

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. YOUNGER. Mr. Speaker, recently I inserted in the Appendix of the RECORD an article by Dr. John H. Hoagland, of the Graduate School of Business Administration at Michigan State University, relative to a prediction on the end of the present recession.

I am happy to insert now the latest prediction which includes the statistics for February which are even more encouraging than the January figures:

FEBRUARY MONTHLY CHANGE INDEXES

(By Dr. John H. Hoagland)

Purchasing business surveys now indicate that the business upturn will begin before mid-1961. A business cycle turning point must be near, for even the declining trends of February provide additional signs that the recession is abating.

Each passing month brings increasing evidence that this recession is similar to the recessions of 1953–54 and 1957–58, except this recession continues to be milder. As in previous months, the February declines in business have been less than those in comparable months of the two previous recessions.

Further improvement in the business climate should appear soon for as spring melts the heavy snows in industrial areas, so should the passing of time cause the pessimism in some quarters to blossom into optimism. The growth pattern of this optimism will determine, in part, the timing of the coming business recovery.

One dark cloud on the horizon causing concern is the approaching expiration of labor contracts in the automobile industries. As both sides prepare their positions, rumblings repeatedly reverberate in some

areas of business. Although this accumulating storm area foretells of possible dangers to a business recovery, there is a silver lining. Automobile strikes, though disruptive, have not inundated the total business scene the way the steel strikes did the years 1952, 1956, and 1959. A major business recession followed each of those steel strikes whereas, in 1958, the last major automobile strike did not retard, too much, the growth of that business recovery. Undoubtedly the business trends of 1961 are being influenced by developments in the automobile industries but it is hoped, and expected, that the results will not be too detrimental to the start of the 1961 recovery.

On the accompanying charts of Monthly Change Indices the comparative magnitudes of the current and preceeding recessions can be traced through February 1961. Those not accustomed to using Monthly Change Indices should recognize that these indices measure monthly rates of change and are based upon data from the business surveys of purchasing executives. A positive index signifies a rising trend and a negative index a declining trend, with the trend amplitude being indicated by the distance above or below the zero line—the point of no change from the preceeding month.

Almost all February Monthly Change Indices provide confirming evidence that the maximum rates of business decline occurred during the fourth quater of 1960. The diminishing declines of both January and February point toward better trends in the months ahead. Of 32 Monthly Change Indices charted here only the National and Cleveland employment indices reached new current lows in February, but these indices also should turn soon, as they did after February in the last recession.

In general the February trends show that the drops in order backlogs were significantly smaller than the declines of the preceeding 6 months. New order declines continued to be less than those of the last recession. Reductions in production were relatively mild. The greatest rates of decline in employment have been passed in most areas. The mild increases in industrial inventory liquidations were noticably less than those of the 1960 fourth quarter. Prices remained relatively stable, and vendors provided somewhat faster deliveries.

Although Purchase Policy Indices showed no appreciable lengthening of forward commitments there are growing signs that the reductions of 1960 have been terminated. This stabilization in purchasing policy is favorable, and future increases will strengthen business conditions further. The latter usually does not develop, however, until after the demand for goods increase and supplies are less readily available. The amount of expansion in purchasing policy will probably be moderate for long-term fundamental shifts have been developing as industrial capacities have increased and more electronic data processing equipment has been applied to purchasing and inventory control.

All five of the Monthly Change Indices from the National Business Survey showed greater declines in February than in January. With the exception of employment, the January and February declines were not as great as the average declines during the fourth quarter of 1960. In comparison with the last recession new orders, production, inventories and prices passed peak rates of decline 2 to 9 months earlier during this recession. The lack of a steel price increase in 1960 and the presence of one in 1957 probably caused some of this shift in timing.

As in the previous recessions, the declines in the New England areas have been relatively mild. New orders declined only moderately and production fluctuated between increase and decrease for the fifth month. Employment dropped slightly in February, after registering a minor rise in January and having passed a peak of decline in November. Raw material inventory liquidations increased a little in February, while work-in-process inventories registered minor accumulations. Prices increased slightly.

Detroit, an important area of automobile production, registered signs of improvement during February. The diminishing declines in both business conditions and employment showed that turning points occurred in those indexes during late 1960. Inventories were reduced further, but by lesser amounts, than the peak reductions of December 1960. Few changes were evident in prices.

In the Cleveland area the indexes for new orders, production, employment, and inventories all declined. This pattern is the same as for February 1958. In that year improving trends developed during the ensuing months. With so much similarity between the two recession patterns, further improvements should develop in the coming months of 1961.

February trends in the Pittsburgh area were also encouraging. Order backlogs declined less than any of the preceding 8 months, volume of business declines was less than the previous 4 months, and reduction in production was less than any month since September 1960. Employment declines in February were much less than the 4 prior months and inventory liquidations were greater than January, but less than the average for the fourth quarter of 1960. Vendors provided faster deliveries for the 15th consecutive month.

More encouraging trends also were registered for the Chicago area. Declines in order backlogs were less than during the preceding 7 months and reductions in production were less than the previous 6 months. Employment declines have not changed greatly during the past 7 months and inventory liquidations peaked 4 months ago. Vendors provided faster deliveries for the 14th consecutive month, after showing a peak rate of improvement in July. Prices were almost static.

PURCHASE POLICY INDEXES

Most of the purchase policy indexes show that forward commitments stabilized during the past 4 months, after declining during earlier months. The capital expenditures index indicated that reductions in this important area have ceased. In the Detroit area increases in purchasing policy were recorded for the second month.

Amerigo Vespucci: 1451–1512

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. PUCINSKI. Mr. Speaker, Amerigo Vespucci was the son of a notary in Florence, Italy, and he was fortunate to have been born in the classic age of exploration and discovery. True to his age, he was very much interested in navigation and exploration. He was also fortunate in his association with the famous Medici merchants of Italy, which offered him the best opportunity for sailing and seeing many parts of the then known world. Thus, at about 1500 when he entered the services of Don Manuel of Portugal, he had already seen and visited nearly all the famous cities in his day. He persuaded his patron to send him on expeditions beyond the seas, beyond the unknown. Soon he sailed away from European shores, crossed the Atlantic and is reported to have arrived at Cape Canaveral, Fla. He turned south and sailed as far down as the shores of Brazil. Having thus touched the shores of the two continents, he gave to both his name, Amerigo, soon to be known as America. Today on the 510th anniversary of his birth, we honor this daring and adventurous son of a Florentino notary, Amerigo Vespucci.

Our Republic: Bulwark Against the Tyranny of Majorities

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following excellent statement on the difference between a democracy and a republic appeared in the recent newsletter, Spotlight, published and distributed by the Committee for Constitutional Government. It was written by the very able and distinguished senior Senator from the State of Maine, the Honorable MARGARET CHASE SMITH.

Mrs. SMITH has covered the subject briefly, clearly, and completely. Her statement of the difference between a republic and a democracy has never been more perfectly set forth even in the Federalist Papers, where the subject is gone into at more length. In fact, it was James Madison who wrote in these same Federalist Papers:

Hence, it is that such democracies have ever been spectacles of turbulence and contention; have ever been found incompatible with personal security or the rights of property; and have in general been as short in their lives as they have been violent in their deaths.

The statement follows:

OUR REPUBLIC: BULWARK AGAINST THE TYRANNY OF MAJORITIES

(By Senator MARGARET CHASE SMITH, of Maine)

We talk a great deal about our American Government being a democracy. It is said that we fought two World Wars within a generation to "make the world safe for democracy."

Yet, do we know what we are talking about?

You may be surprised to know that our Government is not a true democracy. It is a republic. If you doubt this, take a look at the Constitution. Try to find the word "democracy" or "democratic." Then take a look at article IV, section 4, which says, "The United States shall guarantee to every State in this Union a republican form of government."

If you read the first 10 amendments to the Constitution, these amendments being more popularly recognized as the Bill of Rights, you will see that they directly flout the theory of democracy.

Now what is the difference between a democracy and republic—what are we instead of what some of us think we are?

A democracy is a truly representative government in which the supreme power is retained by the people and exercised by them. So is a republic. But a republic, such as ours, is a restricted and limited democracy.

The basic distinction between democracy and republic is in the degree of majority rule. Majority rule is unrestricted in a democracy while it is restricted in a republic.

The Bill of Rights part of our Constitution places definite limitations on the power of the representatives of the people. They are denied the power to abridge our freedom of speech, right of assembly, press, trial by jury, against unreasonable searches and seizures, and other individual rights—regardless of how much the majority might be opposed to such individual rights. Under a pure or true democracy, there is no protection of such individual rights against the rule of the majority.

Democracy actually means unrestricted majority rule that our Constitution so carefully prohibits. We are inclined to think of domocracy in the social sense rather than the political sense. We think of it as signifying equality among human beings. This ideal we do find expressed in the Declaration of Independence with the statement that "all men are created equal." But the ideal is even more basic than the Declaration of Independence. It is in reality the Christian concept of the Golden Rule.

So that there is good reason to distinguish between democracy and political democracy. By the sheer unrestricted rule of the majority of a political democracy, social democracy could be killed without any protection whatsoever to the minorities.

A republic is a truly representative government. It provides representation for the minority as well as the majority. It places individual freedom and rights above majority rule. If we were really a political democracy, instead of the republic we are, the will of the majority would habitually ride roughshod over the will of the minority. A republic creates and develops tolerance that acts as a bulwark against tyranny by the majority.

The U.S. Senate, in which I have the honor to serve, is striking proof that our Government is not a democracy but a republic. New York with a population of several million people has no more representation in the Senate than my State of Maine which has a population of less than a million people. Both States have two Senators each. This is a check against unlimited majority rule for the protection of the minority population states.

In short, a republic rather than a democracy is the American way simply because this country was settled and founded upon the love for liberty and individual freedom. Our republic protects our very rights to our beliefs even though we be in the minority. It protects differences of opinion.

India: Its Plans, Its Progress

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1961

Mr. FASCELL. Mr. Speaker, I call to the attention of the Members an article by Mr. Don Shoemaker, of the Miami Herald, dealing with what he feels are the major problems, or hurdles, facing India in the coming decade.

The article follows:

INDIA: ITS PLANS, ITS PROGRESS

(By Don Shoemaker)

In the dining room of New Delhi's giant Ashoka Hotel the Indian orchestra grinds out the overture to "Patience," proving how bad music can be when it is played literally.

Outside, a khaki-clad bearer, or porter, squats in the winter sun and contendedly chews his betelnut, thinking—like his father and grandfather before him—about nothing in particular.

Across town in a Government office where modern bureaucratese is already the rule but typewriters are absent, a smart young ministry officer drafts a memorandum on steel production at a plant more modern than anything in the United States.

These are the three sides of India in her crucial decade, the coming 10 years of the next two 5-year plans. These sides are the British legacy, which is fast disappearing; the old India that is sot in its ways and superstitious (and still very much alive), and finally the new India bristling with plans and dreams.

Which will come out on top, in peace and prosperity?

President-elect Kennedy, cosponsor in the Senate of the Kennedy-Cooper Indian aid resolution of 1958, has said that "how India goes, Asia will follow."

Needless to say, Mr. Kennedy is almost a trinity out here with Jefferson and Lincoln. On election night the U.S. Information Office in New Delhi got 4,000 telephone calls—a rare feat for this post-Victorian telephone system—while the USIS office in Calcutta got 8,000.

Almost without exception, the calls were pro-Kennedy. So Indians agree that the next American President correctly called the turn on India and Asia. Indeed, the new nations and nationalisms of Asia and Africa are looking to this subcontinent.

It seems to me that India's problems—or hurdles—stand up in this order:

1. Whether India can achieve true national unity and not break up into a confederacy of native language states.

2. Whether India can attain relative self-sufficiency in industry as it has done in food.

3. Whether India can establish itself in the 20th century without suffering its mild socialism to become something sinister.

4. Whether India can tame its restive Chinese neighbor or at least keep him in his own cage.

5. Whether Jawaharlal Nehru is followed by a man equally able to command the respect of the Indian people, for in regard to leadership Indians are living as Americans lived when George Washington was alive and President.

As for India's foreign affairs, they are complicated by the Red Dragon. When American newsmen on this tour did not meet up with expected polite taunts about the U–2 incident, Quemoy and Matsu, and U.S. military aid to rival Pakistan, there was one simple explanation:

China's rape of Tibet and invasion of disputed Indian border areas gave India a bad scare. At this moment Indian troops and Chinese troops look down one another's gun barrels at frontier barricades.

India would seem to be ill-equipped to meet the Red Dragon if he had on all his scales. The Indian defense budget is only $600 million a year, or less than the United States recently spent in producing a tank that never worked. The armed forces boast but 400,000 men and there are only 40,000 in the territorials, or home guard.

India and Pakistan are almost buddies again, but what is to be done about China is another matter. For once, India has had to take communism seriously.

The country's national unity is on every tongue but whether it is in every heart has yet to be proved.

Mr. Nehru, who uses words with Churchillian facility and exactness, framed the problem neatly in a speech at a Delhi school dedication the other day:

"We have always cared for the rich variety of India and we feel that a unity based on and recognizing that variety is far better than an attempt to produce some kind of enforced uniformity."

Nevertheless, India is striving for uniformity through promotion of a national language, Hindi, which is supposed to be used in lieu of English. But it is far from popular in South India, and its suggested exclusive use in the schools and colleges is being resisted.

Some Indians seriously fear the country may split up in native language states and that the wild Maharaja of Bastar may not be far off base when he says that "India will once again be the land of kings."

The maharaja is a kind of rich man's Huey Long who was relieved of his title and his lands 8 years ago. While he is wrong about every man a king, or at least every state a kingdom, he does reflect the parochialism which is visible in many of the states.

When these were reorganized 4 years ago to follow language patterns, some felt the government had made a mistake from which it might not recover. Hindi is "dandy," but millions of Indians are far more partial to Telugu, Tamil, Bengali, Kannada, Marathi, or Assamese, a partial rollcall of the regional languages.

At this moment, too, India would be unfortunate were it to lose the services of Mr. Nehru.

Like all strong men, he has not encouraged a succession—not deliberately, but simply because he is Nehru, the chosen instrument of Gandhi.

A Cabinet minister made a slip-up recently and appeared to liken Nehru to the banyan tree, which shelters everyone but under which nothing grows. He didn't mean it that way, and he is careful to explain his embarrassment. But he was right.

Khrishna Menon, the far-out Defense Minister, who has no political following save Nehru himself and who used to specialize in "cracks" at the United States (until Red China made noises at the border), is in no danger of becoming Prime Minister.

S. K. Patil, who "goofed" about the banyan tree, is Minister of Food and Agriculture and very smart political "cookie." He looks like a fair starter.

But if the mace had to be handed out by high noon, it might well go to Morarji Desai, the eloquent, astute, faintly puritanical, and hard-fisted Minister of Finance.

All these men are founding fathers of the Congress Party, which began in the last century not as a political party at all but as a sort of essay society. It is India's one-party system. Mr. Patil thinks it is good for about one more general election, or perhaps a decade, but what will come after?

The parties of the extreme left and right opposition can muster only about 6 percent of the vote and the Socialists lost their thunder to the planners. One of these wings, the Communist left, is suddenly unpopular because it roots for Red China.

The best guess is that a second party will spring from the Congress Party itself in good time, offering opposition but not immoderate government.

This could depend upon the state of the economy a few years hence.

Indians point out that their country has learned to produce enough food so that it is "beyond the famine threat forever."

They say that when the country has a steel surplus, perhaps 10 years from now, it will have much of what it needs indus-

trially and will be independent of foreign grants and loans.

These last have been abundant since the establishment of the Indian union 13 years ago.

Under the third Five Year Plan, the Indians hope to get at least $2 billion in aid from the United States. This is roughly what has come to them since 1947. Mr. Nehru also talks about a "massive" grant—a one-shot affair, and after that, nothing more.

But this is up to Congress. And to Indians themselves.

Their unique economic system is not wholly popular with their own people. Recently the government decided to begin the manufacture of diesel locomotives in the public sector, though there is precious little oil to fuel them while there is an abundance of coal for steam locomotives.

The Times of India gruffly called this a "strange decision," not only because there is little oil but also because private firms wanted the job if it had to be done. "What prompted the government to reject their offers?" asked The Times, answering: "It is difficult to resist the conclusion that the government has once again been swayed by narrow ideological considerations."

The future will depend, too, on the man who was little more than a pack animal under colonialism and who still seems to like it. Will his children get a technical education? Or will they, in the back villages and the city suburbs, continue to sunbake cow dung and sell it for fuel, thus depriving the land of fertilizer?

Whatever all the answers, this land of 400-million-plus—plus 8 million more a year—is the bellwether of the underdeveloped countries.

Its sympathies are undeniably democratic, despite a noisy and sometimes sinewy Communist minority.

Russia itself is in the third 5-year plan for a loan of $500 million. In the meantime the Russian Embassy floods the country with Communist literature and Marxist books, all translated into the regional languages, cheap, and fairly popular.

Using rupees from the Public Law 480 program, under which India got large quantities of U.S. wheat, we are going into the book business.

The U.S. Information Service, which maintains its largest unit in India, is publishing Kennedy's "Profiles in Courage" in Hindi and half a dozen other languages and is already circulating an account of American higher education. Next comes an anthology on American democracy. These books will be free.

One wonders whether this effort, which is worthy, is necessary. For Indians are very high on Uncle Sam at the moment and are likely to be higher as China glowers and the third plan nears.

The American in this part of the world definitely is among friends, many of them made so by President Eisenhower's triumphal visit last year but otherwise by circumstances. A decade may well seal the friendship as the meeting, at long last, of that twain from East and West.

Louis Ferini: An American of Distinction

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and insert therein the most meaningful and eloquent remarks of my distinguished friend, Mr. Louis R. Perini, in accepting the national award of the National Conference of Christians and Jews on the occasion of the 33d anniversary dinner of that great American organization.

Mr. Perini has had an outstanding and most successful career in business, which is not only a credit to him but symbolic of the opportunities which exist in this great country.

He is not only head of the renowned, worldwide contracting firm bearing his name, which he has conducted so successfully for years with his brothers and members of his family, but he is also the owner of the famous Milwaukee Braves, another very successful business venture, as well as a most colorful contribution to American sport.

Notwithstanding his very busy life, Mr. Perini has invariably found the time to engage in civic, charitable, and social service activities, and has given unselfishly of his boundless energy and money in support of many meritorious causes.

It is a happy circumstance, indeed, that the Conference of Christians and Jews has so appropriately honored Louis Perini for his magnificent contributions, and I am happy and proud to add my heartiest congratulations to those which have been expressed to Mr. Perini and his family upon this signal event and great honor. I sincerely wish for this great American and his family many more years of good health, success, and happiness, and continued distinguished service to the Nation.

Mr. Perini's remarks follow:

CAN YOU FORESEE WHAT COMMUNITY BROTHERHOOD COULD DO FOR ALL?

(Remarks of Louis R. Perini in accepting national award of the National Conference of Christians and Jews from Roger P. Sonnabend, general chairman of the 33d anniversary dinner in the Somerset Hotel Ballroom, Boston, Mass., Thursday, Feb. 9, 1961)

Mom—I—our kids have been the recipients of many kindnesses from this community we love and call home.

Incidentally, since my memos were originated several weeks ago, some of this has become stale. Nevertheless, it still retains a current odor.

While still very young, I was subjected to tolerances associated with this inspiring Brotherhood of Protestant, Eastern Orthodox, Catholic, and Jewish movement of kindness toward neighbor and understanding of others' religious beliefs—languages—and our parents' inherited way of living, along with their old countries' cultural habits.

Since I am now dealing with the social, I must say it is nice to be here and still alive. It's been many years since I was last called—"Oh you Guinea—Oh you Wop—Oh you 2-cent lollypop." Brotherhood is a great healer. You people who years ago were called "Limeys, Sheenies, Micks, and Krauts" must remind our fellow citizens of darker pigmentation that time, patience and tolerance will reward them. For baseball is a classic example of the rewards that came with patience—for they are now our brightest stars, and highest paid players.

As we grew in height we came to believe and learn much about other peoples' rights, their feelings, their warmth, their human frailties, their bodies, their images, and these similarities of people could not possibly be a matter of coincidence for I truly believe there is but one Master who had a reason for giving us different tongues, habits and tints. He intended, when he fashioned our will, that we would live in a spirit of liberty and brotherhood; that we would adjust our differences, if any arose; that we would respect the habits and customs of others along with their social, political and religious beliefs.

The problems of integration will fade as surely as the predictions of latter year almanacs.

Brotherhood does not differentiate between white, black, red or yellow provided you covet liberty, peace, and freedom. If you have that, you will cherish your liberties and your rights to brotherhood. Dr. Levine has saved many—he hasn't given a hoot whose heart it was so long as it was beating. Neither has our humanitarian Arthur Rotch concerned himself as to whose parents gave birth to these hearts.

Nationwide much has been printed of liberties and the brotherhood principles of nations and their probabilities of social and political integration in our world's quest of peace.

Locally, we have been concerned with still other forms of liberties, such as the Boston tax rate, the Prudential and Government centers, our urban renewal program, the M.T.A. and the immediate building of the toll highway extension into Boston.

There is nothing less expert than one who pretends in matters much more foreign to him than to his listeners. Therefore, I will prove my inexpertness for I will both aim and fire.

Within the next 25 years we will see Massachusetts and Greater Boston restored and refashioned to the prestige and greatness that was once hers alone. Community brotherhood can do this—of that I am certain.

Because of social, community, and political conflicts, we have been guilty of sabotaging our past opportunities for growth. We are not, at the moment, traveling first class. Conversely, we have succeeded in developing men of outstanding rugged individualism, but in the process may have paid a very dear price of confining unity within community.

We have many capable and dedicated men in our public services. What we business and civic leaders have lacked is the gumption and determination to insist that these servants upon which so much of our cultural and business future depends are equitably rewarded.

Since everything is relative, their rewards have been shameful by present-day executive standards. If brotherhood recognizes one's civic needs and the respect of office, then let us pay the top price. Let's make our top administrative positions the most sought for in America. Not only will it reduce the cost of running our State and city government by the millions, it will further compound values in the form of progress. Let's restore prestige and eliminate the prime reasons for conflicts of interest. Let's, in the name of brotherhood and in a statewide spirit of understanding, do for qualified administrators of government those things that you or your shareholders would insist upon if you and they were running a State for prestige, profit and progress. Let the Massachusetts Association of Chambers of Commerce specifically recommend to the Governor and other leaders of both House and Senate, what these offices should receive as equitable in today's world.

I can see in the immediate horizon towering buildings and marketplaces of trade, spotted throughout this greater community. Cars will then be garaged and mass transportation will have been modernized and revitalized (attainable shortly with a little effort of community brotherhood).

Why strangle one's progress if community needs and logic dictate that we should fore-

see that commuter service as we used to know it has since served its purpose—it is gone—why not face it. And use these rights of way for modern methods of intercommunity transportation. Much growth has been lost in our stubborn adherence to the old. Let's think tomorrow—today—for we are living in the most dynamic period of human existence (3d quarter, 20th century).

He who has a mind, let him think—let's not flounder with the past.

The finest thing that could have happened nationwide, and perhaps to the entire world, was the election by you Protestants and Jews of America's first Catholic President. Twenty-five years of liberty and brotherhood is but a short time. It could well be that Cohen will be the next great President of these United States.

Locally we must unite as these great religions have united in a common objective of community brotherhood. Boston—its economy, its future—cannot afford, even for a moment, the dubious results of progressive stalling. We must build quickly—we must progress rapidly—we must administer wisely, but timely.

For this outstanding tribute and honor, my wife, my family, join me in a sincere "gratias, amici," "ich danka ear, mine a frinta," "thank you, my friends."

President Explains Philippines Fight Against Redism

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. McCORMACK. Mr. Speaker, when we read in a sector of our American press some statements that would make us believe that we must soften our attitude toward the Communists and that judging by the trend of voting alignments in the United Nations, the admission of Red China is inevitable, it is encouraging to read a speech recently delivered by His Excellency, the President of the Philippines, Carlos P. Garcia. It is a voice of firmness and of courage, of uncompromising advocacy of freedom, a voice of strength and vigor that we need in America nowadays to straighten our backbones and make us face up to communism without shirking our responsibilities as free men.

President Garcia forthrightly tells the world that even if the United States recognizes Red China—God forbid it—the Philippines is determined not to follow in such a tragic decision. This is the decision of a true statesman and a proved friend of America. President Garcia emphatically said that "we should not permit an influx of hordes of spies, propagandists, and professional saboteurs, working from the protection of a diplomatic sanctuary in our very midst," and thus he is uncompromisingly against the recognition of Soviet Russia by his government or the admission of Red China in the United Nations.

There is in President Garcia's speech food for thought for the small nations. He says:

The question has been asked in some quarters, for example, why the Philippines, a small nation, has chosen to take an active part in this decisive world struggle. Our reasons in terms of political and religious belief, of morality and justice, already have been adequately stated. For the benefit of those who claim to be practical realists, however, I think it might be wise to add this further practical and realistic reason. The free world is fighting for a word community ruled by law, the Communists for rule imposed by force. As one of the small nations, a world of laws is our sole hope of stature and dignity. Under a world rule of force we can expect nothing better than national extinction and racial absorption.

The Members of Congress and the American peope should also know how President Garcia explains why his country is following American leadership. It is a tribute that deserves wide publicity. This is the kind of leaders that Asia needs. They are the words of a devoted friend of the United States who deserves and has earned the unstinted support of our government and people. Let me quote him:

There is little need to labor the obvious as to why we accept American leadership in this struggle. The American record for supporting freedom for all peoples is ample endorsement of their motivation and intent. In material resource and tenacity no other nation or combination of nations can claim the contribution already made to the fight, or match the strength and potential of America to sustain it. (In this connection, it is interesting to note that while some commentators go as far as to claim Soviet superiority over the United States, Mr. Khrushchev himself promises his people only that they will catch up with the United States in 7 to 10 years.)

Mr. Speaker, under unanimous consent, I include President Garcia's address in the RECORD at this point in my remarks:

PRESIDENT EXPLAINS PHILIPPINE ISLANDS' FIGHT AGAINST REDISM

This annual meeting of the Chief Executive of the nation with the officers, members and guests of the Manila Overseas Press Club is by now a well-established tradition. I have welcomed your invitations in the past because they afford me an excellent opportunity to reach what is perhaps our best informed and most responsive audience on world affairs, the correspondents of the foreign press as well as those members of the local press most concerned with the preparation and dissemination of foreign news. This evening's opportunity is of particular interest for a number of reasons, among them the present state of world tensions and my recent return from a visit with our close neighbors and racial kin in Malaya.

Many of you will recall that a little over 2 years ago, speaking in this very room, I broached the idea of bringing about in this region an association of states which, mostly in the cultural and economic sectors, might explore common areas of interest, common problems and perhaps avenues of cooperative action for a common good. Shortly afterward we had the pleasure of welcoming among us the Premier of Malaya, Tunku Abdul Rahman, who likewise saw merit in the concept and became one of its most vigorous advocates.

This month a beginning was made, a limited one to be sure, but one holding great promise. In the agreement between the Governments of Thailand, Malaya, and the Philippines to confer on the mechanics of such regional association is the beginning of the kind of understanding and cooperation so essential to the free world in this time of trial.

Before discussing this development more fully, however, it might be useful to sketch briefly the background against which elements of our foreign policy should be viewed.

First let us examine the current international situation and the nature of the tensions which constitute the crises of our day.

A great scholar and observer of world affairs makes the significant observation that it is inaccurate to speak of the conflict between the free world and communism as a contest of two similar power blocs. He points out that whereas the Communist bloc is a monolithic organism held together by violence and intimidation, such as the Russian tanks in Hungary, the free world bloc is voluntary association impelled toward pooling its resources in the interests of collective security only by the threatening pressures of the Communist bloc itself. I think it is also useful to define more sharply the nature of the conflict.

It is a matter of Communist doctrine for all to read that the Communist revolution will not, indeed cannot, stop short of an all Communist world. No Communist of any stature has as yet repudiated this basic doctrine of international communism. In fact, careful study of their most recent literature establishes conclusively that even the concept of peaceful coexistence is seen by top Communists as a temporary lull in armed hostilities during which they may consolidate their gains and prepare for the next violent phase of Communist expansion. The present world crisis therefore derives from the Communist Party's continuing attack, by whatever means possible, on all non-Communist countries, since the continued existence of free societies, of free men, cannot be tolerated within the concept of an all-Communist world. Thus, unless we consider surrender to intimidation, the initiative for ending the cold war and averting a hot war rests with the Communists—and only the Communists.

I think it is also high time that we demolish the distortion heard from some quarters that small nations committed to the free world bloc are merely pawns fighting the war of the United States in a big power contest with the Soviet Union.

The question has been asked in some quarters, for example, why the Philippines, a small nation, has chosen to take an active part in this decisive world struggle. Our reasons in terms of political and religious belief, of morality and justice, already have been adequately stated. For the benefit of those who claim to be practical realists, however, I think it might be wise to add this further "practical and realistic" reason. The free world is fighting for a world community ruled by law, the Communists for rule imposed by force. As one of the small nations, a world of laws is our sole hope of stature and dignity. Under a world rule of force we can expect nothing better than national extinction and racial absorption.

There is little need to labor the obvious as to why we accept American leadership in this struggle. The American record for supporting freedom for all peoples is ample endorsement of their motivation and intent. In material resource and tenacity no other nation or combination of nations can claim the contribution already made to the fight, or match the strength and potential of America to sustain it. (In this connection, it is interesting to note that while some commentators go so far as to claim Soviet superiority over the United States, Mr. Khrushchev himself promises his people only that they will catch up with the United States in 7 to 10 years.)

To summarize up to this point, we may say that until the Communist bloc decides to abandon the world revolution, international tensions and conflict, regardless of temporary lulls of peaceful coexistence or peaceful competition, will continue. Further, by the Communists' own doctrine, every free society, committed or otherwise, will continue to be a target of whatever weapon is considered appropriate, whether armed aggression, assistance to internal rebellion, economic sabotage, or any of the many forms of subversion. It may also be assumed that America will continue to exercise the leadership and shoulder the major material burden of free world defense, while her allies gain the strength necessary to tip the balance so decisively that the Communists will be discouraged from further pursuing their aggressive expansion.

This brings us to the question of what may now be forecast as to the American posture of free world leadership under a new administration.

From President Kennedy's pronouncements to date, from those of his major appointees, and from the writings of those known to influence the thinking of the new administration, it is possible to derive at least a preliminary assessment. It now appears likely that there will be no alteration of basic policy and fundamental objectives. In executing policy and pursuing these objectives, however, it may be expected that full advantage will be taken of the opportunity afforded by change to secure a broader area of tactical maneuver, greater flexibility and variety in the instruments of policy brought to bear. Although for years the United States, almost alone, has carried the burden of military and economic assistance to the recovering and developing nations of the free world, and today is suffering in some measure from the economic consequences, it appears likely that neither of these programs will be abandoned or drastically reduced. There appears to be some inclination to lean more toward acceleration of economic growth, and it is predictable that because of economic pressures both military and economic, foreign aid programs will be more sharply scrutinized and more carefully weighed, so that each dollar of investment in free world strength delivers its maximum yield.

In his inaugural address, President Kennedy said: "My fellow citizens of the world: Ask not what America will do for you, but what together we can do for the freedom of man."

What can we do together for the freedom of man? What can a small nation such as ours do now?

It seems immediately obvious that maximum acceleration of economic growth and technical development serve not only the individual national interest, but also the objective of strengthening the free world alliance. It is toward this end that we are taking steps toward stimulating both foreign and domestic private investment, expanding and diversifying our pattern of trade and commerce, and developing new credit lines with appropriate nations of the free world.

Another contribution we can make to the free world effort, one wholly compatible with the national interest and aspiration, is in the political sector—not alone in terms of maintaining our own domestic stability but even more in terms of the posture and initiative we take in our regional and global international relationships. For example, the consultative conference held recently in Manila, I believe, established firmly for the information of all concerned the fact that the peoples and governments of this region see the situation in Laos not as a big power contest but as a serious threat to their own peace and security and a manifestation of renewed Communist expansionism.

Aside from the special and significant features of the free world bloc already mentioned, it should not be forgotten that the free world, precisely defined, includes the so-called uncommitted nations which nevertheless are as dedicated to the preservation of their own free societies and individual freedom as ours. With these nations, while we may differ on the measures taken to insure national integrity, we have much in common in terms of other problems and aspirations wherein mutual understanding and cooperation can be mutually beneficial.

For the most part, these common problems are characteristic of the developing new nations: Security against external aggressions, internal defense and protection of free institutions, and the acceleration of economic growth and technological development. It is no coincidence certainly that each of these areas is today included in the broadened front of Communist attack. As the arms race reaches a point of stalemate, the political and economic sectors grow in importance, and whatever can be done to increase the strength of these sectors in every free nation, regardless of military commitment, is a net gain in terms of free world security.

This has been the underlying purpose of our determination to broaden the base of our relationship, first with neighboring free societies and later with those geographically more remote. It would be utopian to think that in the free association I have described there could be complete agreement in all matters, but it is a characteristic of a democratic community such as the free world comprises that the individual and the community may seek benefits wherever agreement and cooperation can be achieved.

While on the subject of the small nation—committed, uncommitted or neutral—we might stop to consider a particular phenomenon of our times—a phenomenon, incidentally, which underscores my earlier emphasis on the fact that it is the small nation that has the greatest stake in realizing a world community accepting the rule of law.

Recently the General Assembly of the United Nations has been augmented by the admission of many new small nations. Small though each may be in resource and limited in experience, each enjoys numerical equality with the oldest and largest in that assembly of nations. The magnitude of the influence these nations acting in concert can wield has been demonstrated and commented upon. Some view the phenomenon with elation, others with concern. We of the Philippines, ourselves a small nation, experience both reactions. We are elated to have this confirmation of our most fundamental foreign policy outlook, but we are concerned that this power of small states, unique in mankind's history, not be lost or destroyed by abuse.

We must never lose sight of the fact that the power exists only by virtue of the organization in which it is exercised, the United Nations. This organization itself will exist only so long as it honestly and impartially reflects the intent of its Charter, only so long as each member feels that its decisions and judgments are the result of sober and honest deliberation. The intrusion of petty or sordid motives, of ancient grudges, or racial bias could bring about the destruction of what the world has so painfully tried to restore since the tragic collapse of the League of Nations.

Before concluding, there is one other aspect of this administration's foreign policy I should like to clarify. Our determination to withhold recognition from nations of the Communist bloc has been questioned as being more rigid than that of the United States. "More popish than the Pope," is one of the flippant criticisms.

In the first place it should be pointed out that the free world alliance by its very nature does not impose rigid conformity of policy upon each of its members. For its own reasons, the United States recognizes the Soviet Union and sits with its representatives in the United Nations. We have avoided such diplomatic relations without impairing our U.N. participation. Should Red China shoot its way into the United Nations, or even negotiate formal relations with the United States, we see no reason why either development need influence our own policy, which is based upon considerations of practical self-interest. In terms of trade, we certainly have not so thoroughly exhausted the markets of the free world as to turn in desperation to those of the Communist bloc. As for diplomatic convenience, we ask, "Whose?" All too vivid is the experience of many of our neighbors warning us of the tremendous burden that would be placed upon our security services should we permit an influx of hordes of spies, propagandists, and professional saboteurs, working from the protection of a diplomatic sanctuary in our very midst.

This, then, in summary, is our position. The clash between world communism and free societies is not of our choosing and not subject to our evasion. We believe that the only way to avert war, or win it if is forced upon us, is by a pooling of all free world strength in every sector, that weakness or disunity can serve only to invite aggression or piecemeal capture. For ourselves we choose active participation. In the case of those of our free world neighbors and friends who choose otherwise we are prepared to respect their freedom of choice, developing our relations with them in any or all of the other constructive categories of democratic activity mutually acceptable.

Contrary to Marxist dogma, we hold that tyranny—not the free society—carries within it the seeds of its own destruction. We believe, too, that the urge toward freedom is one of the strongest instincts, a divine endowment of all living things—including the people of Russia and Communist China. Therefore, the longer the free world can maintain and widen the margin of deterrence, the closer we come to peace with justice and freedom for all mankind.

I thank you.

Kansas: Symbol of U.S. Progress

EXTENSION OF REMARKS
OF

HON. ROBERT DOLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. DOLE. Mr. Speaker, this year in Kansas we are celebrating our State's 100th birthday.

Among the many activities commemorating our State's first 100 years was an oratorical contest sponsored by the Native Sons and Daughters of Kansas.

The winner, Miss Marilyn Snell, of St. John, Kans., a freshman at Fort Hays Kansas State College, located in my district, gave her prize-winning oration at the centennial dinner of the Native Sons and Daughters in Topeka, January 28. She received the "Haucke Award" for her outstanding oratorical achievement.

It is with pride I submit Miss Snell's oratorical tribute and commend its reading to my colleagues:

KANSAS, SYMBOL OF U.S. PROGRESS

The following is the text used by Marilyn Snell, St. John freshman, in winning the Na-

tive Sons and Daughters' Award for the centennial year. Miss Snell gave this address before the centennial day dinner in Topeka, January 28. The Leader is printing this article in cooperation with the Kansas Centennia with other features to come in following weeks.

Today we stand as a favored generation. Those generations who have proceeded us and those who will follow us have not had and will not have the opportunity to see our State emerge from its first 100 years of growth.

This experience would both gratify and humble us because of the tremendous progress that must be made in the future. This progress that we cannot on our State's centennial birthday is most important when we can visualize it as being symbolic of the growth of the United States of America.

But, before we even start to think about the growth and expansion of Kansas, I wish you would shut your eyes, sit back in your chair and completely relax. Come back with me into history. No, not the history of Kansas; not even the history of our United States. But, back into your own personal history.

Perhaps it will take some of you back to the days of pigtails and long stockings, short breeches and double-breasted coats. But in any case, back to your gradeschool days.

Art class has been dismissed and you are now in your science room. Can you remember the miracle that occurred the first time you planted a bean seed?

Can you remember how delightful it was to watch that beanshoot nose its way out of the shell searching for the sunlight in its first experience of freedom? Then, as each hour, day, and week progressed, you watch it struggle in its new-found environment.

Finally the warmth of the bright, yellow sun touches the neophyte and its battle was won. It was almost as if the beanshoot had worked with conscious determination toward the warmth of the sun above the earth, until its primary battle was finished, until it was standing on its own two feet—or, roots, I should say.

Well, what is the purpose of this little piece of reminiscing? You've probably already guessed that the growth and struggle for light by the beanshoot is striking analogous to the growth and the struggle for that growth in Kansas.

The seed of progress was planted when the first white man set foot on Kansas soil back in 1541, some three centuries before our statehood was final. After many violent and hearty struggles, Kansas added her star to the blue field of the American flag, 100 years ago; then there was no holding Kansas back.

During her childhood and adolescence Kansas grew solid, deep roots * * * roots represented in balanced agriculture, diversified industry and the friendliest, most neighborly people in America.

If there is any area in the United States where agriculture can be called the "Kingpin of the Economy," it is in the vast stretches of farmland that constitute the high plains area of western Kansas.

Although manufacturing has surpassed agriculture as a wealth-producing factor, thus giving better balance to our economy, farm activities rank high and will continue to play a major role in the total picture.

Tops, of course, is the famous "Kansas King—Winter Wheat." The 1958 bumper crop was a jump of 59 percent over the previous year and served to put Kansas back in her traditional position as the Nation's No. 1 wheat-producing State. Kansas also supplies many other important crops and livestock that provide the basis for a substantial food-processing industry.

Yes, throughout the first 100 years of history, the first root, balanced agriculture, has played and will continue to play a major role in stabilizing and nourishing the growth of Kansas.

However, the rise of our economy from the depression era of the 1930's to the present level of prosperity was forged, and thus, another solid, nourishing root was established, in the small shops and large plants of our State's 3,450 manufacturing industries.

Since 1939 manufacturing has been contributing increasingly more to the welfare of the State. During recent years while agriculture has been zigzagging on the charts, manufacturing has been a stabilizing influence in our State's economy.

A milestone was reached in 1952 when, for the first time in Kansas history, manufacturing payrolls became the major contributing factor in the total personal incomes of Kansans.

During this jubilant year of centennial celebration, a practical eye can note that Kansas has made tremendous industrial growth in the past and offers virtually unlimited opportunity for future expansion.

The most outstanding assets that Kansas offers future industry are: (1) an available supply of manpower, (2) our location, as the crossroads of the Nation, (3) our transportation facilities, wherein we are ranked fifth in the Nation in railroad mileage and are served by five major transcontinental airlines, (4) Kansas offers an ever-increasing, prosperous consumer market.

The second root, diversified industry, has provided an expansion of wholesale and retail trade, transportation, construction, finance and many other related activities, to stabilize and nourish the growth of Kansas.

But our plant would still be only partially fulfilled without the third root, a root holding deep in the heart of America; a root for which I am especially proud. This root of nourishment is the most important—the Kansas pioneer.

If only we could have the same desires and abilities of our forefathers, those pioneers who had a spirit within their hearts and minds that they somehow managed to pass on to their children.

A spirit that lends itself to making great people, a people who can excel in culture and education, and yet retain a genuine humility in their religion. People who are interested in the ideals of improving one's self and in sharing the benefits of that improvement with his fellow man.

This is the type of person we think of when we hear the phrase, native Kansan. Our minds immediately recall our beloved William Allen White, Ben Hibbs, George Washington Carver, Glenn Miller, or perhaps our minds would immediately flash to our internationally known Drew Pearson.

But, it has been my experience that no matter where I start, past or present, my final picture of the people of Kansas, the picture to integrate and symbolize the great characteristics of all of these men is best expressed as when I drive down a bumpy Kansas road or a super Kansas highway, pass a dozen Kansans and have as many Kansans wave to me, a hearty wave of friendship and encouragement.

Nothing, absolutely nothing, makes me prouder to be a Kansan than the people I am naturally associated with when I say, "I was born and raised in Kansas."

Yes, from 1541 to 1861 we did progress rather slowly. But during these last 100 years, these years now so vivid in our minds, we Kansans have certainly made up for lost time.

From January 29, 1861, to January 29, 1961, Kansas grew sturdy roots, roots represented in balanced agriculture, diversified industry, and its native people. We have now reached our sunshine; and, as does the bean shoot, we will need great works coupled with God's blessings to continue upward.

There are many miracle mysteries in our world today, not the least of which is the growth of a bean shoot * * * or the growth of a nation.

Ladies and gentlemen, I, a native Kansan, am proud to stand before America today and declare that on our centennial birthday, there is not another State that can surpass Kansas, as the symbol of American progress.

Railroads: National Challenge

EXTENSION OF REMARKS
OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. ROBERTS. Mr. Speaker, under leave granted to me, I am inserting in the Appendix of the CONGRESSIONAL RECORD a thought-provoking article entitled, "The Railroads: A National Challenge," writen by Ernest S. Marsh, president and chief executive, office of the Santa Fe Railway System, and carried in the January-February issue of Railway Materials and Equipment, published in Chicago for some thousands of railway executives in all parts of the country.

As a member of the House Committee on Interstate and Foreign Commerce, one of my continuing responsibilities is to keep up with transportation developments. All of us are extremely interested in the future of our railroads, and I feel that Mr. Marsh's thoughts about rail problems are well worth the consideration of my colleagues.

The article follows:

THE RAILROADS: A NATIONAL CHALLENGE

(By Ernest S. Marsh)

The railroads, with their ability to provide high-volume, low-cost, long-haul service remain the indispensable transportation link of the Nation. This industry, in spite of its difficulties due to the inroads made into its business by the newer carriers, still hauls nearly half of all the freight traffic moving between our cities.

However, in any appraisal of the present-day situation of the railroad industry there quickly comes to mind the paradox that on the one hand the railroads are presently in an excellent position to handle unprecedented transportation needs of the Nation and yet on the other hand numerous unsolved questions may well deter them in performing that service which is vital to the economy of our growing country.

The importance of the railroad industry to our national transportation system is unquestioned. Everyone agrees to that. The truth is that the standards of the American economy have been built around a marketing and distribution system almost totally dependent upon the reliability and efficiency of transportation.

The railroads have spent vast sums of money to be ready for their part in the development of our economy. New technologies have been adopted in every department of the railroad. Billions of dollars have been spent on equipment to provide better handling of lading, expedited service, improved communications, and all of the other things which go to make up the modern railroad.

However, within the past year we have had the railroads characterized in a Department of Commerce report as the "outstanding, unsubsidized, sick man of transportation."

Much has been written and said about the plight of the railroads. Many recommendations have been made and repeated by various boards, commissions, and committees over a quarter of a century. Still, few fundamental remedies have been adopted.

Nevertheless, there is optimism rather than pessimism about the future. But optimism alone is not enough. We cannot solve our problems by ignoring them. They will not disappear if we look in the other direction.

FIVE MAJOR PROBLEMS CONFRONT THE RAILROADS

There are confronting us today at least five major problems: (1) Excessive and inequitable regulation, (2) extensive direct and indirect subsidization of competitors, (3) excessive and discriminatory taxation, (4) excessive and unnecessary costs resulting from outmoded work rules and State laws, and (5) inflation so common to all industry but more serious for the railroads with their high labor cost ratio, their need for substantial capital expenditures on a regular basis, and where prices are not so easily or readily adjustable.

In the period since the end of World War II the total outlay of class I railroads for additions and improvements has been $15 billion, or an average of over $1 billion a year. At the same time the rate of return earned by class I railroads has declined from 3.92 percent average for the years 1951–55 to 2.72 percent for the year 1959.

Yet in what other industry has there been a greater technological advance than we have had in the railroad industry in the past two decades—the introduction of the diesel locomotive; centralized traffic control; microwave transmission of signals; traffic reversal on double track; electronic switching; greatly improved track maintenance machinery; electronic accounting devices; vastly improved train yards; shock control freight cars with safe loading devices; improved servicing facilities: piggyback and containerization; welded rail; curve and grade reductions; and many other less dramatic innovations have all contributed to tremendous increase in the efficiency of our operations.

Except for adoption of these progressive developments—in which the railroad suppliers played an important part—our industry would have had great difficulty surviving under private ownership. But further, as a result of these developments the railroads are in a position to give the shipping and traveling public the finest and most efficient and dependable transportation ever known—and at a reasonable cost.

We cannot, however, fulfill our maximum potential until we are given the opportunity to compete on something like an equal footing with other forms of transportation. Unless and until most of the problems I have outlined have been eliminated, the railroads will have great difficulty proving their enormous capacity and efficiency.

When I speak of resolving the problems of the railroads, let me emphasize that we are not looking for any special favors. All we want or need is a reasonable measure of freedom of genuine competition on equal terms in the transportation industry, coupled with relief from discriminatory, unrealistic and burdensome Federal and State taxation, and relief from unnecessary wage costs fixed on us by wholly obsolete work rules and State laws.

To illustrate one of our problems—under the so-called agricultural and bulk commodities exemptions of the Interstate Commerce Act great quantities of agricultural products move by motor carriers, and fuels, minerals and other such bulk commodities move by water carriers. These carriers, in transporting these commodities, are exempt from regulation by the Interstate Commerce Commission. All the railroads have sought in this area is something approaching equality with the motor and water carriers. We would be happy with either of two alternative remedies—(1) elimination of the agricultural and bulk commodities exemptions in favor of motor and water carriers, or (2) extension of the same exemption to the railroads. I cannot see how any fairminded person could possibly oppose this suggestion. Yet, whenever we advance it, we are berated from some quarters as advocates of monopoly.

If the railroads had it within their power to solve all their own problems, they would do it. But they cannot eliminate restrictive and discriminatory regulations, or unrealistic and burdensome taxation. By themselves, the railroads are largely helpless in resolving these fundamental problems.

Relief ultimately must come from the cumulative efforts of railroad management, railroad employees, the public and the Congress and State legislatures. And because a healthy transportation industry is essential to our national economy, and the railroads in spite of their difficulties are the backbone of that transportation system, the overall problem is primarily one of national concern.

It would be inappropriate to outline here in extensive detail the precise remedies which might be applied. These are largely matters within the purview of Congress and the State legislatures because it is their work which has resulted in most of our problems and only they can set right a situation which they—in many cases entirely unintentionally—created or allowed to continue.

A broad evaluation of our transportation system reveals at once a national challenge, a challenge to bring, in the public interest, order out of a confusion of conflicting purposes, outdated laws, and unrealistic regulations.

The growth of competition is usually a healthy thing for the consumer—in transportation, a healthy thing for the shipping public. But the manner in which this was done through patchwork amendments to the Interstate Commerce Act and the Civil Aeronautics Act, while ostensibly beneficial, has actually been contrary in many respects to the long-term public interest and the well-being of the transportation industry.

A case in point is one in which the railroads fortunately were accorded some measure of relief by the Transportation Act of 1958. However, it provides a graphic example. For years we were denied the right to reduce our rates on certain commodities, even to levels that were admittedly compensatory, because the proposed rates would divert traffic from motor carrier competitors. This was economic foolishness. The shipper could have had lower rates but was denied them in order to sustain the traffic of motor carriers who could not economically meet those rates. As a result, the shipper paid an artificially high uneconomic rate whether his goods moved by rail or truck, and usually this added increment of cost was passed on to the public in the form of higher prices. This situation was met in part by the Transportation Act of 1958 which provided, in still another amendment to the Interstate Commerce Act, that the rates of a carrier shall not be held up to a particular level to protect the traffic of another mode of transportation. This clearly was a step in the right direction and may be a hopeful portent for the future.

The agricultural commodities exemption to which I previously referred is another example of utilization of regulation to frustrate the national purpose of fostering a sound transportation system. It was intended to aid farmers and fishermen in movement of thier products from farm or dock to market. But its most important result has been to develop a substantial segment of the motor carrier industry which, without regulation, moves a tremendous amount of traffic for large industrial producers and processors rather than for farmers or fishermen. Here let me emphasize that, if these carriers can move these products at compensatory rates lower than rates which the railroads could move them, we have no legitimate complaint. However, we can fairly complain about not being permitted to compete for this traffic on equal terms with the motor carriers. Resistance to our complaint would lead one to suspect that if our suggestion were adopted a considerable amount of this traffic would return to the rails.

COMPLETE OVERHAUL OF TRANSPORTATION REGULATIONS NEEDED

These examples point to the need for a complete overhaul of our laws and regulations governing transportation. Such is indeed long overdue. The objective of the railroads is not destructive competition and rate wars. Rather, we want to see an economically sound transportation system in which the various modes of transportation compete on as nearly an equal basis as possible, each promoting and capitalizing on its own inherent advantages while charging compensatory rates for its services, and none enjoying special advantages or favors.

Still another broad area in which relief is not only needed but clearly justified is that of taxes—Federal, State, and local taxes. This is not an objection of the railroads to paying their fair share of the expenses of Government. But it is an objection to a tax structure which severely handicaps us in our position in the transportation industry, and which, in some instances, is plainly discriminatory.

The railroads own and maintain their own rights-of-way, stations, yards, and other facilities. Every substantial railroad, by the very nature of its operations, owns many miles of right-of-way and other real estate and pays a myriad of local property taxes levied on these holdings. Contrast with this the trucker who merely runs through a town or city. The taxpayers provide and maintain his right-of-way and he, of course, pays no property taxes on it. The inequity of the situation is compounded when one considers that the dollars paid by the railroads in the form of property, income and other taxes, are devoted in part to direct and indirect subsidies for their competitors.

The remedy for this particular situation is twofold: elimination of the inequitable practice of assessing railroad property on a higher basis than other property and payment of adequate user charges by carriers employing publicly owned facilities. The trucks should pay their fair share of constructing and maintaining the highways. Water carriers should be charged on the same basis for waterway improvements and facilities provided by the taxpayers. And the airlines should pay adequate charges for their use of airports and navigational and weather facilities and services.

The area of taxes affords another potential source of very helpful relief. In order to continue to expand and improve their facilities, the railroads need capital, and at the rates of return outlined earlier—2.72 percent in 1959, and, perhaps, as low as 2.4 percent in 1960—it is difficult for them to find or accumulate that capital in present earnings. At least, it is very difficult under our present laws regarding deductibility for tax purposes of funds expended for capital acquisitions or improvements.

We have in the past and will continue in the future to seek legislation that would enable us to put aside funds from current income in a construction reserve and deduct them from taxable income of the year.

If not used for capital improvements within a period of years—for instance, 5 years—the funds could be made subject to taxes and perhaps certain penalties.

Such a construction reserve would enable management to plan ahead and undertake desirable improvements necessary to meet transportation demands adequately. With such a reserve, I am confident that the railroads would broaden and accelerate their modernization program.

There would be no subsidy involved in such an arrangement. At present, the cost of property less salvage value is deductible through depreciation. Under a "construction reserve" plan the actual cost of the property would simply be deducted sooner.

Nor would provisions for a "construction reserve" result in a long-term loss of revenue to the government, for the reason just stated that it does not involve tax forgiveness but merely temporary postponement. Indeed, it might even result in an immediate increase in tax receipts through a stimulation of capital expenditures which would put taxable income in the hands of builders and suppliers and their employees. It could have a very beneficial effect on those involved directly or indirectly with the railroad industry. It should level out the feast or famine experience of the past on orders for equipment and other facilities. Everyone is familiar with the billions of public exepnditures being devoted to waterways, highways and airways. They represent advance appropriations of taxpayers' money for improvements relating solely to transportation. All the railroads ask is some advance treatment of their own money, also for improvements relating to transportation.

A fairminded review of these objectives of the railroads which constitute a national challenge should make it evident that they are plainly reasonable and essential to a sound transportation system. The industry wants no favors, but, at the same time, we do not want to be discriminated against. We want the opportunity to compete fairly with other modes of transportation. We want to be relieved of inequitable and unrealistic tax burdens.

Service is all we have to sell, and it is only through a good brand of service at reasonable prices that we can attract and retain traffic while our country continues to grow and prosper. Over the years it has been demonstrated that the success of a railroad stems largely from the observance of sound operating principles, a policy of constant improvements, and a faith in the future of the industry. A policy of modernization and improvement has to be a continuing thing to keep abreast of new technologies—inventions and devices that will provide a better and more efficient way of doing what needs to be done. This is a job that is never fully completed, because what was modern yesterday may be obsolete tomorrow.

The U.S. railroads are the most streamlined in the world and more efficient now than at any time in their history. But more needs to be done and would be done if they are accorded the relief indicated by ordinary concepts of fair play. With ample resources they could capitalize to the fullest on technological innovations already developed. The horizons of the railroads, if they are given the chance, are virtually unlimited. Whether they will be permitted to move forward at a steady rate is the national challenge.

For the long term we have confidence in the continued growth and prosperity of our country. We have confidence too that a well-informed opinion will bring a sound and wise solution of problems in the competition transportation field and that the vitality of the railroads will be maintained in the interest of the public and our national security.

Foreign Trade Undertow

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. SCHERER. Mr. Speaker, there is no question but that foreign imports today are seriously and adversely affecting the economy of this Nation and adding to the unemployment problem. Much of the legislation that this Congress is going to be asked to pass upon will involve the consideration of the degree to which foreign imports should or should not be controlled. I am submitting for the consideration of the Members of the House an excellent address on this subject by O. R. Strackbein, chairman of the Nation-Wide Committee on Import-Export Policy, before the Society for Advancement of Management, delivered in my city of Cincinnati:

FOREIGN TRADE UNDERTOW

(Address of O. R. Strackbein, chairman, the Nation-Wide Committee on Import-Export Policy, before the Society for Advancement of Management)

The question of foreign trade has been debated throughout this country almost from the beginning of the Republic. Much of the debate, if not all of it, has issued from the base of interest or stake in the flow of imports and exports. Some interests have seen themselves as benefited by imports or exports while others have looked, particularly on imports, as a source of damage to themselves and the economy.

The elements involved include domestic producers, including labor, importers, exporters and consumers.

Domestic producers in turn may or may not be exporters or importers. Owners of manufacturing enterprises may indeed be both importers of raw materials, component parts and semifinished items, and exporters as well. They may sell abroad as well as at home. Usually their foreign sales are only a fraction of their domestc sales; but in some cases their exports may represent a substantial part of their total sales.

Attitude toward foreign trade may be determined in considerable degree by the extent to which the domestic producers export or import. It may vary also by the fact that they are merely importers of raw materials or parts rather than also being exporters.

If the producer neither imports nor exports he is a wholly domestic operator; and this fact will have a bearing on his outlook. This outlook will be further affected by his competitive status in relation to imports. If he has no competition from imports, his attitude may be quite objective. If, on the other hand, imports do compete with him, his attitude will be shaped by the seriousness of such competition. He may be little concerned about imports if they have gained little on him and if the outlook is that they will not be much of a threat in the future. He may, however, be greatly concerned or even frantic if imports are pressing him hard, cutting sharply into his market, gaining a rising share of it, breaking prices and generally disrupting his distribution and orderly marketing.

Another factor in attitude shaping is what is the prospective situation. The producer who does not now export may have hopes of engaging in foreign selling in the future. The producer who now feels no competitive onslaught from imports may see such competition looming on the horizon. The producer for exports may see his foreign market shrinking; or, on the contrary, possibly improving. He may, again, be nervous over political trends in some of his foreign markets. These are all factors that help to shape attitude toward foreign trade.

If the producer is not a manufacturer but a farmer, his attitude will be shaped by similar considerations. Is his product exported? What share of it? Is the foreign market attractive and important or is it uncertain and trivial?

If the farmer produces solely for the domestic market his feeling toward foreign trade will be one of relative indifference if in addition he faces little or no competition from imports and if there is little or no prospect of its arising. On the other hand, if imports are hurting him or threatening him, his response will be the same as that of the manufacturer. The degree of his interest will be determined by the volume and the sharpness of the import competition and by the trend and the prospects.

Sometimes the trend and the prospect are more upsetting than the actuality. This is only natural since the unknown often has power to induce more fear than what is in being and can be seen and evaluated. As an economic force the unknown but suspected, the unseen but feared, may be more powerful in shaping action than what is present and real, visible in broad daylight.

This is an important factor in foreign trade, even as it is in domestic production and trade—only more so if and when unknown factors play an important part in shaping profit and loss.

Foreign trends and developments are farther away and often more obscure than those at home. Up-to-date statistics on foreign movements and operations are often lacking or fragmentary. Therefore the unknown and the uncertain may play havoc with planning and foresight. Fear of rising imports may put a damper on business expansion for the domestic market because no sure answer can be had from abroad. The fear may not materialize; but the effect is the same; and, of course, the apprehended may indeed come to pass and sometimes may be exceeded. Then dismay and discouragement multiply; and there is no way of stopping the spread of gloom, unless, of course, there were some recourse.

What has been said of manufacturers and farmers is true also in the mining, lumbering and fishing industries. Any producer's outlook is determined or shaped by that which affects him or by what he thinks affects or will affect him.

The position of labor in this field is somewhat different. Workers who are directly in the front of import competition and who know what is or may be the impact on their employment, on their wages and on their hopes of promotion and their workweek, will react in much the same manner as the producers. They will regard imports as the enemy of their present welfare and future prospects. This similarity in reaction to that of their employers can and often does create a community of interest between the two.

If imports do not strike their own industry, the workers will be as indifferent as the manufacturer or farmer who is immune to import competition. If their industry is an exporter, the workers may become convinced that their interest lies in the freeing of trade barriers such as tariffs and quota restrictions. This will be a reflected conviction coming in the first instance from labor leaders, economists, commentators, publicists, etc. These workers would generally support the idea of free trade.

Then there are those who are employed in industries in which foreign competition produces only an indirect effect. Their attitude toward imports will be very similar to that of the industrialists themselves, i.e., one of complacence or indifference. "Perhaps," they think, "imports do hurt some people. That is too bad; but they help others; so, I guess the equation about balances. So, why get excited?" Such would be the workers in factories making parts and components or materials used in other industries that produce the final products, such as autmobiles, machinery, appliances, etc. The workers in paint factories, glue mills, paperboard plants, steel works, etc., may feel that since little or no paint is imported, little or no paperboard, or, until recent years, very little steel, they are free of import competition.

Only when they see foreign cars dotting the streets, foreign typewriters and calculating machines clicking in their offices, imported bicycles scooting along the sidewalks or foreign tableware rattling in the kitchen and the dining room, do they begin to reflect that the paint and the parts in the foreign cars are made outside of this country; the paper cartons in which these items are imported are supplied from abroad and the sprockets and chains, brakes and tires on the bicycles also come from overseas.

It will take some time for these workers to feel a kinship with those employed in the plants, factories and mills that turn out strictly domestic products that are hit directly by imports. It takes a while for those who are indirectly affected to see that imports are hitting at their own jobs, wages, workweek and working conditions just as surely as they strike at the workers employed in the domestic automobile companies, part manufacturers, etc., or in the bicycle or glass or pottery companies; or in the plants making screws, nuts and bolts, nails and other items that go into the finished product.

When finished shirts, blouses and pajamas are imported the workers in domestic button factories are bypassed. When readymade suits and sportswear are imported, not only are the workers in the button factories left to one side, but also the buttonholemakers, clothcutters and needleworkers. The textile workers already know that they themselves are under fire from imports, but it takes a while before their compatriots in the garment factories learn that they too have something at stake.

Even farther removed from the fray are the whitecollar workers, employees in doctors' offices, insurance agencies, banks; bookkeepers, salesmen, etc. They feel the effects more readily and believably if they are located in communities given principally to one or a few small industries, such as glassware, pottery, gloves, coal, lead, zinc, or the like. There the effects of an imported blight are more readily seen, even if they come by indirection. When the workers are unable to pay their doctors' and medical bills, the doctor's clerk, the pharmacist's helper and the lessor of the property soon learn the source of the trouble. Dried up or shrunken payrolls soon tell their tale.

While generally the interests of the workers and the manufacturers, i.e., their employers, are as one in the matter of imports and exports, there comes a parting of the ways under certain circumstances, some of which we see today and more of which are rapidly developing.

Before considering this aspect of the subject we should pay our respects to the other elements involved in the foreign trade sector of our economy. Mention at the outset was made of importers and exporters quite aside from the industries and other producers that import raw material or export some of their output. It should be enough to say that export and import houses, distributors, merchants, etc., will naturally be found arranged on the side of a maximum and free trade.

This, it should be noted, does not make them unselfish upholders of the national interest as opposed to the local, selfish interests of those who wish to see imports regulated, as they would like to have themselves considered, and as they never tire of asserting.

There remain the consumers—you and I, Democrats, Republicans, Catholics, Protestants, workers, industrialists, schoolchildren and teachers, salesmen and buyers, blacks and whites, men and women—that conglomerate mass known as the population.

The only comment necessary is to say that there is no such thing as a consumer interest as such. The interests of consumers are very diverse, as different as are people of different interests and pursuits and as unlike as the interests of the buyer and seller, farmer and processor, labor and management, landlord and renter, railroad and passenger, insured and insurer. The only common denominator is the human species and and the national interest. The latter is nearly as diverse as the number of those who comment on it. The consumer can have no spokesman because he has no coherence.

Back then to the interests of those whose welfare can be related directly or indirectly to the effects of imports and exports; more particularly, labor and the owners and managers of industries, farms, mines, fisheries, lumbering enterprises, etc.

With respect to reaction to imports, to repeat, the attitude of these various elements is much the same. The common denominator is injury or absence of injury. In the presence of injury, the degree of its infliction determines the tenor of the response. In the absence of injury there is indifference or adherence to what is considered the national interest. The only other determining factor then is the prospect of future injury.

With respect to exports, the common denominator is economic gain. If a good export market is assured, all is well. Workers will side with management in support of liberalizing trade. This has been the attitude over the years of the United Automobile Workers, the Steel and the Electrical Workers. If exports decline and the outlook for further shrinkage is compelling, both the producers and the workers begin to feel some disenchantment toward overseas markets.

If imports increase their pressure, as they have done in the past several years, attitudes of all the affected groups may be expected to undergo a modification. If the shift has been sharp, a complete turn-around may even occur. This was the case with the Amalgamated Clothing Workers and the garment-making unions. To a far degree this has also been true of the Textile Workers, and is finding an echo among the butchers and meat cutters.

Where the pressure, though felt, is not yet so great or perilous, some change in attitude may be expected, but no great swingabout. Witness the automobile and the steel industries and the unions in those industries. There have been expressions of alarm; there has been evident disenchantment toward exports, and the ideals of free trade have become tarnished. In the case of automobiles, imports reached about 10 percent of the market in 1959 and were met by the compact car and driven back slightly. Meantime, however, this country has lost completely its hegemony in the export field in automobiles. Our imports of cars now far exceed our exports and other countries have taken our long-held export lead away from us.

In the case of steel, imports surpassed our exports in the latter part of 1958 and continued until a few months ago. The outlook is for a long-term entrenchment of imports in this country.

Nevertheless neither management nor labor in these gigantic industries has yet turned around. They are taking stock and watching.

According to the preceding analysis, it would seem safe to say that if automobile imports reached 15 or 20 percent of the market and steel imports did the same, a turnaround quite swift and determined, would be executed, and without apology or regret.

Many examples could be cited, such as petroleum, an industry in which the independents came into conflict on this point with the great international oil producers. The latter, being themselves the importers, remained loyal to the principles of liberal trade. The former, finding themselves imperiled by the import impact, girded themselves for battle and 2 years ago succeeded in having an import quota placed on imports of crude oil, residual fuel oil and petroleum products. It would be more in point to say that the coal industry, not noted for its friendship otherwise toward the oil and gas interests, moved a strong hand in behalf of a restriction on residual fuel oil, a direct competitor. It may be noted that imports of petroleum had captured some 20 percent of the domestic market, when the quota cut them back to about 15 percent.

Here it may be added that imports in an increasing number of products have since 1950 captured a growing share of the market, often going from 5 or 10 percent, to 20 percent and on up to 30, 40 and even 50 percent or more. The New England fisheries, the tuna fisheries of the west coast, hardwood plywood, knit gloves, bicycles, smoking pipes, nails, typewriters, certain sporting goods, and other items have had this experience.

Once the tide of imports engulfs industry to an alarming degree, a divergence between the ownership, on the one hand, and labor and suppliers, on the other, begins to appear. Perhaps small business and most farmers should be placed in the latter camp.

When costs in this country rise to a point at which imported goods can readily undersell our producers and capture a progressively increasing share of the market, the manufacturer is confronted with a hard choice. He may fight against the imports as best he can by trimming costs, bringing out new products, if these can be found, or modifying existing lines and in general selling harder. If this does not meet his problem he may, if his finished product is an assembled one, undertake to import the parts and components rather than buying them from domestic producers. The bicycle industry has been forced into this defensive step. This means a loss of domestic sales to domestic manufacturers of brakes, handlebars, chains, tires, etc.; and, of course, employment suffers to that extent.

If this stratagem does not meet the challenge, the manufacturer may look overseas. He may shut down his plant here, as the White Sewing Machine Co. did some 2 years ago, and become an importer. In that event the domestic suppliers again find their market evaporating. The workers in the plant that made the final product may be dismissed in whole or in part but a substantial number may find employment in distribution or diversification. The transition may, however, be slow and painful.

If this gambit is not open, the manufacturer may send his agents overseas to explore the possibilities. Many have done so and are still doing so; and many have bought into going foreign concerns, notably Hamilton Watch Co. Others have made and continue to make licensing arrangements with foreign companies, under which a fee or royalty is paid to the American patent holder. In yet other cases actual branch plants may be opened overseas. Over $30

billion of American direct private investments, book value, are now in being in other countries, Canada leading, Latin America next and then Europe and Asia.

What happens now?

These companies, operating abroad, will supply foreign markets from within rather than from the United States. They may ship from bases in Europe to Latin America and elsewhere rather than from the home base in the United States. In other cases they may turn around and ship to the United States, as has been done by American automobile makers in England, Germany, and France, and by manufacturers of typewriters, other office equipment, tractors, etc.

All this adds up to a shrinkage in U.S. exports and lessened employment in the very industries that had been leading exporters from this country.

Labor cannot jump the boundaries as readily as capital and is left behind. The same is true of the suppliers or most of them; although some of them may follow their customers overseas. The chemical industry offers a possible example. The smaller manufacturers who lack adequate capital to take part in the exodus remain behind to face the withering import competition. Their main hope is to be absorbed by the larger companies. The trend toward mergers and monopolies may thus receive a considerable impetus.

The farmers, few of whom can emigrate, except to Mexico, Cuba and perhaps a few other areas, will find their domestic market shrunk even as do the suppliers, and the displacement of labor does not expand the market for agricultural products.

In the Midwest, an area long quite immune to import competition because of the overland freight charges, a deepening concern over the import problem is showing itself. The St. Lawrence Seaway leads not only outward but inward; and much of the competitive insulation of the past against imports is disappearing. The area that was free from import worry is now on the frontier of the low-wage competitive onslaught.

The machine tool industry, the foundries, the parts manufacturers and metalworking industries in general are now exposed on the new frontier. Their attitude toward import competition has given evidence of changing in accordance with the general experience.

The national trade policy of this country continues to support further reduction of the tariff and shunning of import quotas. Under present circumstances this represents a shocking failure to adjust to the new postwar competitive world. The competitive realities are against this country for reasons that are clear and simple: namely, low wages abroad, abetted by fast-rising productivity which in turn has been in considerable degree not only financed by this country but blue-printed to thousands of productivity teams hand-led through our factories. This is not said by way of complaint; but it is a fact that we ignore at our economic peril.

We are running successively in the red year after year in our international account and the outlook, considering our indefensible policy, is not good for a turnabout. The stimulation of our exports depends too much on our own Treasury to be anything much beyond a clumsy attempt to lift ourselves by our bootstraps. Witness the subsidy on our raw cotton and wheat exports, that between them cost the Treasury over $500 million a year. Witness the sales abroad of hundreds of millions of dollars of agricultural products for foreign currencies and shipments in the form of outright grants. Again, that is not a complaint; but we should begin most seriously to count our outgoing chickens. Many are coming to roost even now.

The recent speculative flurry in gold-buying abroad had only one possible meaning. Speculators who make a living by buying cheap and selling dear were betting that we will soon devalue the dollar. Why?

The outflow of gold has resumed. Beginning anew in recent months at an accelerated rate, the outflow has reached nearly $1 billion during 1960. The gold stock in Fort Knox is now slightly below $18.5 billion.

There is no likelihood that the varied gap that separates foreign wages from those in this country is about to close and little evidence that it is being significantly narrowed; and there is the rub. The installation of vast amounts of modern machinery and equipment abroad has greatly lifted productivity overseas and this confronts producers in this country with a problem never before contemplated. Yet we have thrown away most of our tariff defenses and even now we are in Geneva gnawing more of them away.

At the same time a mockery has been made of the remedy, i.e., the escape clause of the Trade Agreements Act, that has been so assiduously but falsely held up to the American people as a true source of relief against serious injury from imports.

What is needed in order to halt the growing exodus of manufacturing enterprise and so that economic expansion in this country may continue, is a competitive climate that will make investment in this country as attractive as abroad. In many lines this is no longer the case.

The reality and fear of import competition and the poor outlook for export expansion must be lifted. Otherwise the vigor and vitality in our economy to which we look for sustenance not only of our own population but for strength to ward off defeat from abroad, will be leeched away.

Thomas Garrigue Masaryk

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. PUCINSKI. Mr. Speaker, the greatest Czechoslovak statesman of the 20th century, Thomas Garrigue Masaryk, was the son of a humble coachman, born 111 years ago today. At the time of his birth his country was ruled from Vienna and his people were suffering under Austro-Hungarian autocracy. By the time of his death 87 years later his country was liberated. It had become a stronghold of freedom and democracy, and his people were enjoying their richly deserved freedom in peace.

In bringing about such progressive and startling changes in the fortunes of his people Masaryk himself played a leading and very important role. Throughout his long mature life he was their leader, their teacher, their spokesman in the parliament in Vienna and in the capitals of Europe, and the tireless champion of their righteous cause for freedom.

As a man of exceptional ability and wide learning, Masaryk performed all his self-imposed tasks eminently well, and with consummate skill. He was the founding father and the first President of the Czechoslovak Republic. For nearly two decades he guided the destiny of his people, and at the time of his death he was venerated by his country and by all lovers of democracy and freedom.

Communist China Calls Peace Corps an "Expansionist" Move

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. REUSS. Mr. Speaker, I have been heartened and encouraged by the enthusiastic response which the Peace Corps proposal has evoked both at home and abroad. It is unfortunate that this response has not been unanimous, and that our desires to help foreign countries meet their own urgent needs has been met with suspicion in part of the world. In a broadcast from Peiping on March 3 the New Chinese News Agency announced their belief that the Peace Corps was an arm of American "expansion" and "infiltration." While what the Communist Chinese say may be true of their own efforts to aid other countries, I think that the President's message made clear his determination that this would neither be the purpose nor the result of the Peace Corps. And he further made clear his hope that other nations would mobilize similar groups to "increase the welfare of all men and improve the understanding among nations." This will be the spirit of our Peace Corps and I hope that it will become the spirit of all countries sending aid in the form of materials or manpower to their neighbors.

In the thought that it might be of interest to the Members, the text of the Communist Chinese radio broadcast follows:

PEIPING, March 3.—According to a news report from Washington, President Kennedy issued an order on March 1 to establish within the U.S. State Department a large column of "trained American men and women." This column will display the billboard of the "Peace Corps" and resort to the pretext of "aiding" the new nations to intensify the infiltration and control of these countries.

As indicated in the order signed by Kennedy on forming a temporary "Peace Corps," this column will serve as a new tool with which the United States will carry out its foreign expansion under the "mutual security" plan. The order reads that the "Peace Corps" will train and dispatch American men and women to "serve overseas" according to the "Mutual Security Act" "as a new plan for offering assistance to certain countries and areas of the world." It will "coordinate or support" the "economic assistance plan" of the United States and the United Nations. The order also said that the director of the "Peace Corps" will discharge the "responsibility as delegated to the President under the Mutual Security Act and as assigned to the Secretary of State by the President, or the responsibility as

delegated to the Secretary of State under the Mutual Security Act."

On the same day Kennedy also presented to the U.S. Congress a special message proposing establishment of a "permanent Peace Corps." The message said that the United States is prepared to select and train at least several hundred persons for oversea service before the end of 1961. It expressed the hope for several thousand "Peace Corps members" to work overseas within a few years.

Just like the past infiltration of old China by the U.S. officials and "private" agencies of all description and their agents, this "Peace Corps" will "offer service" to the new nations "with initial emphasis in the field of education," especially in teaching English. It also plans to "offer contributions" on terms of medical service and public health, as well as in "rural development." The message indicates that the "Peace Corps members" will become "effective tools" to carry out the "development plans" as formulated by the U.S. "aid agencies" to help these countries.

With regard to selecting personnel for the "Peace Corps," the message said that all Americans "applying" to join the Corps "will be carefully screened" and "specially trained" for a period ranging between 6 weeks and 6 months. They will serve overseas from 2 to 6 years.

According to a Reuters dispatch from Washington on March 2, this U.S. "Peace Corps" will carry out its activities first in six Asian, African, and Latin American countries, including India, the Philippines, Nigeria, and Colombia.

Opposition to a Department of Housing and Urban Affairs

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. WIDNALL. Mr. Speaker, for several years the American people have been subjected to a barrage of propaganda from the mayors of our larger cities for a Department of Housing and Urban Affairs in the President's Cabinet.

Approval by the Congress of such a Cabinet department is fraught with dire implications for our constitutional system of Federal-State-local relations.

My attention has been called to the current issue of the legislative bulletin of the National Association of Real Estate Boards by Curtis E. Huber of Evansville, Ind., chairman of the association's realtors' Washington committee. Mr. Huber sets forth some very cogent arguments against such a Cabinet department. He analyzes some of the arguments of the advocates of such a department and his comments underscore the great confusion over the objectives of such a new Federal bureaucracy.

Mr. Huber puts to rest the argument that a Cabinet department is needed to coordinate the Nation's housing effort, and he views with great apprehension the demands of the mayors to deplete the Departments of Commerce and Health, Education, and Welfare of some of their functions.

I ask unanimous consent to have printed in the Appendix of the RECORD this bulletin by Mr. Huber.

The national legislative bulletin follows:

MARCH 3, 1961.

Department of Housing and Urban Affairs: This is the first of several bulletins which will be devoted to the subject of a proposed Department of Housing and Urban Affairs in the President's Cabinet. Within the next several weeks the President will propose such a Cabinet spot either through legislation or a reorganization plan.

The National Association of Real Estate Boards will oppose the creation of such a Cabinet department. These bulletins are to apprise you of the reasons why NAREB for the past 5 years has insisted that such a proposal is not in the best interest of the Nation. The bulletins will also develop the association's argument against such a Department as well as analyzing the arguments of those who spawned and who are now nurturing this most recent adventure in big Government.

The Kennedy administration will propose that the Congress create a Cabinet post for two reasons: (1) the adoption of such a plank by the 1960 Democratic convention and (2) the belief that such would be an adequate reward for the tremendous majorities returned for the Democratic Party in the recent national elections. The President feels that he owes this to the big city mayors.

Arguments: Let us first examine the arguments of the proponents of a Department of Housing and Urban Affairs. These arguments for Cabinet status are easily turned against such a proposal.

Will it coordinate the Nation's housing effort? The President's proposal will transfer the Housing and Home Finance Agency to the new Department: and, presumably the present Administrator, Dr. Robert C. Weaver, will become the Secretary. Two important housing agencies will be left out of the new Department. One is the Federal Home Loan Bank System which provides more home financing than all other financing institutions including FHA, VA, commercial banks, etc. President Kennedy in a letter dated February 6 to the Chairman of the Federal Home Loan Bank Board called upon the Board to cooperate in the President's effort "to secure a level of mortgage interest rates which will stimulate the construction of housing units, thereby aiding in our overall recovery program and in realizing this Nation's full potential for economic growth." Consider the recent implied warning of Secretary of the Treasury Dillon to savings and loan industry leaders that if dividend interest rates were not reduced the administration would be forced to ask Congress for authority to regulate such rates. Doesn't the omission of the Federal Home Loan Bank System from the proposed Department of Housing and Urban Affairs present convincing evidence that coordination of the Nation's housing programs is not the reason for creating the new Cabinet spot?

Yet the President will not request—initially, at least—that the FHLB system be part of the new Department. Why? Although logic demands it, the President has consented to the strategy that the opposition must be divided and confused. Once the Department is created, without the FHLBB, the illogicality of the situation can be cured by a simple maneuver. By then, NAREB—if such a Department is in being—would very probably support the adding of the FHLBB along with any other housing agency not yet trapped in the new bureaucracy. Certainly, there would be no longer a valid reason to oppose such a transfer.

The VA housing program, in its peak year, contributed to more home financing than the FHA. Current legislative measures indicate that the veterans' home loan program will be extended and expanded. The President will not include the VA program because opposition of the major veterans' organizations could prove decisive. Perhaps later, the veterans' program could be slipped in when only the veterans' organizations are opposed to it.

In any event, Cabinet status for a Department of Housing and Urban Affairs does not have as its objective the coordination of the Nation's housing effort.

Will it give housing a greater voice in Government? Representatives of the home building and home finance industries who view Cabinet status as giving housing a greater voice in the top levels of Government are whistling in the dark. Both the Federal Housing Administration and the Federal National Mortgage Association (and ultimately the FHLBB system) will be geared to accomplishing the social objectives of a monolithic Federal urban bureaucracy. This inevitable erosion of the economic soundness criterion underlying the operations of these agencies has dire implications for private enterprise.

Assuming that housing would play a major role, does not Cabinet status presuppose that Government's role in housing must be a permanent and expanding one? Yet the experience of the FHA, FNMA, and FHLBB, which have conducted their operations without cost to the taxpayers, points to the opposite conclusion. Instead of Cabinet status for housing, the Nation, and certainly private enterprise, should nurture the seeds of a lesser role of the Federal Government in the housing industry.

The erosion of our Federal system: To the big city mayors the State has become a relic of the 19th century. The cities want a direct pipeline into the Executive Branch and the Congress. The cities are impatient with the manner in which the State legislatures handle the demands of the urban areas. They prefer a more benevolent approach from the Federal level. A Secretary of Urban Affairs (we can forget about the minor role of housing) would, they think, hammer away at the cities' needs—see to it, they think, that the budget is loaded with what the cities need and demand. What are these things that the cities will want their Secretary to get for them in the Cabinet? The following urban interests were presented by the mayors before the 1960 Democratic Platform Committee (as reasons why a Department of Urban Affairs is necessary) and in hearings before the House Government Operations Committee (June–July 1959): Public health, immigration, highways and railroads, airports, water and air pollution, juvenile delinquency, slum clearance, housing, unemployment, civil defense, fire protection and prevention, location and relocation of industry, general public works planning.

Will the Secretary of Urban Affairs be the agent for the pirating of these many functions of Government, which affect urban areas, from the present Cabinet Departments?

The American Municipal Association contends that such a new Cabinet Department is necessary because soon we will be essentially a nation of urban dwellers. This is as good an argument against a Cabinet Department as we have ever heard. As a nation of urban dwellers we would have our Secretary in the person of the President of the United States.

Creation of a Department of Urban Affairs would complete the erosion of our Federal system, an erosion which first manifested itself in the early New Deal years. In essence it means that the cities would deal directly with the Federal Government, shunting the State aside as a sterile impediment to urban growth. The influence of the State legislature on the city would be inversely proportionate to the influence

wielded by the city's spokesman in the President's Cabinet.

County officials see danger in Department of Urban Affairs: On June 3, 1959, the Executive Director of the National Association of County Officials, representing 6,000 elected and appointed county officials, testified in opposition to the proposal. The policy statement read into the record is as follows:

"Whenever possible, dealings between county and other local governments and the Federal Government should be channeled through an appropriate State agency. We oppose the establishment of a Federal Department of Urban Affairs on the ground that it would further weaken the States and would tend to create an unwieldy bureaucracy of the type found in many foreign countries."

Coordination begins at home: Have State, county, and city officials made a sincere effort to solve the problem which they would have the Federal Government assume at the Cabinet level? The following colloquy in the hearings before the House Government Operations Committee (June–July, 1959) is of more than passing interest:

"Congressman FASCELL. Has the U.S. Conference of Mayors had any type of coordinating meeting with the American Municipal Association, the National Association of County Officials, the National Planning Association, and other national groups on related problems?

"Mr. GUNTHER [General Counsel, U.S. Conference of Mayors]. We at the staff level often coordinate our activities.

"Congressman FASCELL. But there has been no formalized action, to your knowledge?

"Mr. GUNTHER. No. There are no regularized channels through which discussion between city, county and State officials takes place."

Is housing only an urban problem? The FHA has two programs under section 203(i) (rural and farm) in addition to other programs which are available to small towns as well as urban areas. What happens to these interests when the FHA becomes a bureau of a Department of Urban Affairs?

AMA would deplete Commerce Department: On July 21, 1959, Philadelphia Mayor Dilworth, testifying for such a Department before the House Government Operations Committee, said:

"I think such a Department would certainly have a Division of Urban Transportation to which would be transferred those activities in the Commerce Department involving highways, transit, rails, airports, and other transportation activities affecting the cities. Air and water pollution is another activity which would fall under the jurisdiction of such a Department, and certainly virtually all of the functions of the Housing and Home Finance Agency would be transferred."

Perhaps housing should be shifted to the Commerce Department and public housing and urban renewal to the Health, Education, and Welfare Department if a Cabinet voice is so vital.

On the other hand, Dr. William L. C. Wheaton, director, Institute for Urban Studies, University of Pennsylvania, testifying on the same day, said:

"I do not think that it can or should be a Department of Urban Affairs. Water pollution and problems of transportation can't all be embraced in a department of cities, for many of these problems transcend urban boundaries and flow directly to peoples or to river valleys and so on."

He pleaded for a Department of Housing and Urban Development which would coordinate Federal aids and city planning. This is the present function of the Housing and Home Finance Administrator and his more than 10,000 Federal employees. Will the creation of another bureaucratic level over the present one improve coordination at the local level? The history of the growth of Federal bureaucracy attests to an opposite conclusion.

Where does this leave the small town? Federal programs will be geared to the metropolitan area, and the small town will participate only to the extent that it succeeds in becoming a satellite of the former. Significantly, during the 86th Congress, when department status for urban affairs first asserted itself as a major drive, legislation was introduced to create a National Commission on the Problems of Small Towns. Does this presage Cabinet status for small towns?

Let's not overlook the shortcomings of the cities before giving them a voice in the Cabinet. The Harvard Business Review (January–February 1961) in an article, "Is Business Abandoning the City?" reported the results of a survey of more than 2,000 businessmen. A highlight of the results is summed up in the statement: "The political image of the city is a major influence on business location and residence decisions. Right now, the big city image is bad."

Again, quoting the report:

"One of the chief inhibitors of more effective urban redevelopment efforts, and particularly the involvement of major corporations as entrepreneurs in these efforts, are the difficulties in the vagaries of local politics.

"We need stable, responsible municipal governments to clarify the rules of the game in undertaking major urban rebuilding."

Does the drive for a Department of Urban Affairs suggest that the cities want to surrender their responsibility "to clarify the rules of the game" to the Federal Government?

CURTIS E. HUBER,
Chairman, Realtors' Washington Committee.

Safety Belts for 1962 Automobiles

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. ROBERTS. Mr. Speaker, for several years, and especially from the time when I assumed in 1956 the chairmanship of the Special Subcommittee on Traffic Safety, I have been impressed with the value of certain devices which can be installed in passenger vehicles to curtail traffic injuries.

One of these devices, proven extremely beneficial, is the safety belt.

I was delighted recently when the major automobile manufacturers in this country announced that, starting with the 1962 models, they will install safety belt attachments for the front seats of all passenger vehicles.

By this commendable action, the automobile industry has forcefully called the attention of every automobile owner to the value of seat belts. To make seat belt attachment standard equipment will constitute a considerable financial investment by Ford Motor Co., General Motors, Chrysler Corp., American Motors, and Studebaker-Packard.

This will undoubtedly encourage the public to install and use safety belts. Expert testimony before the Subcommittee on Health and Safety, which I now chair, indicates that at least five or six thousands of lives could be saved each year if motorists used properly installed safety belts. In addition, thousands of serious injuries could be averted. This alone would more than pay the added cost.

In this connection, Mr. Speaker, I would call Members' attention to my bill, H.R. 134, introduced on the opening day of this session, which would establish standards for the manufacture of automobile safety belts. It is important, with the increasing acceptance of these belts, that the belts themselves be properly constructed so that they will be unfailingly strong and safe.

Under leave to extend, I wish to include a wire story on the safety belt announcement, as well as an editorial from the La Grange, Ga., Daily News, which points up the efficacy of seat belts.

The article follows:

THE 1962 CARS TO HAVE ATTACHMENTS FOR SAFETY SEAT BELTS

DETROIT, February 25.—The auto industry is going to make it easier for you to put seat belts in your car.

Starting with the 1962 models, all the major domestic manufacturers will install safety belt attachments in the front seats of all passenger autos. The anchors will be affixed to the auto frame or subframe.

The companies said yesterday that they will provide uniform attachments built to industrywide specifications to provide buyers with an easy, economical method of attaching seat belts. Previous costs have run as high as $20 per belt because of the drilling and other labor costs. Now the buyer will only have to pay additionally for the belt. Cost of the anchor is expected to be minor. Belts alone cost as little as $3.50.

Ford has been offering seat belts as optional equipment since 1955, but has had few takers.

General Motors, Ford, Chrysler, American Motors and Studebaker-Packard all said they will install the belt attachments as standard equipment.

WHAT PRICE LIVING?

More and more is being said about automobile seat belts. And there's no wonder, because it's a proven fact that the belts can save lives and are saving lives in the very limited group of users about the country.

Calculations, thorough and conservative, show from 9,000 to 18,000 persons would not be killed in the slaughter of the highways if seat belts were used by everybody.

Why do only 2 of every 100 cars have seat belts if the margin of life and death is so emphatically affected? There's public apathy to overcome, just like in other safety projects, and law enforcers like Col. Bill Trotter, Police Chief Troy McClung, and Sheriff L. W. Bailey know what this apathy can do.

There's a bright spot though. Manufacturers are taking the idea more seriously based on the minute percentage of patrons who ask for the seat belts. If as many as 7 percent of all automobile buyers demand seat belts, then auto executives believe the belts will become standard equipment, and, of course, that's the only way to get real good response.

There are several congressional crusaders now joining the campaign for greater safety through use of seat belts. Insurance companies have led in putting belts into company automobiles and medical men and safety councils are behind the movement.

"Seat belts are a lot of trouble," many drivers who take "very few dangerous trips" may say. Yet it takes more time to light a cigarette than it does to flick a seat belt buckle. And every engagement behind the wheel is a dangerous one nowadays.

Diplomacy by Terror

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. ANFUSO. Mr. Speaker, I should like to call your attention to an important article appearing in the current issue—No. 57, winter 1960–61—of Prevent World War III, published by the Society for the Prevention of World War II, a nonprofit educational organization, located at 515 Madison Avenue, New York, N.Y. I refer to the article "Diplomacy by Terror," which is a factual analysis of U.A.R. President Nasser's policies toward his Arab neighbors.

There are many people who are under the impression that Nasser and his government speak for all the Arabs in the Middle East and have their welfare at heart. However, this is pure myth as can be seen by Nasser's efforts to subvert other Arab governments through terror, deceit, bullying, and even assassination. This article shows conclusive that Nasser does not represent the sentiments of other Arab States. On the contrary, a number of these countries fear and oppose Nasser as one who, under the slogan of Arab unity, is trying to absorb them to further Cairo's brand of imperialism. It is essential to understand what is really happening in the Middle East so that U.S. policy will not be guided by the groundless assumption that Nasser speaks for other Arab countries.

DIPLOMACY BY TERROR

President Nasser's capacity for aggravating tensions in the Middle East seems inexhaustible. Since his seizure of power in Egypt, practically every Middle Eastern state has, at one time or another, experienced Cairo's terrorism and poisonous propaganda. The targets may change from month to month and from year to year, but Nasser's overall objective is constant, i.e., to destroy the sovereignty of neighboring states and to append them to his orbit of empire. This article deals with the latest adventures of Mr. Nasser and his henchmen.

Having been sharply rebuffed by the Iraqi Government under General Kassem last year, Cairo has once more turned its guns on Jordan, the favorite whipping boy for Nasser's fiascos.

THE VICTIM

In the spring of this year, Egypt's controlled radio and press launched a vicious attack against the Jordanian Government with special emphasis on the Prime Minister, Hazza Majali. On March 8 radio Cairo warned, "If the people had its freedom it would not allow Majali to remain for a moment. * * * Majali is surprised that the lovers of freedom are dissatisfied with his slave policy. Hazza is surprised—but he is in for an even bigger surprise." The attacks grew in intensity as the summer approached. For example, on June 28, 1960, a Cairo broadcast described Majali as a spokesman of "treason and treachery." The fate of this "traitor" was "inevitable."

No man worth his salt will remain silent in the face of such direct threats to his physical person. Prime Minister Majali not only displayed courage, but spoke out in the sharpest terms. More than that, Majali rose above the question of personalities. He recognized that Nasser's attack upon himself was a clumsy camouflage and was really aimed at the sovereignty of Jordan. On July 7, 1960, Majali told newspaper correspondents that Nasser's policies were endangering peaceful relations in the Middle East. He noted that it was Nasser who initiated these assaults "which include wishes of death and streetdragging for the Jordanian officials."

The Prime Minister further observed that Nasser's incendiary talks took place at a time when Jordan and the U.A.R. had agreed that radio campaigns of mutual recriminations should be halted. He concluded his remarks with these words: "It was the U.A.R. authorities, headed by Jamal Abd an-Nasir, who caused the relations between the two countries to deteriorate. Although it is always Jordan's wish to see the Arab ranks united, we prefer a state of flagrant enmity to an artificial state of understanding which in fact shields intentions of treachery and plots."

Majali continued his exposé of Nasser's conspiracies. At a press conference on August 1, 1960, he outlined in detail Nasser's attempts to subvert and then dominate Jordan. The Prime Minister warned that Nasser's intrigues had far-reaching ramifications. Nevertheless, he assured his listeners that the Jordanian Government would stand firm and resist if necessary. Concluding his remarks, he said:

"Abdul Nasser realizes all this, but he is compelled to continue with his game of destruction from which he derives his continued existence, in order to conceal the corruption and ruin prevailing over his regime in Egypt and Syria * * * Nasser accuses us of being Western agents, because we obtain financial aid from certain Western powers. We do not deny that we obtain aid, but the aid is unconditional. We use this aid in promoting our economy and exploiting our resources. If obtaining aid proves one to be an agent, then Abdul Nasser is the master of agents, because he obtains aid from the East and the West in order to hide the corruption and to satisfy the growing need of his officers who are accumulating wealth, filling their pockets, implementing the plots of destruction, and shattering the Arab strength."

The growing tensions between Jordan and the Cairo government continued up to the Arab League meeting of August 22. The League met for 7 days and among the resolutions adopted was one which emphasized the importance that "accusations and all words and actions—especially through the press and over the radio—which might harm brotherly relations among the Arab countries, should be avoided."

On the day that the Arab League conference adjourned, Nasser's Foreign Minister Mahmoud Fawzi, announced that "the conference was held in a reasonable and realistic atmosphere. We did what we could to coordinate our moves in the direction of the aims in which we believe and for which we are working." On the very next day, August 20, 1960, Prime Minister Majali and 10 other high government officials fell victim to a coldblooded assassination. Could Mr. Fawzi ask for better "coordination"?

THE MAIN TARGET

Cairo's immediate reaction to this crime was one of self-satisfaction. Egyptian propagandists gloated and even warned that other agents of imperialism cannot live long if they oppose the overwhelming will of the people. However, even Cairo miscalculated the reaction of world public opinion. Indeed, almost automatically, commentaries in the Western press pointed to Cairo as the culprit. At that moment the Nasser regime changed its line. One of Egypt's foremost newspapers, Al-Jumhuriyah, ran a leading article entitled "We Accuse the King." It was King Hussein, according to this mouthpiece of the Nasser regime, who was behind the assassination of his Prime Minister. "We have proof to back up this accusation" the Cairo paper assured its readers. But to this day nothing has come out of Egypt that would follow through on this melodramatic accusation against King Hussein. Obviously, it was designed to throw sand into the eyes of those in the West who like to believe that Nasser is just a peace-loving, misunderstood Nationalist.

The criminal character of Nasser's regime was laid bare by the murder of Majali. Seldom have we seen such unanimity of reports in the Western press concerning responsibility for this outrage. King Hussein, himself, charged that the assassination plot was prepared with the full knowledge of those he termed the "responsible authorities in the United Arab Republic" (New York Times, Sept. 4, 1960.)

A couple of days later he publicly reiterated this accusation when he was asked if he thought Nasser had personally been aware of the plot. Hussein replied, "I am sure of it." (New York Times, Sept. 7, 1960.)

GANGSTER METHODS

Why did Nasser resort to this gangster method The fundamental answer lies in the nature of Nasser's goal which is to "integrate" the Middle East so as to provide a springboard for his empire building. This, of course, means that all states in the Middle East must be prepared to forgo their independence of action.

However, history does not record many instances where a state voluntarily consents to the yoke. Aware of this fact, President Nasser resorts to terror, subversion and murder. They have become an integral part of his foreign policy. It is perhaps no coincidence that Nasser is surrounded by German Nazis who helped Hitler to implement the same kind of operation when the Fuehrer was reaching for world domination.

This is the central fact of Nasser's foreign policy and the sooner it is recognized by all states, including the United States the better chance it will be to cope with this danger to peace.

Of course, there are immediate reasons why the Jordanian Prime Minister had to be liquidated. Certainly, one factor was his pro-Western views and his unconcealed contempt for Nasser's phoney nationalism and demagoguery. Nasser was discouraged over the fact that under Majali's leadership Jordan stood in the way of Cairo's plans to set up a so-called Palestinian government which would have inevitably been at the expense of Jordanian territory. Moreover, conditions in Jordan had been improved under Majali. As the London Economist of September 3, 1960, noted, since Majali took over in May 1959, he has brought a measure of calm in Jordan. He had "released a number of political prisoners and his plans for elections later in the year might have allowed more of the steam to escape."

Needless to say, the murder of Majali will not, in itself, satisfy Cairo. On the contrary, Egypt will never be appeased until it has completely swallowed up Jordan. This is impossible so long as King Hussein is on the throne. It is therefore, understandable that Cairo's conspiracies are above all conducted against the King who has been off and on a main target of Cairo's propaganda barrages.

THE TEMPO INCREASES

In the spring of this year, the tempo of the attacks increased with the ferocity which is the trademark of Cairo propaganda. Thus, on April 28, 1960, the Egyptian radio warned that Hussein would inevitably suffer the same fate as his grandfather (King Abdullah) who had been the victim of a terrorist assassination. On June 30, 1960, the Cairo radio declared that "the people have proven that they are capable of crushing their hangman (Hussein)." On July 8, Cairo Radio charged that "King Hussein is merely serving imperialist aims." On July 20 an Egyptian commentator called Hussein a traitor and warned that "the people are lying in wait for him." In this same commentary, it was said that Hussein "will not understand how poor his situation is until the day his people make him face the fate of all rulers who plot with imperialism against their people." Obviously, Nasser will spare no effort to destroy Hussein politically as well as physically.

It should be emphasized in this connection that Nasser's opposition to Hussein is not based on his aversion toward monarchism per se. We have no doubt that there are sincere people who might be misled into believing that this is purely a conflict between a popular dictator on the one hand and a monarch who wants to stay in power for selfish reasons. The issues are much deeper. Regardless of the nature of Hussein's rule, he has demonstrated friendship for the West and has, on the whole, pursued a peaceful foreign policy. Furthermore, Hussein has become a sort of symbol for those forces in the Middle East which stand for independence against Nasserism. It is this symbol which Nasser is striving to destroy.

AT THE U.N.

The contrasting positions of Nasser and Hussein were revealed at the recent session of the U.N. when Cairo announced that Nasser was going to New York to attend the General Assembly meeting. It was hoped that he would dominate the Arab bloc and give the impression that he was speaking for all Arabs. As a matter of fact, the propaganda buildup went even further. Here is the way Nasser's entrance into New York was described by Al Jumhuriyah (September 23, 1960): "Today New York will receive the hero who led the Arab peoples to freedom and peace and who paved the way for the peoples of Asia and Africa to achieve genuine freedom and cooperation among the peoples." Even Mr. Khrushchev could envy the imagination of Nasser's propagandists.

Nevertheless, Cairo showed much uneasiness and vexation over the fact that Hussein would also attend the General Assembly. Consequently, the Jordanian leader was subjected to a barrage of insults and accusations, obviously in the hope that they would intimidate and reduce Hussein's stature. One Egyptian newspaper, Al Ahram, charged that Hussein's trip was really "an imperialist plot" (September 22, 1960). This charge was echoed by another Cairo mouthpiece, Al Akhbar, which alleged that Hussein would be going because he was indebted to the "smile of Macmillan" and "the dollars of Eisenhower" (September 23, 1960).

But no matter how hard Egyptian propaganda tried to defame the Jordanian leader, the contrast was unmistakable when both Nasser and Hussein took their respective turns to address the General Assembly. While Nasser cast aspersions with regard to the U.N. role in the Congo which gladdened the heart of Mr. Khrushchev, the Jordanian leader gave unequivocal support to the U.N. in the "speedy and effective measures taken by the Secretary General and his staff in handling the tragedy of the Congo." Not only did the Jordanian leader expose the aims of communism in the Middle East, but he laid bare the conspiracies of the United Arab Republic, and warned the General Assembly that if they were not stopped they could "lead to the involvement of the major powers and thus produce a world conflict."

Describing Nasser's stepped-up campaign against Jordan, the King declared that it was the aim of Egypt to destroy the independence of his state. He recalled that on August 21, 1958, the U.A.R.'s warlike attitude became so menacing that the General Assembly of the U.N. endorsed an Arab League resolution by which even Nasser's government pledged to cease its anti-Jordanian campaign. "Unhappily," King Hussein remarked, "it (the U.A.R.) did not honor its pledge." These attacks continued and resulted in the assassination of Prime Minister Majali.

Hussein tried to restrain his emotion in referring to this brutal murder, but concluded with these words: "I should like only to add that I find considerable significance in the fact that our troubles with the U.A.R. date from the time that I denounced the growing menace of communism in the Arab world." Nasser was not present when Hussein spoke. He had already returned to Cairo where he received the usual hero's welcome. But Hussein's words are a challenge which, we can be sure, Mr. Nasser will not ignore.

ANOTHER TARGET

That Jordan's firm stand may be emulated by other Middle Eastern States is of prime consideration to Nasser. The recent break between Iran and the Cairo regime shows that the opposition to Egypt's strongman is gaining momentum. This last summer Iran roundly rebuffed Nasser's efforts to set himself up as the spokesman of the Islamic world. The conflict between Iran and Egypt burst upon the scene in July when, at the Shah's monthly press conference, a newspaperman asked if Iran was going to recognize Israel. The Shah's reply was not exactly clear and thus it was subject to misinterpretation. However, subsequent clarification by his spokesman indicated that there was no change in relations between Iran and Israel and that de facto recognition rather than de jure was the basis of Iran's recognition.

However, the Egyptian radio and press drowned out the calm explanations and the Shah was accused of being a tool of Western imperialism and an enemy of the Arabs. For days the Cairo propaganda machine poured out its venomous distortions. Thus on July 24, Radio Cairo said outright that Iran had formally announced establishment of full diplomatic relations with Israel. This was not true. Nevertheless, the lies poured forth in a continuous stream. The Shah was personally vilified and his Government slandered. Just as Cairo calls for the murder of Jordanian leaders, so has it appealed for the assassination of the Shah. On August 3, Radio Cairo declared that the Shah was protected by imperialism but this would not save him from the fate that awaits all traitors.

NASSER'S MANEUVERS

Having denounced the Iranian Government for something that it had not done, the Nasser regime had to follow through to keep up the pretense that what was false was really true. Diplomatic relations were severed. On July 28, the Egyptian Foreign Minister urged all Arab Governments to follow the lead of the U.A.R. and to break off all economic and cultural relations with Iran. Nasser's dominated Arab League was put into motion, and an unnamed spokesman for the League told the press that all Arab countries would blacklist Iranian companies and ships (New York Times, July 29, 1960).

The League spokesman expressed confidence that all other Arab countries would follow Cairo's lead. Nasser, himself, got into the act. In a fiery speech at Alexandria, he accused that Shah of having bowed to the will of the imperialists to receive a few more dollars of American aid. (Nasser receives tens of millions of dollars from American imperialists, i.e., taxpayers.)

Several days later, Nasser returned to the attack, sneering at the Shah for having allegedly recognized Israel to please America. He warned that breaking of relations with Iran would result in dire consequences for the Shah and his Government. "We are confident," Nasser shouted, "that the people or Iran will not let the Shah and other rulers in Iran to continue to march on this road." The road he was referring to, of course, was the path of friendship that had been maintained between Iran and the United States for years.

Actually, the screaming newspaper headlines, the blaring of the Cairo radio and Nasser's fulminations were all part of the psychological buildup which had been practiced in the past by German propagandists so as to pave the way for Hitler's aggressions.

Egypt's Foreign Minister Fawzi exuded confidence that this synthetic outcry would move other Arab States to take action against Iran and "all the Arabs will now say their word about the crime committed by the Shah and his government. Our statements will constitute the beginning of a flood" (July 28, 1960). Mr. Fawzi's optimism was based on nothing more than wishful thinking, for when other Arab governments were put to the test, they showed no enthusiasm. The Jordanian Government sought clarification from Iran regarding the Shah's position. The late Prime Minister Majali criticized Nasser for his "quick decision" and accused him of heaping "irresponsible" abuse on Iran (London Times, (Aug. 3, 1960).

REACTION

The Saudi Arabian Ambassador to Iran denied reports that his government would follow Nasser's line. Indeed, he reemphasized the point that friendly relations between Saudi Arabia and Iran would not be affected by "any kind of propaganda" (AP, Aug. 1, 1960). The Premier of Iraq was also cautious and unenthusiastic. He also refused to follow Mr. Nasser. "We should not allow rashness," he declared, "to make us lose our senses and thus lose our interest." In short, Nasser's trial balloon fizzled out. None of the Arab States went along.

Meanwhile the unequovical stand of Iran turned out to be another blow against Nasser. It unquestionably stiffened the resistance of other Arab States. The Iranian Foreign Minister described Nasser as "this lightheaded Pharaoh who is ruling by bloodshed."

At a press conference in Tehran on July 27, 1960, he delivered a slashing attack against Mr. Nasser: "The stupid, wil ful, and base declarations of Abdul Nasser, which are most unbecoming to the head of a friendly Moslem state, do not come as a surprise to the Imperial Iranian Government, because this man—whose illegal power derives from ambition, murder and bloodshed, incitement to riot, imperialism and the sowing of wrath and dissension among the Moslems—has always dreamed of leading and dominating the Moslem world * * * Gamal Abdul Nasser ought to know that Iran is an independent state and master of its fate, and that he is not the custodian of the Moslem states the states of the Middle East. He has no right to interfere in the affairs of other states."

Nasser's predicament was aptly described in a headline in the Christian Science Monitor, "Nasser Caught Out on a Limb."

The Egyptians were beside themselves with rage. Nasser's diplomats worked feverishly to recoup their master's loss of face.

They tried to do this by getting the Arab League to carry out an anti-Iranian boycott. On August 8, an emergency meeting of the League took place but no decision was reached. Consequently, the subject was deferred to the official meeting of the Arab Foreign Ministers on August 22.

On August 29, the Egyptian newspaper Al-Akhbar praised the results of this week-long meeting under the title "Arab Solidarity." This newspaper told its readers that resolutions on matters of great importance" had been adopted at the league meeting. Significantly, the paper did not go into details as to what these resolutions proposed to do, but it alleged that the conference had "established the primary element on which the strength of the Arabs depend—solidarity." The London Times correspondent reporting from Beirut put it this way: "The conference saved itself and the life of the league by avoiding the main issues in which agreement was not expected * * *" (Sept. 29, 1960). Obviously, Cairo propagandists could not be frank. As far as Iran was concerned, all of the maneuvers by Cairo went for naught. Indeed, the life of the league was saved.

OTHER TARGETS

Although Iran and Jordan have been the main targets of late, Nasser's aggressive activities are pointed toward other areas. On September 20, 1960, the Lebanese Ad-Dustur reported that members of a Syrian terrorist gang had been arrested. These agents of Nasser were also being interrogated in connection with recent bomb incidents in Beirut, Tripoli and other Lebanese towns. Another report from Jordan mentions that armed clashes had taken place between military units of Lebanon and the U.A.R. and that forces from the U.A.R. had crossed the Lebanon border and penetrated into Lebanese territory.

Turkey has also been the subject of Nasser's attacks. On July 11, Nasser's Minister of Interior in Syria, Colonel Serraj, called for the return of "Iskenderun" which is the Arab name for Alexandretta. This areas was incorporated into Turkey in 1939 following an election supervised by France and Turkey in which the pro-Turkish elements won. In reply to this revisionist speech by a key figure of the Nasser regime, the Turkish radio questioned why the U.A.R. had "chosen a way outside peaceful rapprochement." Several days before Serraj spoke, a member of the Iraqi air force, who had fled from Egypt, told a press conference in Jordan that Nasser was organizing a conspiracy to overthrow the Kassem regime (July 5, 1960).

NASSER'S TROUBLES

The enumeration of the plots and conspiracies engineered by Nasser and his associates pinpoints the main difficulties which block peace in the Middle East. So long as Western policymakers harbor illusions regarding the meaning of Nasserism, the Cairo regime will be able to continue its deadly game. Nasserism thrives on terror, subversion, and warlike acts. It is the age-old tactic of the demagog and dictator who has failed to cope with the real problems besetting his people. The roots of Nasser's crisis of leadership were described in succinct language by Iran's Deputy Foreign Minister as he explained Nasser's anti-Iranian policies:

"Nasser had been waiting for an opportunity to raise a furor, for the following reasons:

"1. According to reliable statistics in our possession, the economic position in Egypt is very grave.

"2. As a result, the standard of living has dropped by 35 percent during the last 6 months. The people are dissatisfied with the prevailing police regime, and the absence of freedom has caused a further deterioration of the situation. The condition of Egypt's farmers is worse than it was 5 years ago, and there is documentary evidence to prove this.

"3. The Egyptian Government nationalized the press, so that all the country's editors and correspondents have become the servants of the Government.

"4. The elections held there recently were modeled on the elections behind the Iron Curtain. No one may vote for any but the candidates placed on the list by order of the Government.

"5. Nasser promised his people to set up an Arab Empire and failed. In Syria there is strong opposition to Egyptian rule, and the Syrian people find themselves buckling under the economic strain and the lack of liberty.

"In order to conceal his internal difficulties, Nasser seeks to keep his people preoccupied with other matters and, with his campaign against the recognition of Israel, raises a furor in an attempt to force other states of the Middle East to follow in his wake. But he has failed miserably. The truth is that his tactics are well known to the Arab countries."

German Power Politics

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. ROOSEVELT. Mr. Speaker, I should like to call your attention to an important article which appears in the current issue—No. 57, winter 1960–61—of Prevent World War III, published by the Society for the Prevention of World War III, a nonprofit educational organization located at 515 Madison Avenue, New York 22, N.Y. I refer to the article, "German Power Politics," which deals with the crucial issue of nuclear weapons for Germany. There is no doubt that NATO must be kept strong militarily in the face of the Soviet challenge. On the other hand, it is highly questionable, both from a military as well as a political point of view, whether nuclear arms for Germany would strengthen the Western cause. This article reveals some interesting facts on the problem which are little known. Because of the vital importance of understanding what might be involved in the nuclear rearmament of Germany, I believe this article merits attention and study by all security-minded Americans:

GERMAN POWER POLITICS

In matters of high politics there is no logic—only interests. A case in point is the current campaign of the West German Government to equip its armed forces with nuclear weapons. Needless to say, this has outraged no less than frightened millions of people. It is precisely this reaction which now compels the Germans to soften their blunt demand by proposing that NATO become an independent nuclear force. If this should come about, then the Germans will have achieved their objective. They will have killed two birds with one stone by outflanking the opposition to the nuclear rearmament of Germany and bypassing present prohibitions on the production of nuclear arms on German territory.

The German argument for nuclear weapons has been put forth by Chancellor Adenauer on a number of occasions. In a speech before the International Press Institute (October 31, 1960) Dr. Adenauer said that NATO (including Germany) should be equipped "with deterrent nuclear weapons." As matters now stand, he said, the Soviet atomic arsenal is so great that in comparison the weapons of NATO (including Germany) are equivalent to "bows and arrows." Then he went to the heart of his "reasoning" for equipping Germany with nuclear weapons, "I am convinced that the Soviet Union will agree to controlled disarmament only after we have achieved at least a balance in power."

Let us now analyze Dr. Adenauer's argument and see how much logic it contains. Judging from Dr. Adenauer's estimation of Soviet forces, Moscow now possesses superiority in power. Yet it was Chancellor Adenauer himself who made a most optimistic evaluation of Soviet policy when he was interviewed on the "Meet the Press" program in the United States (March 20, 1960). In reply to a question, he told his press interrogators: "I am convinced that Khrushchev does not want any war. He just has not any use for war. He needs the whole force of Soviet Russia for peaceful reconstruction for the next 7 years at least to carry through his 7-year plan."

Of course, it would be foolhardy for the Western powers to plan their defenses purely on Chancellor Adenauer's assurances of Russia's peaceful intentions. Indeed, Dr. Adenauer has been telling the West all along that a basic reason why the Soviet Union does not attack, is due to fear of the retaliatory blow of the U. S.'s deterrent nuclear forces. A few years ago, Chancellor Adenauer told a meeting of the Council of Foreign Relations in New York: "The United States has in a historically very short period of time become the strongest and the decisive world power" (April 16, 1953). Two days before he confided to an American audience in Chicago that the countries of Western Europe "are helpless in the face of the huge powers of the Soviets." Therefore, he declared, the strength of the United States must stand "behind us as long as any danger threatens."

The overwhelming power of the U.S. deterrent forces has been repeated up to the very present. Thus, in April of this year, the Chancellor, speaking before the German Press Club, said that the United States was the only power which could save the world (Christian Science Monitor, Apr. 13, 1960). According to the London Times (June 22, 1960) Dr. Adenauer told a meeting of his political party that only the power of the West based on the strength of the United States, had prevented West Germany from being "swept under by the Communist flood." The deterrent power of the U.S. nuclear forces has also been recognized by Chancellor Adenauer's arch political rival, Berlin's Willy Brandt. In a speech before the recent congress of the Social Democratic Party, Brandt warned his listeners to be "careful that the deterrent factor of the United States is not reduced." While no one, he admitted, could feel at ease in this "horrible" situation of nuclear balance we would feel less at ease if the West did not possess the (United States) deterrent (New York Times, Dec. 25, 1960).

Consequently, it would seem that the responsible leaders in West Germany including Chancellor Adenauer, do believe that the U.S. nuclear deterrent compels the Soviets to think twice before committing aggression in Europe. From the foregoing it would therefore follow that the balance of forces is not in favor of the Soviet Union—and if it is not, then why should the Germans be equipped with nuclear weapons? (If the Germans should receive nuclear weapons to remedy an alleged unbalance, is it not plausible that the Soviets would go ahead and provide nuclear weapons for its satellites and possibly Red China?)

Obviously, the answer to the question is not in the realm of logic, but in the sphere of power politics. In a little noticed speech delivered in Brussels in September 1956, Chancellor Adenauer declared that it was time for Western Europe to develop its own independent power. "The vital necessities of European countries need not always be identical with the vital necessities of the United States and vice versa; from this situation could ensue diverging political convictions which in turn could lead to independent political action." Chancellor Adenauer saw the countries of Western Europe in danger of being crushed between the two colossi, America and the Soviet Union.

As long as the countries of Western Europe were not united, Adenauer observed, they would be compelled to be dependent on one or the other of the superpowers. The Chancellor said that this was "deplorable from various points of view." One basic objection was related to the development of nuclear weapons. In the long run, Dr. Adenauer declared, the monopoly of these weapons by the two world powers is "bound to make the situation intolerable for the small powers." Implicit in this criticism was the idea of an independent nuclear force for Western Europe. Indeed, Dr. Adenauer was more than hinting when, toward the end of his talk, he declared outright: "The purpose of NATO is to protect certain interests of the Atlantic Community, not common European interests."

Thus, 4 years ago, Chancellor Adenauer revealed his true reason for wanting nuclear weapons for Germany. It is based on his pet scheme of a third power bloc in Western Europe dominated by German military might armed with nuclear weapons. For what purpose? "Without power there can be no policy." This is what Chancellor Adenauer told his generals and admirals on the occasion of his last birthday (London Daily Express, Jan. 9, 1960.) Dr. Adenauer's Defense Minister, Frank Josef Straus, spelled out the dictum in concrete terms.

Three years ago, Straus wrote a rather sensational piece on the nature and function of the new German Army in a weekly review which is closely associated with the Bonn Government. As noted by the New York Times correspondent (February 19, 1960) Straus' article outlined "the basic prerequisites for a return to the Bismarckian policy of strength and the use of this policy to force the western and eastern powers to reunify Germany" Straus emphasized that the West German Army should be used as a bargaining counter. He insisted that the West German Government conduct its diplomacy in such a way as to make Germany "so indispensable for the potential enemy that both sides would find it worthwhile to talk with Germany." The potential power of a German Army built along these lines, would, according to Mr. Straus, give the Germans a real opportunity to be heard.

There is nothing much that we could add. However, we do hope that our own policymakers will not allow themselves to take hasty decisions on so crucial a matter as the nuclear rearmament of Germany via NATO.

The 100th Anniversary of the Inaugural of Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. SCHWENGEL. Mr. Speaker, on Saturday, March 4, 1961, it was the will of Congress to commemorate the 100th anniversary of the first inaugural of President Abraham Lincoln. An appropriate ceremony for this occasion took place at 11 a.m. at the east front of the Capitol.

I was privileged to have a role in this ceremony and was pleased that we were blessed with good weather so that the some 20,000 who gathered there and those who saw and heard the program on radio and television could relive this great moment in history.

Those of you who shared in this rich experience can testify that what we heard and saw on that day will be one of the highlights of the Civil War Centennial observance, and that it, too, will take its place as one of the historic contributions to our heritage.

Unfortunately, many of the Members could not be present and thousands of others had to miss the event because of the travel distance involved and because of other commitments. It is appropriate, therefore, that we provide for the entire program, just as it took place, with the remarks of our beloved Speaker and the address of the distinguished American author, Carl Sandburg, be printed in the CONGRESSIONAL RECORD so that it can be preserved for all time and made available to others who may be interested to have a copy of the program.

Under leave to extend my remarks, I include this commemoration ceremony in its entirety in the Appendix of the RECORD. The program follows:

THE LINCOLN INAUGURAL COMMEMORATION PROGRAM

(Music: the U.S. Marine Band; Lt. Col. Albert F. Schoepper, U.S. Marine Corps, conducting.)

Mr. SCHWENGEL. I present the Reverend Donald W. Mayberry of the St. John's Episcopal Church for the invocation.

Rev. Dr. MAYBERRY. Let us pray.

Oh, God, who moves among the centuries as author, and through faith in whom do we, living as in the chapters therein, find out our lives become rich. We honor this day, Thy servant Abraham Lincoln, who standing here admidst a people torn and anguished did lift his spirit above the false strength of malice to Thy spirit, and his will beyond factions and strive to Thy perfect will, and in Thee found his way and his Nation's way, so may we with his simplicity of heart find Thee in the complexities of our day. In the self-giving of ourselves to it, Thou hast set out happiness. Give us, we pray, the endurance to possess and to distribute Thy peace and may the blessing of God be amongst us and through us illumine the lives of others. We ask it in God's name. Amen.

Mr. SCHWENGEL. Mr. Speaker, my colleagues, distinguished guests, my fellow countrymen, speaking for the Congress, whose servant I am, I extend a cordial welcome to each and all of you.

On a pillar to the entrance of the Archives Building here in the District of Columbia are inscribed these words:

"The heritage of the past is the seed that brings forth the harvest of the future."

There is no place in our heritage from which we can take more or better kernels of wisdom and examples to plant in the hearts of people now with better prospects for good results for the future than from the life and experience of our most American—American Abraham Lincoln.

I am glad to meet and greet all of you here and all of you in the radio and television audience who will share in this moving, meaningful, and momentous experience in our national life, which took place here 100 years ago today. This experience, if properly understood and commemorated, can do much in our day to help us along our difficult way as we prepare ourselves to contend with the struggles of our day.

It is fitting and proper, as a part of this experience, that we listen to an American statesman and to an American sage, poet, and historian whose respect and reputation has no peer in America.

Now, and first, it is a great honor and privilege for me to present a man who has had, just as the man we honor with this program, a tremendous influence for good in our country. A man who has served his people and his Nation extremely well, and longer as Speaker than any other man ever elected to the Congress.

All of America knows now that I speak of our beloved Mr. SAM RAYBURN, Speaker of the House of Representatives, and now I yield to this great American for such remarks as he may care to make.

Speaker SAM RAYBURN.

SAM RAYBURN. Mr. Chairman, members of the committee, distinguished guests and fellow Americans, I am happy to join the chairman in welcoming you today on Capitol Hill.

There are few occasions upon which the committees of the Senate and the House allow any sort of demonstration on this plaza. We inaugurate our Presidents here, and have for more than a century; but we meet here today for a special reason, and that is, to reenact the inauguration of one of the greatest Americans in all of our history and one of the greatest men of all time.

Prejudice, hate, agitation brought about the Civil War. I have always thought if it had not been for hotheads in the South and the inane and insane agitators of the North that Abraham Lincoln, by his justice, his fairness, his great statesmanship, would have prevented the Civil War which destroyed the flower of our young manhood in this country that at that time was so sorely needed.

As a son of a Confederate soldier, who did what he thought was right, I say for him and for myself after that was over, he was proud our great Union was preserved; and so, today I come upon this platform, with many distinguished people and many out in front of me, to say to you as I have said when I presented him to the House of Representatives a short while ago, that Carl Sandburg had studied Lincoln more and understood him better than any man who has ever written about him since his passing.

The saddest thing that ever happened to the border States and the Southland was for an insane man to assassinate Lincoln. Lincoln was strong enough in the hearts and minds of the people in the North that he could have prevented, and would have prevented, some terrible things happening in some parts of our beloved country. But north, south, east, and west, we have forgotten that prejudice, we have forgotten that hate, and today we are proud indeed, and I am happy to welcome you on this great occasion when we celebrate the inauguration of that great statesman, that man with a heart, that man with a heart of gold, and I am glad and I am happy, I am honored, to have the privilege of being a part of these ceremonies.

Mr. SCHWENGEL. Thank you, Mr. SAM.

Our speaker is inseparably identified with the Lincoln story and its telling. He has devoted his life to it. He has lavished his genius upon it. He has quickened it and made it enduringly a part of ours. His "Abraham Lincoln: The Prairie Years and the War Years," are acknowledged throughout the world as constituting "a noble monument of American literature." It is with grateful pride and eager expectancy that I present the magnificent, the incomparable Carl Sandburg.

Mr. SANDBURG. Perhaps as an old reporter I could offer the point of information that Mr. SAM RAYBURN and myself are agreed that the crowd here today is nearly doubled that of 100 years ago when that was 10,000 listening to Lincoln.

Here 100 years ago to the day were 10,000 people who hung on the words of the speaker of the day. Beyond this immediate audience were 30 million people in 34 States who wanted to know what he was saying. Over in the countries of Europe were more millions of people wondering whether the American Union of States would hold together or be shattered into fragments. During the 4 months since his election Lincoln had kept silence on all such questions as, "What will be your policy?" "How will you act on this or that?" Six States had seceded from the Union. Big screaming black letters in Charleston, S.C., cried to the wide world. "The Union is dissolved." Scores of newspapers had asked in effect, "Mr. Lincoln, since you know you can't coax the seceded States back, will you go so far as to use force and start a bloody civil war?" The General of the Army, Winfield Scott, had arranged for riflemen in squads to be hiding on the roofs along Pennsylvania Avenue when the Presidential carriage passed. His orders were: "To watch the windows on the opposite side and fire on them in case any attempt should be made to fire on the Presidential carriage." Alongside the carriage rode a squadron of cavalry. In front of it marched a company of West Point cadets along with infantrymen and riflemen from the District of Columbia. On sidewalks were people who cheered and people with stony faces who refused to cheer.

Out over the country from the Atlantic to the Pacific was everyday question, "Will there be a war?" The new man, about to become the 16th President of the United States who, in minutes, would take the oath to be faithful to the Constitution, was drawing to the close his inaugural address, saying, "In your hands, my dissatisfied fellow countrymen, and not in mine, is the momentous issue of civil war. The Government will not assail you. You can have no conflict, without being yourselves the aggressors. We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break our bonds of affection."

In this he was speaking as a President, majectic, kindly, understanding. However, he knew well that as President he was also Commander in Chief of the Army and the Navy of the United States. He spoke, too, somewhat like a man with an iron hand in a thick velvet glove and almost like a solemn oath he declared, "I hold, that in contemplation of universal law, and of the Constitution, the Union of these States is perpetual. Continue to execute all the express provisions of our National Constitution, and the Union will endure forever."

There came from him little gnarled nuggets of wisdom which in the 100 years since he spoke them have been spoken and printed thousands of times, "Suppose you go to war, you cannot fight always; and when, after much loss on both sides, and no gain on either, you cease fighting, the identical old questions, as to terms of intercourse, are again upon you."

There were crimson shadows flowing from some of his sentences. "This country, with its institutions, belongs to the people who inhabit it. Whenever they shall grow weary of the existing government, they can exercise their constitutional right of amending it, or their revolutionary right to dismember, or overthrow it."

Like an elderly counselor he asked, "Why should there not be a patient confidence in the ultimate justice of the people? Is there any better, or equal hope in the world? My countrymen, one and all, think calmly and well upon this whole subject. Nothing valuable can be lost by taking time. Intelligence, patriotism, Christianity, and a firm reliance on Him, who has never yet forsaken this favored land, are still competent to adjust, in the best way, all our present difficulty."

From a Capitol doorway, standing with folded arms watching Lincoln and plainly wanting to be seen watching him was Senator Louis T. Wigfall, of Texas, who in his South Carolina years had killed a man in a duel. Plainly wearing contempt, defiance on his face, Wigfall was saying now in pantomime what he had said in the Senate, that the old United States of America, the Union, was a corpse and the question now was how "to give it a decent burial." He questioned the backbone of the President-elect and in Senate speeches laughed sometimes, this Wigfall, as though the Four Horsemen of the Apocalypse were a quartet of fat merry clowns and war meant neither cadavers nor ashes.

In contrast, Representative Tom Corwin, of Lebanon, Ohio, spoke in the House a bitter grief:

"Better for us that the fruitful earth should be smitten and become dry dust; better that the heavens for a time becomes brass, and the ear of God deaf to our prayers; better than famine, with her cold and skinny fingers, lay hold upon the throats of our wives and children, than that we should prove faithless to our trust and all our bright hopes die out in that night which knows no coming dawn."

On January 16 of 1861 Corwin wrote to Lincoln a letter for Lincoln's eye only. "I have been for 30 days, in a Committee of 33." Members of Congress from nearly all States south and north served on this committee, of which Corwin was chairman and he gave to Lincoln this judgment:

"If the States are no more harmonious in their feelings and opinons than these 33 representative men then, appaling [sic] as the idea is, we must dissolve and a long and bloody civil war must follow. I cannot comprehend the madness of the times. Southern men are theoretically crazy. Extreme northern men are practical fools. The latter are really quite as mad as the former. Treason is in the air around us everywhere. It goes by the name of patriotism. Men in Congress boldly avow it and the public offices are full of acknowledged secessionists. God alone I fear can help us. Four or five States are gone, others are driving before the gale. I have looked on this horrid picture till I have been able to gaze on it with perfect calmness. I think if you live, you may take the oath."

The last two sentences were addedly profound coming from the best wit and story teller in Washington. When Lincoln was a Congressman in Washington he and Corwin often had fun together with their stories. Now Corwin felt himself a presence lingering on a threshold preparing his farewell.

This 16th President of the United States had a vision of his country being of service in the world leadership. It is told in an address in Illinois in 1858: "These representatives in old Independence Hall, said to the whole world of men: 'We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness.' This was their lofty, and wise, and noble understanding of the justice of the Creator to His creatures. Yes, gentlemen, to all His creatures, to the whole great family of man. In their enlightened belief, nothing stamped with the divine image and likeness was sent into the world to be trodden on, and degraded, and imbruted by its fellows. They grasped not only the whole race of man then living, but they reached forward and seized upon the farthest posterity. They erected a beacon to guide their children and their children's children, and the countless myriads who should inhabit the earth in other ages. Wise statesmen as they were, they knew the tendency of prosperity to breed tyrants, and so they established these great self-evident truths, that when in the distant future some man, some faction, some interest should set up the doctrine that none but rich men or none but white men, were entitled to life, liberty, and the pursuit of happiness, their posterity might look up again to the Declaration of Independence and take courage to renew the battle which their fathers began."

A preacher in Auburn, N.Y., having sagacity and wisdom gave his listeners in the pews these long thoughts about Lincoln, the 1864 candiate for President of the National Union Party ticket:

"Such an epoch of perplexity, transition, change, is not often witnessed. In every such passage of a nation there ought to be a character like Samuel. Misunderstood and misrepresented at the time; attacked from both sides; charged with saying too much and saying too little, he slowly, conscientiously and honestly works out the mighty problem. He was not a founder of a new state of things like Moses; he was not a champion of the existing order of things like Elijah. He stood between the two; between the living and the dead; between the past and the present; between the old and the new; with that sympathy for each which at such a period is the best hope for any permanent solution of the questions which torment it. He has but little praise from partisans, but is the careful healer binding up the wounds of the age, in spite of itself; the good surgeon knitting together the dislocated bones of the disjointed times. The explanation of his every act is this: He executes the will of the people. His wisdom consists in carrying out the good sense of the Nation. His growth in political knowledge, his steady movement are but the growth and movement of the national mind. He stands before you a not perfect man and yet more precious than fine gold."

As Lincoln spoke on that day which we memorialize now a hundred years later he knew death was in the air and so was birth. What was dying men did not know. What was being born no one could say for sure. He knew well and deeply what he said 2 years later amid the smoke and blood of conflict: "The fiery trial through which we pass, will light us down, in honor or dishonor, to the latest generation."

He would have wanted us of the latest generation today to remember how he stood amid the terrific toils and turmoils he was under compulsion to face.

Lincoln came out of the pioneer time of America. He began his journey to the White House in a one-room log cabin with a floor of packed down dirt and one window and one door. Perhaps we can say now that there can be generations taking hold with the loneliness and genius to struggle that always dwelt in the hearts of pioneers, as though the restless and venturing human spirit shall perform again tomorrow with exploits today declared visionary and improbable. Tomorrow belongs to the children—yes. This means that they and their children will take their own peculiar directions dictated by events not now known to any well accepted prophets. The living might plan and blue-print a world for the unborn, who on becoming born and grown to man size would decide to forget the arrangements made for them while they were unborn. Starting in on their own they might shape something else. With respect and affectionate regard for the elders and ancestors they might do what they do in their time, acting under wills, theories and compulsions unknown to the Founding Fathers.

This has happened across history. More than once this has precisely happened. Tomorrow belongs to the children. They will mold that tomorrow with care and wisdom. Or they will muddle and while muddling some may look backward saying, "There are plenty of precedents."

There are careless generations who drift, dawdle, decay. Still others leave tall landmarks of liberty, of discovery, invention, and culture, setting targets of achievement at which no succeeding generation can take a horse laugh of derision and belittlement.

What the young people want and dream across the next 100 years will shape history more than any other motivation to be named.

Youth now living and youth as yet unborn hold the seeds and secrets of the folds to be unfolded in the shapes to come.

None shall look back on this hour and say we did not have hope and faith.

The mystery of justice between man and man, nation and nation, shall take on new phases.

Dreamers of deep sacred dreams, finders and welders, sons and daughters of burning quests, shall come.

In actions of courage and endurance lighted with inner humility, lighted sometimes with a fine balance of motives as between freedom and discipline, they shall clothe human dignity with wider meanings.

Youth when lighted and alive and given a sporting chance is strong for struggle and not afraid of any toils, punishments, dangers, or deaths. What shall be the course of society and civilization across the next 100 years? For the answers, read, if you can, the strange and baffling eyes of youth.

As the new President, 100 years ago, slept his first night in the White House, his inaugural address had gone by telegraph to St. Joseph, Mo., and Pony Express relays were rushing West with it. They would be 7 days and 17 hours reaching Sacramento, Calif., with his plan for the east and west coasts, the Great Lakes and the gulf, the Rio Grande and the Penobscot to belong to one common country.

It was a great day in American history, of which we might say it was sunset and dawn, moonrise and noon sun, dry leaves in an autumn wind, and springtime blossoms, dying time and birthing hour. It has been a privilege to face this magnificent audience, and I hope it has been worth your while. I thank you.

Mr. SCHWENGEL. My friends, to try to comment on a magnificent address like that is impossible but it must be said, Mr. Sandburg, that all of America and liberty-loving people everywhere are grateful for this eloquent, appropriate, meaningful, and moving experience that you have helped to create for us so magnificently today.

My fellow countrymen, what we emphasize today in this program is not the conflict, but the tragedy, that at frightful cost enriched and made clear the American tradition. The phrase, "Conceived in liberty and dedicated to the proposition that all men are created equal," acquired a magnificent meaning during and since the war for all of us and for all time. With the result that our Nation under God was unified and made strong beyond any power again to separate and divide. What has emerged now is the last great hope of an imperiled mankind. The fragment of history we show so humbly today may furnish an insight into the tumult, the bitterness, that in the end cleared the air for the triumph forever of the American genius for justice and freedom.

From our early revolutionary beginnings and from this Lincoln heritage is forged our country's leadership in a world of this hour, a leadership that gives promise of freedom for all mankind everywhere.

And now the reenactment of the Lincoln inaugural in 1861:

LINCOLN INAUGURAL REENACTMENT, 1861

Narrator: Roger Mudd.

Abraham Lincoln, President-elect of the United States: John C. Collison.

Mary Todd Lincoln, wife of the President-elect: Mrs. Jane Gill.

Stephen A. Douglas, Senator from Illinois: Ralph Becker.

Roger B. Taney, Chief Justice of the United States: William Tredway.

Hannibal Hamlin, Vice Presdieat of the United States: Clarence B. Gill, Jr.

James Buchanan, President of the United States: Ray Moore.

Edward D. Baker, Senator from Oregon: H. P. Newson.

Henry Watterson, journalist: Al Carwil.

James A. Pearce, Senator from Maryland: Al Tyler.

"Mr. MUDD. Honored guests, ladies and gentlemen, you are about to witness the reenactment of the opening act in the greatest tragedy of Amercan history—the War Between the States.

"This platform and the scene about to be played before you, constitute not a precise, but a reasonable approximation of the properties and what happened in this very Capitol plaza, here, on the steps of the east front of the Capitol of the United States, just 100 years ago to the very day.

"The platform, the small table which you may see up front there, and the chairs taken from the U.S. Senate are a nearly authentic recovery of the scenic background on March 4, 1861.

"But on that occasion, extensions were attached to either side to hold the distinguished guests.

"The guests remained standing through out; the chairs were provided only for the central group under the simple wooden canopy made of rough boards and painted an offwhite, as now, to match the Capitol Building.

"The New York Herald reported that a crowd of 30,000 gathered where you are now; and they saw the spreading structure of the Capitol, with its unfinished dome surmounted by gaunt derricks, braced with ropes of steel.

"The model of the statue of Armed Freedom, destined for the dome's apex, stood back there in the grass, among a litter of marble blocks.

"Here is the Lincoln Presidential party—about the way it happened 100 years ago—beginning its slow and dignified walk to the platform for the ceremony of inauguration.

"Shortly before this entrance, the Senate was called to order and the oath of office was administered to Hannibal Hamlin, the incoming Vice President, by the outgoing Vice President, John C. Breckenridge.

"This, that you are now about to see—the inaugural—is the main event.

"Of course, this is a condensed reenactment of the hour, done almost in capsule form.

"Here is the President-elect, Abraham Lincoln, escorted by the President, James Buchanan, a former Minister to Russia and Senator from Pennsylvania.

"Immediately behind them are Mrs. Mary Todd Lincoln, flanked by Henry Watterson, on your right, the famous Kentucky journalist, and Senator Stephen Douglas, of Illinois.

"It was in the Illinois senatorial campaign of 1858 that Mr. Lincoln had forced the Senator to take a political position which wrecked Douglas' chances for the White House.

"Directly behind Senator Douglas on the left is Roger B. Taney, Chief Justice of the United States, participating in his ninth inaugural; and Mr. Lincoln's great friend from Oregon, Senator Edward D. Baker, who will introduce the President-elect for his inaugural address.

"And finally to the rear on your right, Vice President Hamlin, and Senator James A. Pearce, of Maryland, who is a member of the inaugural committee on arrangements.

"That's the party.

"March 4—100 years ago—began as a cloudy and raw day. But when Lincoln stepped forward to speak, Washington was beset by what one report called an unseasonably warm sunshine and the crowds were afflicted by what the reporter of the New York Herald called an overwhelming dust. Pennsylvania Avenue, from the White House to Capitol Hill, had been scraped of its dirt and debris just the day before and the city had no street sprinkling system.

"All reports say Mr. Lincoln's voice was 'clear and distinct' and that it was 'heard by thousands.'

"The crowds, too, participated actively and noisily in the inaugural.

"Not far from this platform and on the plaza grounds, one youngster fell out of a tree. A little man with red whiskers addressed part of the crowd with oratorical flourishes.

"Hecklers and well-meaning enthusiasts took small liberties with the ceremonies.

"One newspaper reported that Mr. Lincoln was greeted by cheers as he approached to deliver his inaugural.

" 'He then put down his manuscript,' said another journal, 'claps his hands in his pockets and pulls out a pair of steel-bowed spectacles. This is a signal for merriment in one portion of the crowd. A lusty, hawk-eyed fellow cries out: "Take off them spectacles, we want to see your eyes." "I didn't know he wore glasses," remarked another, "they ain't in the picture." '

"Now, the principals in today's tableau have ceased chatting with each other. Senator Baker is about to introduce the President-elect.

"You see Mr. Lincoln fumbling a little with his hat and Senator Douglas gracefully relieves him of it. This may or may not have happened. In any event, sometime later, Senator Douglas reportedly said: 'Well, if I can't be President, at least I can hold the President's hat.'

"Senator BAKER. Fellow citizens I introduce to you, Abraham Lincoln, the President-elect of the United States of America.

Mr. LINCOLN. Fellow citizens of the United States, in compliance with a custom as old as the Government itself, I appear before you to address you briefly, and to take, in your presence, the oath prescribed by the Constitution of the United States, to be taken by the President 'before he enters on the execution of his Office.'

"It is 72 years since the first inauguration of a President under our National Constitution. During that period 15 different and greatly distinguished citizens, have, in succession, administered the executive branch of the Government. They have conducted it through many perils; and, generally, with great success. Yet, with all this scope for precedent, I now enter upon the same task for the brief constitutional term of 4 years, under great and peculiar difficulty. A disruption of the Federal Union heretofore only menaced, is now formidably attempted.

"I hold, that in contemplation of universal law, and of the Constitution, the Union of these States is perpetual. I therefore consider that, in view of the Constitution and the laws, the Union is unbroken; and, to the extent of my ability, I shall take care as the Constitution itself expressly enjoins upon me, that the laws of the Union be faithfully executed in all the States. I trust this will not be regarded as a menace, but only as the declared purpose of the Union that it will constitutionally defend, and maintain itself.

"This country, with its institutions, belongs to the people who inhabit it.

"Why should there not be a patient confidence in the ultimate justice of the people? Is there any better, or equal hope, in the world? In our present differences, is either party without faith of being in the right? If the Almighty Ruler of nations, with His eternal truth and justice, be on your side of the North, or on yours of the South, that truth, and that justice, will surely prevail, by the judgment of this great tribunal, the American people.

"By the frame of the Government under which we live, this same people have wisely given their public servants but little power for mischief; and have, with equal wisdom, provided for the return of that little to their own hands at very short intervals.

"While the people retain their virtue, and vigilance, no administration, by any extreme of wickedness or folly, can very seriously injure the Government, in the short space of 4 years.

"My countrymen, one and all, think calmly and well, upon this whole subject. Nothing valuable can be lost by taking time. If it were admitted that you who are dissatisfied, hold the right side in the dispute, there still is no single good reason for precipitate action. Intelligence, patriotism, Christianity, and a firm reliance on Him, who has never yet forsaken this favored land, are still competent to adjust, in the best way, all our present difficulty.

"In your hands, my dissatisfied fellow countrymen, and not in mine, is the momentous issue of civil war. The Government will not assail you. You can have no conflict, without being yourselves the aggressors. You have no oath registered in Heaven to destroy the Government, while I shall have the most solemn one to 'preserve, protect, and defend' it.

"I am loth to close. We are not enemies, but friends. We must not be enemies. Though passion may have strained, it must not break our bonds of affection. The mystic chords of memory, stretching from every battlefield, and patriot grave, to every living heart and hearthstone, all over this broad land, will yet swell the chorus of the Union, when again touched, as surely they will be, by the better angels of our nature.

"Mr. MUDD. It is at this point that Mr. Lincoln took the oath of office from 81-year-old Chief Justice Taney. Contemporary reports reveal that when the oath was given, all stood up and took off their hats. The journalists that day wrote that the new President repeated the oath after the Chief Justice in 'firm but modest voice.'

"(The oath of office):

"Chief Justice TANEY. Do you solemnly swear to faithfully execute the Office of President of the United States?

"ABRAHAM LINCOLN. I do solemnly swear to faithfully execute the Office of the President of the United States.

"Chief Justice TANEY. And will you, to the best of your ability, preserve, protect, and defend the Constitution of the United States?

"ABRAHAM LINCOLN. And, I will, to the best of my ability, preserve, protect, and defend the Constitution of the United States.

"Mr. MUDD. The great drama of the inaugural is now ended. A nation is teetering on the edge of the great abyss. The new President, the new First Lady, the ex-President, the Chief Justice, the Senators, and a great galaxy of notables—many of them not to be seen in this tableau—are preparing to depart in their horse-drawn carriages to the festivities at Willard's Hotel downtown.

"The gaiety, the elegance, and the grandeur of the inaugural and its subsequent events cannot be completely captured for this reenactment. Nor, by the same token, is it possible to reenact the tense and highly charged atmosphere of impending doom which, in this hour, hung like a pall over the Nation.

"But they were there.

"For this is the eve of disunion and tragedy.

"The inaugural party, then as now, returned to Willard's Hotel for the luncheon. The menu was mock turtle soup, special brisket of corned beef with green cabbage, parslied potato, and blackberry pie and demitasse.

"It is this same menu that will be served at the reenactment today in the same place.

"Other words that this President has spoken will be remembered more than the words he spoke today.

"Yet the words he spoke today: 'We are not enemies, but friends. We must not be enemies' became, of course, the main theme of his Presidential life.

"Like all his words, they will serve to lift the moral tone of mankind through the ages."

Mr. SCHWENGEL. Ladies and gentlemen, the committee, the Congress, are grateful to all who have had a part in this program and we thank all of you good people for coming. We hope you feel it was a worthwhile effort. And now I present the Reverend George M. Docherty, pastor of the New York Avenue Presbyterian Church, for the benediction.

Rev. Dr. DOCHERTY. Let us pray.

Oh, God, of the nations, the wounds of the Nation have, indeed, been bound up and the scars have healed and in unity with live one nation, indivisible under God. In our day and generation grant us such courage and self-sacrifice as we do this day commemorate, that we may labor until across the whole world every child of the earth shall know a full life, enjoy liberty, and seek that happiness that is the blessing of all and the grace of the Lord Jesus Christ and the love of God, the fellowship of the Holy Spirit rest upon and abide with each one of us and all God's children everywhere, now and forevermore. Amen.

Alabama Man's Gift Plan

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. ROBERTS. Mr. Speaker, a friend and constituent, Mr. Edward H. Pearson, of Autaugaville, Ala., has come up with a unique idea for helping others and at the same time helping ourselves.

A story about his plan appeared recently in the magazine, America's Textile Reporter.

The Reporter comments:

We don't know whether every last detail of Mr. Pearson's plan could be put into effect, but we would like to see it tried. Here, at last, is a "giveaway" program that really makes sense.

I think Members will enjoy reading about Mr. Pearson's plan.

The article follows:

ALABAMA MAN'S GIFT PLAN WOULD AID NEEDY, BOOST U.S. TEXTILE TRADE

A little over a year ago, on December 3, 1959, the Reporter carried an article about Edward H. Pearson of Autaugaville, Ala., and his plan which would build new business for the textile industry, while at the same time providing good used clothing, gratis, to needy people at home and abroad.

Mr. Pearson's idea, which included the granting of tax deduction certificates to those who donated clothing, proved itself in a 1-day drive at Prattville, Ala., a town of less than 7,000 inhabitants, when more than $6,000 worth of garments was collected in just a few hours.

For the past 31 years, Mr. Pearson and his wife have made it a part of their Christmas holiday program to donate gifts of fruit, candy, and simple toys to children and grownups alike, within a 10-mile radius of Autaugaville. They annually carry the spirit of Santa Claus to as many as 1,200 people on the day after Christmas. So when Mr. Pearson, who owns a broom factory in Autaugaville, speaks of practical charity, he knows at first hand what he is talking about.

In a recent letter, Mr. Pearson said that more people than for many years in Autauga County were on the list for a visit from his party of Santa Claus' helpers, this past Christmas. He added:

"Our newspapers are making a big mistake when they publish stories that the world is consuming more cotton today than is being produced, and that we are gradually working down our cotton surplus. We all know that the 1961 cotton allotments to our cotton farmers will be increased some 10 to 15 percent in acres they will be allowed to plant. We, of course, are thankful for this increase, but it's not the textile mills in our United States who will receive most of the benefits, but it's the textile mills in other parts of the world, using American-raised cotton that was sold to them at a discount to encourage export shipments.

"It is hard for us to understand why we have to produce the raw cotton for export to foreign nations and have textile mills here in our United States needing orders to keep their workers employed. Why do we have to have mills such as West Boylston Manufacturing Co. and others closed down or running just part time, due to lack of orders for the goods they could be producing, when it would be such a simple matter to flood our textile mills with orders and put them on a 6-day full time operation round the clock?

"We know that distribution of any type of goods can be worked out so that the one who needs the goods will get them. It would be just as easy to work out the distribution of used clothing and bedding that was in good condition to the ones needing such goods here in our United States as well as foreign nations, as it is to set up the Christmas giving we do on a very small scale in our community. It takes us from 9 o'clock the morning of December 26 to 5 o'clock that afternoon to give to some 1,200 people. We do this with about four people helping my wife and myself.

"We also know, and you published this in your Texile Reporter, that if people are allowed a tax deducation certificate for the value of goods they donate to an organized charity, they will donate large quantities of their good used clothing, as they did in our one-day clothing drive in Prattville. Of course, the people throughout the county helped make this possible. The reason they did this was they were allowed to deduct the value of the donated goods up to 30 percent of their adjusted gross income for the year. It just shows what can be done if you can get the right setup operating.

"We also know when you have donated your own personal clothing and bedding, you and your family have to replace such donated goods with new goods, and this produces new business and jobs. * * * Right now, lack of orders is keeping good textile mill machinery idle, causing unemployment, and with the stockholders of the company receiving no returns on their invested capital.

"We have everything ready and set up to prove to the United States and the world that we can consume any amount, not only

of the cotton and wool our farmers are able to produce, but also all man-made fibers. We don't just "think" this can be done—we know it can be done. One real test of 30 to 60 days in any large trade area would prove we are right. We realize that just one man would be unable to do this. It would take a small group working together to get the job done.

"We have asked the Lord for the past 31 years to give us good weather at Christmas time, so we could make our rounds and bring a little Santa Claus to the people of our community, and for every Christmas He has given us the weather so large crowds would meet us. This Christmas we had the largest number we have had in many years.

"We are now praying, asking our Lord if he will help us get this set-up for donating used clothing and bedding to organized charity operating, and prove to our world that we can balance consumption of clothing and bedding with any volume of goods that our manufacturers are able to produce, with the donated goods caring for the needy here in the United States and other nations of the world. The Bible tells us that, if we have two coats and see a person who does not have a coat, we should give this person one of ours. We then have to buy a new coat, so when the next needy person comes along we will still have an extra coat to give to him.

"By giving away our old coat and keeping our new one, we will be raising our living standards, and also our new purchase will help provide jobs for the unemployed. And, as we have outlined, our Federal Government will have paid much of the cost of the new coat we buy through the tax saving we will have made. Yet, the government actually will make money on the deal, and will suffer no real loss of revenue, since the new business produced should more than offset, overall, the tax deductions—the new jobs produced for unemployed workers will also produce additional withholding taxes.

"Our State of Alabama Unemployment Agency has just informed us that during the tax year of 1961 all unemployment taxes against business will be advanced, due to the increase of unemployed workers. We think this is pretty general over our Nation."

Revaluation of the German Mark

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. FRIEDEL. Mr. Speaker, as a member of the Interstate and Foreign Commerce Committee of the House of Representatives, I would like to take this opportunity to commend West Germany for the action taken in revaluing the mark.

Many of us have recognized for some time that the exchange value of the mark has been below its true value, particularly in view of the great economic recovery made by West Germany. This action in valuing the mark upward by 5 percent should have the effect of stopping inflation in that country and, at the same time, it will help the United States to improve its balance-of-payments position. I would have liked to see the mark valued upward by 10 percent, but this latest action is certainly a step in the right direction and I hope it is just a forerunner of other steps to be taken by the German Government to meet some of the realities of the international economic situation.

Increasing the value of the German mark by 5 percent means that those who hold them can get more dollars for the same marks and can buy more American goods cheaper than before.

It also means that anyone with American dollars will find German goods more expensive. This should discourage Americans from buying in Germany and stop some of the dollar outflow. It should also stimulate our exports and bring about a decrease in prices of German imports.

The Washington Star had a very timely, article on this subject last night, which I would like to include at this point in the RECORD:

CHIPPING AWAY AT DEFICIT

Weekend announcements in three free world capitals offer further encouragement of at least a modest near-term improvement in our unfavorable balance-of-payments position.

In Bonn, on Saturday, the West German Government announced a 5-percent increase in the exchange value of the deutschemark. In The Hague, on the following day, the Netherlands Government announced a similar revaluation of the Dutch guilder. In Washington, there was a series of moves—including a State Department order relaxing the barriers to foreign tourist travel to the United States, a Defense Department order ending transocean transportation at Government expense of foreign-made automobiles purchased by servicemen overseas, and a new call from the White House for a voluntary reduction in overseas spending by both military and civilian personnel of the Defense Establishment.

The West German move was not made expressly, or at least not exclusively, for the benefit of the dollar. It has been recognized for some time that the exchange value of the mark, fixed immediately after World War II, has been below its true value in the light of the spectacular economic recovery in West Germany. This undervaluation has, in itself, helped the booming West German export trade but has been inflationary at home and, partly because of the often-rumored upward revaluation, has contributed to the speculative interest in the mark. The mark's attraction has been a factor in the outflow of American gold that has accompanied our balance-of-payments deficit. While some authorities on international exchange already are expressing fear that the 5 percent change is not enough to correct the basic problem, theoretically it should bring a nominal rise in the price of German exports and a parallel decrease in prices of German imports. The Dutch action, taken primarily to keep that country in step with its biggest trading partner, should have similar effect—with both having some helpful impact on our own export-import trade.

As for the steps taken here, they promise only a limited chipping away at the payments problem. On the scale proposed, the voluntary reductions in overseas spending, for example, would amount to about $100 million yearly in a deficit record that has been running well over $3 billion. Even so, it is obvious that a cure for this problem will not be achieved through any single action here or abroad. Our own Government still is seeking other ways to act unilaterally and still more that might be done through negotiation with our allies. Meanwhile, even limited accomplishment and cooperation are helpful.

Legalities of Aid-to-Education Program

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mrs. BLITCH. Mr. Speaker, to the credit of a large segment of our population, education is a priority item in their thinking. There have been many who have wanted to go completely overboard on the subject and to get Federal aid to education whatever the cost to our Constitution and to our traditions. Integration, up until recently, has been the bulwark of obstruction to the bill. We have used this tactic honestly and effectively. However, we did not wish to bring in the religious question for when one raises the question of religion in politics he or she is often accused of bigotry. I have no bigotry in my heart toward any religion that any individual in our great Nation wishes to embrace, but my deep concern is that of our forefathers who settled this country to escape the cruelties administered to them because of their religion. The largest denomination in the United States at the present time is the Roman Catholic Church. I, myself, am a Protestant, but I have never at any time failed to appreciate the fact that I could practice my Protestantism and the Catholics could practice catholicism without state interference. Now that the issue of Federal aid to education is before us again and we have a fine man as President who is a Catholic and who endorses a Federal aid to education bill that would exclude aid to parochial schools, his own church hierarchy has condemned him and is now making a valiant effort to have its schools included in the Federal aid bill.

To those of my colleagues who represent great Catholic majorities I have the greatest sympathy, for it means that their constituents will be doubly taxed by the Federal Government for public education if the President's bill should pass. On the other hand, if it should pass, with parochial and other denominational schools included, the basis upon which our freedom was established will have been destroyed. It seems to me, Mr. Speaker, that this Congress has never treaded on more dangerous ground. For the information of my colleagues and the general public at large, I am including in the RECORD an article published in the Washington Post, March 7, 1961, which I think will give all of us reason to think. Even though we have the President's assurance of nonsupport of aid to parochial and other denominational schools, what assurance do we have in the future that this legislation will not overstep the bounds of the sacred Constitution? Any succeeding President or Congress could amend the bill to include the objectionable features.

Are there not minds keen enough and means great enough at the local and State level to take care of this very serious question? Or shall we, as Members

sworn to preserve it, betray the trust placed in us by our constituents who elected us to represent them even though some of them forget the principles upon which this Nation stands?

LEGALITIES OF AID-TO-EDUCATION PROGRAM

(By James Clayton)

("Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof"—amendment No. 1, Constitution of the United States.)

Last Wednesday, President Kennedy told his press conference: "Well, the Constitution clearly prohibits aid to the * * * parochial school. There is no doubt about that * * *. There isn't any room for debate on that subject."

A day later, American leaders of the Roman Catholic Church said: "In the event that there is Federal aid to education, we are deeply convinced that in justice Catholic schoolchildren should be given the right to participate."

These two statements and the administration's aid-to-education bill have brought up one of the most difficult and most decisive issues in American constitutional law: What kind of aid to religious schools and to students who attend them is constitutional?

WHAT BILL PROVIDES?

The administration's bill provides aid to public elementary schools but none to private and parochial elementary schools. It provides scholarships for college students which can be used at public or private colleges. And it provides loan funds for both public and private colleges and universities.

President Kennedy's statements imply that these things are constitutional and that it would be unconstitutional to go much beyond them. The Catholic leaders have implied that the Government can go far beyond them without acting unconstitutionally. Both sides are oversimplifying the problem. Here are some of the questions and answers both sides must face:

Question. What does the Constitution mean when it says there shall be no law "respecting an establishment of religion?"

COURT INTERPRETATION

Answer. The Supreme Court's basic interpretation of this language was in 1947, in the Everson case, when all nine Justices seemed to subscribe to what Justice Hugo L. Black said the phrase means:

"Neither a State nor the Federal Government may set up a church. Neither can pass laws which aid one religion, aid all religions, or prefer one religion over another. Neither can force nor influence a person to go to or remain away from church against his will or force him to profess a belief or disbelief in any religion * * *. No tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever they may be called, or whatever form they may adopt to teach or practice religion. Neither a State nor the Federal Government can, openly or secretly, participate in the affairs of any religious organizations or groups or vice versa."

Question. That sounds fine, but does it mean that Federal and State Governments can never do anything which aids a church or a religious school?

Answer. No, it does not mean that. Government has long provided aid of one kind or another to churches and religious schools. The basic such aid is exemption from most forms of taxation; these exemptions have been upheld as constitutional in States where they have been tested in court.

TO STUDENT, NOT SCHOOL

More than that, the Supreme Court has held that it is constitutional for a State to provide free bus transportation for students in parochial schools and to pay for secular textbooks in parochial schools. These two things, the Court has said, are aids to the student and not to the school.

Even this, however, is a close question. Four Justices of the Supreme Court said that free bus transportation to parochial schools was unconstitutional; five said it was all right.

Question. Does this mean that the scholarship part of the President's program is constitutional as an aid to students?

Answer. It probably does. Scholarships awarded on a merit basis for use in any college, public or private, would probably be considered as aids to students. That was the rationale behind the GI bill scholarships which could even be used at divinity schools.

Question. Did the Supreme Court ever say that the GI bill program was constitutional?

Answer. No, it did not. The Court only decides problems when they are carried to it in a disputed law suit. No such case ever arose under the GI bill.

In fact, this is one of the reasons for the constitutional argument now going on. It is extremely difficult to get a case involving aid to religious schools into the Federal Courts.

MIGHT NEVER RULE

Question. Do you mean that if Congress passed a bill granting direct aid to parochial schools, the Supreme Court might never have an opportunity to say whether it was constitutional or not?

Answer. That's right. Under the Federal Court rules, a taxpayer could not challenge the act as unconstitutional. The only ones who could would be persons who could show that the act damaged them personally. If carefully written and carefully administered, such an act would give lawyers a tough job in trying to find a way to protest it in court.

SEES A DIFFERENCE

Question. President Kennedy has indicated that there is a difference between aid granted to colleges and technical schools and aid granted to elementary schools. Is this a valid distinction?

Answer. Most constitutional experts think that it is not a constitutional difference. If aid to elementary schools is unconstitutional, the same aid to colleges and technical schools is probably also unconstitutional, they think. A few agree with Mr. Kennedy that there is a distinction. They justify it on two grounds: 1, that elementary schools teach religious dogma as well as academic subjects, while colleges and technical schools often do not, and 2, that compulsory education laws require youngsters to attend elementary schools but not college.

The one Supreme Court decision which may (or may not) be relevant came in 1899 when the Court said Congress could spend money on an addition to a Catholic hospital here as long as the hospital acted within the terms of a congressional charter.

Regardless of a constitutional difference, however, there is certainly a political one. The Federal Government has in the past aided colleges with loan funds for dormitories and other projects. These have never been tested in court and are accepted facts of life, whether or not they are constitutional.

Question. Is there a difference between direct grants of money to schools and loans to schools?

Answer. Again, most experts think that there is no difference. If government lends money to a school at advantageous rates, this is an aid as clearly as a direct grant of money, they argue. But in 1958, the New York Court of Appeals ruled that a sale by New York City to Fordham University (a Catholic school) of land in the Lincoln Square redevelopment area was not an aid to religion although the city sold the land at less than it paid for it.

Question. Some Catholics have complained that an aid to education bill which does not provide funds for private and parochial schools would discriminate against the students of those schools. Is that a valid argument?

Answer. Regardless of whether this is valid from moral or logical grounds, the argument is clearly invalid from a constitutional viewpoint. Students who go to private and parochial schools are free to attend public schools and thus gain the benefits of governmental help. That is all the Constitution requires.

Question. Can Congress make a distinction between private schools run by religious groups and other private schools in granting loans or aid?

Answer. No, it cannot do so without denying one group or the other "equal protection of the laws." Whether it can distinguish between profit and nonprofit schools is an undecided question.

Prize-Winning Editorial From the Yazooan

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. WILLIAMS. Mr. Speaker, the Yazoo City, Miss., High School paper, the Yazooan, has again received an award from the Freedoms Foundation.

The editorial entitled "Nations Seek Truth; Must Fight Indolence," and which appeared in the October 6, 1959, issue won the George Washington Honor Medal.

Under leave to extend my remarks, I include this excellent prize-winning editorial which was written by Mr. Thomas Sewell Rand, now a student at Dartmouth College. The editorial follows:

AMERICA MUST LEAD—NATIONS SEEK TRUTH; MUST FIGHT INDOLENCE

Since the beginning of organized governments, man has been continuously engaged in a struggle to maintain fundamental God-given liberties. Among these rights is freedom of expression.

Americans are indeed fortunate among the peoples of the world because their right to say what they think is specifically guaranteed in the Constitution.

The average American has read about Khrushchev's recent visit in uncensored, American newspapers, heard reports over free air wires, and after forming an opinion on the merits of the exchange of visits, discussed it openly with anyone he pleased.

The average citizen in Russia, however, when he is asked about Khrushchev's trip to the United States, could not refer to the leader of his people as one noted American newspaper columnist did. He called Mr. Khrushchev "old Hawgjowls." If he valued his life he would be forced to agree that his brilliant master would eventually save the world with his sermons on communism, delivered from the pulpit of the free world's press.

When the American people give voice to their thoughts, then they no longer have to give vent to their emotions. A people blessed with legislation effectively guaranteeing each person the right to a free expression of opinion will never face the need to rise up in arms against an oppressive and

despotic government. Through united voices the people, the ultimate foundation on which any government rests, can shape the government under which they live to the mold of public opinion. No iron-fisted dictator can long clench a people in a tyrannical grip if they have the privilege of expressing their opinions without fear of reprisal.

Nevertheless, the American people must face with fear and apprehension a very real danger from within—the complacency and ingrained habit of appeasement that have become characteristic of a large segment of America's people. Americans have long excelled among the peoples of the world for their adamant stands for the right. Today, however, moderate points of view are becoming more and more a part of the American scene.

It is vitally necessary in a world where one false step by a world power could trigger a nuclear war that Americans and free people the world over continue to use their liberties to the fullest extent. Only through constant use, incessant vigilance, and a firm stand for the right can the American people retain their liberty and offer the oppressed peoples of the world credible assurance that they will continue to lead free nations in the never ending fight against tyranny with an unyielding dedication to and love for the American credo.

Resources Challenge

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. ABERNETHY. Mr. Speaker, the recommendation of this administration under the leadership of President Kennedy to move forward in the development of the natural resources of our country is meeting with wide approval. Surely a standstill policy—a policy of no new starts—cannot be justified. There must be new starts. And the progress of such depends upon the dispatch with which we in the Congress develop the necessary legislation.

Our country is abundantly endowed with great natural resources. To harness and put them to use enhances the standard of living of all Americans.

The President's program should have the support of the Congress. Already it has the support of the people. As evidence of this I include as a part of my remarks an editorial which recently appeared in the Commercial Dispatch, a conservative grassroots newspaper published at Columbus, Miss., in my congressional district.

The editorial follows:

RESOURCES CHALLENGE

President Kennedy has placed before Congress and the American people a challenge to venture toward new frontiers in the conservation and development of the country's natural resources. His plan is sound in purpose, broad in scope.

There are bound to be some misgivings as to the wisdom of this or that aspect of Mr. Kennedy's proposals. But on the whole the program appears to be a well-conceived summation of what must be done if the Nation is to fulfill the greater responsibilities that will come as a swiftly rising population puts more and more of a strain on our resources.

The administration envisions the need of more water, more electric power, better forest conservation, expanded recreational facilities. Means of dealing with these needs are proposed. The President notes, for example, the frequently stated forecast that U.S. water consumption will about double in 20 years; he recommends spending twice as much to find economical ways of making ocean water suitable for home and industrial use. His plan also foresees much broader development of nuclear power. He asks for control of air and water pollution, flood control, expansion of national parks and wildlife refuges and water reservoirs, more effort to tap the oil, gas, minerals and food in and under the sea.

The economic and political impact of the administration proposals will be emphatic and enduring. Although no price tag has yet been on either the immediate or the long-range program, the matter of cost will soon be brought sharply into focus. Whatever comes of the debate, the President must be credited with having offered an imaginative plan for tackling one of the Nation's major tasks.

Control of Textile Imports

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a concurrent resolution passed by the New Hampshire Legislature, March 1, 1961, requesting its congressional delegation to support and work for all possible and necessary legislation and regulations to control textile imports which are adversely affecting the textile industry in this country.

The concurrent resolutions follows:

Whereas the textile industry is an important part in the economic life of New Hampshire; and

Whereas foreign competition is one of the factors adversely affecting this industry and the economy of this State; and

Whereas the U.S. Senate Textile Subcommittee has recently been holding hearings relative to this question; and

Whereas the Governor of New Hampshire, as chairman of the New England Governors' Conference, and all other New England Governors have been diligent in the effort to find a solution to this vital problem: Now, therefore, be it

Resolved, That the General Court of the State of New Hampshire requests its congressional delegation to support and work for all possible and necessary legislation and regulations to control textile imports which are adversely affecting the textile industry in this country; and be it further

Resolved, That the secretary of state transmit copies of this concurrent resolution to the President of the United States, Senators STYLES BRIDGES and NORRIS COTTON, of the Senate of the United States, and the Honorable PERKINS BASS and the Honorable CHESTER MERROW.

STEWART LAMPREY,
Speaker of the House of Representatives.

SAMUEL GREEN,
President of the Senate.

Passed March 1, 1961.
Attest:

ROBERT L. STARK,
Secretary of State.

Fiftieth Anniversary of the Indianapolis Motor Speedway

EXTENSION OF REMARKS
OF
HON. DONALD C. BRUCE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. BRUCE. Mr. Speaker, it gives me great pleasure to congratulate the Indianapolis Motor Speedway on its 50th anniversary.

The first International 500 Mile Automobile Sweepstake was held in Indianapolis in 1911, and since then, auto enthusiasts from all over the world have traveled to Indianapolis for this annual racing classic. Besides being a thrilling spectator sport, the speedway has also been used as a testing ground for many safety features of our present day automobiles.

Mr. Speaker, under unanimous consent, I insert in the RECORD the following resolution adopted by the Indiana State Legislature on March 4, 1961:

HOUSE RESOLUTION 30

Whereas it is appropriate for the General Assembly of the State of Indiana to take notice of events which are of profound significance to our great State; and

Whereas one of the great events taking place in Indiana during the 20th century has been the founding of the Indianapolis Motor Speedway; and

Whereas this great attraction has brought fame and acclaim to Indianapolis and the State of Indiana from all corners of the globe; and its contributions to the development of the automobile as an aid to better living for all mankind are known the world over, and

Whereas the 50th anniversary of this spectacular event will be celebrated on May 30, 1961; and

Whereas the 92d General Assembly of the State of Indiana wishes to congratulate the Indianapolis Motor Speedway, its sponsors, friends, and automobile racing fans everywhere for their inspired interest in the greatest motor classic of the century: Now, therefore, be it

Resolved, That the House of Representatives of the 92d session of the General Assembly of the State of Indiana hereby congratulates the Indianapolis Motor Speedway on its golden anniversary and hereby extends every good wish for a future filled with even greater fame to the claim of the world capital of auto racing; be it further

Resolved, That the House of Representatives of the 92d General Assembly of the State of Indiana hereby memorializes the Congress of the United States to recognize the golden anniversary of the Indianapolis Motor Speedway by respectfully requesting the Postmaster General of the United States to take the necessary steps to cause to be issued at Indianapolis on May 30, 1961, a stamp commemorating the 50th anniversary of the founding of the Indianapolis Motor Speedway; be it further

Resolved, That the Postmaster General of the United States be respectfully requested to take any steps necessary to be caused to be issued at Indianapolis on May 30, 1961, a stamp commemorating the golden anniversary of the founding of the Indianapolis Motor Speedway claiming the title of "The World Capital of Auto Racing"; be it further

Resolved, That a copy of this resolution be sent to all Indiana Members of the U.S. House of Representatives and the U.S. Senate, to the Postmaster General of the United States,

to Mr. Anton Hulman, president, and to Mr. Joe Quinn, Jr., safety director of the Indianapolis Motor Speedway.

E. BOOMLEY,
Representative.
EDWARD MADINGER,
Representative.

Attest:

FRANCES GAYLORD,
Clerk of the House.

Uncle Sam as Don Quixote

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two articles from the editorial section of the March 6 and 7, 1961, issue of the Bangor Daily News:

[From the Bangor Daily News, Mar. 7, 1961]

UNCLE SAM AS DON QUIXOTE

Cervantes' classic novel of some 350 years ago told of the adventures of Don Quixote, a noble-minded man who sallied forth as a knight to right wrongs and to aid the downtrodden.

Today, Uncle Sam is preparing to sally forth in similar chivalrous manner. But Uncle Sam's exploit will be in fact, not fiction. And, of course, it is going to cost the taxpayers umpteen millions of dollars. We have in mind President Kennedy's Peace Corps—a brave band of young men and women already being formed to venture into the highways and byways of the world and set things to rights.

The Washington office of the Peace Corps reports that young people by the thousands are clamoring for enlistment. This is understandable. Young people are adventurous by nature. And good old Uncle Sam will pay the expense of their travels and their sojourns. It is a most appealing proposition.

There will be screening. If this is done properly, we suppose the majority of those accepted will be sincere in their desire to be helpful. But sincerity and idealism are not enough to remedy the woes of this sorely troubled world. It is too bad, for life would be much pleasanter and the millenium much nearer if they were.

The peace corpsmen are to receive up to 6 months' instruction in the language and customs of the lands to which they are assigned. But how much can a bright young man or woman from, say, Peoria, Ill., learn in 6 months about India, or Afghanistan, or Ethiopia? Enough to make him or her an effective helper?

We think not. Rather, we suspect, the corpsmen will find themselves groping about blindly in unfamiliar surroundings. And very likely being more trouble than their worth—however good their intent and however hard they strive. To reverse the picture for a moment: Would you expect a man from Afghanistan to come into a depressed area of the United States and show us how to lift it up by its bootstraps?

Modern travel and communication have brought the world's ills close to the view of Americans for the first time. But the ills are not new. They are ages old and deeply rooted in human nature. They are not going to be remedied quickly or easily.

The fictional Don Quixote "came a cropper" 350 years ago. Uncle Sam, we fear, is going to do the same with the Peace Corps.

The program strikes us as a bit of idealistic "boondoggling" which has been sold to President Kennedy and which his brother-in-law, Sargent Shriver, is going to direct.

[From the Bangor Daily News, Mar. 6, 1961]

WANTS MORE THRIFT

EDITOR, BANGOR DAILY NEWS: I note comments made by Frank W. Anderson in a recent issue of your paper, relative to thrift. I am 100 percent in agreement with his views and from talking with numerous voters, I know that a very large percentage of them are of the same opinion.

It seems to me that most of our elected officials, both National and State, have the feeling that the more ways they can think of to use money and increase taxation the better job they are doing.

I think we need more men in office that realize it was the taxpayer that put them in office; the taxpayers' money that they are spending, and the taxpayer is not interested in wasteful spending and higher taxation. In other words, a little more thrift would be a move in the right direction.

W. H. COMSTOCK.

Farmers Need a Press Agent

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. SCHWENGEL. Mr. Speaker, Robert C. Liebenow, president of the of the Chicago Board of Trade, recently wrote a letter to the Burlington (Iowa) Hawk Eye in which he voiced some arguments which I have often made, to wit: the farm story needs to be better publicized. I am glad that Mr. Liebenow concurs and I hope that we can encourage others to join us in spreading the word about just how valuable this wonderful farm plant of ours is.

Under leave to extend my remarks, I include Mr. Liebenow's statement in the Appendix of the RECORD:

FARMERS NEED A PRESS AGENT

Reams have been written about the great wastes in the farm price support program—about the staggering piles of surplus crops lying idle, the enormous expense involved in Government loans for unused crops, etc. All of this is quite true, of course. (I might point out, incidentally, that it would be more economical, since we must aid the farmer, to do so by making direct payments to him where necessary, rather than advancing money on crops that cannot be consumed.)

Meanwhile, I think American agriculture needs a good press agent—to tell the public that the farmer is not the villain in this picture, but that he is playing a vital role in our economy. Consider the following, if you will:

1. Farming is one of our biggest industries, employing some 7.5 million people (more than are employed in the steel, automotive, transportation, and public utilities industries combined).

2. Farmers buy, annually, between $2.5 and $3 billion worth of farm machinery, some $3.5 billion worth of gasoline and other fuels, lubricants, maintenance products, etc. (Farmers use more petroleum than any other single industry.)

3. They buy millions of tires a year, and consume approximately 24 billion kilowatt-hours of electricity.

Yes; the truth is that agriculture is still big and important business, and I think the fact should be trumpeted throughout the country, along with clarifying facts and figures concerning the essential nature of the farm problem.

ROBERT C. LIEBENOW,
President, Chicago Board of Trade.

The Proposed Peace Corps

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. DAGUE. Mr. Speaker, the President's proposal that a Peace Corps be organized for the purpose of promoting American ideals both at home and abroad has left me with considerably less than the enthusiasm such a proposition should invite. First, I believe we are rushing headlong into a program that has not been thought through; second, I feel that this could become a haven for draftdodgers; and, third, judging by some of the mistakes our oversea emissaries have already committed I am reluctant to have a bunch of half-baked, ill-prepared amateurs represent us on foreign soil.

My thinking in this matter has been greatly strengthened by a letter received yesterday from a valued constituent of mine, Mr. William H. Kearns, Jr., of 109 Valley Forge Road, Wayne, Pa., a portion of which is included with these remarks as follows:

One particular program that distresses me deeply is the proposed Peace Corps of the President's brother-in-law. I urge you and plead that any appropriations bill for this wild-eyed and worldwide boondoggle be voted down, and that departmental appropriations be amended to preclude funds from such purposes.

My reasons for asking this are as follows:

1. For some years now, there has been a crying need to strengthen and support the professional Foreign Service of the United States. Yet when foreign aid and a host of related programs were instituted, without exception, the Foreign Service was circumvented, and in most cases, its officers were not called on to testify at hearings. Thus the prime function of the Foreign Service was ignored, and the opportunity to strengthen our professional diplomatic corps was drowned in a sea of bureaucracy. This sending abroad of inexperienced and impractical idealists cannot help but create more problems for the Foreign Service and at the same time further weaken its morale and hopes for the future.

2. Secondly, Mr. Shriver has again raised the specter of possible draft exemption for those otherwise-qualified males who would serve in the Peace Corps. It should be evident, even to the wildest-eye idealist, that this can have a profound effect on recruitment for the military services whose need for the more technically competent grows each hour of the day. This, combined with the ever-growing attitude that a military career is the last possible thing for a young person to undertake, is bound to sap our national strength.

3. Finally, the basic question must be met head on: What image of America will result from sending thousands of inexperienced youngsters to foreign lands? Isn't there a grave danger in this? Consider for a moment how our reputation suffered in many lands where more mature and allegedly experienced persons were sent under mutual security, mutual defense assistance, ICA, and other similar programs. Furthermore, will not this Peace Corps build a whole new cadre of persons who turn their faces to Washington for cradle-to-grave guidance who might otherwise prosper and develop better under private initiative?

The trap is there, waiting to be sprung, and the dangers are many.

Lest you think that I write as a crochety person whose peripheral vision is restricted by advancing age, let me add that I still have some time to go before reaching my 40th birthday. But having served as a World War II naval officer, who has seen more of the world than most, I believe that I can safely exclude myself from the "crank" category.

Again, I urge you and your colleagues to give this "innocents abroad" program your utmost consideration before granting it any funds.

Conservation of Salmon

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. WESTLAND. Mr. Speaker, one of the largest industries of my district and the State of Washington is salmon fisheries. The fishermen who depend upon the salmon for their livelihood are confronted with the problem of conservation of the salmon run.

As population of the Pacific Northwest increases there are greater needs for power and land reclamation. Therefore, it has become necessary to construct many dams across the rivers and streams in which salmon spawn. One of the great rivers which contributes to the cycle of the salmon is the Salmon River. In order to help conserve our salmon reserves I have introduced H.R. 3589, which would prohibit construction of dams on the Salmon River.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the Washington State House of Representatives which supports the objectives of my bill and also S. 323:

Be it resolved by the house of representatives in legislative session assembled:

Whereas the Governors of Washington, Oregon, and Idaho, in recognition of the serious depletion of the fishery resources of the Pacific Northwest, met jointly in Boise, Idaho, on February 6, 1961, and agreed to take steps to remedy this situation and to urge Congress to enact legislation to safeguard the fish runs on the Salmon River in Idaho, the most valuable fish producing stream in the entire Columbia River system, which can be accomplished by preventing any further obstacles to Salmon River fish in their migration to and from the Pacific Ocean, similar to the objectives of Senate bill 323 and House bill 3589 of the 87th Congress: Now, therefore, be it

Resolved, by the house of representatives, That we urge the Congress of the United States to enact legislation creating a fish sanctuary of the Salmon River by prohibiting the construction of dams thereon and restricting the height of dams below its mouth on the Snake River to a height no greater than the highest of those dams presently constructed or authorized in that stretch of river, that is, a dam having no more than 100 feet of hydraulic head; be it further

Resolved, That the clerk of the house of representatives immeditely send copies of this resolution to the Honorable John F. Kennedy, President of the United States, the Chairman of the Federal Power Commission, the President of the Senate, the Speaker of the House of Representatives, each Senator and Representative in Congress from the States of Washington, Oregon, Idaho, California, and Alaska, and to the Governors of each of these States.

I hereby certify this to be a true and correct copy of resolution adopted by the house of representatives March 1, 1961.

S. R. HOLCOMB,
Chief Clerk, House of Representatives.

Dr. John A. Clements Named the Federal Civil Servant of the Year

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. FRIEDEL. Mr. Speaker, on Wednesday, March 1, 1961, Dr. John A. Clements was awarded a certificate as the Federal Civil Servant of the Year 1960 by the Federal Business Association of Maryland. It was given him in recognition of his physiological research which led to development of the mouth to mouth resuscitation method which is now acknowledged as a great contribution in the saving of human lives.

Dr. Clements, who lives in the Greater Baltimore area, is a medical research specialist at the Army Chemical Center, Edgewood, Md. In addition to this work, Dr. Clements lectures at the Johns Hopkins Hospital on anesthesiology and also is a frequent participant in various medical research projects throughout the country.

It was my privilege and pleasure to have been a member of a committee consisting of the Right Reverend Noble C. Powell, Episcopal bishop of Maryland; Mr. Sterling Noel, managing editor of the Baltimore News-Post; and myself, which finally selected Dr. Clements for this well-deserved honor.

The purpose of the Federal Civil Servant of the Year awards is to recognize outstanding individuals and to draw public attention to the competence and devotion of Federal employees and to encourage improvement in managing and transacting Federal business. The organization presenting these awards was established in 1923 by the President of the United States for the coordination of Government business.

Miss Bertha D. Baldwin, of the Bureau of Narcotics is the president of the organization and Mr. Frank E. Quinn, director of the Maryland Regional Office of the Veterans' Administration, is chairman of its Civil Servant of the Year Committee.

The Federal Business Association of Maryland deserves commendation for its excellent work in bringing into closer relationship the representatives of the various Government departments and independent Government organizations located in Maryland in order to foster principles of economy and efficiency in the transaction of Government business. That is the reason I wish to bring this to the attention of my colleagues in the Congress of the United States and to the public in general.

Resources for All

EXTENSION OF REMARKS
OF
HON. HAROLD T. JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. JOHNSON of California. Mr. Speaker, we all heard and subsequently have studied the outstanding special message presented to the Congress by President John F. Kennedy relative to the preservation, development, and use of the Nation's priceless natural resources. There is no question that these blessings which nature has bestowed on this country must be preserved if our future generations are to have the raw material with which to continue building our great Nation.

I would like at this time to insert in the RECORD an editorial published by the McClatchy newspapers of the great Central Valleys of California. This fine editorial points out the challenge of the times is to "raise the curtain on a new era in which the Nation's God-given resources will be used for the benefit of all rather than of a few":

J.F.K. SETS BOLD COURSE FOR USE OF RESOURCES

President John F. Kennedy submitted to Congress last Thursday a special message which may herald a radical change in U.S. policy on preservation, development, and use of the Nation's priceless natural resources.

It is perhaps the most comprehensive, the most imaginative, and most constructive blueprint on the subject ever laid out by a U.S. President. It stands in bold contrast to the restrictive, no-new-starts policy of the Eisenhower administration which the President not only deplored for its lack of vision but also blamed for loss of lives and property by floods.

Kennedy reiterated profound statements that the continued strength and prosperity of the Nation depend upon the wise and careful use of its natural resources. And he added the solemn warning that "If we fail to use these blessings prudently, we will be in trouble in a short time."

The President's broad program ranges the whole gamut from water and power, forests, minerals, recreation, commercial fisheries and recreation to cleaning up the Nation's rivers and air.

The Nation, he said, must prepare for doubled consumption of water, up to 600 billion gallons a day, and a tripling of power output by 1980.

The message leaves no room for doubt that he stands flatly for giving preference to public agencies in the purchase and distribution of publicly generated power to encourage widespread use and to prevent monopolization.

He pledged his administration to principles which "recognize the prior rights of the general public, consumer, and taxpayer who have financed the development of these great natural assets originally vested in them."

With Congress cooperation, the President's program will raise the curtain on a new era in which the Nation's God-given resources will be used for the benefit of all rather than of a few. And that is how it should be.

Don't Dilute It

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1961

Mr. DULSKI. Mr. Speaker, several days ago the President sent a special message to Congress, recommending the establishment of a permanent Peace Corps. As one who is in full accord with the President's idea, I would be very disappointed if it were diluted and volunteers in the Peace Corps were used in depressed areas at home in this country.

Under leave to extend my remarks, I wish to include an editorial which appeared in the Buffalo Evening News, Buffalo, N.Y., on March 7, 1961, and which echoes my sentiments:

DON'T DILUTE IT

After wholeheartedly applauding President Kennedy's new Peace Corps, as unveiled last week, we must say we hope it isn't true that the administration is already considering diluting this worthwhile program into a diversionary campaign of domestic do-goodery, whereby its volunteers will be scattered over the depressed areas of this country as well as sending them abroad.

Nothing, in our opinion, could kill the Peace Corps idea faster than this. The corps can be just as great a success as careful administration can make it—by painstaking screening of its personnel and its missions. But the idea of using its volunteers in depressed areas at home—said to have been suggested to the President by Mrs. Eleanor Roosevelt—seems so laden with political and sundry other boobytraps that it would wreck the corps before it gets a fair start.

And so we trust that the President was merely being polite to Mrs. Roosevelt when he told her, without rejecting the use of the Peace Corps for the purpose, that the administration is "studying" how it can "use Americans who desire to serve in our own country—in slum areas, in education, retraining and all the rest."

The best answer to that last, of course, is that nobody in Washington needs to tell young Americans who want to serve in these capacities how best they can do it. The opportunities are lurking all about and fairly screaming at them: In every social service profession; in every church; in medicine; in schoolteaching; in United Fund agencies; in Federal, State, and local public welfare work.

To serve humanity abroad, there is need of governmental sponsorship and organization and supervision for the kind of worthwhile undertakings the Peace Corps can do. But when it comes to recruiting volunteers for social service work at home, let the administration just look around and take note of the countless public, quasi-public and private agencies already in the field that it would have to compete with. And then let it drop the idea of organizing a domestic corps of volunteer do-gooders at once, and concentrate on making the Peace Corps, as originally conceived for service abroad, the success that it can be if carefully administered.

Address by Hon. Robert E. Jones Before the Pacific Regional Road Conference of the International Road Federation at Sydney, Australia, on February 27, 1961

EXTENSION OF REMARKS
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. BUCKLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I believe that other Members of the Congress would be interested in reading a speech made by Congressman ROBERT E. JONES, of Alabama, a member of the Public Works Committee of the House of Representatives. Congressman JONES headed a delegation consisting of Congressman FRANK SMITH, of Mississippi, and Congressman FRANK CLARK, of Pennsylvania, to the Pacific Regional Road Conference of the International Road Federation at Sydney, Australia, on February 27, 1961. Congressman JONES made this address before delegates of 17 southeastern Pacific nations. The press of all these nations reported our colleague's speech in full, and praised it extravagantly. All said he had made a notable contribution to explaining American democracy in action, and I am sure it will be of interest to many:

On behalf of the delegation from the Congress of the United States, we wish to thank you for the cordial and warm reception we have had since being in your country.

We attend this conference to listen and to learn.

The profits of these discussions and deliberations will be carried back and reported to our committee and our Congress.

We are proud and pleased to participate in this international activity.

The United States of America is overlaid with a network of nearly 3½ million miles of roads and streets. The quality of the democratic form of government which we enjoy today in a large measure is attested by this hallmark. For freedom of the individual is the basic ingredient of our democracy. And this hallmark of roads insures one form of freedom—the freedom of movement for our citizens to all parts of our country.

Because of this freedom, ours has truly become a nation of movement. Last year, our citizens traveled over 720 billion vehicle miles in the 75 million passenger cars, trucks, and buses we have on our highways today.

Travel, they say, is broadening. I believe that this vast amount of travel over our roads and streets not only has broadened but also has unified our people to an ever increasing extent; they have developed a better mutual understanding of the people, the industry, the agriculture, the resources, and the problems which are characteristic of the various sections of this country. Through better understanding there has come greater unity.

Our citizens have developed an understanding of what highway transportation means to them—individually and as a free nation. I believe this because in 1956, through their representatives in Congress, the people of our country made a decision to implement the greatest public works program ever undertaken anywhere in the world. Passage of the Federal Aid Highway Act of 1956 launched the greatly increased program of highway construction and improvement that is now underway in our country.

This Federal Aid Highway Act like its predecessors since the first one which was passed in 1916 authorized the appropriation of funds for Federal participation in the cost of constructing and improving roads on the Federal-aid highway systems. Of the 3.5 million miles of roads and streets we have, over 850,000 have been included in these Federal-aid systems. The remainder of the roads and streets are constructed and improved by State, county and local highway agencies and by the toll road authorities with funds available to them.

The Federal-aid program is carried out as a partnership between the States, represented by their highway departments, and the Federal Government, represented by the Bureau of Public Roads. Each partner has well-defined responsibilities. The State highway departments initiate programs, prepare plans, specifications and estimates, award contracts, supervise construction and maintain completed projects. The Bureau is responsible for approving the States proposals at each stage and for insuring that completed projects are adequately maintained.

This partnership has stood the test in our 40 years of Federal-aid highway programs in excellent fashion. The many problems encountered have been resolved mainly through the spirit of mutual respect and mutual cooperation that has developed. The seasoning over the years has qualified this partnership to carry out the present program efficiently, economically and expeditiously.

The expanded program was based upon an estimate of the cost of needed improvements in the light of the benefits to be derived from them. This is a sound business approach. These studies are made constantly by the Bureau of Public Roads with the cooperation of the State highway departments. They give us in Congress a basis for evaluating the highway needs of the Nation by comparison with the needs for other public works, for public health, for agriculture, for education, for defense and for the many other programs in which the Federal Government participates. Appropriate legislation is drafted largely on the basis of these evaluations so that the investment in highways will return a profit to the Nation in the benefits that will be received.

The construction and improvement of roads has been a profitable investment in our country. The late Commissioner of Public Roads, Thomas H. MacDonald, in discussing highway transportation and wealth, once stated, "We were not a wealthy Nation when we began improving our highways. But the roads themselves helped us create a new wealth, in business and industry, and land

values. So it was not our wealth that made our highways possible. Rather, it was our highways that made our wealth possible."

This relationship between highway transportation and our economy is well documented. Down through the years, curves showing the dollar value of the gross national product, and the motor vehicular miles of travel on our roads and streets, have paralleled each other to a remarkable degree. We anticipate that our gross national product, which in 1960 was about $500 billion, will reach nearly a trillion dollars in the next 15 years. During the same period we anticipate traffic to increase so that some 1.1 million motor vehicles will travel annually almost 1.2 billion miles over our highways.

We have implemented this tremendous highway program in part, therefore, so that our citizens will benefit from continued economic growth. The roads we are building now, not only will satisfy the pressing needs of today, but also will provide adequate highway transportation for the vehicles of the future. Since we have seen the interdependence of our economy and highway transportation, it is clear that the highway program of today is indeed a factor that is shaping the structure and magnitude of our future economy.

In providing highway improvements to insure future economic growth, many problems are encountered, particularly in urban areas. This is largely attributal to the profound influence which modern highways have upon such areas. But we have learned that problems more often that not, can be converted to opportunities by those of vision and vigor.

It takes both vision and vigor to find solutions to the complex problems involved in planning future highway systems that will adequately serve all the needs of our expanding urban areas. These needs are many. Growing populations, industrial expansion, residential developments, and other public works programs, are just a few of the traffic generating factors which must be considered. The closest cooperation between Federal, State, and local agencies which have related responsibilities is essential if the problems involved are to be converted to opportunities.

A coordinated, long-range plan for highway imporvements in an urban area is an important aid to restoring order to these congested communities. These improvements can help to channel facilities for industry, commerce, and business into locations planned for economic growth. They can also aid in channeling other community activities such as schools, residential developments, shopping centers, etc., into areas selected in the long-range plan for the orderly development of the metropolis and its suburbs.

Such a plan must be dynamic. It must be subject to continuing review and revision as changing conditions warrant. We are now beginning to get completed section of the network of expressways and their supporting new and improved roads and streets in many urban areas. The completion of these new and improved highway transportation facilities usually acts as a catalyst for other urban area development activities.

For instance, the taking of right-of-way for a new expressway may give impetus to the program for rehabilitating blighted sections of urban areas if there has been coordinated planning of these activities. As these programs progress, the need to relocate facilities, businesses, industries, and service facilities will stimulate the development of areas planned for these needs.

Growth trends develop during these activities. These must be studied for they may require adjustments in the planned highway network. As movement replaces congestion on the roads and streets in urban areas, the true benefits from safer and more efficient highway transportation begin to take size. Frequently, the new and improved roads and streets bring benefits that exceed estimates and require revisions in the overall plan to provide for greater growth than was anticipated.

We are beginning to get better information upon the economic impact of improved highway transportation. A report was recently submitted to Congress by the Secretary of Commerce. This was prepared by the Bureau of Public Roads with the cooperation of the State highway departments. It summarized the results of studies that have been made on the economic, social, and other impacts of highway improvements in both rural and urban areas.

It was found that highway improvements bring about changes in accessibility which in turn result in changes in land use and land values. In studies of changes inland values along major highway improvements in urban areas it was found that industrial property values increased 17.5 percent annually, commercial property increased 10.4 percent and residential property 8.5 percent. Unimproved land increased 12.5 percent per year. The average annual increase of all property values in these categories was 9.3 percent.

In many instances anticipated change in land use due to the greater accessibility is a contributing factor to the increase in land value. For example, the conversion of farm or unimproved land to an industrial property along a major highway improvement would normally be followed by a sharp increase in the value of the land since industry is considered to be a highly productive use for land. In the selection of new locations several factors are normally considered, most of which would relate to highways. These include the availability of a labor force, and since about 70 percent of our labor force travels to and from their place of work by automobile, the availability of highways would be an important criteria. Highways also would be important to the efficient transportation of raw materials to an industrial site and the movement of finished products to the market. Improved highways of modern design have played an important part in the relocation of industries to industrial parks in rural areas.

The single family residence is the largest consumer of land in urban areas. From 50 to 75 percent of land use in our cities is used for this purpose. Current trends increase the importance of residential development in planning long-range highway improvements. In my own State of Alabama, for example, not only is the population growing but it is also shifting. In 1950, 43.8 percent of the population of the State resided in urban areas while 56.2 was rural. The 1960 census shows that 54.8 percent of our people now reside in the urban areas and only 45.2 percent are in the rural areas. Highway improvements, therefore, can benefit the community by opening up new areas for needed residential developments in urban areas.

We have already mentioned the benefits of highway improvements in expediting the rehabilitation of blighted areas in our cities. Removal of undesirable structures and replacing them with highways of modern, clean design helps make this urban area a more attractive place in which to live and to do business.

Highway improvements bring similar benefits to rural areas. They increase the value of farm lands by making them more accessible to market and to sources of supply. They open up new areas of natural resources. They provide access to resorts and other places of recreation for all our people. They have been a means of bringing our children into consolidated schools where better educational facilities are available. They mean better mail, medical, and other services to our residents in rural areas.

All of our people will benefit from this highway improvement program upon which we are embarked for this is a balanced program. All classes of roads from the low traffic farm-to-market type to the multiland high speed expressways carrying large volumes of traffic will be constructed or improved for all are needed to develop the maximum benefit for our people in safety, welfare, and continued economic growth.

Within the Federal-aid highway systems that will be improved is a network of 41,000 miles of roads that comprises the trunkline system of the United States.

The Interstate System has been planned as the trunkline highway system of the United States. It will link together 90 percent of the cities having populations of 50,000 or more, as well as many smaller cities and towns. It will serve well over half of the urban and almost half of the rural population of the United States.

The system includes only 1.2 percent of the Nation's total mileage of roads and streets but, when it is improved to the high standards adopted, it is expected to carry 20 percent of all traffic. It will be of invaluable benefit to long-distance passenger-car, bus, and truck travel, and will serve equally well relatively short range travel along its lines, and important needs of suburban and urban traffic. It has been estimated that the reduction of traffic accidents through modernization of the system will save 3,500 lives a year.

The highways that now approximate the routes of the Interstate System have become an integral part of the Nation's industrial assembly line. Raw material, goods in process, and finished products move endlessly over these routes. So also, in and near the cities, move great streams of workers, driving from home to factories, mills, offices, and stores. The Department of Defense considers the system essential to the national defense. It will provide valuable escape routes in case of emergency evacuation of cities.

This Interstate System will be supported by concurrent improvements as needed on the remainder of the Federal-aid systems. The urgency of the need for completion of these improvements was recognized by Congress. We directed in Federal-aid highway legislation that the rate of construction including the Interstate System be accelerated. The other roads and streets in the country also are being improved as rapidly as funds are available.

We have seen the benefits of highway improvements not only at home but also abroad. Some of the countries which we have assisted in their road programs are represented here today. We have seen the improvements in the economy, the welfare, the health, and the social activities of people all over the world which come, in a large measure, where adequate systems of roads are provided to meet their highway transportation needs.

The dollars invested in highway construction and improvement have been shown to bring direct benefits to highway users on the order of 1 to 3. But the indirect benefits—the lives saved, the production cost reductions, the timesavings, and many others—have led most of us in Congress to support highway legislation to develop these benefits for our people.

A most important consideration is that good roads give our people that freedom of movement that is the hallmark of a free people.

The Milk Pricing System Under Federal and State Marketing Orders

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial comment from the Cheese Reporter, Sheboygan Falls, Wis., on a letter written by Nick E. Fabricius in which he discussed the milk pricing system under Federal and State marketing orders.

The editorial, including the letter, follows:

FABRICIUS COMMENTS

Nick E. Fabricius, who is associated with the Dairy Maid Products Co., in Eau Claire, Wis., had a letter in a recent issue of a dairy magazine in which he discussed the milk pricing system under Federal and State marketing orders. His comments are quite interesting and we have taken the liberty of setting them forth here for our readers. Wrote Mr. Fabricius:

"From time to time we read articles by some of our profound economists stating that we cannot expect to ship milk to eastern milksheds for class I prices inasmuch as those areas only exceed our manufacturing milk prices by the difference in freight. This applies particularly to one of our midwestern economists whom I need not name. I assume the reason for these articles is the more or less general support by midwesterners for the Johnson bill that is designed to eliminate milk barriers. Occasionally a midwesterner has the temerity to object to the pricing mechanism under Federal and State orders that are obviously causing the production of excessive amounts of surplus.

"It would seem desirable for those of us in the Middle West to restate our case. We are not so stupid as to think we can ship milk or even cream to order markets with any degree of regularity. However, we do think it would be desirable if we could ship milk for 2 weeks or a month, and cream for a month or two, so some effort could be made to control surpluses in milkshed areas. If this were done it would seem that farmers in the sheds could expect better blend prices and our farmers could retain their market for manufactured milk products.

"Midwestern farmers and managers have a right to be concerned when they read order bulletin headlines such as: 'Production in January and February Sets New High,' 'Production Up Again in June; Receipts Top Billion Pounds.' But of even more concern are headlines such as: 'October Receipts Increase; Consumption Is Also Higher,' 'December Production Rises; Consumption Also Increases,' 'Production and Consumption Up in June.'

"To state that such headlines are misleading is to put it mildly. When we read the entire article we find production is up 6 to 7 percent, and consumption is up only one-tenth of 1 percent. In another area production was up approximately 9 million pounds above the same month the year previous, and consumption was up only 500-000 pounds. We could fill this entire publication with similar headlines. We admit our stupidity, but most of us have finished grade school arithmetic. With these increases in production, plus lower percentage utilization, plus low prices for surpluses for manufacture, we realize we are fighting a losing battle here in the Midwest. In most cases we are trying to pay our farmers 20 to 40 cents per hundredweight more for manufacturing milk than is paid for surplus milk under Federal and State orders. And that is the reason for the serious impairment of the capital structure of many of our plants.

"In a very practical way we have been reminded during the last year as to just what is happening to our markets. One distributor told us that he likes to handle our butter and powder but that for 5 to 7 months he can buy these products from surplus grade A sources at a much lower price. In another case a public official told us there was no use to look for distribution in his State for it now is making all of its butter, powder, and cheese needs from surplus grade A. He predicted that his State would be exporting cheese by fall. This is the case in two States where historically we have shipped milk and cream for short periods and manufactured products for 12 months. And it is no secret that we are being undersold in our midwestern cities by manufactured milk products from eastern markets for many months of the year.

"Many of us doubt we will ever have a shooting war with the Communists. But we are equally convinced that we will have an economic war with communism. We feel President Kennedy's statement that we should think about what we can do for our country rather than what our country can do for us, should be taken seriously by all of us. We assume we can ask ourselves if what we are doing in our dairy industry is in the public interest.

"Is subsidizing surplus milk production in milksheds with Mrs. Consumer's dollars in the public interest; particularly when it robs the efficient dairy farmer in the Middle West of his traditional market? We could, of course, argue about the relative efficiency of our milk producers. The fact that our farmer averages about $2 per hundredweight less for his milk should be argument enough. Despite this eastern producers are asking for an even higher price for class I milk. I suppose this move is in the interest of an adequate milk supply even though there is only a 60-percent fluid milk utilization during the best months. One result we are sure of is that we will be further undersold in our midwestern cities.

"We have all heard the argument advanced that the price of fluid sold as fluid can be raised without affecting consumption. In the language of the economist fluid milk has an inelastic demand curve. Some recent studies cast some doubt on this old chestnut. It has been indicated that a slightly lower price to Mrs. Consumer greatly affects milk sales, with a consequent better blend price to the farmer. If this study is sound it would seem we should reappraise many of our pricing programs under State and Federal orders. It would seem that to do so would be in the public interest."

The President's Message on Education

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. HARVEY of Indiana. Mr. Speaker, this is a copy of a letter received from the teachers of the Riley School of Richmond, Ind., in which they expressed their approval and support of the proposals in the latest Presidential message to Congress on education:

RILEY SCHOOL,
Richmond, Ind., March 2, 1961.

Hon. RALPH HARVEY,
House Office,
Washington, D.C.

DEAR CONGRESSMAN HARVEY: We, the undersigned teachers in Riley Elementary School, Wayne Township, Richmond, Ind., assure you of our strong approval and support of the proposals in the latest Presidential message to Congress on education.

We believe in local, State, and Federal support of schools, inasmuch as the strength of all democratic governments depends on a well-educated citizenship. We believe all supporting funds should be merged and expanded according to local needs, whether for construction or increased salaries, to draw the most capable young people into the educational profession.

We urge you to use all your influence to secure the prompt passage into law of these proposals.

Sincerely yours,

L. Dallas Albright, John C. Harvey, Helen Holder, Marie Kessler, Marjorie Miller, Joan Westendor, Edith Rothermel, Anna Marie Thurston, Ruth Harris, Marjorie Morehouse, Marie Alexander, Thelma Magee, M. Stewart, Juanita W. Cox, Robert S. Byrd, and Vivian L. Jones.

United Nations at the Crossroads

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. ROOSEVELT. Mr. Speaker, I should like to call your attention to the leading article, entitled "The United Nations at the Crossroads," which appears in the current issue—No. 57, winter 1960–61—of Prevent World War III, published by the Society for the Prevention Of World War III, a nonprofit educational organization, located at 515 Madison Avenue, New York 22, N.Y. This is, in my opinion, a well thought out analysis of the U.N.'s problems in Africa. Obviously, the United Nations has a tremendous task in helping the African peoples to achieve progress in all fields. The opportunities are great, but so are the dangers. As the article points out, if the Soviet Union is intent on bringing the cold war to Africa, then the future of the United Nations may be jeopardized. On the other hand, if Moscow comes to the realization that the African peoples need concrete economic assistance and want no part of the big power struggles, then there is hope. In my opinion, the article is on sound ground when it states that the United States must do everything to strengthen the prestige and the authority of the U.N. in Africa, thereby removing the cold war from the crucial continent.

The article follows:

THE UNITED NATIONS AT THE CROSSROADS

The 15th year of the United Nations has been marked by international tensions and conflicts which may ultimately make or break the world organization. The turbulence in the Congo seems to be the climactic event which is taxing the courage, patience, and leadership of the United Nations far

beyond anything it has had to face since its inception. While U.N. Secretary General Dag Hammerskjold grapples with this unprecedented mission, Nikita Khrushchev strides to the rostrum of the General Assembly determined to turn the United Nations into a satellite of Soviet bloc policy or to tear it into shreds.

One should not be misled into believing that the Soviet Premier's unseemly behavior was a coverup for the lack of a carefully prepared program. Mr. Khrushchev is a dedicated dictator and his sense of purpose is not deflected by the extra drink, the pounding of a desk, or the waving of a shoe.

The Soviet Premier came to the General Assembly with at least three basic aims:

(1) To discredit and downgrade the world position of the United States.

(2) To pose as the champion of the newly created African States against what he calls the bloodsucking colonialists.

(3) To undermine the effective and independent functioning of the United Nations.

Mr. Khrushchev tried to employ the Congo crisis as a club to beat into submission those forces in the United Nations which stand in his way. Did he succeed? To rush forward at this time with a definitive answer would be premature and even dangerous. However, the immediate results of his labors were barren as indicated by the voting on key issues in the General Assembly. It is also noteworthy that many of the newly created African States showed little enthusiasm for his rantings and blandishments. Moreover, the Communist record in Tibet and Hungary as well as in other countries of Eastern Europe was laid bare by various speakers. This, too, helped to deflate the Soviet posture of anticolonialism.

These are indeed encouraging signs. They are, above all, a tribute to the good sense of the majority of United Nations' members who know how to distinguish between Soviet preachings and deeds. It is essential that the specious character of Communist sympathy for the victims of colonialism be unmasked at every opportunity. The very bypassing of the United Nations in the Congo reveals the real objectives of the Soviets; namely, to put across its own brand of imperialism under the guise of opposing colonial influence.

However, the short-term victory over Mr. Khrushchev's initial attack is only a breathing spell. Moods of complacency and overconfidence could be most damaging to the cause of freedom in Africa. Mr. Khrushchev's setback in the United Nations does not mean that the seeds of anti-Westernism which he boasts to have planted, will not sprout. The long-term prospects for freedom will be measured by the kind of positive program adopted by the West. To put it another way: anti-Communist action by itself is bound to degenerate into sterility and open the doors for further Soviet penetration.

The Soviet leader is a resourceful student of world politics. He is fully alive to the variety of opportunities available for fishing in the troubled waters of the Congo—Indeed, in all of Africa. We would be deluding ourselves, let alone the peoples of Africa, if we insisted on reducing their problems to a simple matter of combatting a Communist conspiracy. That the minions of Moscow are working around the clock needs no elaboration here. However, the gigantic problems of Africa would still be with us if there were not a single Communist agent on the entire continent.

Rampant poverty and disease, aggravated by political oppression and unrest, are at the bottom of the troubled waters. They inevitably attract Communist anglers. This is not to say that a number of progressive steps have not been achieved under the tutelage of the former colonialist powers. Nevertheless, it would be contrary to fact to allege that the situation in the Congo on the eve of independence, was exemplar—particularly when contrasted to the state of affairs in Nigeria or in the former French African colonies. As Walter Lippmann observed: "The tragedy of the Congo, as all the world now realizes, is that the Congolese themselves have so very few trained leaders, administrators, and technicians. Belgium granted them independence without having prepared them for it" (August 16, 1960).

Obviously, Mr. Khrushchev was well aware of these deplorable conditions. He has therefore made the Congo crisis a major point of concentration by distorting and slandering the Belgian record and by associating the United States with it. At the same time, he has endeavored to create bitterness between the United States and our Belgian ally. By such maneuvers Mr. Khrushchev apparently hoped that Africa will eventually open its arms to Moscow.

The next step in the Soviet strategy aims to turn the United Nations into a bedlam of discord so as to whittle down its power and prestige. This would jeopardize the independence of the small nations and throw them at the mercy of Moscow. Secretary General Hammerskjold put his finger on this central point when, in replying to one of Khrushchev's diatribes, he warned the General Assembly: "It is not the Soviet Union or, indeed, any other big powers who need the United Nations for their protection; it is all the others. In this sense, the organization is first of all their organization * * *" (October 3, 1960). In these words the Secretary General provided the key to the problem of thwarting the Soviet offensive.

Only by strengthening the United Nations in every way can the World Organization carry out the purposes of the U.N. Charter. Only a United Nations whose authority is respected, can foil those who would subvert the charter for self-seeking advantage. Whether it be in the political area, in the fields of economic and technical assistance or in such vital areas as health, physical rehabilitation, education, etc., the United Nations can and must play the leading role.

There is a direct relationship between the strength and authority of the United Nations and the support it receives from people all over the world. They feed on each other and this is the secret weapon which is far more potent than Mr. K.'s juggling with ICBM's. It was precisely world opinion, backing up the Secretary General on the Congo, which compelled the Soviets to pull in its horns during the recent sessions of the Secretary Council. This same force underpinning all of the United Nations actions, will enable the new African states to grow and develop without fear of becoming pawns of power hungry dictators, whether it be of the Khrushchev or of the Nasser varieties.

At this session of the United Nations General Assembly, the U.S. delegation showed its awareness of the great potential for good that can be derived from a further bolstering of the United Nations. It is certainly a realistic approach to the rapidly changing world picture. It will be welcomed by all peoples who are sick and tired of the power politics played by Mr. Khrushchev and his stooges. Mr. Khrushchev's stellar performance has also made it much easier for our policymakers to "sell" the United Nations to the American people. He has opened their eyes, we believe, to a fundamental truth, i.e., that a strong United Nations is man's best hope for world peace and security.

In this connection, it was interesting to note that a distinguished member of the Senate Foreign Relations Committee, the Honorable MIKE MANSFIELD publicly challenged the Russians to make an agreement with the United States whereby, in effect, both sides would refrain from extending the cold war to the African Continent. Senator MANSFIELD proposed that neither major power would maintain military bases in Africa. Finally, all military assistance and large scale economic aid would be channelled through and handled by the United Nations. Senator MANSFIELD's bold and imaginative proposals have put the Soviet Union on the spot. So far, Moscow has been silent, preferring to continue its undermining activities in the Congo and in other areas of Africa.

Commenting on Senator MANSFIELD's proposals, the New York Herald Tribune, September 1, 1960 wrote: "If and when the Russians renounce their designs in the Congo and genuinely accept the United Nations as an agency for keeping it free of the cold war and of conflict between the two major powers, they would then contribute to the kind of agreement envisaged by Senator MANSFIELD." This is indeed the nub of the question and Mr. Khrushchev cannot evade it by fulminations and threats.

If and when Mr. Khrushchev comes to the realization that the rights of the African peoples can best be safeguarded through the United Nations, then perhaps precedent will be established for extending United Nations authority to other hotspots of the world. On the other hand, if the Soviet Union is intent on emasculating the United Nations, the peace and security of the world will become more and more the plaything of power-hungry blocs. It is for the Soviets to decide. It is the job of the United States to make it clear before the whole world where the ultimate responsibility lies. The United States must now take up the fight and rally all forces of peace and freedom to prevent the United Nations from suffering the fate of the League of Nations.

Johan Ludvig Runeberg, 1804–77

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 9, 1961

Mr. PUCINSKI. Mr. Speaker, Johan Ludvig Runeberg, the distinguished son of a Swedish sea captain, was born in Finland, in 1804. In the mid-19th century, he became the national poet of Finland, and at the time of his death, in 1877, he was venerated both in Finland and in Sweden.

Runeberg was a gifted, well beloved poet, and he showed unusual interest in popular poetry and folklore. He cut short his college studies at the University of Abo, and traveled through various parts of the country, learning many popular songs by heart. Later when he began to compose his own verses, popular songs served him well as models.

In 1848 he achieved great popular success with the publication of his series of poems on the War of Independence of 1808. This series made him Finland's national poet, her poet laureate. All his poetry shows great originality and immense power, and his poems form an enduring link between the Finnish and Swedish people. Honor goes to the memory of this great national and international poet, immortal Runeberg of Finland.

Appendix

Proposed New Electric Power Generating Plant in West Virginia Would Augment "Coal by Wire" System, and Be Helpful to Appalachian Region and National Growth

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, March 10, 1961

Mr. RANDOLPH. Mr. President, I believe it is pertinent that a Senator from West Virginia invite the attention of his colleagues to two articles which appeared in today's issue of the Washington Post.

The first article I will discuss is that under the headline, "Long-Distance Power Transmission Studied," in which Staff Reporter Julius Duscha writes that:

> Secretary of the Interior Stewart L. Udall yesterday (March 9, 1961) ordered a study of proposals to transmit electric power 1,000 miles or more. Now power is generally transmitted no further than from 250 to 300 miles.

Certainly, I see nothing wrong with such a study. In fact, I believe it is indicated in the light of what is reported to be extensive Soviet Russian achievements in the field of long-lines electric power transmission.

Whether or not it was a thought expressed or a suggestion introduced by Secretary Udall, I do not know, but the following paragraph from Mr. Duscha's Washington Post article invites attention and comment:

> If long-distance lines prove to be efficient, a housewife in Washington, D.C., might cook someday with electricity generated by water in a surplus power area such as Washington State.

Mr. President, the slogan "Coal by Wire," meaning electric energy generated from steam through the burning of coal in giant boilers, is really meaningful; and it is much more than a mere slogan. It is a fact—an accomplishment—and a very vital one to the coal industry of this country.

Now, apparently, the Secretary of the Interior is hopeful of expanding a "water by wire" program. Presently, according to Mr. Duscha's story in the Post, the Secretary's immediate objectives are to extend hydroelectric power capacities from the Pacific Northwest to southern California, and has has a task force examining these possibilities.

Perhaps this country is on the verge of another era of a developing power controversy. There are the proponents of hydroelectric energy and possibly atomic energy who may seek to apply pressure on other existing natural resource fuels utilized in the generation of electric power.

I must say, Mr. President, that we of the already-hard-pressed Appalachian coal-producing region will remain alert and aggressive. We will not oppose progress, but we will resist efforts of others to make of our region an island of permanent poverty and to deny us our fair share of the utilization of and markets for our rich heritage of natural resource fuels.

Our Appalachian region has made vast contributions to national defense posture and national security, as well as to industrial and general economic growth. We intend to continue to do so, and we will strive mightily to retain our equity in the Nation's defense requirements, as well as our country's equity in that which we have to offer for the maintenance of the national security and extension of national growth.

And now, Mr. Presdient, I refer to the other article in today's Washington Post, to which I made earlier reference. It is a story under the headline, "A $150-Million Plant Proposed in West Virginia By Virginia Power," and originated at Charleston, W. Va., by the Associated Press.

This article confirms earlier information I had acquired in personal conversations and correspondence with Mr. A. H. McDowell, Jr., president of the Virginia Electric and Power Co., that West Virginia's coal industry and tourist business could secure a shot in the arm if the West Virginia Public Service Commission approves an application filed by Virginia Electric and Power of Richmond, Va., to build a 1-million kilowatt steam electric generating station on Stony River in Grant County, W. Va.

This is the type of industrial development which admirably fits the needs of West Virginia and other States of the Appalachian region, and which plays a vital role in the economic growth of this country. It would be further augmentation of the vital "coal by wire" system.

Mr. President, I ask unanimous consent for the printing of the Washington Post article by the Associated Press, in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A $150 MILLION PLANT PROPOSED IN WEST VIRGINIA BY VIRGINIA POWER

CHARLESTON, W. VA., March 9.—The proposed construction of a $150 million electric generating plant in Grant County promises to open up a new coal producing area in eastern West Virginia, the Public Service Commission was told today.

The PSC conducted a formal hearing on an application by the Virginia Electric and Power Co. of Richmond, Va. for authority to build and operate on Stony River a steam generating facility with an ultimate capacity of about one million kilowatts.

Vice President R. M. Hutcheson of Vepco said: "initial construction is planned to be either a 250,000 kilowatt or a 300,000 kilowatt unit . . . We would expect to complete the proposed facility in about eight to 10 years."

The Virginia company now has about 762,000 electric customers in Virginia, North Carolina, and in five West Virginia counties.

Hutcheson said a desire to cut total fuel costs has been the primary reason in the company's decision to build a generating plant in West Virginia.

"About 48 percent of the total cost of coal at existing company steam electric stations is for transportation charges in moving the fuel from the mine to generating station," he said.

The coal in the Grant County area is high in ash content and has a high mining cost. Hutcheson said there has been little demand for it because "prospective users refuse to pay the present freight costs to haul this high ash, low quality coal."

The proposed Stony River facility ultimately is expected to use 2.5 to 3 million tons of coal per year and will create what Hutcheson called a substantial market for the fuel available in the Grant County area.

"The mining of these quantities of the coal in conjunction with the satellite industries and development which must result will be a substantial benefit to the area, and the State," Hutcheson said.

Hutcheson added that $24 million of the estimated construction cost will go for payroll. Annual operating and maintenance expenses, exclusive of the cost of coal, are expected to run $900,000 of which about $600,000 will be operational payroll.

Other potential economic benefits Hutcheson singled out included the creation of a 120,000-acre lake which he said should prove to be a great tourist attraction.

Water for cooling and other purposes will be obtained from the lake to be formed behind a dam about 143 feet high and 1,500 feet long a short distance south of Mount Storm. The dam would be of earth and rock fill construction.

"Medicare's" Ultimate Cost: $22.5 Billion a Year?

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. HIESTAND. Mr. Speaker, some some of the legislation now facing this Congress has spurred more thought than perhaps at any other time. One of these subjects in the legislative mill is the medical care to the aged program.

I should like to share with my colleagues the following article from the

March 3, 1961, Human Events which deals with an important phase of this program:

"MEDICARE'S" ULTIMATE COST: $22.5 BILLION A YEAR?

Despite the denials of its proponents, the King bill is a foot-in-the-door move toward socialized medicine, and we do mean socialized medicine. If this bill should be passed, a drive will immediately begin to provide medical, dental, hospital and nursing home needs for all persons of retirement age.

At the same time, there will be a campaign to lower the age of eligibility by steps down to 60, 50, and then all the way. Ultimately, the program will cover the health needs of all, cradle to grave.

The cost of this introductory bill has been estimated at only $1 billion. Estimates made to get a new social program through Congress usually prove to be one-half or one-third of its actual cost. The cost of the British health program passed by the Labor Party immediately after World War II turned out to be three times the promised figures.

The British program now costs $2.5 billion and its supporters insistently argue it is grossly inadequate—as it certainly is. Brittain has less than one-third of our population, so its $2.5 billion cost would be in excess of $7.5 billion in the United States, if only to take care of 180 million people as against 50 million.

But an estimate of a $7.5 billion cost to the United States for a British-type full coverage plan would ignore the fact that wages and salaries in the United States of America are three times the British scale. If all persons being paid by a U.S. health care program—physicians, nurses, hospital attendants, and the rest—are to receive American-standard incomes, the $7.5 billion estimate must again be trebled—bringing the cost up to $22.5 billion.

Now let's see what a $22.5 billion program would cost in social security taxes.

The King bill calls for a payroll tax of one-half of 1 percent, which is to be collected one-half from employer and one-half from employee.

That one-half of 1 percent payroll tax will produce a yield of $1 billion. On that basis, the tax would have to be 11¼ percent if a $22.5 billion cost is to be met. This 11¼ percent is for health alone; it does not include the payroll taxes collected for old-age pensions, unemployment insurance, and other items that the "cradle-to-grave" advocates will eventually want to provide.

However, before bringing the $22.5 billion collective cost down to the level of the individual, let's establish right now that the tax, even when paid by the employer, is payment for the services of the employee. Liberals, interested always in deception, would like wage earners to believe that the employer's share is "no skin off his back." Let commonsense give the true answer.

Now that this foundation has been laid, let's see what a $22.5 billion program would cost in tax payments by and for an average wage earner.

For a $5,000 wage earner, the combined tax payment will be $567.50. If $5,000 should be his annual earnings from ages 20 to 65, the tax payments for and by him will total $25,537.50.

The average family today has two wage earners. If the second earner gets $3,000, the tax payment will be $337.50 per year. If that earner also works from 20 to 65 the tax payments for and by him will be $15,187.50.

For the two members of this family, the 45-year total will be $40,725.

Those tax payments go to Uncle Sam, who wants plenty of authority about how those sums are to be spent.

If the average wage earner knew now what medicare's full ultimate cost would be—to him and to his children when they grow up—the storm of protest would blow into a thousand pieces this great leap forward toward a socialist state.

Medical Care for Disabled Veterans—Address by William Q. Cooper, National Commander of Disabled American Veterans

---

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, March 10, 1961

Mr. YARBOROUGH. Mr. President, all of us are keenly aware of the Nation's responsibilities to its disabled war veterans.

As chairman of the Senate Veterans' Affairs Subcommittee, I feel a special responsibility in seeing that fair, reasonable veterans' legislation is enacted.

One of our principal concerns has been to help whenever we could to see that disabled veterans continue to have available medical service and hospital care of top quality at veterans hospitals.

Recently the national commander of the Disabled American Veterans, William Q. Cooper of Dallas, whom I have known for many years, made an outstanding address on this subject. Commander Cooper's address is a ringing declaration for veterans' medical care, and in opposition to opinions shaped by pocketbook prejudice.

I ask unanimous consent to have printed in the Appendix an excerpt from the speech delivered by National Commander Bill Cooper to the Disabled American Veterans in Amarillo, Tex., on March 4, 1961.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM A SPEECH BY WILLIAM O. COOPER, NATIONAL COMMANDER OF THE DISABLED AMERICAN VETERANS, AT AMARILLO, TEX., MARCH 4, 1961

I come before you today to bring you a warning and to urge your closest attention to and deepest interest in a matter of grave concern to the DAV, to all disabled veterans and to the American people as a whole.

As most of you may know from previous reports, my recent appearance before the House Committee on Veterans' Affairs was received most kindly and cordially by all members of the committee. I feel confident that they will be most receptive to our efforts in behalf of disabled veterans. But this is not the end of the fight by far. For, in spite of their inclination toward our cause, there are strong forces ranked against us, seeking at every turn to undo the work that we have done in behalf of the Nation's war disabled.

Perhaps most important and most basic to the present and continued welfare of disabled veterans throughout the Nation is a continuing high level of medical service and hospital care in veterans' hospitals of sufficient size to carry the patient load, equipped with the latest medical facilities and staffed by the finest doctors and by skilled and dedicated medical services personnel.

And it is in this very basic requirement for the future welfare of all disabled veterans that our program is threatened most gravely by forces who would—to gain their own selfish ends—obstruct the efforts of the Federal Government to meet the Nation's responsibilities to its war disabled.

In recent months the pages of the Nation's newspapers have been filled with an increasing number of statements from the American Medical Association and allied organizations, which I am forced to conclude can only be intended to undermine the very basis of the entire structure of Veterans' Administration medical services.

It is impossible to view a collection of public statements from this great granddaddy of all trade unions over any appreciable period of time without becoming immediately aware of the inconsistency and lack of objectivity in their stands on every issue which they feel might in any way intrude upon that wide area of vast public concern—the health of the Nation—which they have come to consider their private domain.

And here, let me pause briefly to emphasize that I, personally, and the organization which I represent have nothing but praise for the thousands and thousands of dedicated physicians and surgeons—many of whom were educated under the GI bill of rights—throughout the Nation who give so unstintingly of their time, effort, and lives to alleviate suffering and to maintain and improve the health of the Nation. It is only the pressure tactics of their association that we abhor.

Just look at the record of AMA opinion and action on hospital and medical benefits for disabled veterans, the operation of Veterans' Administration hospitals, the staffing of all hospitals over which the medical profession exercises sway, training, and standards for doctors, care for the aged and all other efforts to spread the benefits of better medical care to a wider segment of our society.

In each instance, this trade union in professional association clothing has been guilty of thinking through their wallets, of allowing their opinions to be shaped by pocketbook prejudice.

On the one hand—in spite of countless examples to the contrary—they cry out that any Government action in the medical field will do great harm to the level of medical care now enjoyed by the Nation. On the other, they set standards for the acceptance of doctors on hospital staffs and for admittance to medical schools which, to the layman, at least, can only appear arbitrary and designed more to limit competition than to improve the general level of medical care received by the vast majority of the American people.

They complain bitterly about the large number of non-service-connected disabled veterans receiving care in Veterans' Administration hospitals, claiming that the medical profession and local institutions can better and more efficiently provide this care. Yet, recent surveys of non-service-connected veterans in VA hospitals have shown dramatically that the vast majority of them had been admitted after exhausting their own funds for private medical care, and that by far the largest number of these had been admitted at the request of their private physicians.

The organization I represent is not advocating at this time that the Nation rush headlong into any program of greatly expanded medical care, supported by Federal funds.

I do insist, however, as an individual and as the spokesman for millions of war dis-

abled with a keen interest in the medical services provided by the Nation, that the matter be fully explored from every conceivable angle to determine what is best for America and what is best for the American people, regardless of its effect on the American Medical Association.

Let us judge all suggestions in this vitally important area without labels, name calling or other pressure tactics to determine the type of program that will do the most good for the most people.

Actually, it is extremely difficult to form objective judgments on these matters. It is impossible to draw any single line which would put all those things which can most efficiently be handled through private efforts on one side and the clear areas of Government responsibility on the other.

I remember a time, not so many years ago when the entire sewage system of a small Texas town not so very far from my home was owned and operated by a single individual. In the interests of bettering his profits he had resisted all efforts to improve services or to expand his facilities to meet the growing needs of his community.

Finally, the community was forced to take over the operation of this enterprise, with adequate recompense for the interests of the owner. I recall, as many of you may also, the terrific fuss this gentleman raised over the matter, shouting about the evils of socialism to all who would listen.

And, while it is a bit fanciful, I really don't think that the situations are without parallel. Sometimes the extreme reactions of the AMA toward every effort of the Federal Government to improve national medical standards are just about as ridiculous as a national association of plumbers and pipefitters crying "socialized sewers" because Federal, State, and local governments have assumed the responsibility for community-wide sanitation and sewage disposal.

In the brief period of our national existence under the Continental Congress, the Federal government didn't have the right to raise a standing Army.

At a time, hundreds of years before that, there was no government roads. Each individual built whatever he considered a suitable road across his property and, if he felt so inclined, put a tollgate across it and charged, quite literally "whatever the traffic would bear."

It is not impossible (although admittedly very improbable) that we might, hundreds of years from now, return to this theory of private enterprise in the extreme or that our States should again wring the right to maintain standing armies from the Federal Government.

For the present, however, our theories of government and philosophies of economics, tell us that this is absolutely ridiculous. The building and maintenance of roads, and the authority to maintain a standing army are clearly the prerogatives and responsibilities of the Government.

In short: it is just as impossible to guide our thinking on the health of the Nation by the theories of a generation ago, as it is to guide our transportation and defense policies by theories held to be reasonable in the extreme in other ages.

In this general field we view with some alarm the tactics of the AMA in its efforts to discredit these programs. We are willing to join with all competent Americans in a critical analysis of the programs and needs in the fields of veterans' care, but we will resist with all the strength at our command any effort to destroy these programs.

America knows these needs exist and we would say to the leader of AMA, "Unleash the hands, the minds, the genius of your members; open the staffs of our public hospitals to the talents of doctors outside seeking to reach their patients within. Unshackle the medical schools of the Nation and encourage more young men and women in the noble profession Hippocrates began 400 years before Christ."

Let us seek to discover the secrets of the diseases that plague us on earth with the same zeal and total mobilization as we seek to unravel the mysteries of outer space.

Let us, therefore, set aside all preconception and all prejudices in this vital area of public concern.

Let's look at increased Government participation in the improved health of the Nation, in the light—and only in the light—of finding a workable solution that will bring the highest possible standard of medical care to the largest number of people, at the lowest total cost to our entire economy.

For, whatever our theories of government and economics, it is unquestionably and undeniably true that millions of Americans today do not receive the medical care that they need and—as citizens of the richest Nation the world has ever known—that they deserve.

Rising costs for medical care, hospitalization and drugs are rapidly driving the price of sound health for the average American family into the luxury class, placing adequate private medical care beyond the means of the unemployed and partially employed, the retired, the disabled and all other on fixed and limited incomes.

Some solution must be found to insure for all Americans a necessary and proper level of medical care.

Whatever the solution, the time for action is now.

Party Responsibility on the New Frontier

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1961

Mr. MATHIAS. Mr. Speaker, on March 1, 1961 Carl Shipley, chairman of the Republican State Committee for the District of Columbia, addressed the executives of the Washington Trade Association. In his remarks, he clearly defined the responsibility of President Kennedy to make the Capital City of Washington the Nation's pride and not its shame.

Mr. Shipley has emphasized the need for urban renewal, crime and traffic control, and has called upon the President to exercise the power he has over the congressional majority, the Board of Commissioners of the District of Columbia, and other executive agencies to effect necessary action.

Under unanimous consent, I include a summary of Mr. Shipley's remarks in the Appendix of the RECORD.

SUMMARY OF REMARKS BY DISTRICT OF COLUMBIA REPUBLICAN CHAIRMAN CARL L. SHIPLEY TO WASHINGTON TRADE ASSOCIATON EXECUTIVES, MAYFLOWER HOTEL, MARCH 1, 1961

PARTY RESPONSIBILITY ON THE NEW FRONTIER

Party responsibility is vital to American government. The two-party system is the very pulse of the machine. We Republicans will be a responsible and loyal opposition—suggesting, criticising and examining President Kennedy's actions, in the Nation's interest. After November 8, he became everyone's President, regardless of party. As our President, we Republicans ask God's blessing to keep and guide him as Chief Magistrate.

As responsible citizens concerned with the Nation's Capital, we think he stands on the threshold of an opportunity to make Washington the splendid and beautiful central residence of this great Nation, as a congressional committee in 1915 hoped it might be, rather than the Nation's disgrace it is rapidly becoming.

For 8 years President Eisenhower, and the District's Republican Board of Commissioners, sent pleas to Democratic Congresses, without much response. The Nation's Capital has continued on the downgrade at an alarming rate—commonsense says we face a disaster unless President Kennedy lowers his sights from his lofty concern with Africa, Asia, and Latin America long enough to see the appalling realities in his own country's Capital City. Thus far, his many emergency messages to Congress have taken no proper account of the crime, poverty, and slums here in Washington, at the front door of the White House.

What shall history say of President Kennedy's stewardship of the City of the Nation? Shall his indifference let it become steadily worse? Shall he let it drift, or shall a Democratic President use his power with a Democratic Congress to turn the tide, and make Washington the Nation's pride and not its shame?

It is easy to contemplate the handsome facade and ignore the truth about Washington. But let's be fair with ourselves and face the facts—they are all written out in the District Commissioners' last four reports to Congress:

1. Street crimes of violence increased steadily year after year—Washington is one of the Nation's most lawless cities. And yet, Washington has more policemen per thousand population than any city but Boston.

2. The juvenile court is 2,200 cases behind, and losing the race daily against its backlog. The juvenile delinquency rate continues up and up—one of America's sorriest examples. What kind of a symbol for the world is this?

3. The population of Washington has decreased from 802,000 in 1950 to 764,000 in 1960. White people are leaving, nonwhites are coming in. The population was 65 percent white in 1950, but has fallen to only 45 percent white in 1960. As the first American city to become more than 50 percent Negro, Washington is rapidly developing into a Negro ghetto—80 percent of the children in our so-called integrated schools are Negroes, and there is very little integration. This is extremely unfair both to Negroes and other Americans throughout the whole Nation. The adjacent communities in Maryland and Virginia must welcome our Negro citizens and provide opportunities for housing and schools equal to those in Washington. It is not in the Nation's interest to have a dense concentration of Negroes, or any other racial group, restricted to any given part of the Washington metropolitan area. There can be no excuse for President Kennedy to fail to exercise positive leadership immediately in solving this problem.

4. Although our slums are as bad as any in the Nation, urban renewal lags and drifts. New slums develop faster than old slums are removed. President Kennedy virtually has direct control over all of the agencies responsible for urban renewal in the Nation's Capital.

5. Traffic congestion is abominable, yet funds for highways and bridges are not available. President Kennedy can hop over the traffic in his helicopter, but the rest of us are not so fortunate. The 7 million visitors who come to Washington each year from all over the world must get a melan-

choly impression from our failure to solve even the traffic problem.

What can President Kennedy do? He has appointed a new District Commissioner, Walter Tobriner, an able man. As Democrats, they should be able to get action now from the Democratic Congress on the following:

1. Two more judges for the juvenile court.
2. Amend Public Law 85–451 to increase the authorized annual Federal payment to the District by Congress from $32 million to $50 million.
3. Obtain legislation which clearly recognizes the President's responsibility for (1) preparing the District budget, and (2) requesting appropriations from Congress to provide financial support, over and above that which can be derived from taxing District residents and businesses at rates comparable to those of surrounding communities, to the extent necessary to make the District of Columbia what the Capital of the United States should be.

In addition, President Kennedy can exercise direct control over the Board of Commissioners and other executive agencies, to get urban renewal moving, crime under control, and traffic unsnarled.

The Nation's Capital is one challenge on the New Frontier President Kennedy has the power to do something about now. We Republicans, as a responsible opposition, urge him to get things moving in Washington.

Problems of the Open Spaces

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, March 10, 1961

Mr. WILLIAMS of New Jersey. Mr. President, I have been extremely encouraged by the enthusiastic reaction to a bill I recently introduced, S. 858, the more so because of the newness of the subject, namely the preservation of open space to provide necessary recreation, conservation and scenic areas in and around our cities and towns, while at the same time using such land as a means of curbing urban sprawl and encouraging more economic and desirable urban development.

I wish to bring to the attention of those interested in this subject two editorials that have commented on the bill, one from the Washington Post and one from the Camden Courier-Post. I ask unanimous consent that these editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Feb. 11, 1961]

OPEN SPACES BILL

Senator HARRISON A. WILLIAMS, JR., of New Jersey, has come up with a bill that will have a wide appeal for urban and suburban dwellers throughout the country. He would create a $100 million fund that could be used over a period of 5 years on a matching basis to help State and local governments protect open spaces that ought to be devoted to parks or other recreational or conservation uses. It would set up a sort of "Capper-Cramton" program for the country as a whole.

The operations of the Capper-Cramton Act over a period of 30 years are responsible for saving many of the stream valleys in the Washigton area from the bulldozers. Millions of dollars have been saved by purchasing land suitable for parks before it has acquired real estate values. It was a grave mistake when Congress finally cut off funds for this purpose last year, and an effort is now being made to correct that error by providing $1.2 million in the new budget to match Virginia and Maryland funds for stream-valley purchases.

Congress has a special obligation to exercise foresight in the protection of open spaces near to the Nation's Capital, but the problems of other cities are not essentially different. Urban sprawl is spreading over the countryside at an alarming rate. Unless local governments act quickly to save scenic and historic spots, recreation areas and green belts to relieve the monotony of endless suburbs, many of the amenities of urban living will be lost for all time.

We are well aware of the fact that there are many demands upon the present Congress. In few instances, however, will a current outlay of funds hold greater promise of future return in terms of savings and conservation than that proposed by the Williams bill.

[From the Camden Courier-Post, Feb. 27, 1961]

CONSERVATION OF THE OPEN SPACES

As New Jersey, already the most urban State in the Nation, rapidly becomes more urbanized and open spaces dwindle, Senator WILLIAMS has appealed to constituents to "let me know if your valley is still green."

With housing development after housing development supplanting the once vast stretches of wooded areas and open lands, WILLIAMS is convinced that it is time to call attention to our dwindling natural resources for recreation.

The New Jersey Democrat wants direct word from the people on the subject because, as he puts it, "great social problems are most clearly understood only when we know what is happening to individuals."

WILLIAMS, who has introduced a bill to establish a National Wilderness Preservation System, and other farsighted individuals recognize that an increasing population, accompanied by an expanding settlement and growing mechanization, is destined to occupy and modify all areas within the United States except those that are designated for preservation and protection in their natural condition.

Alarmingly, there are some individuals who don't seem to care how or for what purpose the countryside is chopped.

There may be a better answer to the problem than WILLIAMS' bill, which would provide Federal assistance to State and local governments in preserving park and recreation space and controlling urban sprawl. But one thing is certain: The Government, the States and the public in general ought to pay more attention to conservation of these resources than they have.

The bill would provide $100 million a year for 5 years for planning and moderate grants for land acquisition. It comes at a time when there should be more national concern over the undesirable consequences of haphazard growth, controlled in many instances by nothing more than a profit motive.

It seems to fall within the framework of the massive conservation program President Kennedy has sent to Congress, a program that goes further than any previous Chief Executive has proposed.

Governor Meyner, too, has called attention to the problem by his proposal for a $60 million bond issue to meet the State's open space crisis. The money would be used to purchase land for future park, recreation, reservoir and water reserve needs. Of the total, $20 million is earmarked for reservoirs, $20 million for purchase of forest and park land, $5 million for extensions to existing park lands and the remaining $15 million to be devoted to land acquisition by counties and municipalities.

New Jersey's conservation department is charged with a dual function, the strengthening of the economy by industrial expansion and the conservation of resources. In the long pull, it cannot hope to attract economic development unless open space and recreation are provided for those people who will settle here and man the industries.

While it is not expected Governor Meyner's green acres program will get anywhere this year, it certainly is something the State ought to do something about soon. The governor emphasizes that "we have reached the now-or-never point," that the State's land resources "are disappearing at a startling rate while the price of those sites which remain continues to soar."

Examples of the dwindling open spaces can be found close at hand as one motors through what used to be the scenic countryside. Another is found in the seesaw battle of natural habitat versus jetport site in the Great Swamp area of Morris County.

A losing battle along that line was under way at Stone Harbor, where a third of one of the Nation's best known sanctuaries for exotic wading birds has been set aside for development by real estate operators. As a result, some bird lovers who have been struggling for years against encroachment by real estate men fear that ultimately the entire sanctuary may be chopped up for housing lots.

As time slips by, it will become more difficult to roll back such encroachment or even to find a primeval spot to preserve.

Dorothy E. Dickinson, Second-Place Winner for State of Ohio Prince of Peace Contest

EXTENSION OF REMARKS
OF
HON. WILLIAM H. HARSHA, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. HARSHA. Mr. Speaker, recently the Ohio Council of Churches sponsored a contest known as the Prince of Peace Contest for high school students. This contest included essays written on appropriate subjects.

I am happy to announce that one of my constituents, a Miss Dorothy E. Dickinson, 38 Bortz Street, Ashville, Ohio, wrote an outstanding essay, and as a result of her fine work, she was awarded second place for the entire State of Ohio. Needless to say, I am extremely proud of this fine young American lady and consider it an honor to include the complete text of her work in the RECORD. Her subject, "Lasting Peace by Knowledge," certainly is apropos of the troubled times we are now experiencing and is worthy of the attention of my colleagues.

LASTING PEACE BY KNOWLEDGE

(By Dorothy E. Dickinson)

Peace is the greatest desire of mankind, for without peace there is no prosperity, security, or opportunity for progress.

Since the beginning of man's existence on this planet, he has lived by conquest; first, conquest over beasts for food and protection, second, by conquest of the land for food and security against the elements, and later by conquest against other men to acquire more food and security.

Later in man's history he went forth in conquest at another's bidding, the bidding itself a form of personal conquest by the leader. In doing this man believed that he was performing a mission that would benefit himself and his countrymen. The leader held up before his followers the wealth of others (to cause envy), the story of their neighbor's threats (to cause fear and hate), and the difference of color and religion (to create a feeling that the conquest was justified). In this way the leader proved that those they were to kill or maim would become a menace to all if they were allowed to thrive. Therefore, peace to an individual has come to mean peace to the group of people of which he is a part.

Problems of peace have occupied each moment of man's existence. The first beast harnessed by primitive man enabled him to proceed a little farther afield in harassing his neighbor than was possible before. Ships came to span the seas, and later planes and rockets placed any point on earth within a few hours' reach. Therefore, as man's ability to travel has progressed, war has evolved from when personal differences were settled individually, until today when peace or war depends on any nation's relations with the rest of the world.

Peace to an individual has come to mean peace to the nation in which he lives. The peace of subjugation, the uneasy peace of cold war, or the peace of an interval between hot wars, is far from the goal the world strives to attain.

National peace or war is the result of the desires of the majority of the people in the country involved.

War is always a gamble, not only to a nation but also to each individual. When a nation loses a war, it loses its national identity, but even though his country may be the victor in the conflict, the individual may lose his life and is certain to lose a portion of his personal resources in the national war effort.

Peace by law or peace by powerful weapons is not the answer to world peace. War makes its own laws as necessity arises, but humanity has not found peace in a long list of progressively destructive weapons ranging from thrown rocks to atom bombs.

The hungry man thinks of war for food, the fed man thinks of war to obtain luxury, and the man who has acquired both food and luxury thinks of war to obtain power. Consequently, man, as he is taught to provide for his physical needs, must also be taught faith, love, and compassion.

To obtain lasting peace, the individuals of the world must be able to pause, clothed and fed largely by their own initiative, and have the ability to realize that, even though they must render to their respective Caesars the things due him, it is not well for them to give their Caesars those things a good leader would not demand for his own benefit, such as, lives, money, and allegiance.

It will necessitate the combined efforts of all the nations to teach the people of the earth how to provide life's necessities for themselves. They must be taught to earn these things by their own hands. No man places a high value on those things for which he has not paid a price in effort. Giving him food, clothing, and shelter will provide him with no lasting desire for peace, for his surplus time and energy will beget envy and greed. He must be taught to provide for himself.

If the people of the world are educated sufficiently to provide for themselves, conscientiously instilled with knowledge that created the desire to peaceful coexistence and brotherly love, and taught to think for themselves, they will not be easily led by some pomopus leader who dangles wealth before their eyes in exchange for the conquest of others. Only through education and the ability to think for themselves, can people attain any stability and not be swayed by the promises of wealth or the incitement of envy, fear, or hate that leads them to do the bidding of their Caesar. Instead, the people will be able to determine the difference between their leader's lust for power and their own welfare.

In an effort to obtain world peace, we must make our goal one of lasting peace. The goal of lasting peace is often confused with the problems presented by some real or fancied menace to the peace of the day. These conflicts of ideals or struggles for power may, and often do, lead to a war. The easing of tensions between powers or nations, while desirable, does not in itself contribute to a lasting peace. Only the prevention of the desire for war among the people of the world will bring about any degree of lasting peaceful relationship. Desire for war can be stopped by the education of the people of all countries.

A program for the education of nations must be executed by the combined efforts of all the countries of the world. However, before people can be taught to think and reason for themselves, they must have the necessities of life. No hungry man nor one who is exhausted from eking a meager existence from the land is able or willing to give much time or thought to anything except his own physical welfare. He must first be adequately fed, clothed, sheltered, and have a few leisure hours to devote to his own betterment.

Peace is a problem of the population of the earth. A program for the education of the people of the earth, with the goal of lasting peace, will call for the accumulated knowledge of all humanity, regardless of race or creed. This will not be realized in a short period of time. However, with the peace-loving people of the world working diligently together toward a common goal, they themselves will find it necessary to forgo belligerent nationalistic or idealistic ideas and thereby, further their own understanding and knowledge.

The will to work for lasting peace must spring from the hearts of those who desire it. They must be willing to plan for and finance the cost of sending emissaries, accompanied by such tools or other equipment as necessary, to the parts of the world where their particular type of knowledge is needed; the weaver to the people who need cloth, the lumberman to the country that has timber but no houses, and to the people who have the necessities of life but wish more for their children, a college professor.

This program should be so well financed that it would cause men and women highly skilled in their trades to want to add to their already possessed abilities, dedication of purpose in foreign lands. However, this dedication must not be to their own personal financial disadvantage.

These emissaries must be people who have, in addition to their skill, embedded deep in their hearts the principle of Christ's teaching, "Thou shalt love thy neighbor as thyself."

Loyalty Day—Americanism in Action

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, March 10, 1961

Mr. WILEY. Mr. President, during the 1960's, our country will face threats to security and survival greater than ever before in history. Every aspect of our way of life will be severely tested, including our ability to maintain a good, healthy lead over the Communists in the production of good things of peaceful life for better living, for more people; attain a pace of scientific-technological progress that will continue to surpass all competition; maintain a jet-nuclear-missile-space defense second to none in the world (a) to provide for our security, and (b) to deter would-be aggressors elsewhere in the world; and create a world climate and understanding of how the ideas and ideals of freedom can serve mankind. If this is done, nations, through self-determination, can have an opportunity to select those principles which best serve the interests of their people and progress.

Today, the challenge to freedom by a powerful and ever-growing totalitarian enemy—communism—offers a threat to our security so great as to question whether freedom, itself, can survive.

If we can adequately mobilize not only our own people and resources, but also capitalize upon the limitless reservoir of world sympathy with the principles and ideals of freedom, we can—in my judgment—win the battle against communism.

On May 1, the Nation will observe Loyalty Day. The observances offer each of us a new opportunity to become rededicated to freedom—and its great promise for the future of mankind.

In encouraging greater patriotism among our citizens, our veterans organizations have provided splendid leadership. The Veterans of Foreign Wars, for example, contributed immeasurably to encouraging support and approval and recognition of May 1 as Loyalty Day.

Recently, the Veterans of Foreign Wars magazine published a thought-provoking article by Thomas B. Dean, chairman, VFW National Loyalty Day Committee, entitled, "Loyalty Day—Americanism in Action." I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOYALTY DAY—AMERICANISM IN ACTION

(By Thomas B. Dean)

At this moment in history it would be well for all citizens of the United States to ponder the true importance of two major individual citizenship responsibilities.

These are (1) the need to practice the kind of human justice we say should pre-

vail in all freedom-loving countries and (2) the obligation to support America's efforts to assist our allies in the cold war against Communist Russia.

Today the United States and the free world are combating the mighty forces of Soviet communism. The basic objective of Red Russia is the ultimate military, political, and economic control of the world.

Ever since World War I the VFW has recognized the full implications of Communist plans for world conquest. When the Communists in the United States flaunted their anti-American beliefs with the visual aid of an annual May 1 parade in the heart of New York City, the VFW parried this strategy with the sponsorship of another parade—this one dedicated to the spirit of Americanism. New York City was treated to a demonstration in behalf of Americanism that stole the spotlight from the marching Reds. Subsequently the May 1 parade by Communists in New York became a memory. This is as it should be.

VFW leaders across the United States picked up this new weapon in the fight against the agents of Communist Russia and—following the pattern set in the East, developed Loyalty Day observances on a nationwide scale.

We are reminded how Congress acted in 1958, in response to the many Loyalty Day projects sponsored by the VFW. With little or no opposition, a bill was passed by Congress, and signed by President Eisenhower, proclaiming the establishment of May 1 as Loyalty Day in the United States.

Under this law, we—as individual citizens—are asked to publicly reaffirm our loyalty on that date. The display of the American flag on all Government buildings was ordered.

The duties and responsibilities of loyal citizens have increased greatly since World War II. Without our seeking it, or being ready for it, the United States was elevated to the position of world leadership. We are now charged with the task of preserving the concept of freedom in the world. To set the pattern on a global basis, it is mandatory that we should practice what we preach within our own boundaries. We have no moral right to ask other peoples to accept principles which we ourselves choose to ignore.

True Americanism means loyalty to God, loyalty to our country, and loyalty to the ideals upon which this country was founded. These are the deep tones of democracy in action. As Americans, we cannot minimize these ideals. When we fail to practice the kind of Americanism to which we are pledged, the leaders of Red Russia and Red China win another battle in the "cold war" against us.

Loyalty means liberty. If freemen stand by idly and allow Americanism to deteriorate, Communist slavery will move closer to its goal of triumph throughout the world.

There is no doubt the American people will do their best to expose and resist the spread of Communist thinking in this country. Most Americans also recognize the importance of giving aid to the freedom-loving nations of the world that are equally opposed to Communist infiltration.

Complete information on Communist party techniques must be made available to every American. The aims and purposes, unscrupulous methods and the ultimate goal of the Communist Party must be clearly understood by Americans—young and old.

Communist efforts to infiltrate various youth organizations, labor unions, college student groups and even some religious organizations must be recognized for the dangers they represent.

Loyalty Day comes each year as a dramatic reminder to all Americans that we must be vigilant against the evils of Communist Party propaganda activities.

An urgent note to post commanders—how will your post participate in the 1961 Loyalty Day program? Each post, no matter if it be large or small, can easily perform one of the many suggested Loyalty Day activities that will help accomplish the purpose of this observance.

Attractive window posters accenting the theme "America Is Your Heritage" are available from the national headquarters supply department. The display of these colorful posters in your community is a starter. From that point, any post can expand its program to promote Loyalty Day.

Let us not forget that Loyalty Day needs the active support of individual VFW members on the community level to give it the proper impact this day truly deserves.

Each post should plan an appropriate Loyalty Day project. Patriotic ceremonies at civic events are desirable. A parade is an ideal project. Proclamations by municipal leaders will help spotlight the purposes of Loyalty Day.

In any event, participation on the post level is essential. Post officers should examine the material supplied by the national Loyalty Day committee and then go into action.

Morris Morganstern: Mr. Brotherhood

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. RYAN. Mr. Speaker, I would like to call to the attention of my colleagues in the House one of my most distinguished constituents, Mr. Morris Morganstern—philanthropist, investment banker, and president of the Morganstern Foundation of New York City.

Last month Mr. Morganstern received the 10th annual Brotherhood Award of the New York Council of the Jewish War Veterans of the United States. Previout recipients of the award include Bishop James A. Pike and Dr. Buell Gallagher, president of City College of the City of New York.

Mr. Morganstern is a lifelong advocate of the tenets of brotherhood, a generous friend of all groups, regardless of race, creed, or color. He is the owner of the famous George Washington letter, valued at $250,000, written in 1790 to the congregation of the Touro Synagogue in Newport, R.I. It was written in reply to a letter of welcome from Moses Seixas, sexton of the Hebrew congregation in Newport, on the occasion of Washington's visit to the city and is considered to be a classic statement of the American ideal of freedom and religious harmony.

Mr. Speaker, under leave to extend my remarks, I include the text of the George Washington letter, a press release on the award to Mr. Morganstern, and some excerpts from an address by Dr. Lewis Webster Jones, president of the National Conference of Christians and Jews on the occasion of the award:

To the Hebrew Congregation in Newport, R.I.:

Gentlemen, while I receive, with much satisfaction, your address replete with expressions of affection and esteem, I rejoice in the opportunity of assuring you, that I shall always retain a grateful remembrance of the cordial welcome I experienced in my visit to Newport, from all classes of citizens.

The reflection on the days of difficulty and danger which are past is rendered the more sweet, from a consiousness that they are succeeded by days of uncommon prosperity and security. If we have wisdom to make the best use of the advantages with which we are now favored, we cannot fail, under the just administration of a good government, to become a great and a happy people.

The citizens of the United States of America have a right to applaud themselves for having given to mankind examples of an enlarged and liberal policy, a policy worthy of imitation. All possess alike liberty of conscience and immunities of citizenship. It is now no more that toleration is spoken of, as if it was by the indulgence of one class of peopel that another enjoyed the exercise, of their inherent natural rights. For happily the Government of the United States, which gives to bigotry no sanction, to presecution no assistance requires only that they who live under its protection should demean themselves as good citizens, in giving it on all occasions their effectual support.

It would be inconsistent with the frankness of my character not to avow that I am pleased with your favorable opinion of my administration, and fervent wishes for my felicity. May the children of the stock of Abraham, who dwell in this land, continue to merit and enjoy the goodwill of the other inhabitants, while every one shall sit in safety under his own vine and fig tree, and there shall be none to make him afraid. May the Father of all mercies scatter light and not darkness in our paths, and make us all in our several vocations useful here, and in his own due time and way everlastingly happy.

G. WASHINGTON.

NEWS RELEASE FROM LOUIS WEINTRAUB ASSOCIATES, INC.

Morris Morgenstern, New York investment banker and philanthropist, tonight, February 21, called for a "united citizens drive" in support of President Kennedy's food for peace and youth corps programs.

Mr. Morgenstern, president of the Morris Morgenstern Foundation, received the 10th annual Brotherhood Award given by the New York Council of the Jewish War Veterans of the United States. Accepting the award, Mr. Morgenstern applauded the Kennedy programs as "plans which will help promote brotherhood in newly emerging nations and in underdeveloped areas."

He urged that "all our citizens, from all walks of life, give strong support to these constructive avenues toward peace and brotherhood."

The Brotherhood Award was presented to Mr. Morgenstern by Milton Rittow, commander of the New York Council of the Jewish War Veterans of the United States, in ceremonies attended by more than 300 people in the board room of the Union of American Hebrew Congregations, 838 Fifth Avenue, New York.

Other speakers at the brotherhood ceremonies were Dr. Lewis Webster Jones, president of the National Conference of Christians and Jews; author Will Oursler; Paul Rutheiser, director of veterans' affairs, city of New York; and Irving Friedman, executive secretary, the Governor's committee to employ the handicapped.

Through his educational and philanthropic foundation, Mr. Morgenstern, last October cosponsored with the National Conference of Christians and Jews, the nationwide antibigotry drive. Mr. Morgenstern, who owns the famous George Washington letter on racial tolerance written to the Touro Synagogue, Newport, R.I., in 1790, received the award "in recognition and appreciation of his continuing efforts to advance the cause of understanding, toler-

ance and brotherhood among all races, creeds, and religions."

EXCERPTS FROM AN ADDRESS BY DR. LEWIS WEBSTER JONES

I am happy to join in the tributes being paid tonight to Morris Morgenstern. No man better deserves the award you are here conferring upon him.

Last fall, the Morris Morgenstern Foundation and the National Conference of Christians and Jews jointly sponsored a national celebration of the 170th anniversary of George Washington's celebrated declaration against religious intolerance—"To bigotry no sanction." It was a dramatic reaffirmation, in which millions of our citizens participated, of this Nation's dedication to the principles of brotherhood. And it was both fitting and typical that Morris Morgenstern should have been a sponsor of that occasion.

I have been told that Mr. Morgenstern is the first member of the Jewish faith to receive this award from the Jewish War Veterans. In seeking the first member of your faith for this award, you could not have made a better choice.

The observance of Brotherhood Week serves to remind us all the precepts and principles which should guide our lives throughout the year. I am pleased to pay tribute to the Jewish War Veterans for your many contributions toward bettering relations among members of various faiths, and to Mr. Morgenstern.

Wiretap Legislation Urgently Needed

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, March 10, 1961

Mr. KEATING. Mr. President, the distinguished dean of Brooklyn Law School, Jerome Prince has recently written to me expressing approval of S. 1086, a bill which I introduced to help clear the confusion presently surrounding wiretapping, by court order on the State level. This bill was modeled after S. 3340 in the 86th Congress which was reported favorably by the Senate Committee on the Judiciary.

In view of Dean Prince's widespread acceptance as a leading scholar in the law of evidence, I know his comments will be read with a great deal of interest by many colleagues who share my feelings about the need for legislation to deal with this pressing problem. I ask unanimous consent that a letter from Dean Jerome Prince be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BROOKLYN LAW SCHOOL,
Brooklyn, N.Y., March 3, 1961.

Hon. KENNETH B. KEATING,
U.S. Senator,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KEATING: Permit me to express my approval of your bill which would amend chapter 223 of title 18 of the United States Code.

The existing law concerning the use of wiretap evidence in a State court is in urgent need of correction. At present the unauthorized divulgence in a State trial of wiretap evidence violates section 605 of the Federal Communications Act and constitutes a crime under section 501 of the act, even if the tapping was done under a State court order. (See *Benanti* v. *U.S.* 355 U.S. 96 (1957).) Nevertheless, under *Schwartz* v. *Texas* (344 U.S. 199 (1952)), a State is free to adopt a policy admitting such evidence. The *Pugach* case (277 F. 2d 739 (2d Cir. 1960)), recently affirmed by the Supreme Court, leaves this situation unchanged. Thus, under the present law, a New York trial judge commits no error in admitting wiretap evidence in a criminal trial. (See *People* v. *Variano*, 5 N.Y. 2d 391 (1959).) But in allowing such evidence to be admitted he is tolerating, if not aiding in, the commission of a Federal crime. Recognition that the commission of a Federal crime is inherent in the admission of wiretap evidence has produced uncertainty in the State law and has adversely affected law enforcement. Thus, at least one New York trial judge has felt compelled to exclude wiretap evidence despite the general New York rule admitting competent evidence illegally obtained (*People* v. *O'Rourke*, 23 Misc. 2d 2 (Nassau County Ct. 1960)). And at least one State prosecutor has said that he cannot in good conscience offer wiretap evidence on a criminal trial. (See Prince, "Evidence," 35 N.Y.U.L. Rev. 1590, 1597, (1960).)

The present unsatisfactory State of affairs can be corrected only by legislation, and it is my opinion that your bill supplies a simple and satisfactory remedy. By exempting from the operation of the Federal Communications Act, the interception and divulgence of any wire or radio communication if such interception was made under the authority of a State court order issued after a court determination "that reasonable grounds existed for belief that such interception might disclose evidence of the commission of a crime," your bill, if enacted into law, will wisely free each State to formulate its own public policy with respect to legalized wiretapping and with respect to the use of such evidence on trial, and, of course, to do so in the light of its own experience and felt necessities.

I wish to make plain that I am no friend of indiscriminate wiretapping. The unnecessary invasion of another's privacy is abhorrent, whether accomplished by wiretapping, illegal search or by any other means. But whether wiretapping should be prohibited entirely within the State, or restricted to certain types of crimes, or allowed in all criminal investigations are questions which, I think, should be left to the State. For this reason I do not agree with the recommendation of the very able committee on Federal legislation of the Association of the Bar of the City of New York that Congress permit State wiretapping only in the more serious crimes, more specifically to crimes punishable by maximum sentences of 5 years or longer. Such a national rule would ignore the fact that problems of law enforcement vary from State to State, requiring different approaches as to the subject of wiretapping. Moreover, since punishments are not uniform throughout the United States, it is quite possible that the same offense, because of the different punishments prescribed, may justify wiretapping in one State but not in another. Finally, the proposed national rule overlooks the fact that certain offenses—certain conspiracies for example—may pose a truly serious threat to the welfare of the people of the State, even though not punishable by maximum sentences of 5 years or more.

Sincerely yours,

JEROME PRINCE,
Dean.

How To Hurt Both Religion and Education

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, March 10, 1961

Mrs. NEUBERGER. Mr. President, one of the most important measures to be considered by the Senate at this session is the Federal aid to education bill, S. 1021, of which I am a cosponsor. The bill has stimulated a great deal of debate across the Nation. Mr. James Reston, the distinguished columnist of the New York Times, has today written an excellent article concerning this issue, our Constitution, and religious-sponsored schools. I ask unanimous consent that the article, entitled "How To Hurt Both Religion and Education," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO HURT BOTH RELIGION AND EDUCATION

(By James Reston)

WASHINGTON, March 9.—In their statement on Federal aid to education, the hierarchy of the Roman Catholic Church has raised a serious issue.

They have said, in effect, that if they cannot get the Federal aid they want for their parochial schools, they will oppose the President's bill to provide Federal aid to public schools.

At no point in this or any other statement by the National Catholic Welfare Conference does anybody question the need for Federal aid to provide adequate standards for a rapidly growing population, but the fourth point of the official church statement by Archbishop Karl J. Alter, of Cincinnati, nevertheless declares:

"In the event that a Federal aid program is enacted which excludes children in private schools, these children will be the victims of discriminatory legislation. There will be no alternative but to oppose such discrimination."

There is, however, a very clear alternative. This is to do what most people and groups do all the time in a democratic society—namely, to fight hard for what they want for themselves and then, if they don't get what they want, go along with the best possible compromise for the whole Nation.

THE OTHER QUESTIONS

Once this principle of the primacy of the general welfare is accepted, much can be said on the merits of Federal aid to parochial and private schools.

The claims of the Catholic Church cannot be lightly brushed aside, as President Kennedy originally tried to push them aside, by saying that aid to parochial schools was "clearly unconstitutional" and by adding that "there isn't any room for debate on that subject." This merely envenoms the debate that is now obviously in progress.

The main reason for Federal aid in the first place was to see to it that the Nation develops all the brains it has, and if this reason is valid, it surely needs Catholic brains as well as Baptist or Presbyterian brains.

Also, Catholic schools have benefited in the past from the Federal funds in the National Defense Education Act; Federal funds have followed Catholic students to Catholic colleges; Federal funds have made

available scientific, foreign language, and other teaching facilities to Catholic schools; and even under the present Kennedy program, Federal funds would be granted to Notre Dame University, for example, to help defray the expenses of any student who won a Federal scholarship and chose to attend that university.

President Kennedy, however, has provided a way to argue out all these highly controversial religious and constitutional points. He has proposed that his bill be allowed to come to a vote to deal with the general welfare and that separate legislation be introduced providing for loans to the parochial and other private schools.

All he asks is that the people who have a special interest in parochial school education or racial integration do not insist on fighting out their religious, economic, or racial battles at the expense of progress in the field of general education.

It may be that, in the end, the officials of the church will agree to this procedure. When Rt. Rev. Msgr. Frederick G. Hochwait, education director of the National Catholic Welfare Conference, was asked on the air the other day whether his organization would rather see no education bill than one that didn't give his organization what it wanted, he replied, "not necessarily."

THE PRESSURES

Nevertheless, the mail flooding into Capitol Hill these days is not taking this line, but crying "discrimination" and charging "taxation without participation." In short, it is carrying out the threat to defeat implied in Archbishop Alter's official statement.

In some ways, of course, there is discrimination. There are almost as many Catholic children in the public schools as in the parochial schools, 4,447,600, at last count, to 5,088,000 and obviously, if all of these had to be educated in the public schools taxes would have to go up.

The decision not to participate in the public school system, however, was not the Government's, but the church's. They have chosen the separate way, and they have been given the opportunity to argue their case.

Accordingly, the first question is one of good faith: Whether they are prepared to put the progress of the Nation's education first, or risk wrecking the President's bill to serve their special interests.

Postal Subsidy for Moscow Propaganda

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. BOLTON. Mr. Speaker, very interesting and important studies of the methods by which Communist propaganda reaches America and how it is distributed are being made in the House and the Senate as well as in the General Counsel's Office of the U.S. Post Office. A brief article by Lawrence Sullivan in Christian Economics challenges every American. The article follows:

POSTAL SUBSIDY FOR MOSCOW PROPAGANDA

(By Lawrence Sullivan)

High school and college students throughout the United States are richly supplied with Communist youth literature which is delivered free of charge by the U.S. Post Office.

This report, from the House Committee on Un-American Activities, has alerted educators once more to the tide of ever more aggressive student leadership in pro-Communist demonstrations throughout the country.

When Moscow determines upon a new propaganda drive aimed at U.S. students it ships over its educational literature in ton lots to U.S. ports of entry, already addressed individually. Uncle Sam then distributes the Moscow periodicals free anywhere in the 50 States and the territories.

"Every school and college in the United States is directly or indirectly the recipient of some of these Communist propaganda publications," the committee's report said. ("Communist Training Operations, Part 2," GPO, Washington, Oct. 12, 1960, p. 1327.)

Our own Bureau of Customs made a 12-month spot check of Moscow's training literature through New Orleans. It counted at least 300,000 packages of Communist propaganda destined to schools and colleges in the United States.

Each package contained 5 to 15 different publications on youth leadership for communism.

"New Orleans is one of the lesser ports of entry from the standpoint of Communist propaganda. A heavier volume of this material is coming into the United States via approximately 40 other ports of entry."

The endless lists of U.S. students are compiled and addressed through the World Federation of Democratic Youth, a pro-Communist transmission-belt organization in London; and by the International Union of Students in Prague, Czechoslovakia.

"Both of these major international Communist-controlled youth organizations publish at least 40 periodicals, which are disseminated regularly in schools and colleges * * *.

None of these publications bears labelling as Communist propaganda, in accordance with requirements of the Foreign Agents Registration Act."

In one recent year 7 million pieces of such Communist literature were cleared through New York, and tons more through San Francisco, Seattle, Baltimore, Los Angeles, Philadelphia, Boston, and New Orleans. Every Russian, Polish, or Czech ship touching a U.S. port brings its quota of Red "educational literature" for domestic free mailing. During one week last year the San Francisco Post Office cleared 17½ tons of postage-free Red propaganda to U.S. addresses.

"It is frustrating and disappointing to see the sanctity of the mails abused," said Chief Postal Inspector David H. Stephens, before the House Appropriations Committee. "In this country we are governed largely by the sanctity of the seal of mails, a tradition which has served us well, and I would hate to see it weakened."

Congressman FRANK T. BOW, Republican of Ohio, a ranking member of the Appropriations Committee, disagrees:

"No other country in the free world permits Moscow's propaganda to be delivered at the expense of its own taxpayers," said Congressman Bow. "Many countries refuse to let such subversive material in under any circumstances. Instead of increasing postage rates at home, why not start on budget-balancing in the Post Office by refusing to distribute this Communist propaganda free of charge?"

In a few cases, when non-Communist ships are available, foreign postage pays for fetching the Russian literature to our ports of entry. But at shipside, United States of America, the mail is handed over to the U.S. Post Office. The entire cost of distribution and delivery to any address in the United States, Puerto Rico, the Virgin Islands, or Guam, is borne by the U.S. Post Office.

"This propaganda is unsolicited," Congressman Bow continued. "Much of it is addressed to colleges and student groups throughout the United States. Under the Foreign Agents Registration Act all of this stuff is supposed to be labeled 'political propaganda,' but none of it is.

"The only way to discover propaganda is to open the literature and study it for subversive content. Of course, if the Russian packets are never opened, there would be no way to determine the content to be 'political propaganda.'"

Not even first-class mail from the United States to Russia is delivered without being opened and examined in Moscow. Every piece of mail is read carefully for content. That which is approved is forwarded to the addressee. That which is not deemed in the Russian national interest is thrown into the trash. The U.S. mailer is not even notified that his mail will not be delivered. Much of the "pen pal" mail sent by American youths to Russian teen-agers under the Washington-Moscow cultural exchange agreement is never delivered in Russia, but all Russian letters are delivered here.

Our U.S. law extends to Communist countries free second-class mailing privileges anywhere in our national territory. Section 226, title 39, of the United States Code provides these preferential postage rates "* * * for the dissemination of information of a public character, or devoted to literature, the sciences, arts, or some special industry."

Never has any U.S. Government agency compiled for Congress a statement showing the total annual tonnage of incoming Communist propaganda distributed free, nor even an official guess of the total cost of this subsidy to the Kremlin's special industry mail.

"Does not commonsense dictate the complete elimination of all postal subsidies for Communist propaganda before American readers are taxed further for their own daily, weekly, or monthly publication?" Congressman Bow asks.

"I think the flow of propaganda material into this country is a very serious matter, indeed," said Chief Postal Inspector David H. Stephens before the Appropriations Committee (p. 162), "I am sure you know that the Government is limited as to what it can do to combat this influence with respect to denying use of the mails to the senders of his material * * *."

The Supreme Court has ruled in several controlling cases that the doctrine of clear and present danger from Red propaganda does not apply to mere advocacy of Communist principles, but applies only when specific over acts of sabotage, subversion, or revolution are at hand to offer a clear and present danger to the national security.

Songressman JOHN R. PILLION of Lackawanna, N.Y., pressed Inspector Stephens on the matter of incoming Red propaganda.

"Actually, if you had a great bundle of propaganda, no matter how vicious, coming from Red China or Moscow, and if I were to receive it in New York City or San Francisco and you attempted to investigate it, under the Supreme Court decision would you say you have the power to take that propaganda material away from me?"

Inspector Stephens answered: "I would say in this country, no" (p. 164).

"So when we talk about using our law enforcement machinery to stop Communist propaganda, you are helpless, and your hands are tied completely under the decisions of the Supreme Court today; is that correct?"

"That is correct," replied Chief Inspector Stephens, "and I might say that living with it from day to day is a very frustrating experience."

"Could this situation be corrected by legislation?" queried Congressman OTTO E. PASSMAN, of Monroe, La., "or would it require a constitutional amendment to offset these rulings of the Supreme Court in order to give you power to seize this Communist propaganda?"

This urgent question is now under crash study, both in the general counsel's office in the Post Office, and by constitutional experts in the House and Senate.

Meanwhile, the Kremlin's youth-training literature continues to flow inward daily by the ton.

At the same time the United States, through its U.S. Information Agency, is spending an average of $110 million a year the world around in news, radio, library, and TV operations calculated to defeat Moscow's unrelenting propaganda drive against freedom.

Participation by United States in Organization for Economic Cooperation and Development—Statement by National Foreign Trade Council

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, March 10, 1961

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement approved at a meeting of the National Foreign Trade Council Board of Directors on February 24, 1961, approving membership and active participation by the United States in the new Organization for Economic Cooperation and Development.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

U.S. PARTICIPATION IN THE ORGANIZATION FOR ECONOMIC COOPERATION AND DEVELOPMENT

(Statement approved at a meeting of the National Foreign Trade Council Board of Directors Feb. 24, 1961)

Recognizing the need for a medium through which the closest contact may be maintained between the United States and the nations of Western Europe on matters of continuing mutual economic concern, the National Foreign Trade Council favors membership and active participation by the United States in the new Organization for Economic Cooperation and Development. As successor to the OEEC, the OECD represents the responsive adaptation of an existing body to changing and challenging conditions. It can and should serve the same great constructive purposes of promoting international economic growth and development on a sound and lasting basis.

Despite the historic and steadily enlarging community of interest between the United States and Western Europe, there are also unfortunately recurrent points of difference and disagreement. In the economic and financial field, these differences as well as those which arise among the Western European countries themselves can best and most fruitfully be resolved through a forum for consultation such as OECD will provide. But beyond the mere exchange of views there is an increasing advantage to be gained from greater cooperation and coordination.

The council has had repeated occasion in the past to commend the OEEC for the leadership it has given during years of tension and strain, and for the contribution it has made toward the elimination of unduly burdensome and discriminatory restrictions and the restoration of a sense of fiscal and monetary responsibility. It is expected that the new OECD will be animated by the same spirit and will pursue the same realistic course. The United States, however, should impress on OECD and its members the vital role to be played by private enterprise in achieving the agreed aims and the desirability of according private enterprise the same recognition as it received from OEEC.

Finally, while there is much to be gained from the entry of Canada and the United States into common membership with the countries of Western Europe in OECD, there remain many distinctly European problems and issues. It is important that these not be neglected or subordinated by the new Organization and that OECD carry forward with equal vigor and dedication the essentially European work of the OEEC. One of the most important tasks the OECD can and should assume is to serve as a unifying and liberalizing economic force in Western Europe.

Colorado Water Projects Surveyed

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. ASPINALL. Mr. Speaker, there is a great deal of talk these days about the necessity for conservation of our water resources. In Colorado, where we have always lived with these problems, people are doing something about it. Under leave to extend my remarks, I should like to place in the RECORD an article which appeared recently in the Denver Post, outlining some water projects that are underway or planned throughout Colorado. The article was written by Mr. Bert Hanna of the Post, and it as follows:

COLORADO WATER PROJECTS SURVEYED

A statewide survey just completed by the Colorado Water Congress reveals an unprecedented number of civic and community water development projects are underway or planned throughout Colorado.

The programs range from expansion of existing municipal water systems to new methods and efforts to conserve water and improve sewage facilities. And an important consideration in the minds of all water experts this year is the critical water shortage in many areas created by the scant snowpack in most of the mountains.

The report on the statewide programs, prepared by Charles C. Fisk, Denver water supply engineer and newsletter editor for the Colorado Water Congress, contains these progress highlights:

The city of Boulder plans to expand its water system. The plan is to use space in the Public Service Co. Barker Reservoir at Nederland for water exchange. If that doesn't work out, a new $14 million mountain reservoir is indicated.

Boulder's water now comes from North Boulder Creek. The proposed expansion, financed by a bond issue, would develop Middle Boulder Creek supplies.

Pueblo residents expect to vote this year on a proposed $6 million bond issue for expansion of water facilities. The program includes main extensions, additional storage and pumping facilities, improvements to the treatment plant. This doesn't include planned purchase of new raw water supplies.

Arvada is seeking proposals for an engineering study on expansion of water facilities. The major facility will be a proposed filter plant near Denver Water Board's Ralston Reservoir. Arvada obtains most of its raw water from Denver.

Leadville recently dedicated its new Canterbury tunnel water supply project. It's a unique water defreezing scheme with a conduit under 7 feet of cover that will carry water to Leadville from a spring deep inside the old Canterbury mine, abandoned since 1923.

Thermostatically controlled heating cables will prevent freezing in Leadville fire hydrant laterals. Result will be elimination of most of the freezing problems that have plagued Leadville's water system for years.

Aurora and Colorado Springs received a $212,000 loan from the Federal Communities Facilities Administration for planning the proposed $40 million privately financed Homestake water project. Supply source is the Eagle River basin. Several projects on both slopes are seeking conditional decrees for Eagle River water rights which District Judge William H. Luby, of Eagle, denied on grounds water needs were speculative. The Colorado Supreme Court is expected to rule soon on appeals from Luby's decision.

Residents of southwest Weld County are considering a proposed $5.5 million domestic water project. Supply is the Colorado-Big Thompson project. Facilities are a filter plant at Carter Lake, clear water storage, 200 miles of pipeline. Service area includes some 3,500 rural and small town families in the Berthoud, Mead, Johnstown, Niwot, and possibly Windsor and Evans areas. Financing will come from a Federal loan, if possible, or a bond issue.

Farmers and ranchers in rural areas of the Grand Valley have decided the time has come to get domestic water piped to their homesites. The Ute water district proposes to divert water from Plateau Creek below Collbran project's Molina powerplant, construction of treatment facilities and delivery of potable water through 400 miles of pipeline. Service area includes potentialliy 64,000 farmers and ranches from Cameo to near the Utah line. Cost is estimated at $10 million, while financing will be by Federal loan or bond issue.

Grand Junction is expanding its water treatment plant, plans a $150,000 filter unit to serve outside the city area. But city officials are worried about this year's poor snowpack on Grand Mesa.

The Grand Mesa Water Users Association has proposed a cooperative cloud seeding project to increase the Grand Mesa snowpack. Delta and Grand Junction will join the project as contributors.

The Colorado River and Middle Park Water Conservation Districts are core drilling at Azure damsite between Little and Big Gore Canyons 10 miles downstream from Kremmling. The proposed reservoir probably will be about 20,000 acre-feet first-stage capacity, ultimately about 90,000 acre-feet. Financing probably will be through an REA loan.

This project will create hydroelectric power for REA sales and industrial water for the proposed Crown Zellerbach's paper pulpmill.

The Basalt project is slated for early U.S. Bureau of Reclamation studies. It's in the Fryingpan and Roaring Fork Valleys of Garfield, Pitkin and Eagle Counties. Objective is to find uses for water to be stored in Ruidi Reservoir, replacement feature for the proposed Fryingpan-Arkansas transmountain diversion project.

The Sweetwater project is a privately financed undertaking being planned by Rocky Mountain Power Co. of Denver. It will divert from the South Fork of the White River into Sweetwater Creek, Colorado River tributary above Dotsero. Major facilities will be a large reservoir and powerplant about 4 miles above Dotsero. It will utilize

power and municipal-industrial water for oil shale development area and eastern slope areas by exchange at an estimated cost of $21 million for first-stage development.

Westminster has received a $24,000 interest-free planning loan from the Community Facilities Administration to finance water studies. The town is considering the feasibility of enlarging Standley Reservoir.

Durango received a similar loan for planning water facilities to cost $575,000. Lafayette got a loan from the same source to plan improvements to its water system costing $388,000.

In the area of water sanitation, the survey notes that the Denver Metropolitan Sanitation Committee received a $270,000 Federal loan last month to finance planning for metropolitan sewage treatment facilities. Hurry-up studies will be made by three Denver engineering firms.

Objectives will be to determine what it will cost each participant to join the metropolitan district which each metropolitan community must approve by April 23.

Aurora is experimenting with an odorless, sludge-free sewage disposal process. Objective is a decentralized sewage treatment system that is less expensive, more flexible than conventional systems.

The deepest waste disposal well ever sunk is the 11,400-foot shaft under construction east of Denver at Rocky Mountain Arsenal, an Army Corps of Engineers project to treat chemical wastes and inject them into a deep, porous sandstone formation. Cost is $265,000 for the well, $375,000 for the treatment plant.

Code of Ethics for Legislators and Public Officials

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, March 10, 1961

Mr. PROXMIRE. Mr. President, the Wisconsin Federation of Women's Clubs at its convention last May endorsed a Code of Ethics for Legislators and Public Officials. This code has also been endorsed by the auxiliary to the Veterans of Foreign Wars, the County Board of Dane County, both candidates for President and Governor last year, and all the State officers.

Mr. President, the code is an excellent one. It bears a strong resemblance to the Code of Ethics for Government Service adopted by Congress in 1958. It is slanted slightly more in the direction of members of legislative bodies, which is perhaps a needed emphasis.

The resolution accompanying the code points to the same need which prompted me to support the Code of Ethics for Government Service in 1958, and to introduce in January of this year a bill to create a Commission on Ethics which could implement and apply the code. In her letter to me, the president of the Wisconsin Federation of Women's Clubs, Mrs. L. F. Motel, states her belief that such a Commission would render a valuable service in interpreting the code and deciding on violations.

Mr. President, I ask unanimous consent that Mrs. Motl's letter to me and the resolution endorsing the Code of Ethics for Legislators and Public Officials be printed in the Appendix of the RECORD.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

WISCONSIN FEDERATION OF
WOMEN'S CLUBS,
February 27, 1961.

Senator WILLIAM PROXMIRE,
Washington, D.C.

DEAR SENATOR: Enclosed you will find a copy of the resolution and code of ethics endorsed by the State Federation of Women's Clubs, at their convention last May. Since then it has been endorsed by the Auxiliary to the Veterans of Foreign Wars, the Dane County board, both candidates for President and for Governor, all the State officers and many others.

The code has received favorable action in the national resolutions committee of the Women's Club, and we hope it will be endorsed by the national federation at their convention in June. We also anticipate its introduction in our own legislature.

I have read with great interest the step you have taken to create a commission of ethics. I would appreciate very much a copy of the bill.

Endorsement of the code will be of little value if the officials do not adhere to its principles. I believe a Commission of Ethics will render a valuable service in interpretation and decisions on violations.

Wishing you success in your undertaking, which will surely tend to improve the ethical standard of our public officials, and which is extremely important, if the ideals of our country are to survive.

Sincerely yours,

Mrs. L. F. MOTL,
Chairman of Legislation.

Whereas recent disclosures by legislative investigating committees and by the press reflect a serious deterioration in moral and ethical standards of many people generally; and

Whereas such an attitude is contributing to our political, legislative, and government officials adopting a course of action based on expediency and self-interest rather than on principle and statesmanship; and

Whereas we believe that unless our governmental leaders especially are made to act according to principle and high ethical standards the very foundations of our democracy and freedom are threatened; and

Whereas public opinion and votes reaction need to be stimulated by providing a simplified standard from which to judge our public officials: Now, therefore, be it

Resolved, That this day, May 16, 1960, the Wisconsin Federation of Women's Clubs meeting in convention at Madison, Wis., endorses the following Code of Ethics for Legislators and Public Officials and urges its distribution and promulgation among all citizens of our State:

CODE OF ETHICS FOR LEGISLATORS AND PUBLIC OFFICIALS

1. He will put loyalty to the highest moral principles and to country above party and persons and uphold the honor and dignity of his office.

2. He will be a scrupulous trustee of all public funds, will not permit nor condone unjust enrichment of himself at the expense of the public, and will not accept expense money in excess of his actual expenses.

3. He will not promise his constituents improvements or public works that cannot reasonably be accomplished.

4. He will not take credit of any kind properly due someone else.

5. He will make no promises of any kind which compromise the duties of his office.

6. He will never accept for himself or his family favors or benefits that might influence the performance of his duties.

7. He will not make of his office a means for employment of his relatives.

8. He will be consecrated to the consideration of economy in the interest of economic stability.

9. He will endeavor in the performance of his duties to expedite good government and avoid delaying tactics.

10. He will avoid special concessions to lobbies detrimental to the public.

National Peace Agency—Letter to the President

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. MOELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to discuss an issue which disturbs many millions of people throughout the world. This is the lack of any effective means of controlling the explosive arms race we have been in for many years. Weapons of terrifying destructive power have been developed, technology seems to far outdistance man's ability to settle his differences, and now, advanced research and development by such powers as France and Israel appear to foreshadow a rapid spread of nuclear weapons among the community of nations. Experts tell us that it is only a matter of time until the Communist Chinese join the nuclear club. A recent scientific breakthrough in West Germany indicates that a cheap method may have been discovered to enable even small and relatively poor nations to have their own nuclear arms.

The nuclear test discussions scheduled to be resumed in Geneva later this month may or may not come up with any real progress. But it is essential that progress be made and one of the best ways we can assure progress is for the United States to initiate a vigorous and concentrated program of planning for peace. There is undoubtedly some work now being done in this field by the Federal Government, but so far, it has been a scattered and haphazard effort. There is no central direction or planning of this vital work. No one has gathered together all the diverse interests of the various governmental departments and agencies into a coherent whole, analyzed where we should be going, where we are lacking in information; and what we should be doing to energize and concentrate the national effort toward achievement of peace in our time.

I have recently introduced a bill, H.R. 2267, to establish a National Peace Agency. Over 30 other Members of this House have introduced similar legislation during the current session of Congress. The House Committee on Foreign Relations has yet to organize their subcommittees and therefore has been unable to take any action, schedule any

hearings, or request comments from the affected executive agencies. Thus, we have been in session over 2 months now and there is little prospect of action in this vital area in the near future.

In his last press conference, President Kennedy was asked what progress he had made in building up an adequate staff to deal with the question of disarmament and planning for negotiations. In his response, Mr. Kennedy stated that Mr. McCloy was working on the problem and he hoped to have recommendations to submit to Congress "in some days."

This week I sent a letter to President Kennedy outlining some of the problems and urging that quick action be taken on this matter. I would like to include the text of my letter to the President in the RECORD with the hope that it will act as a reminder that we have not yet done what we must, that we have not yet taken any concrete action to launch a genuine and sincere study of the problems of disarmament, control, inspection, and their many related problem areas.

Letter to the President:

MARCH 6, 1961.

The Honorable JOHN F. KENNEDY,
The White House,
Washington, D.C.

MY DEAR PRESIDENT KENNEDY: One of the questions raised at your press conference the other day concerned the amount of effort currently being expended by the Federal Government in the field of disarmament planning.

Disarmament planning, or as it may more appropriately be called, planning for peace, has long been a concern of all thoughtful Americans—indeed of thoughtful men the world over. Your answer to this press conference question, as well as the many statements you have made on the subject, both during and since the campaign, indicate that this problem has been, and is, one of deep concern to you.

I will not soon forget the stirring words with which you characterized the task before us:

"But neither can two great and powerful groups of nations take comfort from our present course—both sides overburdened by the cost of modern weapons, both rightly alarmed by the steady spread of this deadly atom, yet both racing to alter that uncertain balance of terror that stays the hand of mankind's final war. * * * Let both sides, for the first time, formulate serious and precise proposals for the inspection and control of arms—and bring the absolute power to destroy other nations under the absolute control of all nations. Let both sides seek to invoke the wonders of science instead of its terrors. Together let us explore the stars, conquer the deserts, eradicate disease, tap the ocean depths, and encourage the arts and commerce. Let both sides unite to heed in all corners of the earth the command of Isaiah—to 'undo the heavy burdens * * * (and) let the oppressed go free.' And if a beachhead of cooperation may push back the jungle of suspicion, let both sides join in creating a new endeavor, not a new balance of power, but a new world of law, where the strong are just and the weak secure and the peace preserved."

Mr. President, the spontaneous and tremendous response you have received from the American people on your projected Peace Corps is proof enough of the wholehearted support you may expect to receive in your efforts to work out effective programs for arms limitation. This support will come from men of good will throughout the Nation and from the Congress.

As evidence of this support from the legislative branch of the Government I might cite the many bills to establish a National Peace Agency introduced during the current session of Congress. I have introduced such a bill, H.R. 2267, and believe this approach to the problem merits your most careful consideration.

Few will dispute the aims of this legislation: To promote arms limitation, to assure international control and inspection, and to assist in the elimination of the economic causes of war. Nor will many dispute the advisability of initiating research and study programs to seek and implement solutions to such problems as nuclear, missile and satellite test monitoring; the effect of disarmament on national economies; limiting the use of space for military purposes; the effects of radiation on men; population maldistribution; and problems of underdeveloped nations—to cite but a few contemplated by this bill.

There may well be some who feel that establishing a separate agency to carry out this vital mission would involve duplication of effort now being expended in several departments of the Government. I do not subscribe to this belief. I think, rather, that a single National Peace Agency could, and would, serve to focalize all Federal effort directed toward these goals. One agency, dedicated to these high purposes, would capture the imagination of the country, mobilize the creative power of American ideas, and concentrate the national effort toward the achievement of peace in our time. However, I respectfully submit that it is of overriding importance that no disagreement as to the location or agency structure of this effort be allowed to jeopardize its success. It is imperative that the task be initiated with vigor and without delay. I am confident that the Congress will respond to your call.

It is no small satisfaction to me and to many millions of Americans that we are able to rely on thoughtful and decisive executive action in these difficult times. I urge you, therefore, Mr. President, to give the problem of planning for peace your most careful and expeditious consideration so that your recommendations to the Congress may be made in the near future.

Respectfully,

WALTER H. MOELLER.

Mass Transportation Problems

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, March 10, 1961

Mr. WILLIAMS of New Jersey. Mr. President, on February 13 the Christian Science Monitor, one of the most respected newspapers in the country, devoted its lead editorial to S. 345, the mass transportation bill I recently introduced.

After describing the compelling reasons for Federal interest and assistance in this problem, the editorial describes some of the provisions of the bill and urges "that the Committee on Banking and Currency make sure the bill is not lost in inaction."

I must confess that I was flattered by the editorial's observation that the bill would make "good reading" for executives caught in a traffic jam or delayed on a commuter train. As we all know, a copy of a bill is not usually something one likes to curl up with either in bed or on a commuter train. But I did at least try to make the bill comprehensible on the face of it, so at least our poor commuters need not carry along a set of the United States Code with the bill, in addition to suffering the other usual indignities of commutation these days.

Mr. President, I ask that the editorial from the Christian Science Monitor, entitled "Out of the Traffic Jam," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Feb. 13, 1961]

OUT OF THE TRAFFIC JAM

If 7 out of 10 Americans live in cities, at least that many are on intimate terms with the traffic jam, the overcrowded streetcar, the subway strike, the late commuter train, and the perennial fare rise.

These are, alas, fixtures of city life, begot in one way or another by the wonderful automobile. And they are related to other uncomfortable urban problems—declining downtown shopping areas, higher in-town property taxes, spreading slums.

Political, educational, and social improvements obviously are needed. But these corrections alone will not save the cities from strangulation and loss of tax base. One big mechanical improvement must also be made: mass transportation needs to be rescued after decades of neglect.

The bluntest way of putting this is to say that it costs each taxpayer from 9 to 17 times as much to pay for auto expressways to move X-thousand people into town as it does to pay for a fine rapid transit system to move the same number of people.

Add to this staggering expense the added cost to the city from losses of taxable land eaten up by eight-lane expressways and downtown garages, and it is easy to see why mass transport plans are such an urgent pocketbook matter. (For instance, 68 percent of the downtown Los Angeles land area is already consumed for traffic and parking use.)

To Americans accustomed to taking care of such local matters locally it is hard to understand why Federal intervention in this crisis is needed. But unquestionably it is.

With the present system of tax revenues heavily weighted in favor of the Federal treasury, local and State aid are simply not forthcoming. Most big cities have been backed too near their statutory debt limits to be able to borrow at commercial rates the millions of dollars needed to make their mass transportation systems truly efficient. And local property taxpayers cannot provide such large chunks of capital.

In addition most metropolitan areas cut across city lines, and 53 of the 200 major urban areas cross State lines, making this clearly a job where Federal coordination can help.

It is for these reasons that the cautious urban mass transportation bill now in the Senate (S. 345) has such remarkably broad backing. Among its sponsors are both extreme liberals and extreme conservatives.

The bill provides for low-cost, long-term loans from the Federal Treasury to cities "to preserve and improve essential mass transportation facilities and equipment such as terminals, stations, adjacent parking lots, new commuter cars and buses."

It also provides for strictly safeguarded planning and pilot project grants to help metropolitan areas develop long-range plans for highways, rail service, rapid transit routes and industrial-residential zoning.

The bill would make available $100 million for loans the first year; $150 million in subsequent years.

It contains carefully constructed safeguards and incentives to insure that funds are not wasted or grabbed as a handout with which one city administration can patch up its finances at the expense of future mayors and taxpayers. Among the safeguards is a cutoff of Federal assistance after 3 years if progress does not measure up to strict tests.

We shall later analyze the provisions of S. 345 in more detail. For the present it is enough to urge that the Committee on Banking and Currency make sure the bill is not lost in inaction. And that city administrators and civic leaders familiarize themselves with its contents. It makes good reading for executives caught in a traffic jam or delayed on a commuter train.

Research in Oceanography

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, March 10, 1961

Mr. MAGNUSON. Mr. President, President Kennedy's references to research in oceanography in his inaugural address, his state of the Union message, and his February 23 message to Congress on natural resources development have received a most favorable response in the Pacific Northwest, as I am sure they have also in other parts of the country.

I have received letters from constituents in the State of Washington and from residents of Oregon who are enthusiastic about the President's advocacy of an expanded program. Many citizens have spoken to me personally to the same effect.

Indicative of the attitude in this area is an editorial entitled "Kennedy and Sea Resources," published in the February 24 issue of the Seattle Times, one of the Nation's leading newspapers.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

KENNEDY AND SEA RESOURCES

President Kennedy promised in his natural resources message yesterday that his administration would give "concerted attention" to unfolding the mysteries of the sea.

This pledge will be well received here. And the President's followup moves on his promise will be eagerly watched.

Mr. Kennedy made clear that his interest applied both to oceanography and to the narrower field of fisheries.

The administration's views on extending oceanographic research appear to parallel closely those of Senator MAGNUSON, who has been pushing legislation for a large, modern fleet of research vessels to match the vast ocean-study efforts of the Russians.

On the basis of Mr. Kennedy's somewhat generalized statements yesterday, we would expect the administration to support MAGNUSON's bill or at least the chief substance of it.

As for fisheries, the President pointed out that this country will need an additional 3 billion pounds of fish and shellfish annually by 1980, and many other countries also would benefit from more extensive use of sea life for food.

"All this wil require increased efforts," he said, "under Federal leadership, for rehabilitation of depleted stocks of salmon and sardines in the Pacific, ground fish and oysters in the Atlantic, lake trout and other desirable species in the Great Lakes, and many others, through biological research, development of methods for passing fish over dams and control of pollution."

The administration soon will discover, if it is not already aware of the fact, that the preservation and restoration of fish resources—at least as far as the north Pacific is concerned—are deeply involved in international affairs as well as in the type of domestic programs mentioned in the President's message.

The recent salmon-conservation conference called in Juneau by Alaska's Governor Egan gave rise to many expressions of serious concern on the part of American and Canadian fisheries officials over the extension of Japanese and Russian fishing in the north Pacific in disregard of conservation practices.

Pacific Northwest fishermen have not in the past found the Federal Government sympathetic enough or alert enough in regard to this problem.

Perhaps Mr. Kennedy's expressions will signal a change of attitude in the State Department and other concerned Federal agencies.

Certainly his interest in the ocean deeps—scientific, military, and commercial—is warmly welcomed in this north Pacific gateway city, and it is to be hoped that manifestations of that interest will not be slow in coming.

Address by Vice Adm. Hyman G. Rickover on Receiving Annual Patriotism Award at University of Notre Dame, February 22, 1961

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. BRADEMAS. Mr. Speaker, on February 22, 1961, it was my pleasure to be present at the University of Notre Dame on the occasion of the presentation by the senior class during the annual Washington Day exercises of the annual patriotism award to Vice Adm. Hyman George Rickover, U.S. Navy.

At this point I should like to include the statement of the senior class concerning this award:

THE SENIOR CLASS OF THE UNIVERSITY OF NOTRE DAME TO VICE ADM. HYMAN GEORGE RICKOVER, U.S. NAVY—PATRIOTISM AWARD

Greetings, in his time Washington expressed the feeling that a kind of destiny had set him upon his service to our country and that more was expected of him than could really be performed. But history reveals the wonder of his achievement even as in our time. Sir, you have shown yourself to be a citizen of destiny, capable in the nuclear age of scientific and military performance more than marvelous. And you have not hesitated to tell our people of the perils of failing to use with full strength and unrelenting concentration the educational resources we richly possess.

Combining unusual genius and inventiveness with forceful character and courage, you have advanced our national cause of liberty and security. For such dedicated accomplishment, sir, we are proud and happy to honor you today as a patriotic inheritor of the spirit and purpose of Washington.

Mr. Speaker, following his introduction by the distinguished president of the University of Notre Dame, the Reverend Theodore M. Hesburgh, C.S.C., Admiral Rickover delivered an excellent address on "Democracy and Competence." I am pleased to include the text of this address at this point in the RECORD:

DEMOCRACY AND COMPETENCE

(Remarks by Vice Adm. H. G. Rickover, U.S. Navy, for delivery upon the acceptance of the Patriotism Award at the University of Notre Dame, Notre Dame, Ind., Wednesday, February 22, 1961)

Thank you for the great honor you have bestowed upon me and for the opportunity you have given me to speak here tonight.

We have just witnessed the impressive ceremony of the orderly transfer of the Presidency from one man to another, from one party to another. There has been favorable comment on the very thorough briefing that has taken place; the many consultations, the hours spent by new department heads and subheads, sitting beside their predecessors, notebook in hand, absorbing and recording the experience of the past so there will be no sharp break, no unnecessary gap in the continuity of managing the public affairs of this Nation. We have come to take it for granted that periodically such transfers of power take place. Yet relatively few nations manage this part of the democratic process as well as we do, and those few are all part of the civilization of the West which itself invented democracy and made the rule of law supreme in all human relationships.

As I look at this audience in which young people predominate I cannot help thinking about the private inaugurals that take place every day in all parts of this country when responsibility shifts from one generation to the next; we are not always as conscientious about briefing our private successors as we are about briefing incoming political administrations. The briefing I speak of is, of course, education: the educing or bringing forth of capacities locked in the child, the careful guidance of his growth to maturity by responsible adults in home, church, and school; the effort to develop his spiritual and intellectual resources so he will be prepared for the challenges the future may bring. Surely this too is part of the democratic process; a part, alas, we do not handle very well. The experiences of my life have given me a sense of deep personal distress at our failure—the failure of the generation currently in charge to help youth develop such competencies as they will need when they take over from us.

I thought it might perhaps be of interest to you if I devoted my remarks to the subject of competence in a democracy. We must face the fact that it is no longer sufficient for us to handle the political problems of democratic self-government to our own satisfaction. We are on trial; our way of life is on trial. We are being challenged by a rival system of government which claims to manage modern industrial societies more effi-

ciently than we and ought therefore be emulated throughout the world. We would like to go our own way but the world will not leave us alone. Science and technology have destroyed the geographic isolation which until recently allowed us to manage our affairs without giving thought how other nations manage theirs. Now we find ourselves captaining the free world and everything we do either strengthens or weakens the coalition fighting to preserve its right to remain free.

To remain free we must be immensely competent, and competent in a great variety of new ways. One of these has to do with science and technology, with the kind of creativity that produces scientific discoveries, and with the kind of organizational and social skill that puts these discoveries to practical use. That we cannot afford to fall behind in science and technology is self-evident. Of course there are other fields where we must likewise keep ahead and I do not for a moment wish to deprecate them. It is a fact, however, that unless we predominate in science and technology it will not matter how well we perform in other fields. The survival of our own, of everyone's freedom depends today on power anchored in scientific superiority.

I can illustrate my point best by citing an actual example of specific competencies needed to keep us in the forefront. You are perhaps aware that the Naval Reactors group I head has been part of a large-scale effort to launch a power revolution that will have as deep an effect—perhaps a deeper one—on living conditions as that of the earlier power revolutions that ushered in first the age of steam, then that of electricity. The nuclear power revolution is but one of several developmental projects of similar magnitude; all are concerned with the tremendous effort man is currently exerting to reshape nature. All have, in common, great potentialities for harm if they are not handled by people with the requisite competence.

There is first the requirement that only persons with a high degree of scientific and engineering ability be permitted to handle the powerful natural forces being harnessed by new development projects; if people who are, technically speaking, laymen, meddle with them there is grave danger these forces will escape man's control and go on the rampage, wreaking havoc. There is second the requirement that only persons with a high sense of social, ethical and political responsibility be allowed to decide how this new power is to be used; with it man can today do more evil than has ever been possible, barbarous though much of human history has been.

Our is a democracy where the ultimate decision in these matters rests upon each and every one of us; in final analysis the most important requirements is overall competence of the public to understand the forces with which we deal and to choose the right men to direct their development and use. This comes down to voting in the right kind of government. It means that, besides such considerations as whether candidate X has the kind of personality, the kind of looks, family, background, etc. we like, we give thought to whether he has the mental competence to deal with the tremendous decisions Government must now make. It means that, besides making certain he will get us our fair share of public funds to lubricate the local and State economy and keep us employed, we also weigh his readiness to put the national interest above local interest in matters that ultimately decide the fate of all of us.

Let me spell out several necessary competencies, with particular reference to the project set up to obtain energy from nuclear fission and apply it to ship propulsion and to generation of power for civilian use. The atom sets its own categorical imperatives; we have no choice but to accept them. Specifically, this means that the engineers in my reactor group must perform at higher levels of engineering competence; it also means that industry must perform at higher levels of managerial and production competence; that officers and men operating nuclear ships, and personnel who operate atomic power central stations must be far more competent technically than their counterparts in conventional ships and plants. What is adequate for routine manufacturing, construction, and naval jobs is wholly inadequate for the utilization of atomic power.

But this is not all. When nuclear reactors enter into domestic or international policies, those in government who have to decide how reactors may best be utilized to the advantage of the United States must be competent in new ways not required of politicians and statesmen before the advent of the atom: they must be thoroughly versed in the potentialities and limitations of this complex new source of power; above all, they must be fully aware of the need for special safety measures without which our use of this relatively untried new force of nature might prove disastrous.

As in the case whenever man attempts to pioneer beyond established techniques, we in the naval nuclear propulsion group had to learn about the atom even as we were working to develop it for human use. It seems to me this aspect is too often lost sight of when new developmental projects are set up. We talk of getting a strong man to head the project, we devote a lot of energy to setting up an imposing organization with layers upon layers of allegedly competent administrators to look over each others' shoulders so no mistake will be made; yet rarely do we make provision for self-education on the job. It should be obvious that when you develop something new you must simultaneously develop new human capacities. In our own reactor group we were driven to see this point because there simply were no engineers available who knew how to handle the project.

So, from the first, we set up a system whereby we kept transmitting what we were learning on the job to new members of our group, thus slowly building up a corps of nuclear engineers. I know of no other way to do this. There has to be a constant passing from practical experience to theoretical reasoning and back again; this sort of thing can nowhere be done better than in such a combination work-school program. The entire project was a bootstrap operation where work, study, and teaching went on simultaneously.

As important as this process of mutual education has been our choice of technical personnel. Since in a novel project everyone is by definition a novice, one essential task for those in charge of such an enterprise is to find people who have the innate potentialities to develop, to become active contributors; from the start we have been expending an immense amount of effort on a search for young people who show evidence that they may in time be capable of innovating, of applying basic principles to novel circumstances, of disregarding old, established routines, and taking chances on untried procedures. Selection of young people, usually straight from college or engineering school, takes up much of my own time and that of my leading engineers; we have found no shortcut; no sure-fire mechanical process that would pick out the winners. We do it laboriously through personal interviews, through trial periods; yet, though we have had a fair amount of success, we constantly find our prognostications confounded by various unpredictable human factors.

These interviews with hundreds and hundreds of young men from the top of their graduating classes have brought home to me how poorly our public school system prepares American youth for the problems of tomorrow. These bright young people are, for the most part, badly deficient in basic knowledge, in a truly scientific spirit, in readiness to apply themselves with all their strength to a task that is vital to our future. The core group that has emerged from a long selection and trial process have, of course, performed superbly. Yet our work has been delayed by the need of these young men to make up their educational deficiencies through study at night; many have had to be taken off work and sent to school. We are presently operating our own school system which not only trains people specifically in nuclear engineering but provides remedial courses in fundamentals they should have learned in school and college.

The specter of Russia's giant scientific strides lent urgency to our work. We decided to save time by telescoping the procedures usually followed in new engineering projects. The sequence normally runs from basic research to applied research, to the laboratory or breadboard model, finally to the full-scale working model. We skipped the stage when theory is tried out on laboratory or breadboard models, and designed our reactors to fit directly into ships and power stations. This was a gamble we could not have taken had we not been fortunate enough to receive the backing of Congress. With their support we were able to cut construction time for the first atomic submarine by several years. The *Nautilus* was designed and built within the time usually required for the building of a conventional submarine. Omitting the laboratory model stage did increase our difficulties, however.

To most laymen—and alas even more so to public relations men—a laboratory model always seems to be equivalent to the finished, working product. But this is not so. There are many laboratory reactors; reactors that produce a little electricity under ideal laboratory conditions, and much is to be learned from them. There is a world of difference, however, between a research or experimental reactor and one that must actually produce useful power for a naval ship or a utility system. Whereas laboratory conditions favor the new project, reality is troublesome.

It is troublesome because as soon as you move from the laboratory to the practical world you deal with people outside your own group, over whose qualifications you exercise no control. I use the utmost care in choosing the engineers—naval and civilian—for my own reactor group. I can, therefore, influence the quality of their design work. But for construction of our reactors and of the ships and power stations into which these are installed, we depend on governmental and industrial organizations that do not specialize in atomic energy. Most of their work is with conventional types of ships and powerplants. Their managers, as a rule, lack familiarity with the pecularities of the atom. Therefore, they tend to go about building reactors and nuclear ships in the old and tried ways that were appropriate for conventional jobs. It has taken time and effort to convince them that nuclear power is a more exacting kind of energy than steam or diesel power.

Old, established organizations develop undue veneration for routines and protocol and it is extremely difficult for their managers to realize that what suffices for conventional work is quite inadequate when you undertake new engineering projects. We still have trouble getting the idea across that technological breakthroughs can never be brought about by routine methods and protocol. The essence of all progress is a shedding of preconceived ideas and accustomed ways of doing things, a venturing into the unknown where one is necessarily

guided more by intuition and imagination than by established rules and regulations. How else can anything new be created?

Every attempt to develop something new is hampered not only by technical but also by administrative problems, and sometimes by lack of understanding on the part of the general public. Advancement is hampered unless all who directly or indirectly exert influence on new projects learn to think on a higher intellectual plane. At the present stage of development only extremely competent, technically trained persons can design, build and operate reactors or devise appropriate safety regulations for their use. This is unfortunately not understood by many persons occupying key positions in the organizational set up. Among nontechnical administrators in particular, few realize that to deal efficiently and safely with these new and increasingly complex technical developments they themselves must achieve greater technical knowledge and attain a higher level of human competence. I do not exaggerate when I say that a major part of my own time and that of my top engineers must be diverted from our regular job and devoted to a never-ending battle for higher levels of performance by people outside my own group who make decisions about the building or use of nuclear powerplants. Having ourselves gone through the laborious process of self-education on the job, it is self-evident to us that higher standards of performance are a necessity dictated by the nature of atomic energy; there is nothing personal about it.

Personalities should never intrude into decisions concerned with technical problems. Unfortunately they often do, when people without scientific training make decisions concerning development or use of nuclear energy. In this country we place extraordinary emphasis on getting along with people, on conforming to accepted ways of doing things, and on maintaining pleasant social relationships in our business contacts. People with a nonscientific outlook carry this attitude into technical fields. They regard as impolite, even rude, our insistence on high standards of performance, despite the fact that these high standards are dictated by laws of nature. We were forced to choose between letting technical standards slide and so failing in the job assigned to us, or of incurring personal unpopularity. Faced with this choice, the reactor group put the primary task first. Of course, if it were generally understood that no new project can be pushed through without exacting higher standards of performance, our demand for these standards would not be resented. It is sheer ignorance of the complexities of nuclear fission that generates friction and a hostile attitude toward the rigorous specifications we are compelled to exact.

The climb upward to higher technologies is always difficult and painful. It is rendered still more onerous when one must periodically stop and convince reluctant climbers that it is really necessary to reach a higher plateau. Time thus lost in argument shows up in lengthening lead times, that is in prolongation of the period which elapses between conception of a new idea and its utilization in a useful object; as for example, between Einstein's formulation of the equation $E=Mc^2$ and completion of the first atomic bomb or nuclear reactor.

The imaginative creativity of the theoretical scientist who deals with abstract concepts is always ahead of the technical and administrative competence of those who translate the abstract into the concrete. How fast we progress technologically depends largely on the time it takes us to put new scientific ideas to practical use. Since World War II, leadtimes have been lengthening alarmingly in this country—from 2½ years during the war to 10 years today. In Russia, meanwhile, leadtime on military items is said to have been reduced to but 5 years. This is so serious a matter that we ought not allow obsolete organizational routines and preference for pleasant personal relationships to prevent us from reversing this ominous state of affairs. With the world situation as it is today, our country must advance rapidly if it is to retain its present power position. Delay in utilizing new ideas could spell disaster. Anyone familiar with history knows that a slight advantage, grasped and exploited by one side, has often totally altered power relationships. Today changes occur faster than ever before. No longer can we afford to indulge in the luxury of ignorance of scientific and technical matters which delays vital enterprise and lengthens our leadtimes. Leaders in industry and government must acquire a better understanding of science and its inexorable laws so they will find it less repugnant to consult technical experts, even those who are their subordinates.

The man of the future on whom we shall depend more and more is the professional expert. Today he is still being bossed by administrators thinking at prescientific levels; his work is hampered and sometimes destroyed by men in whom is vested great power but who are unable to understand the realities of the new, artificial world which the scientific revolution has created almost overnight. In the future, both a great deal more technical knowledge and a better understanding of the world we live in will be required of all who manage large organizations. Administrators whose sole talent is to manipulate men, money, and words will be of little use to us in the future; professionals who can handle the intricate mysteries of complex scientific and engineering projects are on the way in. This applies all along the line to the skilled workman on whose judgment, concentrated attention, and sense of responsibility may depend the functioning of some new gigantic piece of engineering. To put this in military terms, we shall need more technical sergeants and fewer martinets. In our naval nuclear program we have taken cognizance of this demand for a different kind of man, and we have set up schools to train the officers and men who will operate the new atomic Navy.

But the need for higher competence is not limited to leaders who supervise and direct large organizations, or to the professional people who run our complex society, or to the scientists and engineers who move us ahead technologically—this higher competence is required of all of us. This is so because ours is a democracy and no democracy can function properly if the majority does not understand what the minority does. In a thoughtful editorial introducing a series of articles entitled "Adventures of the Mind," the Saturday Evening Post said, "The fact is that what the scholar thinks, the artist creates, the scientist discovers, cannot achieve full reality without the rest of us. Without us no idea or institution can flourish."

Democracy is in serious danger if the mass of our citizens, whose beliefs and attitudes shape national policy and determine national mores, are out of touch with the talented minority who push us ahead technologically and from whose ranks come all the trained professionals who run our complex society. Life on a high level of technology cannot be lived democratically unless all the people raise their human stature so that they may be competent to judge and direct the new forces that our creative brainworkers are bringing under man's control. More is needed today than the marvelous practicality for which Americans have long been famous. In the past this practicality served us well, for our principal task was the taming of this continent; the exploitation of the natural wealth of this new land. To do this all we needed was ability to adapt and apply scientific techniques developed elsewhere.

But this practical ability no longer suffices; we must now make over the world in order to offset shrinkage of space and natural resources; we must develop scientific substitutes for disappearing natural materials—artificial sweet water, for instance; artificial power through hydrogen fusion; substitutes for metals which, at present rates of use will be exhausted before too long. We must, in other words, turn more and more to science to solve our problems. Yet we cannot hand over management of our affairs to scientists; the people themselves will have to acquire sufficient understanding of science and scientists to be able to direct scientific work toward socially desirable ends. Should they shirk the effort to acquire this understanding of science, the American people will not, in the long run, obtain maximum social benefits from scientific work and preserve the right of self-government as well.

Just as important as popular comprehension of science is popular understanding of the humanities; these too are becoming more and more important, for in this overfull world where people and nations impinge ever closer upon one another, it is the humanities that teach us how to preserve human dignity and decent interpersonal and international relationshisp even when we are crowded together with people we would not choose for close neighbors. To keep democracy viable, to sustain a free technological society today, the American people must be well versed in the fundamentals of the sciences and the humanities. No better foundation for a modern democracy can be built than an educational system open to all children that helps them to acquire civilized minds through a liberal education.

Democracy is the only government worthy of free men; it is also the most difficult. It will not run well unless all the people, or at least a majority, possess those qualities of mind and character that in other forms of government are needed by none but a small governing group. We are not born with these qualities. We must acquire them through effort; we must be carefully guided and taught by home, church, and school. Hence the overriding importance of education in a democracy; education that enhances the human personality, that "brings the mind into form" to quote John Henry Newman's definition of a liberal education.

Much of our educational thinking is built on the erroneous belief that science, which has so greatly eased man's physical labors, similarly can ease his mental labors—a totally false conclusion; the very opposite is true. Periodically magazines break out in fanciful descriptions of the world of tomorrow when kitchen walls move up and down at the touch of a button, roasts cook themselves, everyone operates his own helicopter, and life is one long round of vacation fun and refreshing pauses for togetherness around tables laden with food which nobody has had to prepare. Never a word will you find in these rosy pictures of things to come about people having to be wiser, more knowledgeable, better educated, more actively involved in public affairs. Life without effort appears to be our national goal.

But when machines take over manual labor and routine mental chores, the complexity of life increases; efficient management of one's private and the Nation's public affairs makes much higher demands on the human mind. Today most fathers work fewer hours than their children ought to devote to studies if they would develop their innate abilities to the fullest and be best prepared for the problems of tomorrow. It is nonsense to say that new scientific methods can make learning painless and fun; that it

matters not whether a child chooses to become "educated" via typewriting or the study of calculus; by fudgemaking or learning to speak French. Only an uneducated person with no concept of what the future will be can blind himself to the necessity for education to center upon developing the mind, upon making it a useful tool. Only work requiring skills in which the intellect plays an important part has any real future. Jobs that are purely routine and can be learned in a few days are bound in time to be taken over by machines, but automation will never be a threat to those who have a mind that can think for itself and reason logically.

Another misconception widespread in our educational thinking is the notion that higher education is a democratic right—as is the right to vote or to equality before the law; that it is part and parcel of the American standard of living and should therefore be universal; that it is something you need not earn by effort but which is yours by virtue of living in a country that occupies a privileged, as it were, an upper-class position in the society of nations. Such thinking does not differ much from the notion that special rights accrue to persons by virtue of belonging to an upper class within a given nation. In education the only valid right is the right to equality of opportunity. When we attempt to use a public agency—the school—to level down inherent inequalities of talent and motivation we destroy equality of opportunity. Children of educated or well-to-do parents will simply attend private schools if the public schools lower their standards; it is not possible in a free society to undo inequalities of intellectual power conferred on us by God.

In order to preserve a narrow and mistaken concept of democratic education we are currently depriving many of our talented, and almost all our average children of a carefully planned sequential program of studies in the liberal arts that will genuinely educate them. Because we cannot impart this general education to all children simultaneously, we have downgraded curricula in the direction of what are termed, "common needs of youth"—vocational training, the teaching of manners, leisure time skills, and the like. These do not equip youth with competencies needed in the twentieth century, either to be successful in their private lives or to discharge their responsibilities as democratic citizens. Maudlin sentimentality and an unrealistic notion of the child's democratic right to choose only subjects that interest him keep many of our children from obtaining the solid advantages of a broad general or liberal education.

Something on the order of 300 courses are offered in our public schools; I doubt whether more than 10 percent have anything to do with developing the child's mental capacities. We are the only civilized nation where children are not protected at school against pursuing educational programs unsuited to their abilities and needs. In contrast to the law which takes account of the limited judgment of minors and erects safeguards to prevent them from making decisions that will harm them, our schools do not protect minor children against their immature desire to avoid hard subjects and choose courses that require no effort on their part and little or no homework. These easy courses have the so-called advantages that they do not show up mental inequalities as do those of the liberal arts curriculum (also, they are easier to teach).

We make a mockery of the noble concept of universal free education when we eliminate from education everything that spurs the child to effort. It is official educationist dogma that "there is no aristocracy of 'subjects' * * * mathematics and mechanics, art and agriculture, history and homemaking are peers." All win for the pupil the same credit toward his final diploma or degree; all are open to every pupil regardless of his ability. Thus do we eliminate competition and reward from the child's most important business—growing up to be a worthwhile adult. In every other human activity we recognize that people do their best when they are challenged by competition; we know that effort brings reward. Not so in education. Here we actually pride ourselves on sparing the lazy and the stupid child the disappointment of failure. To save the sensibilities of the incompetent, we neglect the talented. And even the average child with sufficient motivation to absorb at least part of a liberal education all too often misses out because he has not been properly guided and spurred on to exert himself.

Today's effort to wrap children in cotton wool and protect them against every risk of school life contrasts with the way children were raised in pioneer days. No parent would then have dreamed of sparing his son the risk of possible accident by not teaching him to shoot a rifle. Survival in pioneer days depended on being a handy shot; the risk of a child hurting himself had to be taken. Survival today depends on ability to raise intellectual capacities to higher levels than were ever before needed; yet, though ability to think is as important today as ability to shoot was yesterday, many American parents will not accept the risk of their child hurting himself by failing in a tough curriculum. Our folklore has little admiration for the pampered child of rich parents, but now that most of us are rich beyond the dreams of people elsewhere in this world; richer by far than most ruling classes were a few generations ago—now we engage in that very pampering we once scorned.

A peculiar sense of logic permits us to award the star athlete all sorts of honors, thereby motivating him to practice hard and continuously; while to do the same for children of superior intelligence and scholastic achievement is supposed to "undemocratic." It is odd that we who think we are an exceptionally practical and realistic people should admire the kind of competence which has no great personal or social value in later life, while we deprecate intellectual prowess of which we have far too little and need a great deal.

We want our children to lead a happy and rich life. But instead of teaching them to develop their inner resources we waste their best learning years on training them how to be socially popular and how to find a mate. Much of the "entertainment" type education given in our schools could well be given after school hours and at the expense of the interested families. I am old fashioned enough to feel that taxes ought to be invested in educating children for real life and not for having a good time.

In setting educational objectives, one may take the view that they must achieve what is best for the individual, or one may take the view that they must aim at what is best for society. In democracies, fortunately, that education which enables the individual to make full use of every one of his abilities because all have been developed to their maximum potential—that education also best prepares him for democratic citizenship.

When we substitute vocational training for general education in our schools, we treat human beings as breadwinners pure and simple. We leave out of consideration their needs as persons and as citizens. This is an attitude often found in authoritarian societies but it has no place in a democracy, particularly one as rich as our country which can well afford to provide all its children with a good liberal education. Though it is not highly regarded by authoritarian governments, the independence of mind which such an education develops is indispensable in a democracy.

Substituting vocationalism for general education cheats a child of his right to become a well-educated person. Let us, by all means, provide for all sorts of extracurricular activities which may be pleasant or marginally useful to children; we can use the school buildings for this after hours. But let us not substitute typewriting, metal shop, or driver training for history, languages, mathematics, and sciences. Vocational skills were deemed sufficient for the hewers of wood and the carriers of water in times gone past; they are not sufficient for future democratic citizens.

How better can we use the wealth and the leisure which technological advances give us than by investing them in a concerted campaign to provide our children with the best schools and the best educated teachers in the world so that all future American citizens may absorb as much education as is humanly possible. Is there a worthier goal we can set for ourselves than to help America's youth become the most intelligent, the most competent, the most patriotic, and the wisest of rulers of this land of ours?

Mr. Speaker, let me conclude by reading an extract from the bull of Pius II in 1459 upon the establishment of the University of Basle, Switzerland:

Among the joys which mortal man in this transient life can obtain by God's gift, this does not deserve to be reckoned among the least, namely, that through constant study he can gain the pearl of knowledge. This points out to him the way to live well and in happiness and by its great value enables one who possesses it to far surpass him who does not. Furthermore, it makes him like unto God and brings him to a clear knowledge of the world's secrets. It brings its favors to the untaught and raises to the heights men born in the lowliest circumstances.

Mr. Speaker, I should also like to insert in the RECORD a fine editorial from the South Bend, Ind., Tribune in praise of Admiral Rickover's address:

[From the South Bend Tribune, Mar. 2, 1961]

SOUNDING THE ALERT

Two men who spoke last week at the University of Notre Dame emphasized the pressing need for quality education in the United States, but for two entirely different reasons.

One, Vice Adm. Hyman G. Rickover, a sharp critic of the Nations' public school crisis, looked at the problem from the patriotic point of view of survival of freedom as we know it in the United States.

The other, Louis F. Buckley, regional director in New York City for the U.S. Bureau of Labor Statistics, viewed the matter from the standpoint of how a solid education will benefit the individual in the competition for jobs in the future.

Both men made their points clear. Both made it plain that quality education is essential to the well-being of the Nation as a whole and to the individuals who hope to fare well in the United States of tomorrow.

"To remain free," said Admiral Rickover, "we must be immensely competent, and competent in a great variety of new ways. One of these has to do with science and technology, with the kind of creativity that produces scientfic discoveries, and with the kind of organizational and social skill that puts these discoveries to practical use."

Estimating that 26 million new, young workers will enter the labor force in the current decade, Buckley warned that only the skilled will find the path smooth in tomorrow's automated world.

"The untrained or uneducated," said Buckley, "will not be able to design, produce, install, service, or operate the machinery of the future."

At a time when fresh attention is being given to the quality of education at all levels in the United States, the words of Admiral Rickover and Buckley are timely and meaningful.

Noting that in pioneer days no parent would have dreamed of exposing a son to possible accident by not teaching him to shoot a rifle, Admiral Rickover added:

"Yet though ability to think is as important today as ability to shoot was yesterday, many Americans will not accept the risk of their child hurting himself by falling on a tough curriculum."

What both men are saying is that the educational system must do better and the young people themselves must do better in preparing themselves for the future or the Nation and its individual citizens will be in deep trouble.

What Liberty Is

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 10, 1961

Mr. WILEY. Mr. President, our country is faced with one of the severest tests of its ideological history.

Communism—a global social-economic-military system antithetical to freedom—has mobilized almost a billion people and vast resources in its attempt to conquer the world.

As adherents to the belief that government of, by, and for the people—not a totalitarian system—can best serve mankind, we now must shoulder the responsibility of warding off this threat to liberty, and of creating a climate in which the ideals of freedom can flourish.

However, this can be done effectively only if we understand the meaning of liberty—its opportunities, responsibilities, and ultimate goals.

We can effectively insure the survival of liberty only if we have a good understanding (a) of its meaning for ourselves and our country; and (b) of its potential for establishing the climate in which the world, too, can best progress to its ultimate destiny.

Recently, the American Bar Association Journal published an informative article by Wendell J. Brown. In this analytical article, Mr. Brown traces the origin of our concept of liberty as set forth in the Declaration of Independence, embodied in the Constitution, and reflected in the life and progress of our Nation.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT LIBERTY IS

(By Wendell J. Brown)

Culturally we have reached a stage in America in which we assume that we know what liberty is, could we but say or could we but take time to say. We take liberty for granted in the same way that we take electricity for granted. Each are common and useful to us. No one really knows or has to know what electricity is, for it to be and to continue to be a common and useful product.

But liberty, different from electricity, must come from within ourselves and to produce it we must know what it is—its spirit and its structure. This short article is the result of my unwillingness to assume that I know what the full import of liberty is.

SOURCE OF LIBERTY

An understanding of the full import of the concept of liberty requires that we examine its source. The words of our Declaration of Independence to the effect that man is "endowed" by his "Creator" with certain "unalienable rights" among which are "life, liberty and the pursuit of happiness" were not entirely the words of Thomas Jefferson, but were built from the words of John Locke and other philosophers. Specifically, the phrase "endowed by his Creator" was inserted from the floor of Congress after Jefferson's draft came before it for debate and adoption.

In early America the acceptance of the thought behind the words "endowed by his Creator" was much broader in its base than either the acceptance of Jefferson or the acceptance of the Continental Congress. Its acceptance came from the individual convictions of the bulk of the 3 millions of people in the then American colonies.

Most of these early Americans, our forefathers, had never heard of John Locke. But an unusual number of them had read their Bibles. In them they had read that men should "render unto Caesar the things which are Caesar's; unto God the things that are God's". The basic idea that each individual has the God-given right to an inner life was not new to them. Thomas Paine merely put their basic thought into words. This basic thought was and still is that political sovereignty derives from our Creator and resides essentially in the people. This idea, even then more than 1,700 years of age and still alive, is that each man, be he a Caesar or a George III, is equally bound to acknowledge that he must render unto God "the things that are God's."

Also, our forefathers knew that they couldn't sit around on stools, or even sit in pews, and wait for God to bring liberty to them. With respect to that basic right, they knew that God acts discernibly through a responsible people. They had learned that fact the hard way. The great paradox in the concept of liberty is that man is endowed by his Creator with the right to liberty and yet to have it he must earn it. This paradox, elusive to some, did not bother our forefathers. Overwhelmingly they understood and accepted the paradox contained in Paul's comment, "I labored more abundantly than they all, yet not I, but the grace of God which was with me." At the end of that first year at Plymouth in 1620 only 50 of the original 102 survived. What the survivors attained thereafter they knew would have to be earned by them, even though they knew that they could not earn anything save by the grace of their Creator.

Why did our forefathers ascribe this unalienable right to liberty to their Creator? They acknowledged that they were endowed by their Creator with the unalienable right to liberty because they knew they had it, and it was their faith, a hard faith that they were willing to fight and die for, that there was no other source for it.

And I venture to think that we cannot escape the fact that such hard faith furnishes us with the emotional catalytic element in the concept of liberty which is required to make it an equally hard political fact. Emotionally we have to get outside ourselves to attain a rational perspective of liberty which shows us what it is. Once we have done that, we cannot help but know that there is a Creator who has endowed us with these individual inner lives which we ourselves could not have created and yet which we have.

Paradoxically, egoism and humility have a place in the concept of liberty. Egoism stems from the knowledge that each individual has the power of choice. Humility stems from (1) the knowledge that such power of choice must be God-given and (2) the faith that it is a part and parcel of a divine purpose. Under the aegis of liberty, ego and humility complement each other. They walk hand in hand.

When Lincoln said that ours is a nation "conceived in liberty" he understood and his audience understood that our Nation was born of the idea (1) that there is in each individual a God-given inner life which is worthy of preservation and protection and (2) that governments should be instituted among men to preserve and protect such individual inner lives. Hence our Federal Constitution declares that it, our Constitution, is ordained and established "to secure the Blessings of Liberty to ourselves and our Posterity."

It is thus that we in America have philosophically and politically immersed our individual lives in a stream of life which may have continuity and which at least makes sense.

Liberty, then, is the acceptance of the idea (1) that there is in each person a God-given inner life which is worthy of preservation and protection and (2) that a primary job of government is to preserve and protect such individual inner lives.

If all of the "bigs" of our day—big business, big distribution, big agriculture, big labor, big government, big foreign powers, big religion—must continue to pay homage to the idea that each individual has a God-given inner life and a right to that God-given inner life we shall continue to have liberty—otherwise not.

ITS UNIQUE QUALITY

Liberty has a unique quality which enables it to avoid the historical graveyard in which many dogmas are buried, dogmas for which men would once have died. Its unique quality is that it seeks to accomplish no fixed end, but only seeks to provide a process of living by which each man can work out for himself his own life and his own conception of his own destiny, provided he stays within an area which will allow others to have such right equally with him. Inasmuch as its primary object is to furnish a fertile field for reason to function, reason will never destroy it. It is bound to survive rational advances in science and philosophy. Dogmas die because all human knowledge is imperfect and yet man is a rational being. Liberty lives because reason cannot do without it.

Yet reason is not placed on a pedestal by liberty. Rather, liberty takes man as he is, an emotional, volitional, physical, and rational entity. It is never embarrassed by man's imperfection, but, like a patient and understanding friend, is tolerant of those whose thoughts reach beyond their grasp and is just to those whose actions encroach upon the rights of others.

ITS HEROES

It has no heroes save men of commonplace caliber, men who in a greater degree than others have commonplace virtues, men who are decent, free, and God fearing. In the concept of liberty, a great man of Napoleonic stature is a public calamity and must be dealt with on that basis whether he be a too aggressive foreign dictator or a too aggressive labor leader or a too aggressive person or group of persons of any sort.

The torch of liberty throws its own light and they who would purport to act in its

name immediately have the burden of persuasion thrust upon them by those who understand what liberty is. To sustain this burden they must prove more than pureness of motive. They must never put down the light of liberty under a promise to pick up again in futuro.

ITS DUAL CHARACTER

Liberty is a requirement of a complete and functional living which is an inescapable fact where human beings live, want to live, and have to live in relationship with each other. Yet it must be earned by a people who would possess it. It must be earned in the same way that the graceful and awe-inspiring freedom of movement of a skillful ice skater is earned, by a self-discipline as sharp and as keen as the steel upon which the skater relies. Man cannot have liberty unless he accepts the moral task it imposes. It is a combination of self-assertion and self-denial, of independence and responsibility. Inherently it cannot be a gift which has no mutuality. When a man thinks that he alone can make a gift of liberty, he has lost his sense of liberty and should not be allowed to carry its torch. Men cannot have liberty by the grace of one person alone.

LIBERTY AND EVOLUTION

Liberty recognizes that Darwin was a man and, therefore, had within himself "the spark of liberty" which is common "to the mind and spirit of man." Liberty does not accept or reject the theory of evolution. Rather it observes that each man is endowed with a spark of willfulness which makes him individually different from any other person. It observes the ever-living process of change and hence knows that it must never cease its fight to preserve that "spark of liberty in the mind and spirit of man." The quotations are the words of Herbert Hoover, our oldest living ex-President, a man who has an unusually high degree of understanding of what liberty is.

POLITICAL LIBERTY

Liberty presupposes an individual who has more than an embryonic sense of independence and more than an embryonic sense of responsibility. In fact, liberty in its totality presupposes a nation made up of a sufficient number of people who have an individual sense of independence and sense of responsibility to make it work. There must be enough of these individuals to make liberty the dominant characteristic of a particular group's way of life. In practice the idea of liberty must always have this dual aspect of independence and responsibility. To attain independence there is always the responsibility to fight for it and to know what we are fighting for.

THE AMERICAN IDEAL

In the search for a firm understanding of what liberty is, time and again I have returned to the thought that whenever men have dared to think in terms of a free nation for themselves and their posterity they have thought in terms of a just and righteous God. We know that there is a force greater than our own which created the world in which we live and that this world includes human beings endowed with a power of choice. We cannot understand the concept of liberty without this objective viewpoint of that which is within ourselves. If we are "endowed" with the "unalienable" rights which are the essence of liberty then there must be a Creator who thus endowed us. Once we see ourselves from the perspective of our Creator we see moral values within ourselves which include the cultural idea of liberty.

At age 78, Kerensky smiles at Khrushchev's reference to God because he recalls Karl Marx's saying that "religion is the opium of the people" and that Lenin has declared "God is a complex of ideas engendered by the ignorance of mankind * * * religion is a kind of spiritual vodka in which the slaves of capital drown their human shape and their claims to any decent life". Yet historical time, as distinguished from research laboratory time, has proved that if we would have liberty—a chance for an individual decent life—we must appreciate that an individual sense of dignity is best attained and only attained by a mature faith that we have been thus endowed by our Creator.

STRUCTURAL LIBERTY

We are not hypocrites because we do not always live up to the American ideal of liberty. There are limitations inherent in all human endeavor, and the practical premise of structural liberty is that human beings are both good and bad. Otherwise there would be no need for structural liberty which consists of governmental restraints and governmentally enforced absence of restraints. In the words of Carl Schurz, a Senator in Lincoln's day:

"Ideals are like stars; you will not succeed in touching them with your hands. But like the seafaring man on the desert of waters, you will choose them as your guides and following them you will reach your destiny."

John Adams, in his eventide correspondence with his friend, Thomas Jefferson, referred to the fact that the preservation of liberty by government is a complicated administrative task. Each of them had been at the helm of our ship of state and each of them knew the tribulations which a state "conceived in liberty" must perforce undergo.

CONSTITUTIONAL BACKGROUND

Under the American ideal of liberty, we are immediately beyond the question of whether any government is necessary for the preservation of liberty. By the time our Constitution was adopted, effective in 1788, by a process of trial and error extending from the days of John Smith to the Articles of Confederation, we had found that the preservation of liberty requires a form of government which has coercive power, one that can deal effectively to protect individuals or groups of individuals within its jurisdiction from each other and one which can effectively protect the legal entity of the Nation from outsiders. We found that even by fleeing to a new country we could not escape that fact. Nor could we escape that inexorable fact by casting off all ties with all government.

We did not reach this stage in our thinking until we had to and we were reluctant to reach it at all. The hard thinking, practical, disputatious, idealistic and differently constituted delegates who met in Philadelphia from May to September of 1787 and there formulated our Federal Constitution were confronted with the fact that the only alternative to the granting of power was dissolution and loss of their liberty.

These 55 men at Philadelphia had no use for any form of government except to preserve their individual liberties. The federation wasn't working. Accordingly they had to "form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense * * *" all to secure the blessings of liberty for themselves and for their posterity.

Individual liberty, and there is no other, insists upon the right of each individual to seek his own answers. It combats the idea of either a government which would create a mass hypnosis or one which would stifle criticism of the Government. Many years ago Jefferson stated the ideal of liberty in these words:

"This institution will be based on the illimitable freedom of the human mind. For here we are not afraid to follow truth wherever it may lead, nor to tolerate error so long as reason is left free to combat it."

More than 100 years later Justice Holmes reiterated the same thought when he wrote from the bench that our concept of liberty is an inspiration to endeavor that encourages the free trade of ideas and which is based on the rational faith: "that the best test of truth is the power of the thought to get itself accepted in the competition of the market, and that truth is the only ground upon which their wishes safely can be carried out. That, at any rate, is the theory of our Constitution."

Without these individual inner lives and the right to them there is no market in which truth can be tested. There is only oblivion.

OUR CONSTITUTIONAL HERITAGE

With the premise that liberty is only for a people of whom the majority are individually independent and responsible, our forefathers have (1) adopted a Federal Constitution; (2) provided therein that it "shall be the supreme law of the land" and a Supreme Court to enforce it; (3) provided for the reposing of legislative, executive, and judicial powers in separate governmental bodies; (4) provided for a system of checks and balances between these separate powers; (5) provided for the preservation of the idea of federalism or State's rights; and (6) provided a Bill of Rights. This instrument our forefathers conceived and made a living document for themselves and, insofar as they could, for us.

A CONSTITUTION IS NOT THE COMPLETE ANSWER

But the effective promise of liberty is not contained in our Constitution but in the indwelling spirit of each of those who cherish it. Each generation must remake the promises contained in a constitution or it loses its vitalty.

In the process of lving, each day is a new day and liberty must be found there. A constitution which in unequivocal language guarantees individual liberty is not enough to assure its preservaton. No matter how a constitution is worded, history proves that it can be lost or become meaningless. Even the three sturdy rules of construction, which provide that to know any part of a constitution's meaning it must be read (1) in its entirety, (2) giving common speech and common understanding meanings to the words used and (3) with the circumstances under which it was made in mind—are not enough to preserve a constitution.

Nor can we rely solely on an independent judiciary because the Supreme Court must have a justiciable controversy on its docket before it can act and its actions may become a colossal futility. The executive and the legislative branches are equally the custodians of liberty. They are equally the active bailees of its owners, the people.

OTHER CONSTITUTIONS

In the desert of time there are strewn many constitutions whose skeletons remain to tell us that if we, the people, would be free we cannot merely enact a constitution and then rest.

Many sovereignties, now dead, started with glorious words of liberty in their organic laws. In 1860 the Argentine nation adopted a constitution for the stated purpose of "securing the benefits of liberty to ourselves, our posterity, and to all persons who may desire to inhabit the Argentine soil." The Italian Constitution of 1848 provided in article 26 that "Individual liberty is guaranteed." The Constitution of Mexico, adopted in 1857, provided that "In the Republic all are born free." The fundamental laws of the Russian Empire, adopted May 6, 1906, provided, after several bows to the sacred and inviolable character of the person of the Emperor, that "The domicile of everyone is inviolable" and that "property is inviolable." The Constitution of the Spanish monarchy of 1876 provided that "no one shall be deprived of his property except by the competent authority, and for a proved cause of public utility, always after due compensation." All of these

sovereignties have been replaced. Words even in organic laws are not sufficient to preserve the liberty which the words espouse.

LIBERTY ANALYTICALLY RESOLVED

There are they who say they believe there is no God. There are they who believe there is a God, a Creator, who has no time for man. There are they who believe there is a God, and, like Socrates, say and believe "I move not without Thy knowledge." Man is free because he has a God-given power of choice. With that power of choice he is also given a moral sense. Inasmuch as we have learned that government must be by consent of the governed, the majority must determine what the laws of that government shall be. Inasmuch as the majority has a God-given moral sense, liberty has a chance to succeed. Inasmuch as the majority also has a God-given choice, liberty has a chance to fail. Choice and moral sense by the majority are inseparable if we would have liberty.

Analytically thus resolved, liberty has no secrets. It is neither myth nor magic. It is not supernatural because to have it we must earn it. It becomes a dynamic political fact for a particular nation whenever and wherever there are a sufficient number of individuals within that nation with the required strength, courage, and intelligence to make it an ethical imperative for each of them in the conduct of their individual lives.

The basic and grand concept of liberty does not change. The same idea which conveyed itself into the minds of our forefathers is still there, a universal idea, available to all, and yet peculiarly our American heritage.

Children are playing in front of my house. One of them has a piece of chalk and is drawing a circle on the sidewalk. After their game has been played, rains will come and wash the circle away. Yet the geometrical concept of a circle will remain, and cannot be destroyed. However, even a nation blessed with a constitution which guarantees liberty may lose it. Yet liberty is immutable. Even after it is gone and only the hunger for it remains, there will be the concept of liberty which can never be destroyed.

On How Not To Grow Old

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1961

Mr. WEAVER. Mr. Speaker, the other day I received a letter from a fine lady, Mrs. B. F. Stewart, of Cambridge, Nebr., who lives in the Frst Congressional District. Mrs. Stewart recently celebrated her 93d birthday. Her letter to me contains a few words by an unknown author which I feel are good advice, not only for my colleagues but for all Americans.

I would like to incorporate Mrs. Stewart's very fine letter at this point in the RECORD.

Congressman PHIL WEAVER,
Washington, D.C.

DEAR SIR: I was pleased to receive the nice note extending best wishes on the occasion of my 93d birthday. That seems a long time to live.

I quote some lines from an unknown writer:

"Age is a quality of the mind
If we have left our dreams behind
If hope grows cold
If we no longer look ahead
If ambition's fires are dead
Then we are old.

"But if from life we take the best,
And if in life we keep our zest,
If love we hold,
No matter how the years roll by
No matter how the birthdays fly
We are not old."

Federal Crime Commission

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1961

Mr. MOELLER. Mr. Speaker, I have recently received from Lt. Comdr. Helen G. Williams, of Lancaster, Ohio, Secretary of the Ohio Department of the Reserve Officers Association of the United States, a copy of a resolution enacted on January 22, 1961, by that organization. This resolution opposes the creation of a Federal crime commission on the ground that crime can be fought most effectively on the local or State level, that the FBI is now adequately performing the functions that such a Federal Commission would perform, and that establishment of any such superagency would constitute a step toward development of a national police state. I would like to include this resolution in the RECORD as well as the remarks made on this subject by Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation in a speech last October. Mr. Hoover is of the opinion that nothing could be more dangerous to our democratic ideals than the establishment of an all-powerful police agency on the Federal scene.

It is my understanding that Attorney General Robert F. Kennedy is currently giving his attention to the problem of effectively combating national and international crime syndicates. Mr. Kennedy has his work cut out for him in this field and any reasonable proposal he may offer that does not conflict with or endanger our traditional constitutional rights should be given the careful consideration of all citizens.

The Reserve Officers Association resolution and Mr. Hoover's speech are as follows:

Whereas certain groups and individuals in the United States advocate creation of a Federal Crime Commission or national clearinghouse for criminal information; and

Whereas establishment of such a superagency on the Federal scene would constitute a step toward a national police state which is repugnant to American freedom and throught; and

Whereas crime constitutionally is a local matter which can be handled most effectively by law enforcement at the State and local level; and

Whereas the Federal Bureau of Investigation, under the leadership of its dedicated Director, J. Edgar Hoover, is already effectively performing the very functions which are being proposed by advocates of a Federal Crime Commission through its cooperation with all other law enforcement agencies in the dissemination and exchange of criminal intelligence information: Therefore be it

Resolved, That the Ohio Department, Reserve Officers Association of the United States, assembled in council this 22d day of January 1961 at Columbus, Ohio, does hereby oppose any movement to establish a Federal Crime Commission in the United States; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the Attorney General of the United States, the Director of the Federal Bureau of Investigation, and the Ohio Senators and Representatives to the 87th Congress, for insertion in the CONGRESSIONAL RECORD.

Enacted at Columbus, Ohio, the 22d day of January 1961, and approved.

H. KERNY BURCH,
President.
HELEN WILLIAMS,
Secretary.

REMARKS OF J. EDGAR HOOVER

No profession in our country has been so beset by outside theorists and pressure groups as law enforcement. This is true to such an extent today that we members of the law enforcement profession are well advised to be extremely skeptical of many alleged friends. I refer particularly to those persons—some in an earnest desire for a remedy to the crime problem, and others blinded by the urge of empire building—who have advanced such potentially dangerous so-called solutions as Federal crime commissions, national clearinghouses, and special prosecuting teams to cover the United States.

Typical of the ignorance of a self-appointed Pied Piper of crime is his statement that "fingerprints, criminal records, and rogue's gallery photographs are the tools of a bygone era." Such statements reflect the total immaturity of a theoretician in the field of law enforcement. It is remarks like these that indict the maker for his stupidity.

The persons who endorse these grandiose schemes have lost sight of some very basic facts. America's compact network of State and local law enforcement agencies traditionally has been the Nation's first line of defense against crime. Nothing could be more dangerous to our democratic ideals than the establishment of an all-powerful police agency on the Federal scene. The truth of these words is clearly demonstrated in the experience of nations ruled by ruthless tyrants both here in the Western Hemisphere and abroad.

Blanche Lange Hall Dedicated at Hardin-Simmons University, Abilene, Tex.

EXTENSION OF REMARKS
OF
HON. OMAR BURLESON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 10, 1961

Mr. BURLESON. Mr. Speaker, an outstanding Texas woman, Mrs. Fred M. Lange, of Dallas, was honored recently when Hardin-Simmons University in Abilene named a dormitory for her.

Mrs. Lange, well known in Texas for her activities in educational, church, and civic work, is the wife of Fred M. Lange, executive vice president of the Dallas Community Chest Fund, a man who has devoted his life to raising money for welfare purposes.

Mr. Speaker, it may be said simply and truthfully that this couple works for mankind.

Under leave to extend my remarks, I submit a story from the Abilene Reporter-News about the dedication of Blanche Lange Hall, an editorial tribute to Mrs. Lange by the Dallas Times Herald, and the text of Mrs. Lange's brief address at the dedication, and ask that they be printed in the RECORD:

[From the Abilene Reporter-News, Feb. 19, 1961]

"ALL DEDICATED WOMEN" HONORED, MRS. LANGE SAYS

(By Lane Talburt)

Mrs. Fred M. Lange of Dallas accepted the honor Saturday of having a dormitory on the Hardin-Simmons University campus named in her honor in behalf of "all the dedicated women of the Southwest who labor in the interests of our youth."

Blanche Lange Hall was formally dedicated with the unveiling of a plaque at the dorm entrance by Mrs. Rosemary Gordon Smith of Dallas, niece of the honoree, and the unveiling of a portrait of Mrs. Lange in the reception room by her sister, Mrs. Mary Swanzy Woodward of Dallas.

The painting had been presented to the university by Frank Heller, head of the Remington Rand Corp. in Dallas.

Facilities of the women's dormitory will be open to the public from 2 to 4 p.m. Sunday. Guests will also be able to tour the new chapel-auditorium now under construction and the newly renovated Caldwell Hall.

Dr. Evan Allard Reiff, Hardin-Simmons University president, said the newly decorated dormitory was being named for the Dallas civic and church leader because of "her interest in our young women."

"We're so happy in this occasion to say in our own hearts that Mrs. Lange has consented to have this dormitory named after her," the president told the crowd.

A group of about 100 friends of the Langes who accompanied the honoree from Dallas to Abilene in 2 chartered planes were among approximately 250 persons in the reception room who heard Mrs. Lange express her gratitude for the honor.

"I am most appreciative for this generous recognition and I am proud to become more closely identified with this outstanding center of Christian education," Mrs. Lange said.

"At the same time, I am humbled by the realization that I shall need to live up to this great honor.

"There are many women throughout Texas and the Southwest who are deeply devoted to this fine university who could have been chosen. Being conscious of this fact, I do not accept this recognition for myself.

"I accept it on behalf of all those devoted women who work in the interest of culture and education based on high Christian principles, as exemplified so well in this institution of higher learning.

"I feel that through me you honor all the dedicated women of the Southwest who labor in the interests of our youth. You honor the young women who will live in this dormitory and the families they will rear in the future. They will be the recipients of the rich religious spirit which pervades this campus."

Dr. W. B. Irvin of Dallas, vice president of the H-SU Board of Trustees, presided at the ceremonies, Dr. Lee Hemphill, vice president in charge of development at the university, gave the dedicatory prayer.

Audrey Rasco, a student in the school of music, sang a solo, "Bless This House."

Reception and open house followed, with dormitory hostesses taking visitors on tours of the building and other campus structures. Hall Council members, headed by Gail Smith of Haskell, were official hostesses.

Honorary hostesses for the reception were Mrs. David Proctor and Mrs. W. P. Wright, cochairmen, Mrs. Guy Caldwell, Mrs. H. A. Pender, Mrs. Marvin Lewis, Mrs. E. L. Farnsworth, Mrs. Ernest Yeatts and Mrs. Will Minter. Ex-officio hostesses were Alice Berkshire, dean of women at H-SU, and Mrs. W. M. Rayburn.

Members of the university administrative staff and H-SU trustees, were in the reception line honoring the Langes.

A noon luncheon in the Windsor Hotel preceeding the dedication ceremony was attended by trustees, administrative officers and their wives and the Dallas delegation.

Host committee for the luncheon included Mr. and Mrs. W. P. Wright, Dr. and Mrs. Elwin Skiles, Mr. and Mrs. J. D. Sandefer, Dr. and Mrs. Irvin and C. M. Caldwell.

The Reverend W. H. (Dub) Jackson, Southern Baptist missionary to Japan who is currently in Abilene on a furlough, presented Mrs. Lange a picture of the Tokyo Baptist Church at the luncheon. The Reverend Jackson said Mr. and Mrs. Lange inspired construction of the church while visiting in Japan several years ago.

The H-SU girls trio sang "Be Still My Soul."

Invocation was given by the Reverend Merle Weaver, pastor of Lovers Lane Methodist Church in Dallas of which Mrs. Lange is a member.

The honoree has been active in the Dallas Women's Forum, Women of Rotary, Women's Group of the Dallas Council on World Affairs, Dallas Civic Opera Women's Board, League of Women Voters, Dallas Symphony Orchestra Women's Guild and Friday Forum.

Mr. Lange has served as public trustee representing H-SU in the Texas Foundation of Voluntarily Supported Colleges and Universities for several years.

[From the Dallas Times Herald, Jan. 11, 1961]

HONOR WHERE DUE

The Dallasite for whom a women's dormitory is to be named at Hardin-Simmons University wears two civic hats. She is both Mrs. Fred M. Lange—"the woman behind the man in public life"—and Blanche Lange, a leader in her own right.

Her fellow citizens revere her in both roles. Hundreds of them will be voicing their approval of the honor bestowed by Hardin-Simmons' executive committee.

As wife, Mrs. Lange has backed her husband's outstanding career as former executive leader of the Community Chest and now head of the Chest Trust Fund as well as in other key roles he has played. As citizen with a special interest in Christian education, Blanche Lange has been active in such varied organizations as the Women's Forum, Women of Rotary, Women's Group of the Dallas Council on World Affairs, Dallas Civic Opera Women's Board, League of Women Voters, the Friday Forum and others.

The naming of Blanche Lange Hall honors notable achievements. It should inspire future students at the Abilene institution.

MRS FRED M. LANGE'S RESPONSE TO THE NAMING OF THE BUILDING, SATURDAY, FEBRUARY 18, 1961, AT HARDIN-SIMMONS UNIVERSITY, ABILENE, TEXAS

Dr. Reiff, members of the board of trustees, members of the faculty, and beloved friends who so kindly have come from near and far to be with us on this wonderful occasion.

This is a thrilling experience for me personally. I am most appreciative for this generous recognition, and I am proud to become more closely identified with this outstanding center of Christian Education. At the same time, I am humbled by the realization that I shall need to live up to this great honor.

There are many women throughout Texas and the Southwest who are deeply devoted to this fine university who could have been chosen. Being conscious of this fact, I do not accept this recognition for myself. I accept it on behalf of all those devoted women who work in the interest of culture and education based on high Christian principles, as exemplified so well in this institution of higher learning.

I feel that through me you honor all the dedicated women of the Southwest who labor in the interests of our youth. You honor the young women who will live in this dormitory and the families they will rear in the future. They will be the recipients of the rich religious spirit which pervades this campus.

Because of this religious atmosphere and heritage, the Kingdom of our Lord and Saviour will be made more real to those who live here, and our State and Nation will be a better place in which to live.

It is my prayer that during the remaining years which are mine, I shall be privileged to take a personal interest in the young women who reside here. I pray that God's love will be so manifest that those who live within these walls will learn to live together so well that they will become shining examples in a world that needs women of highest ideals and Christian devotion.

Captive Nations

SPEECH

OF

HON. WILLIAM W. SCRANTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. SCRANTON. Mr. Speaker, one aspect of the age in which we live which has often been criticized by commentators is the fact that too often, the cause of world peace and the preservation of human freedom and dignity seems such a complex task that the average citizen finds himself unable to make a contribution.

Americans from every walk of life dearly love peace and liberty, but it is difficult for them to understand always what they can do to make the world safe for their children.

May I submit that the resolution calling for the establishment of a Captive Nations Committee in the House presents an unusual and precious opportunity for the Congress to provide leadership in a field where the American people, wherever they live, can make a real and substantial contribution.

Because I come from northeastern Pennsylvania, a part of this Nation particularly blessed with the richness of the varied cultures that were carried there from every corner of the world, I am very well aware of the tremendous emotional, intellectual, religious, and family ties that bind so many of our people to enslaved nations across the world. These northeastern Pennsylvanians, and

thousands more like them across America, have a very deep appreciation of the facts which have led to the enslavement of the nations from which their ancestors came. These people know that Soviet unity is a myth. They know that it is only an Iron Curtain which manages to keep their blood relatives within the Soviet orbit.

Congress, by establishing a special Captive Nations Committee in the House, will be in effect encouraging not only Americans whose ancestors have come from the captive nations, but all Americans, to take a very deep and personal interest in the fate of the enslaved peoples. If we are able to enkindle a spark, a feeling of personal obligation, a sense of mission among the American people in regard to the Communist menace, and if through this committee we can maintain a constant spotlight of public opinion on the problem, then I would predict that before too long, this spark could very well spread across the world.

I know I speak for every one in northeastern Pennsylvania when I say that all of us hope that this committee will be established, and that Congress and the entire U.S. Government will lend their great moral leadership to the cause of the captive nations—a cause which our people want to serve and are able to serve.

Residual Oil Problem a Factor Relating to Fuels and Energy Resources Requiring Study in Depth—Senate Resolution 105 Has 63 Cosponsors

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, March 10, 1961

Mr. RANDOLPH. Mr. President, there appeared in today's issue of the Washington Post under the headline "United States Revises Residual Oil Import Curb," an article which points out that Secretary of the Interior Stewart L. Udall yesterday issued an order which "increased slightly the amount of residual oil that can be brought into the United States and changed the regulations to permit more importers to enter the residual oil business."

The article noted that "importers will be able to bring residual oil into the United States at the rate of 461,427 barrels a day," and indicated that this represents only "an increase of about 10 percent over the current rate of about 422,000 barrels."

A thorough analysis reveals that the Interior Secretary's order considerably more than "increased slightly" the amount of residual oil that can be brought into the United States.

At this point in my remarks, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD extracts from a statement issued by the National Coal Policy Conference through its president, Joseph E. Moody, in rebuttal to Secretary Udall's announcement.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS OF STATEMENT BY JOSEPH E. MOODY, PRESIDENT, NATIONAL COAL POLICY CONFERENCE, INC., MARCH 9, 1961

The import total permitted for the next year is 13 million barrels more than the import quotas for calendar year 1960, and amounts to 40 million barrels more than were imported in these controlled categories in 1957—the original base year which the Office of Civil and Defense Mobilization found to be a maximum level which should not be exceeded in the interests of national security. Permitting imports of 20 percent of this annual total during the next quarter means that the quarter total will equal 370,000 barrels per day, compared to 332,000 per day brought in during the second quarter of 1960.

This does not take account of the more than 30 million barrels per year increase over 1957 which is going into the general market through greatly increased use of bonded oil for ships' bunkering, freeing domestic residual for other markets, and the residual oil which is now being brought in at an annual rate of 18 million barrels from Mexico under bond and then shipped across the border and returned overland as unbonded but quota free imports, in flagrant evasion of the intent of the control program.

With permitted quotas of 168 million barrels for the next year, total imports of 261 million are thus indicated, and this is the equivalent of 62 million tons of coal. That means that, even under a control program which was established in the interests of national security, and should be administered to prevent further damage to the domestic fuel and transportation industries, the announced level projects an increase in imports since 1957 of annual residual oil imports which is the equivalent of 21 million tons of coal.

Demand forecasts can only be made by making certain assumptions as to the price for which residual will be sold. The high levels announced today obviously indicate Bureau of Mines' anticipation that residual will be sold at dump prices to make further inroads into coal markets.

In addition, such a level of anticipated demand can only reflect the Bureau's willingness to meet all requests from oil importers, even including those to permit frantic search for new markets, rather than to fulfill the legitimate needs of U.S. consumers.

We are completely unable to understand the published statement by Secretary Udall that the new procedures "will not change demand levels, and therefore, will not be detrimental to the interests of other energy-supplying industries in the United States."

On the contrary, they can only trigger a frantic scramble for existing coal markets by oil importers, and contain within themselves an automatic demand escalator which will be disastrous to the domestic producers of heavy crude oil, to the coal producing regions of the United States, and to the railroads which derive a substantial portion of their freight revenue from hauling coal.

Mr. RANDOLPH. Mr. President, today's Washington Post article also contains this paragraph:

Udall's decision followed an all-day hearing 2 weeks ago at which representatives of New England industrial interests argued for the abandonment of the import quotas while representatives of West Virginia and other coal-producing States called for an embargo on all residual imports.

I cannot speak for others from West Virginia "and other coal-producing States" who testified before Secretary Udall, but I state unequivocally that I did not on that occasion, or at any other time, call for "an embargo on all residual imports." I have consistently supported a system of established import quotas on foreign residual oil—preferably based upon the 1957 import rate of this cheaply produced byproduct of oil from foreign sources.

Frankly, Mr. President, I am much disturbed by what seem to be distortions of facts, exaggerations, and caustic comments growing out of the controversy over the residual oil import problem. This is only one—but a very important—factor relating to the fuels and energy resources situation in this country demanding study in depth.

In this connection, it is satisfying to report that Senate Resolution 105, to create a Special Committee on a National Fuels Study, which I submitted March 2, 1961, will be referred today to the Committee on Interior and Insular Affairs with 62 of my colleagues from both parties and from all sections of the country as cosponsors. We all hope it will have early and favorable committee consideration and that it will be adopted with dispatch by the Senate.

Joe Vaccarella: From Marine to Mayor To Master of His Mounts

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. SANTANGELO. Mr. Speaker, one of the most dedicated public officials I ever met was the energetic mayor of Mount Vernon, Joseph Vaccarella. His popularity was enhanced by the daily kindnesses that he showed and the good he constantly performed. Many times a bereaved family would be heartened by a surprise visit from the ubiquitous "Mayor Joe." Some may erroneously have thought that he was doing these good deeds for political reasons, others know that it was his nature to be considerate. How good Joe Vaccarella was few people could fully realize until a story was written about him by Dan Parker, feature writer of the New York Mirror on December 22, 1960.

Joe Vaccarella won election as a Democrat in the city of Mount Vernon, N.Y., in a traditional Republican area. His qualities as mayor inspired the young lawyer, and his well wishers and friends are legion. After serving for two full terms as mayor, Joe Vaccarella demonstrated that he could adjure power and declined to run. As expected, he was succeeded in office by a Republican, an outstanding former legislator and judge. The courage that Mayor Vaccarella demonstrated in the ring, in the Marines, and in politics he will never lose. Like

Cincinnatus of ancient days, Joe Vaccarella has renounced government power and returned to his first love, sports. If his State of community needs him once again, I am confident that he will answer the call.

A beautiful tribute was paid Mayor Joe by one of the discerning sports writers, Dan Parker. The details so poignantly portrayed reveal the soul and the heart of the man and depict his ever youthful spirit. I feel that a reading of this capsule life story would stir his many friends throughout this Nation. I salute Joe Vaccarella and wish him complete relaxation and joy in his new pastime.

The article by Dan Parker follows:

EX-MAYOR SHEDS TROUBLES IN SULKY SEAT AT TROTS

(By Dan Parker)

From the mayor's office to the mare's stable is where the paths of glory have led Joe Vaccarella, ex-marine, ex-boxer, ex-referee, ex-mayor of Mount Vernon, N.Y., and now extraordinary harness racing driver, presently at Seminole Park Raceway, Casselberry, Fla., training his stable of five harness racers for next season.

Joe Vaccarella is an unusual person. At an age when most youngsters have no thought for anything but having fun with the other kids, Joe was the sole support of his parents and two blind sisters, developing a sense of responsibility seldom encountered in one so young. This early contact with life's harshness gave him a special understanding of other people's troubles that was to serve him in good stead when he became one of the most popular and efficient mayors the city of Mount Vernon ever had.

The road to political success was a long, hard, uphill pull for Joe but when he made the grade he wondered if it was worth the headaches. There were years of back-breaking toil on the New York City docks as a longshoreman, with professional boxing as a sideline to swell his income, in order that his sisters and parents might not be neglected, but he found out that all this was child's play compared with politics.

This modern Horatio Alger type youth enlisted in the Marines in the First World War. Returning from overseas, he worked as a supervisor on the docks and then opened a travel bureau in Mount Vernon, continuing his interest in boxing, meanwhile, as a referee and judge on the staff of the New York State Athletic Commission. The term "man of the people" is much abused when applied to politicians. But it is an honest description of Joe Vaccarella. His dreary childhood and sympathetic nature give him a deep insight into the short and simple annals of the poor. During most of his younger days he was skating on the edge of poverty himself, burdened as he was by the load of responsibilities that were his since he was able to work. The problems that assailed common folk troubled him as much as if they were his own and he decided that he would seek election to office as a means of doing something to help. His first goal was Mount Vernon's board of aldermen but, through lack of experience in this devious game, he was beaten. However, with the persistence that has carried him so far, he tried again at the next city election and was successful. One term as an alderman gave him a fine knowledge of municipal affairs and put him in a position to help so many Mount Vernon people, that, unwittingly, he built a political machine.

The outbreak of World War II fanned into flame the spark of patriotism in Marine Vaccarella's breast and he offered his services to his country. It wasn't easy for a man in his late thirties to get into the service but he found a way, by enlisting in the Seabees branch of the Navy which all but the hardiest were ducking. Commanding a regiment of Negro stevedores, Joe rose to the rank of lieutenant (junior grade) in New Guinea where his friend and fellow boxer, Steve Belloise, was also stationed with a naval unit. They saw that the ships were unloaded and that the supplies were kept moving, in that malaria-ridden jungle. Joe worked night and day but the anopheles mosquitoes finally caught up with him and sent him back home, ridden with malaria.

Mount Vernon was so proud of its native son who, despite family burdens, had performed so valiantly in both major wars and served his hometown so well that he was put up for mayor by his host of friends and elected. Four years later, he was returned to office, first Democratic mayor ever re-elected in the Westchester County community.

The reason for his great popularity as a public servant as quoted by Julius Wickler, high in the councils of the Westchester County Democratic Party, is simple: "He understood the common man, anticipated his needs and saw that they were filled." No contract was too small for him to follow through to completion. When it snowed heavily, Mayor Vaccarella worked 18 hours a day, visiting the street department crews and participating in their chores just as if he were one of them, even to driving snowplows himself. Four years ago, Mayor Vaccarella took a brief respite from city hall to visit his friend, Anthony Abbatiello, a harness racing man who keeps his stock at Five Point Farms, Freehold, N.J. This visit proved to be the turning point in his life.

Joe had passed the half century mark without ever learning to play. It wasn't that that he didn't want to; he just couldn't afford to take time out, with responsibility always tagging after him. Now, the brisk country air at his friend's training farm awakened in him a sudden interest in the horses he saw jogging around the track and he asked if he could hitch one of the trotters to a buggy and go for a ride. That did it. The mayor resolved then and there to go into the harness racing game after his term expired so he could whistle while he worked. The mayor had finally learned how to play and the beneficial effects on his health from his first real hobby convinced him he wasn't making a mistake.

As an amateur driver last year Joe participated in 14 races and won six before qualifying at Monticello with Larry Scott in 2:10. Relieved of the responsibility that went with being Mount Vernon's chief executive, Joe launched his new career last New Year's Day. The first horse he acquired was Scot Honor, a 5-year-old pacer which he drove to a 2:03 mile at Saratoga last August. There are now five standard breds in his stable and Joe expects some of them will be heard from during the 1961 campaign. Until his wife joins him at Seminole Park in January, the ex-mayor, who is childless, has his nephew, Jimmy Vaccarella, to keep him company.

"Do I miss politics?" he asked the other day, repeating a question put to him. "No, I don't. I like the harness racing game better. Why? Because horses don't talk back to you."

One of Joe's keenest regrets is that his two sisters who are excited over his new career can never enjoy the thrill of watching a horse race or even visualizing animals they have never seen, through that extra keen sense of perception with which the blind are partially compensated for being doomed to live in a world of darkness. Did I say "doomed"? There's no such word in their vocabulary as they everlastingly thank the good Lord for blessing them with a brother like Joe.

Toronto's Transportation

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, March 10, 1961

Mr. WILLIAMS of New Jersey. Mr. President, in matters of foreign policy we have been turning increasing attention of late to our neighbors of the South. In matters of metropolitan affairs, however, increasing attention has been turning to the North, to Toronto, Canada, in particular. Toronto offers many interesting insights into ways of solving metropolitan or regional problems, and one of the most interesting activities going on there is in the area of mass transportation.

The February issue of Metropolitan Transportation carries an informative article no Toronto's rapid transit program, describing not only the costs involved, but the beneficial effects of the present 4½-mile system on traffic congestion and adjacent real estate values. I would only like to emphasize the wisdom displayed in Toronto's decision to undertake its future expansion program on a regular annual basis over a 10-year period, with adequate governmental support.

Mr. President, I ask unanimous consent that the article on "What Rapid Transit Has Done for Toronto" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT RAPID TRANSIT HAS DONE FOR TORONTO—LESS TRAFFIC CONGESTION, MORE TRANSIT RIDERS AND INCREASED REAL ESTATE VALUES RESULTED WHEN TORONTO OPENED ITS FIRST SUBWAY. NOW A SECOND IS UNDER CONSTRUCTION

(Toronto is the only important city on the North American Continent which appears to be finding a rational solution to its transportation problem.)

These words, spoken recently by famed City Planner Walter Blucher, are a tribute to the people of Metropolitan Toronto and to the Toronto Transit Commission for the courage and foresight both displayed not only in building Canada's first subway but also in moving quickly to extend the system when the first line proved its worth. It was just 20 years ago that preliminary studies on a possible Toronto subway were begun. Studies continued and plans were drawn during World War II and on January 1, 1946, the citizens of Toronto voted overwhelmingly in favor of building the Yonge Street Subway—to be financed largely out of TTC funds.

TTC Chairman W. C. McBrien glowed with pride as work was begun on December 8, 1949, and on March 30, 1954, Canada's first subway was opened by the Toronto Transit Commission.

The Yonge Street Subway starts adjacent to the Union Station at Front and York Streets, runs under Front Street to Yonge Street, which is the main north and south thoroughfare, and under Yonge Street to College. At this point the route curves about 200 feet east onto a private right-of-way parallel to Yonge Street, coming out into an open cut between Bloor Street and

St. Clair Avenue. Near the latter point, it crosses under Yonge Street to the west side and continues in open cut to an underground terminal at Eglinton Avenue. There are 12 stations on the line which is 4½ miles long, approximately 3 miles being underground and 1½ miles in open cut.

TWENTY YEARS AND $67 MILLION LATER

The total cost of the structure, including right-of-way, rails, electrical distribution system, signal system, ventilating and control, was approximately $55 million. This is equivalent to $12 million per mile and, as the ultimate capacity is 40,000 people per hour, it works out to a capital expenditure of $300 per passenger accommodated at the maximum hour. The rolling stock cost about $12 million additional. This covered the purchase of 140 rapid transit cars built in England by the Gloucester Railway Carriage & Wagon Co., Ltd. The entire cost of building and equipping the subway was borne by Toronto Transit Commission. About $18 million of the cost was met from surplus funds accumulated during the war years. The remainder was raised through debentures issued by Metro, but repayable by the Toronto Transit Commisison out of current revenues, as provided in the Commission Governing Act.

While this line is only 4½ miles long, it is probably the most successful postwar rapid transit installation on the continent in terms of benefits carried in the first 5 years of operation. Approximately 250,000 passengers are now being transported every business day. Thirty-two thousand passengers are carried in the peak hour and direction, and for 15-minute periods passengers have been carried at a rate of 39,000 per hour.

Next month the Yonge Street subway will mark its seventh anniversary. Certainly 7 years constitutes a sufficient span of experience to assay what this first 4½-mile taste of high-speed rapid transit has done for Toronto. And three marked areas of improvement do present themselves—most forcefully.

TRAFFIC CONGESTION HAS BEEN RELIEVED

First, the subway has eased surface traffic congestion. Opening of the subway made it possible to remove streetcars from Yonge Street and Avenue Road. Overnight the capacity of these two thoroughfares was increased for automative traffic—at no expense to the motorist or to the community.

Traffic experts agree that a highway 20 lanes wide would be required to transport in automobiles the number of passagers carried by the Yonge subway. To duplicate subway capacity on the surface, the community would have to build at least three major streets, and carving new streets through a great city can only be done at incredible cost.

AUTO DRIVERS CONVERTED INTO SUBWAY RIDERS

Second, the subway has attracted new customers. One of the toughest jobs of a transit system is to convert automobile drivers into transit riders. Yet this is a major factor in the solution of traffic congestion. The only way drivers can be converted into riders is to make transit faster and more convenient than automobiles. This has been done on the Yonge Street subway. In a survey of subway riders using Eglinton Station, 13 percent reported that they formerly drove their cars to work. From these figures it is estimated that the subway is keeping 10,000 automobiles off the streets every business day.

REAL ESTATE VALUES HAVE INCREASED

And third—and most important—the subway has encouraged redevelopment and new development along the entire route. Dozens of attractive commercial and office buildings have been built in the past 5 years, many of them replacing substandard housing that was a burden on the taxpayers. These fine new buildings have added millions of dollars to the assessment rolls. Assessed values in the 14 subdivisions through which the rapid transit system passes increased 37 percent in the 5 years, while assessed values in the remainder of the city showed an increase of 20 percent.

It is interesting to note, incidentally, that if the 14 subway subdivisions had increased only 20 percent—the same as the rest of the city—the total increase in assessment would have been $88 million, less than it was. With a 48-mill tax rate this could have meant a difference in tax revenue of over $4 million a year, which is more than enough annually to liquidate the cost of the Yonge subway.

Public acceptance of the subway has exceeded all expectations. It has proved to be the anchor of the community. It has assured the permanence and stability of the downtown area, which is the foundation for growth and prosperity of any city. In view of this success, it is not surprising that the 10-mile Bloor-Danforth-University subway is now under construction.

SECOND SUBWAY SECTION NOW BEING BUILT

The conditions which existed on Yonge Street before the Yonge subway was built are now being encountered on Bloor Street. In rush hours, a total of about 12,000 people an hour are using Bloor at its heaviest point and about 9,000 of these people are streetcar riders. There is often serious congestion indicating that the capacity of the street has just about been reached.

Conscious of the steady increase in Bloor Street transit and other traffic over the last 15 or 20 years, and faced with the prospect of tremendous population growth during the next 20 years in suburban areas tributary to the Bloor carline, the Toronto Transit Commission began to urge the construction of an east-west subway on or near Bloor Street, an important business street throughout its length.

In 1956, the Metropolitan Council (formed in 1953 to put Toronto and its suburbs under a single unified government) authorized investigation and study of the proposal and the preparation of functional plans and estimates. These were presented by the Toronto Transit Commission to council in January 1958 and called for a subway on or adjacent to Bloor and Danforth from Keele Street to Woodbine Avenue, with an extension of the present Yonge subway up University Avenue to Bloor Street to provide additional capacity into and coverage of the downtown area and the whole central business district.

METRO AND TTC SHARE COST

On April 7, 1959, Metropolitan Council approved the financing program for the $200 million project with Metro to assume about 55 percent and the Toronto Transit Commission to assume the remainder. Over $80 million of Metro's share will be raised on a pay-as-you-go basis through taxation by a 2-mill capital levey over a 10-year period. This special levy must be used for subway construction. The remainder of Metro's share (about $22 million) is being covered by the issue of debentures and sale of surplus right-of-way land. The Toronto Transit Commission share is being met through debentures issued by Metro with the Toronto Transit Commission being responsible for repayment and interest. These arrangements were approved by the Ontario Municipal Board. Under this program, the Metropolitan Corporation is purchasing and will retain ownership of the right-of-way. All other costs are divided equally between Metro and the Toronto Transit Commission. The bylaw to permit the expropriation of the land needed for the right-of-way was passed on April 21, 1959.

CONSTRUCTION SCHEDULED IN THREE STAGES

Construction work began officially on November 16, 1959, when Prime Minister Leslie M. Frost broke the ground for the first stage, the 2-mile University line which will extend from the present Union subway station west on Front Street, north on University Avenue and west on Bloor Street to Huron Street.

The second construction stage will be started early in 1963. It extends along Danforth Avenue and Bloor Street from Greenwood Avenue to University line and includes construction of Greenwood yard and shops. Completion date is set for 1966.

The third stage of the subway is the west leg of the route, along Bloor Street from University to Keele Street and also the easterly portion from Greenwood to Woodbine Avenue. These will be started in January 1967 and should be completed by the end of 1969.

USE TUNNEL SHIELD AND MILAN METHOD

Tunneling is being done with a tunneling shield. Each shield is equipped with hydraulic jacks that move the shield forward along the tunnel route. The earth in front of the shield is cut up with a pneumatic hand spader passed through ports in the shield, loaded on a conveyor and taken to the surface. As the shield is pressed forward, heavy cast iron tunnel liners are inserted behind it, and these form the outside wall of the tunnel. The small space outside the tunnel linings is filled with a cement grout and the lining joints are caulked to make them watertight.

The men working in the tunnel are all medically examined, and they must be certified as fit for work under air pressure. They are reexamined every 2 months. A typical shift is 8 hours. The men go through the air lock with their work gang, and in the lock the air pressure is gradually taken up to the pressure in the tunnel. For the meal break, they again come through the air lock to the surface.

One of the most interesting construction phases of the new subway is the 162-foot Milan method test section which was started on August 14 and completed before the end of the year. The construction method employed was a variation of cut and cover which eliminates the need for temporary piles, timber decking, and forms for the subway walls and roof. The test was considered successful and this method will be considered for subsequent construction stages.

Unlike the Yonge subway, the entire Bloor-Danforth-University line, with the exception of ravine crossings, will be underground—43,223 feet in concrete box, 8,226 feet in cast iron tunnel, and 3,710 feet in open ravine crossings.

When the entire 10-year project is completed, Toronto's new subway will be 10.45 miles long, will have 25 stations, and will carry about 345,000 riders a day. A total of 280 additional subway cars will be required and orders were placed last month for the first 36, Montreal Locomotive Works (assisted by Pullman-Standard) being the lucky bidder. See box for a recap of the bidding.

Present TTC Chairman W. E. P. Duncan probably finds the 10-year piecemeal construction program frustratingly slow. Certainly savings could have been effected, for example, by ordering all 280 cars at once. But TTC can't move any faster than the metropolitan council can go, and the city can't move any faster without endangering either its credit rating or other public-works programs.

COMMERCIAL INTERESTS WANT AIR RIGHTS

The Toronto Transit Commission has been encouraged by a desire of commercial interests to obtain air rights to build over their open-cut sections of the rapid transit rights-of-way. Air rights have been sold and structures built over sections of the right-of-way

of the Yonge Street line. The original plan for the Greenwood yard called for an open area. Certain commercial interests have indicated a desire to cover the yard and build a shopping area on top. Similar interests are now being expressed in the Davisville yard air rights for development of commercial purposes. The TTC hopes to exploit these interests to the maximum extent.

AIM FOR 37-MILE RAPID TRANSIT NETWORK

The Bloor-Danforth-University subway is a 10-mile extension in the development of rapid transit for Toronto. Plans are being studied for extension to the present Yonge Street line, for another crosstown route, and for an extension in the northwest section of the city which might include operation in the center mall of an expressway similar to the Congress Expressway in Chicago. It is hoped that by 1980 the present and proposed rapid transit lines will total 37 miles.

Metropolitan Toronto and the Toronto Transit Commission have joined hands in the construction of the Bloor-Danforth-University subway, which will put Toronto even further out in front of most of the American metropolitan area counterparts.

This giant undertaking should benefit every resident of the Toronto area. Traffic congestion will be reduced on Toronto's main crosstown artery. Thousands of daily transit riders will enjoy substantial savings in time. And newly created property values will produce greatly increased tax revenue.

Medical Care for the Aged

EXTENSION OF REMARKS
OF
HON. JACK R. MILLER
OF IOWA
IN THE SENATE OF THE UNITED STATES
Friday, March 10, 1961

Mr. MILLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a short but thought-provoking editorial relating to the problem of medical care for the aged, and published in the Mason City, Iowa, Globe-Gazette of January 11, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PROBLEM THAT IS BEING SOLVED

In the drive about to get underway to place widescale medical care for the aged under social security, there should be a realistic look at the problem. What has been done and what is being done to solve it should figure in the congressional approach.

Here are some statistics that should not be passed over lightly:

There are 120 million persons covered by surgical insurance, 86 million have policies designed to help pay for doctor calls and other nonsurgical care, 25 million have major medical insurance and 43 million have some form of loss-of-income insurance.

Voluntary health insurance has had a phenomenal growth in the past 15 years. More than a thousand organizations in the health insurance field (737 of them insurance companies) have focused their attention on solving this problem in the free enterprise way.

To the claim that those already in retirement are not helped by this program, it can be pointed out that numerous policies for persons 65 or older are available at moderate cost.

Many companies now offer coverage designed specifically for senior citizens. Home nursing care and less expensive residence in nursing homes rather than in hospitals are covered in the protection.

A blind spot in the social security approach is that it would do nothing for the several million older men and women who never qualified for social security. They're the forgotten people.

To remedy this would entail a drastic departure from social security's original intent—one that could wreck both the present retirement program and the voluntary insurance already procured by millions from private companies.

Compton College Student Body President Sends Congressman Doyle Resolution of California Junior College Student Government Conference Supporting and Emphasizing Foreign Student Exchange Program

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to include for the attention of your distinguished self and all the other Members of this great legislative body to following: to-wit, a letter to me dated March 2, 1961, signed by Gary Boyd, student body president of Compton College, Compton, Calif., situated in the great 23d district, identifying to my attention a resolution by the California Junior College Student Government Conference.

I am pleased to furnish a copy of that resolution as sent to me by student body president Gary Boyd.

This resolution, I believe, is very, very pertinent and timely.

THE ASSOCIATED STUDENT BODY,
COMPTON COLLEGE,
Compton, Calif., March 2, 1961.

Hon. CLYDE DOYLE,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DOYLE: Each year officers from the 2-year colleges in the State of California meet in conference to discuss issues relative to the welfare of the student group.

Last year, as student body president of Compton College, I attended this conference of the California Junior College Student Government Association. The enclosed resolution which pertains to the necessity of the further exchange of students with foreign countries was discussed. This resolution was passed unanimously.

I write this letter to encourage your support as we, as students, believe this issue to be timely and necessary.

Sincerely yours,

GARY BOYD,
Student Body President, Compton College.

RESOLUTION 4

Whereas inasmuch as the peace of the world is being threatened by Communist elements and in view of assistance needed in less-developed countries to combat the menace of communism, it is our firm conviction that the adoption of the following program would not only serve as a bulwark against aggressive elements, but would also help host countries to raise their standards of living and ultimately take over the duties and responsibilities currently initiated by internatonal experts; and

Whereas foreign aid in the nature of technical assistance can prove beneficial only if it enables the recipient countries to train its own nationals and to take over the activities attached to international experts; and

Whereas the lack of financial resources for training more students may prove an obstacle to the implementation of a number of worthwhile projects; and

Whereas the objective of the international technical assistance or foreign aid is to help a country to help itself; and

Whereas if sufficient care is not paid (1) to make available competent exchange of foreign students, (2) to maintain a continuity of such students for a long enough time, and (3) to insure either on-the-job training or college education of such personnel, the less-developed countries would not be able to make themselves independent of the outside technical or foreign aid for many years to come; and

Whereas in the interest of economy as well as efficiency, we recommend an early approval of the following: Therefore be it

Resolved, To recommend that the California Junior College Association, the California State Department of Education, the Congress of the United States, and the Department of State of the United States of America, have more exchange and competent foreign students be brought to the United States and that they be educated in the fields in which their host countries are in need; that equipment and machinery relating to the students' major fields be sent with the students on their return home; that the host goverments, in conjunction with the State Department of the United States be asked to strongly recommend that students coming to the United States under such a program should return to their respective countries and serve their governments for a given number of years; and be it further

Resolved, That above all, the U.S. Government be asked to sponsor a special fund from the current foreign aid for the implementation of such a program.

Flood Conditions in Indiana—Federal Grants-in-Aid to State of Indiana

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, March 10, 1961

Mr. HARTKE. Mr. President, the 92d General Assembly of the State of Indiana adjourned at midnight last Monday. It enacted two significant measures which I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD.

One memoralizes and petitions Congress to enact effective legislation which will provide relief from the flood conditions along Indiana's rivers and streams, provide port facilities for Indiana on Lake Michigan, and improve navigation in the Ohio River.

The other authorizes the Governor of Indiana to accept on behalf of the State any and all Federal grants-in-aid available.

These two enactments by the 92d General Assembly of the State of Indiana are important ones and I am pleased to inform my colleagues in Congress of the full cooperation of the general assembly in our efforts to provide full development of Indiana's water resources and the willingness of the State of Indiana to participate in programs set up by the Federal Government.

I continue to feel that Indiana taxpayers should receive a fair return on their tax dollars and I commend the members of the general assembly for their action on these two measures.

There being no objection, the concurrent resolution and excerpts from the acts of the 92d general assembly were ordered to be printed in the RECORD, as follows:

HOUSE ENROLLED CONCURRENT RESOLUTION 2

Concurrent resolution memorializing Congress to enact effective legislation which will provide relief from the flood conditions along the rivers and streams in the State of Indiana, provide for port facilities within the State of Indiana on Lake Michigan, and improve navigation in the Ohio River

Whereas each year the overflow of the various rivers and streams of the State of Indiana creates flood condtions, damaging crops, decreasing the fertility of the soil and damaging highways and other property within the State; and

Whereas such flood conditions are increasing in frequency and intensity because of the increasingly rapid runoff of surface water; and

Whereas the completion of the St. Lawrence Seaway has made feasible and necessary the construction of additional port facilities within the State of Indiana on Lake Michigan; and

Whereas certain improvements in aid of navigation on the Ohio River along the southern boundary of the State of Indiana are necessary in order to improve water transportation and more adequately serve various industries which desire to locate in the area: Now therefore

Be it resolved by the house of representatives, the senate, concurring—

SECTION 1. The 92d General Assembly of the State of Indiana does hereby memorialize and petition the Congress of the United States to enact effective legislation for the control of floods and the prevention of soil erosion along the rivers and streams within the State of Indiana, to preserve natural resources, protect and promote the health, safety and general welfare of the people, and to appropriate sufficient funds for the execution of such legislation.

SEC. 2. The 92d General Assembly of the State of Indiana further memorializes and petitions the Congress of the United States to enact effective legislation for the purpose of building and improving port facilities within the State of Indiana on Lake Michigan, and to appropriate sufficient funds for the execution of such legislation.

SEC. 3. The 92d General Assembly of the State of Indiana further memorializes and petitions the Congress of the United States to enact effective legislation for the purpose of improving navigation in the Ohio River along the entire southern boundary of the State of Indiana, and elsewhere where such improvements are necessary, and to appropriate sufficient funds for the execution of such legislation.

SEC. 4. The principal clerk of the house of representatives is directed to forward copies of this resolution to the Secretary of the U.S. Senate, to the Clerk of the National House of Representatives, the Director of the Budget, and to each U.S. Senator and Congressman from Indiana.

STATE OF INDIANA—EXCERPTS FROM THE ACTS OF THE 92D GENERAL ASSEMBLY

Be it enacted by the General Assembly of the State of Indiana:

The Governor is hereby authorized to accept on behalf of the State of Indiana any and all Federal grants-in-aid available to the State of Indiana, and such grants-in-aid so received are hereby appropriated for their purposes.

"Provided, further, That the appropriations herein made are inclusive of the appropriations heretofore provided by law for the division of industrial hygiene, and for the division of health and preventive medicine, and are for the purposes of matching funds, made available by the U.S. Government under the several acts of the general assembly providing for, and authorizing, such cooperation as provided in said acts, and to enable the State through said several agencies, to avail itself of the provisions of the several acts of Congress of the United States making allotments and grants to the States for such purposes.

"Provided, that in addition to the above appropriation, any Federal funds received for mental health purposes as a grant or allowance, are hereby appropriated for the uses and purposes for which such funds or moneys were paid to the State."

The appropriations for current obligations are for the purpose of enabling said department to carry out all services as provided in chapter 3, of the acts of special session of the 79th general assembly, and all acts amendatory thereof and supplemental thereto. In addition to the above appropriations, all money received from the Federal Government and paid into the State treasury as a grant, or allowance, is hereby appropriated, and shall be expended by the State department of public welfare for the respective purposes for which such money was allocated and paid to this State. If the sums herein made for the department of public welfare are not sufficient to enable the State department of public welfare to meet its current obligations, there is hereby appropriated such further sum as may be necessary for such purposes, the amount, however, to be subject to the approval of the State budget agency.

"Provided, further, That the trustees of Indiana University, the trustees of Purdue University and the Boards of Trustees of the Indiana State College and of the Ball State Teachers College are hereby authorized to accept Federal grants.

"FOR VOCATIONAL EDUCATION

"Current obligations..... $487,500

"In addition to the above appropriation, any Federal funds received for the above purposes as a grant or allowance are hereby appropriated for the uses and purposes for which such fund or money was paid to the State."

In addition to the foregoing appropriations, any funds received for the above title III administration as a matching grant or allowance from the Federal Government are hereby appropriated for the uses and purposes said moneys were paid to the State.

In the event any Federal funds are distributed to the State of Indiana for the support of education, including building construction and the payment of teachers, such funds shall be distributed to the respective school corporations on the basis of the school distribution formula as though such Federal funds had been herein appropriated.

SEC. 4. The amount appropriated in this section shall be payable out of any sums received from the Federal Government pursuant to the Employment Security Administrative Financing Act of 1954, for the administration of the unemployment compensation provisions of chapter 208 of the acts of 1947, and all acts amendatory thereof and supplemental thereto:

"SEC. 5. The trustees of Indiana University, the trustees of Purdue University, the trustees of the Indiana State College, and the trustees of the Ball State Teachers College are hereby authorized to accept Federal grants for new construction, repair and rehabilitation."

Review of First Actions of the Kennedy Administration

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. EVINS. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD my weekly newsletter, Capitol Comments, which reviews the early record of the Kennedy administration. The newsletter follows:

REVIEW OF FIRST ACTIONS OF THE KENNEDY ADMINISTRATION

President Kennedy, although in office as the Chief Executive for only 6 weeks, has shown remarkable insight into the needs of the Nation and extraordinary skill in setting forth programs that will fulfill these needs.

He has moved rapidly in presenting programs to the Congress for restoring vigor to the economy and for improving our international position. He has moved with even more speed in initiating programs, which fall completely within the authority of the Executive, to assure that the Government assume its full responsibility to the people of this Nation and to the world.

A review of some of the important actions of the President during this brief period of the new administration demonstrates this insight and vigor.

The President in his first two Executive orders moved to provide food for the hungry—first, at home by ordering the Secretary of Agriculture "to expand and improve" the program for food distribution to the needy in areas of chronic unemployment, and secondly, by establishing a food-for-peace program to use the Nation's agriculture abundance to help provide food for needy people around the world. President Kennedy has directed also that the school lunch program be expanded and strengthened.

On the military scene during the first 10 days the President ordered $125 million in additional cargo planes to increase America's airlift capacity and $724 million for additional Polaris submarines—one of our Nation's most effective weapons—and also launched the most comprehensive disarmament study in the Nation's history.

To stimulate the economy and help bring the recession to a halt the President lowered interest rates on FHA insured loans; liberalized the loan program to local governments for construction of public facilities; expanded the U.S. Employment service; ordered $257 million in 1961 GI insurance dividends paid ahead of schedule; stepped up payments of $4 billion in income tax refunds; made $724 million in Federal highway funds avail-

able to States ahead of schedule; speeded up processing of urban renewal loans and established the President's Advisory Committee on Labor-Management Policy among other Executive actions.

The President has sent a number of messages to the Congress urging legislation in a variety of fields including assistance for distressed areas; a health insurance program for the aged; a revised and expanded social security program; a national health program; an increase in the minimum wage; a national housing program; a plan to keep the interstate highway program on schedule; and a comprehensive program for Federal aid to public schools—all being considered in Congress.

The President also asked the Congress to extend unemployment benefits and to pass an emergency feed-grain program—both of which have passed the House.

In another very significant action, the President has established a Peace Corps, which will enlist American men and women for voluntary service in promoting understanding and good will in the countries of the world. The Peace Corps will serve as a pool of trained talent which will be sent to foreign countries to help other governments meet their needs for skilled manpower as a gesture of a good neighbor promoting peace.

The President in his inaugural address said the problems of the Nation and the world could not be solved in 100 days nor 1,000 days "but let us begin." The first weeks of his administration indicate early dedication and decisiveness of action determined to serve our country and to make improvements in our relations with other nations of the world.

Success Problems

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. ELLSWORTH. Mr. Speaker, on February 17, our colleague, TOM CURTIS, of the great State of Missouri, presented us here in the House with an outstanding analysis of the economic situation. The strength and force of his ideas have reached out across half the continent and have found response in the editorial page of the Iola (Kans.) Register, one of the really outstanding editorial pages in my own district in Kansas, if not in the entire midcontinent United States. Under leave to extend my remarks, I include the lead editorial from Angelo Scott's Iola Register of March 7:

SUCCESS PROBLEMS

Has it ever occurred to you that some of the greatest problems in this country are due to the successes of our free enterprise system rather than its failures?

Take the farm problem. Actually it isn't an agricultural problem at all. It is a marketing and technological unemployment problem resulting from a dramatic agricultural success.

Agricultural advancement has been so great and so rapid that millions of people who had skills in agricultural work a short time ago now are glutting the labor markets of the cities while machines do their work on the farms.

This is success, not failure. The problem is how to make use of the surplus products and labor created by the agricultural success.

Take the field of health.

So rapid has been our progress in this area that people are living 10 years longer than they did a bare generation ago. There has been no greater success story in the growth of America's free professions and institutions.

So what? So we now have an old-age assistance and medical care problem. People live so long past their earning years that the job of caring for them has doubled in recent years and could well double again in another 2 or 3 decades.

But this again is success, not failure. And Representative THOMAS CURTIS of Missouri, discussing the matter in a speech in Congress the other day, made the pertinent suggestion that in trying to solve the problem, we should be careful "not to undermine the system which produced the progress."

Take the field of manufacturing, mining, and production generally and you find that our major problem—unemployment—is due to our most brilliant successes in devising machines which speed up production faster than displaced workers can be trained for new jobs.

But here again, it seems to me, the clear warning should be raised that the way to cure unemployment is not to undermine the system which has boosted production of the good things of life to the highest level of any spot in the world.

There is no farm surplus problem in India. There is no old-age medicare problem in the Congo. There is no unemployment problem in Russia.

But would you rather live there than here?

Migrant Farmworkers

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. O'HARA of Illinois. Mr. Speaker, Michael Coleman, Jr., is the national president of the Young Christian Workers, an international organization of Catholic youth dedicated to the mission of a better understanding among the young people of the world of the great social issues of our times. Mr. Coleman for 2 years was a flyer in the Air Force of our country in Korea. On his return to civilian life he became a pilot for the Eastern Airlines. Wishing to devote his life to social service, he persued a course of studies leading to a master's degree in industrial relations. By unanimous consent I am extending my remarks to include his statement on H.R. 2010 before the Subcommittee on Equipment, Supplies, and Manpower of the Committee on Agriculture:

STATEMENT OF MICHAEL J. COLEMAN, JR., NATIONAL PRESIDENT, OF THE YOUNG CHRISTIAN WORKERS

Mr. Chairman and members of the committee, I am Michael J. Coleman, Jr., national president of the Young Christian Workers. I wish to express appreciation for the opportunity to appear before this distinguished committee, and to present testimony on the House of Representatives bill 2010, concerning Public Law 78. I would also like to pay a compliment to the various religious groups for the testimony which they are presenting at these hearings. Having cooperated with several of these groups locally and nationally in the past, we believe they are contributing substantially toward social justice for a large group of American citizens, that is, the migrant worker and his family.

Our organization is an international movement of young workers, which is established in 92 countries and territories, with a membership approximating 2½ million.

Our purpose as a youth movement is to inquire into the problems and situations which affect working youth throughout the world, and in each country. Further, we attempt to bring solutions to the social, economic, and moral problems which confront all young workers, and, wherever possible, to present the facts and situation of working youth to various civic, labor, business, Government and legislative bodies on local, national and international levels.

The Young Christian Workers has consultative status in the Economic and Social Council of the United Nations, and is the only worker organization outside of labor unions to have this position. We also have consultative status in UNESCO, and in a less official way, with the International Labor Organization.

Here in the United States the YCW consists of 250 active groups in 26 States. Our membership comprises a typical cross section of young working adults in the United States: factory workers, apprentices, skilled tradesmen and technicians, office workers, professionals, young farmers, union organizers and representatives, local and State political leaders and scores of others who are exercising leadership in their local communities. The Young Christian Workers is proud to count among its membership young workers of varied racial backgrounds, including Negroes, Puerto Ricans, and those of Mexican ancestry. Most important for the purpose of testimony before this committee, our membership also includes those who have been migrant workers or whose families at one time were part of the migrant worker stream.

Since we are the only organization in this country which deals specifically with the problems of young workers, our role in appearing before this committee is to present a situation which seriously affects the lives of a large group of young workers.

We appear before this committee today because of many disturbing facts brought to our attention by our own members. These facts were obtained from surveys and from eyewitness reports of YCW leaders and members in the east, midwest, north central, northwest, and southwest regions of our country. From these results it is apparent to us that serious problems are common to migrant workers in all parts of the country.

For the young workers themselves we found an incredible lack of opportunities; either for an education which goes beyond the elementary level; for employment which pays an adequate wage; or even for the normal opportunities of human development necessary for young adults, that is, if they are going to realize their complete development as human persons.

One example which typifies this situation came to us from Wisconsin. Here young fellows and girls, 12 to 15 years of age were working long hours in the fields and in factories; where, for example, 15 cents was paid for each basket of tomatoes picked, with an entire family picking about 67 baskets a day for an approximate income of $10. Here, too, several 16-year-old fellows told us of the great loneliness which they face as migrants and how they purposely would get drunk in order to combat this problem.

Our results showed us, too, that migrant workers throughout the United States face many basic family problems in common, problems which weaken the very existence of the family itself. In New Jersey, for example, a migrant worker related to us that in his search for work he had to leave his

wife and six children in Florida. He said he missed his family very much and wished he could settle down to a permanent job and home. From Oregon, we noted an observation of migrant family life which was typical of several others we received. That is, the migrant father must often look upon his young children as sources of income. For example, a father with six children may only be able to do without the earnings of three of them. The other three children miss school. This, of course, puts children of migrant families behind in what little formal education they receive as it is. The YCW in Minnesota reports great concern among migrant parents, who realize more and more that formal education is about the only solution to a better economic life.

Particularly disturbing to us were the many comments relating to the spiritual needs of migrant workers. When it becomes necessary to work 10 hours a day, 7 days a week, little opportunity exists for the migrant, who traditionally has a deep religious faith, to even think about his obligations to God. As was pointed out to us by a YCW leader from California, "the only people who show them attention as far as their spiritual and moral life is concerned are some priests and the migrant ministry. Others who show them attention are hustlers, prostitutes, and gamblers."

I would like to point out to this distinguished committee that in each of the areas where an inquiry was made, we discovered similar social, economic, family and moral problems. It was true in housing which could consist, we found, in a barn with 30 men living inside, or 5 men quartered in a cinder block building next to a pig tank. Whether we speak of his wages, his power to bargain collectively, his working and living environment, his health conditions, or his benefits under social legislation, the migrant worker is at the bottom of the ladder. Credit is due, however, to those farm employers, who have in some instances provided such things as accident insurance or fairly decent housing for the migrant and his family. These, we found, were exceptional.

Further, we have seen the direct and adverse effects which the entry of braceros into our country under Public Law 78 has had upon our own domestic workers. First, the availability of 400,000 foreign workers last year forced domestic workers and their families to seek work in other States. We have learned that for the most part migrant farmworkers in the North Central States are U.S. citizens of Mexican ancestry whose residence is in Texas. With the presence of thousands of braceros in Texas, wage rates were lowered to a level which forced the migrant worker and his family to seek work elsewhere.

Second, we find that while he is in the United States serious difficulties exist for the bracero himself. In one California county our groups, seeing this situation firsthand, tell us that, "as far as the bracero or Mexican national is concerned he is segregated from society, with the community in general shunning these people as if they were lepers. Disillusioned with the United States he returns to Mexico with only a small fraction of the money which he had intended to make in order to start a new life. The braceros have no mediator for their grievances. The dignity of the work is brought down wherever nationals are brought in because our own people will not do the work." It was related that in this particular county there were enough people to do the work which the braceros were brought in to do, but, because of low wages and the low dignity and status attached to this work our own people did not do the work. The dignity of the bracero was thereby lowered almost to that of a slave.

Since our national organization is part of an international movement, we have frequent opportunities for personal contact with young workers in many parts of the world. In October of this year, for example, YCW delegates from the United States will go to Brazil for a council meeeting of the International Young Christian Workers. Over 400 YCW leaders from approximately 90 countries will participate in this council. From our international contacts we have come to a profound realization of the high hopes which young political and trade union leaders in the less developed countries have placed in our country for the future of the entire free world. On the other hand we know, too, that many of these same key leaders have serious doubts concerning America's national policies and practices.

It was with this in mind that our movement decided to broaden the scope of its international program last year. In the hopes of allaying some of these suspicions and doubts about our country, we invited a group of key Latin American political and trade union leaders (all former YCW leaders in their countries) for an intensive study tour of the United States. It was our hope to create new bonds of international understanding between us. (One member of this group had recently returned from an all-expense-paid tour behind the Iron Curtain.) On the whole our tour was quite successful. However, in viewing the bracero situation in Texas firsthand, our international visitors came away amazed and even horrified at the treatment accorded to Mexican nationals while they are employed in the United States.

Because of their severe limitations of movement, their life in labor camps, separation from their families, and their inability to change jobs, it appeared to our group that their fellow Latin Americans lost most of their rights and freedom after they arrived here. It was their unalterable judgment that while we spoke to the world about the rights and freedom of workers, in this instance we said one thing and practiced another. We could not justify this situation to them.

In arriving at a policy decision from these and other facts related to this issue, our organization has come to certain conclusions which seem to coincide with other national reports, particularly the recommendations as specified by the distinguished consultants to the Secretary of Labor on the Mexican farm program.

We conclude that if H.R. 2010 which extends Public Law 78 in its present form for 4 more years is passed, serious social injustices are thereby extended another 4 years as well.

We recommend that this bill not be passed in its present form, but should include certain changes.

1. That Public Law 78 be continued on a temporary basis only.

2. The authority of the Secretary of Labor should be increased in order to insure that in the active competition for workers, no adverse effects are brought upon our own domestic workers.

3. The test of adverse effect upon wages and employment should be more specific and such criteria should be clearly established by the Secretary of Labor.

4. The number of Mexicans employed by each employer should be limited so as to insure active competition in the farm labor market.

5. Employment of Mexican nationals should be refused to employers who fail to offer domestic workers comparable wages and conditions of employment.

6. Authorization of Mexican nationals should be limited for the most part to unskilled jobs.

7. Farm wages should be increased at least to the minimum set by the Fair Labor Standards Act.

8. The Secretary of Labor should arrive at a national formula for farm wages so as to prevent unfair wage competition between regions.

9. The present administrative procedure of this program should be improved so as to insure justice for all who are involved—employers, domestic workers, foreign workers, and the public.

Thank you very much, gentlemen.

Federal Emergency Gas Tax Must Be Allowed To Expire

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. ABBITT. Mr. Speaker, the continuing problems of financing the Federal highway program are ample evidence of the validity of the objections raised by a number of us when the program was proposed a number of years ago. Even before the program was launched, there was considerable doubt that the gigantic expenses could be assumed by the Federal Government without additional taxes. Now that the difficulties are more than predictions, many of those who once supported the highway program are losing their enthusiasm.

In my district there is one person, among many others, who, from the beginning, has raised many questions concerning where all of this is leading. He is Mr. A. Robbins, Jr., editor of the Hopewell News, of Hopewell, Va.

I wish to include with my remarks an editorial which appeared in this newspaper on March 3, calling attention to the emergency gas tax. I commend this to the reading of Members of the House.

The editorial follows:

FEDERAL EMERGENCY GAS TAX MUST BE ALLOWED TO EXPIRE

We certainly agree with President Kennedy that the huge trucks should pay a larger share of the cost of construction of the Federal Interstate Highway System, but we certainly disagree with him that the emergency 1-cent increase in the Federal gasoline tax, which will expire on June 30, should be continued.

Because of the insistence of the Democratic Congress that the Federal Interstate Highway program be speeded up, funds were advanced out of the general fund.

Then it looked as if a lot of work would not be contracted, because the day of reckoning had arrived. So the Democratic Congress imposed the additional penny per gallon tax, making the Federal tax on gasoline 4 cents per gallon.

It was stated that this was an emergency measure and that when it expired on June 30, 1961, it would not be reimposed. It was implied by the Democratic leadership in the Congress that they would not try to extend it, as they knew the States needed all the revenue they could get from the gasoline tax to maintain and improve our highways.

STATE INCREASES

On that implied promise several State legislatures raised the State gasoline tax 1 cent. The Virginia General Assembly did this, raising the tax from 6 to 7 cents. That made a total of 11 cents per gallon tax on gasoline. However, we all thought that the Congress would keep the implied promise and let the extra Federal penny tax expire, thus reducing our gasoline tax to 10 cents per gallon.

The point of diminishing returns has already been reached on the gasoline tax. First it was the popular wave of small foreign cars, now it is the compacts. People just got tired of paying so much for gasoline to run big, heavy cars. They might go back to larger cars if the gasoline were reduced.

Anyway, the Congress even looked forward to the day the extra penny Federal gasoline tax would expire. For on July 1, 1961, the Congress decreed that one-half of the excise tax on automobiles, and all the tax on auto parts, should go into the highway trust fund, instead of into the general fund. With the extra taxes on big trucks that the President proposed to the Congress, this should produce enough to keep the program going.

Even if it will not, the program should be stretched out, rather than break faith with the people by continuing the Federal gasoline tax at 4 cents per gallon.

Now as to the big trucks. After a 3-year study a report has just been made to the Congress that they should be paying considerably more taxes.

Some big trucks, the report says, have annual benefits from our highway system of $1,084 to $3,143 but are taxed only $820. The big intercity buses do well, also. The report shows annual benefits of $705 to $1,370, in return for taxes of $540.

MORE FIGURES

More figures are to come later out of statistical analysis of tests recently completed at Ottawa, Ill. In this test 200 variations in highway construction were built and tested by 17 million miles of operation of trucks of several sizes.

Passenger automobiles, delivery trucks, and farm trucks could be served well by less expensive pavements than are being built. The heaviest trucks, about 5 percent of all motor vehicles, require stronger surfaces.

This additional cost for big trucks is apparently paid in large measure by all of us. We make the railroads own, build and maintain their own right-of-way (and pay taxes on it) so we should find a way to make the heavy trucks pay for the additional cost of construction to serve them, as well as their full share of the cost of maintaining these expensive highways.

While the Congress decreed that the Federal Government would bear 90 percent of the cost of the Federal Interstate System, regulations of the U.S. Bureau of Public Roads actually cut this percentage to about 85. So the States actuallly pay some 15 percent and let us not forget that the States must maintain them.

The States need and must have all the gasoline tax they can get. We have always felt that the Federal Government should have laid off the gasoline tax entirely. It could, too, if all the Federal taxes on all motor vehicles, tires, parts, oil, etc., went into the highway trust fund. A lot of these taxes still go into the general fund.

If you are against the Federal Government continuing the emergency 1-cent tax, write today to:

Senator HARRY F. BYRD, and Senator A. WILLIS ROBERTSON, both Senate Office Building, Washington, D.C., and to Representative W. M. ABBITT, House Office Building, Washington, D.C.

Cattleman's Viewpoint

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. ULLMAN. Mr. Speaker, the following guest editorial in the Oregon Cattleman magazine gives the cattleman's viewpoint on the issue of range conservation. Mr. Oliver has served as mayor of the town of John Day in my district.

[From the Oregon Cattleman, Prineville, Oreg., February 1961]

CATTLEMAN'S VIEWPOINT

(By Herman Oliver)

(NOTE.—The text of Herman Oliver's talk marking the issuance of the first commemorative stamp honoring range conservation has been selected as a guest editorial for the February issue of the Oregon Cattleman. The stamp acceptance ceremony was conducted February 3, in Portland's main post office. Mr. Oliver, veteran retired cattleman and civic leader is an early pioneer in range conservation practices. Presented at Range Conservation Stamp Ceremony, Portland, Oreg., Feb. 3, 1961)

Every cattle rancher worthy of the name is a conservationist at heart, partly because he has to be and partly because he wants to be. Ever since soil conservation came to be a popular theme; with Federal, State, and private money backing the concept, our experiment stations all over America have been working diligently to figure out ways and means for keeping the soil in place. Boiled down, the best way to conserve soil is to have a protective covering on it. Of all the kinds of covering, grass works best. Grass roots not only hold the soil in place, but facilitate getting water into the soil by acting as a storage reservoir; holding the water back has untold value by its more gradual release of the moisture from the soil with no damage, as compared to heavy runoff which does endless damage.

Now what does the stockman want? His ambition is to produce beef and lamb for a profit and grass is the means of reaching his objective. Essentially all he has to sell is grass. His cows, steers, and sheep eat the grass. The grass puts on growth and weight and he sells the weight. Therefore, the only income he has comes from grass. To a stockman grass is most important. It can be damaged or destroyed in different ways such as drought, erosion or overgrazing. There are three things involved in overgrazing. (1) By grazing too early in the spring before grass gets a good start; (2) grazing too heavy during the critical part of the growing season; (3) grazing too heavy and too long toward the end of the grazing season, leaving no forage plant food or ground covering.

If these abuses are repeated year after year the grass disappears, the land production goes down and down and the operator has less to sell, so he gets punished right where it hurts most—in the pocketbook. In the livestock industry, we are in the unique position of profiting most when we treat our grass and soil best.

Every stockman then is in league with every conservationist. Their aims are identical; they want more grass on more acres; they want better grass; and they want the grass managed so its root system will not be destroyed.

There is no stockman in Oregon who does not want to leave his ranch better than he found it. If he doesn't achieve that ambition, it is because of lack of knowledge, not lack of desire. However, knowledge of better grasses and better ways of managing them is fairly new. In other words, conservation is a new art and all hasn't been learned about it yet. One only needs to travel through ranch and range countries to see who is practicing land conservation and who is not.

Along these lines, the Federal Government is something like a rancher, because over half of Oregon rangeland area is federally owned, much of which is adaptable to no other purpose than that of growing grass, which can only be harvested by livestock.

About 1870, when the stockmen began the utilization of grass in most parts of Oregon, they were more concerned with hay and water. The grass was already there, ready to use, the hay was for winter feed, while water was one of the means of controlling ranges by acquiring water rights. Then followed a 40-year period of unregulated use that ruined a good part of the range. Wild horses, the flocks of itinerant sheepmen, and large herds of unmanaged cattle were contributing factors. They all crowded the ranges too early in the spring, killing the good grass. Sagebrush increased and cheatgrass came in, so the ranges were reduced to only a fraction of their possible production.

This all happened before 1910, and for many years no one paid much attention to range conditions. However, during more recent years, rangeland has become more important to stockmen and they are more grass and conservation conscious today than ever before.

Oregon cattlemen bow down to no one in their efforts to grow good cattle. Buyers come form the Midwest, from California, the Hawaiian Islands, and even from foreign countries—such as Texas—to buy our cattle. Why? Because they are good and getting better. It costs lots of money to buy good bulls, weed out the inferior cows and all the dozens of things necessary to improve quality in cattle.

But the curious thing is that money spent to develop more grass would result in more pounds of beef or lamb per acre. For example, in Bear Valley (Grant County) the ranchers are making their rangelands produce 10 times more than they formerly did by removing the sage, plowing and reseeding the ground, and that means 10 times as much beef to the acre, and more profit for the ranchers. Maybe our financial institutions should be looking into this and helping the progress of the State by encouraging their ranch customers to devote part of their yearly budget to grassland improvement. It would surely be very helpful in assisting the repayment of their loan, and at the same time improve their financial position materially.

Federal and State agencies should be commended for their farsighted views and activities in this line and should be urged to step up the program to improve the production and usefulness of our national grasslands, by using more of the grazing fees for that purpose. I am sure they will find the livestock permittee willing and eager to work cooperatively with Federal and State agencies to reseed those lands over which they have well established tenacy. The Government is in an advantageous position to do this; its stewardship is virtually perpetual, whereas the rancher may hold title for an average of about 40 years. Conservation does

not only affect the stockman or tiller of the soil, but it also affects more than is generally conceded, "the man on the street," because it does affect the entire Nation.

As my father did before me, I have devoted my ranching life to just such things. If my life has meant anything, it has taught me that the constructive way is the best. I wanted to leave that philosophy in some sort of permanent record, so recently I have put these ideas down in book form, bolstered and enlivened by hundreds of little experiences—many of them humorous. The book will be out in the spring. It will be called "Gold and Cattle Country" and maybe some of you will get something out of it.

Anyhow, like the old prophet Isaiah, I will remind you—"all flesh is grass."

Purim—Loveliest Holiday of the Year

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. O'HARA of Illinois. Mr. Speaker, this is the month of the 105th anniversary of the birth of my mother and my father. I have never failed to observe these natal anniversaries by opening the tide of sweet memories and in my mind reliving the days of my childhood and of my young manhood.

It was especially in keeping with this sentiment that at this time my good friend and constituent, A. J. Glickson, should have sent me a copy of his poem on Purim, his mother's birthday anniversary. By unanimous consent I am extending my remarks to include Mr. Glickson's poem:

PURIM—LOVELIEST HOLIDAY OF THE YEAR
(By A. J. Glickson)

In remembrance's splenderous most sacred sanctuary
Emblazoned deep in heartfelt loving memories
Reposes sweet in heaven's radiant repertory
Purim, my mother's birthday anniversary.

In the treasure trove of precious yesterdays
Reflecting the benevolence of her earthly days
Like a diamond with a thousand lustrous rays
Is the beloved memory of her selfless ways.

Her's the majesty of Queen Esther's dedication
The staunch pride of Mordecai's heroic consecration
The fulsome faith in truth's unequivocal vindication
And the eternal justice of His consummate approbation.

From out of time's labyrinth of memories' recesses
Rising sky high with affectionate blessed caresses
I send this paen of tender greeting on Purim day
"With love to mother on the anniversary of your birthday."

Of all the holidays I esteem and hold most dear
Purim is the loveliest holiday of the year
And so it shall always, forever and ever be
Because Purim is my mother's birthday anniversary.

You sons and daughters of time and clime where'er you be
Your mother's birthday alive or in tender reminiscent memory
The loveliest, dearest and most glorious anniversary
The sweetest song, of all God's melodies, eternally.

Ode to a New Assignment

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, I have received a most entertaining communication from one of the new members of the House Committee on Science and Astronautics, of which I am chairman. Representative JUDY WEIS, of New York, is the first woman to be named to this major standing committee of the House of Representatives. She has attended faithfully session after session of the committee and apparently listened intently to everything that has been said and watched everything that has been done. In other words, she has been an excellent committee member.

Only yesterday I received in the mail from this Congresswoman a delightful piece of poetry entitled "Ode to a New Assignment," with apologies to the chairman of the committee. It is delightfully done and refreshing to read. With the idea of giving this House the full opportunity to understand the attitude of a new Member, especially a female member of the Science and Astronautics Committee of the House, I present to you a poem of her origin entitled "Ode to a New Assignment." It is as follows:

ODE TO A NEW ASSIGNMENT

Listen to the plaintive case
Of a female put on space.
Glad she is, but quite confused—
SACed in, Moon struck, and BMEWSed.

NASA—ARPA—R. & D.,
Conus—Spasur, and Mach 3;
Advent—Scouts, both sea and blue,
What, oh, what, do they all do?

Gantrys, pads, and solid fuels,
Booster, thrust, and molecules;
My, but what a chump I am—
More stupid than a chimp named Ham.

Samos, Midas, Atlas, Thor,
Minuteman, and Transit IV,
Roam in the ionosphere—
Van Allen's Belt is also here.

Echo twinkles in the sky,
Open to the naked eye.
Here's a puzzler—boy, oh, boy!
What's a "carbon cloud decoy"?

Astronauts will soon be found
Up in orbit going round.
Heroes all, we will agree,
Still the earth's the place for me.

Saturn—Nova—Dynasoar,
Each day brings a whole lot more.
With all this hardware up in space,
We should win this awesome race.

This is tough for me, gosh durn it!
But I'll work until I learn it.
I'll not yield my treasured place—
The first female to serve on space.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. BOW. Mr. Speaker, Federal aid to education will occupy the attention of committees in both House and Senate this week.

The Senate hopes to begin debate on a bill within 30 days, and the House may do the same.

Most of the mail I receive is opposed to Federal aid to education. A few letters, usually from school officials and some teachers, support it. Many letters state opposition, go on to say that the writers believe all schools should receive aid if aid is given.

I have, over the years, been giving the issue a great deal of attention, and it seems to me that there are several factors people should think seriously about before they make up their minds.

One is the amount of money the President proposes to distribute, and the manner of its distribution.

The education bill proposes a payment of $666 million the first year, growing to $866 million in the third year.

Each State would be guaranteed a minimum of $15 for every child in daily attendance at a public school.

Some States would receive considerably more than $15. Mississippi, for example, would receive about $29 for each public school child. Ohio's payment would be $16.30.

Now that seems like a considerable sum to many people, and their letters to me indicate that they believe the money would be parceled out so that each school district would receive $16.30 for each child in school.

But this is not the way that the bill proposes to split the pie. Instead, the State educational agency, which means the Ohio Department of Education, would determine which local school districts were most in need. Then they would divide all of Ohio's share among those local school districts.

The Federal Office of Education in Washington would have to approve the State's decision as to what constitutes need. And the law provides that every school district in each State would have a right to appeal if the State decided it did not meet the qualifications for help.

Now, consider for a moment what that would mean in practical operation. Officials in the department of education at Columbus would have $28 million to divide among needy districts. Applications would flock in from all over the State. Political and other pressures would be brought to bear. Someone would make a decision, someone would

be left out, there would be appeals. Presumably a district that did not receive a share could go to court to stop any distribution of funds until its appeal was heard. The possibilities of graft, favoritism, political deals are staggering, and all for a sum that is less than one-half of 1 percent of what Ohio and Ohio school districts already are spending on education.

I mentioned that Ohio's share of the education fund would be $28 million the first year.

Ohio's share of the taxes for the education fund would be $38 million.

It would cost us $10 million in new taxes more than we would receive in new benefits.

Furthermore, there are built in escalators in this law that require our State to spend more for education every year if we want to continue to get our share of the Federal funds. A State is penalized if it does not increase its efforts, which means increase the amount it spends on schools. If a State's effort fails to meet the national average, it is penalized. And Ohio, being a State of high income, would have to increase its educational spending many, many times to avoid this kind of penalty. Of course, our share of the taxes to support the program would not decrease.

These penalty provisions are another form of Federal control. By the use of penalties, with the reward of money, the Federal Government tries to force us to spend more than we may think is necessary for our schools. It gives the Federal Government the power to decide to a large extent what the States and localities must spend on education.

There is still another consideration involved in this matter of effort—the willingness of the State and local communities to build their own schools and finance them.

Assume, for example, that a bond issue is pending in one of our school districts. The local people have been declared ineligible because they appear to have adequate finances, and they do. But right next door is a school district that defeated its bond issue the year before. And that school district is eligible for aid because in the eyes of the State, it is not able to provide the buildings it needs. What incentive remains, then, for any district to go ahead and take care of its needs. Why not slow down, wait a bit, see whether or not we might be able to get part of the Federal money next year or the year after. And so this proposal might very well reduce local incentive to take care of its own problems.

Another serious question rises as to the duration and probable cost of the program after the public finds out how small are the amounts to be distributed under the initial bill. A clue to what lies ahead was given by the Secretary of Health, Education, and Welfare in a recent television interview. Admitting that this bill is for only 3 years, and that it is supposed to be necessary because of an emergency, the Secretary went on to say that he thought large doses of Federal aid were necessary on a permament basis.

How large a dose? Perhaps there is a clue in the report of President Kennedy's task force on education. That group recommended spending $9½ billion in the next 4 years—or about twice the amounts now proposed in Congress.

It becomes clear, then, that what is planned is massive Federal expenditures for an indefinite period of years, even though we start out with only $15 per child on a 3-year basis.

Federal control of education is another consideration.

I have mentioned two matters in which Federal control is already obvious in the bill—even though the bill itself denies the Government any right to control or interfere. The Supreme Court once said that "it is hardly lack of due process for the Government to regulate that which it subsidizes."

In short, the Government has a right to supervise how its money is spent.

As a taxpayer, I think the Government has a duty to control how my dollars are spent. How else can we know that they are spent wisely or properly.

An editorial in a magazine published for teachers—the Nation's Schools—had this to say:

> Federal direction is inherent in any Federal law or any Federal court decision pertaining to education. This is true even if Congress delegates to the States the administration of a Federal grant.

And now let me quote to you what happens in a country where the central government does control schools. We know about the school systems of Nazi Germany and Soviet Russia—but this concerns France, supposedly the citadel of liberty. A recent report on French education reads, as follows:

> Some criticisms come from the teachers' organizations who would like to have more freedom for the teachers and less control from Paris.
>
> The system is criticized because of the inevitable delay and inefficiency which arises from the need to refer any question of importance to Paris for decision. It is criticized by local communities because by the time the bureaucrats in the ministry, in the academy, and in the department have worked out the details of every matter of administration, there is nothing left for the local school boards to do. Some of them refuse to go through the motions.
>
> Some attempt has been made to offer a little adaption of the work of the schools to local needs and conditions. But it is difficult to read much meaning into offers of freedom to the classroom teachers when such important factors as the course of study, the textbooks, examinations, the preparation of teachers, and the inspection of classrooms are controlled centrally and operated in such a way as to secure uniformity throughout the nation.

That is France.

And I am certain that would be the situation in the United States if Federal aid to education becomes the law.

Let me cite another example. The Federal highway program is supposed to be one in which the States have almost all jurisdiction over the roads—the Federal Government only approves what States propose. But since early last summer a committee of Congress has been investigating the Federal aid program as it is administered in each State. There have been hearings in Massachusetts, Florida, and other places. The committee has exposed terrific graft and corruption in some of these States, and the result has been a shakeup in State governments and State highway programs. That is Federal control, exercised by Congress as part of its duty to supervise the expenditure of Federal funds.

It has happened in the highway program. It has happened in every other Federal aid program. It will happen in Federal aid to education.

These are some of the things I hope everyone will consider—consider thoughtfully in the next few weeks.

Citizens of Ohio are being asked to give up a great deal of freedom, responsibility and control of the kind of education their children get, in exchange for a pittance—and worse than that, a pittance which will cost them in actual tax dollars $10 million more than they receive.

You might consider also a few facts about the need for this kind of program.

Nonetheless, the demand for Federal spending in this area has increased so rapidly that it appears almost inevitable. Facing this fact, and hoping to avoid Federal control, I have proposed a substitute and have discussed it on this program before.

My substitute is based on the reasoning that any inability of the State to meet its expenses is due, at least in part, to the fact that the Federal Government imposes so heavy a tax burden. There is little left for States to tax. What we need is to return sources of tax revenue to the States or—failing that—to return some of the money the Federal Government collects, but without the usual fee for collection and administration.

My principal suggestion is to return 25 percent of the money collected from the Federal cigarette tax—based upon the number of packs of cigarettes sold in each State. My bill would give almost every State as much or more than it would have received under the bills in the House in 1960. It is not as generous as the 1961 Kennedy bill. However, it would provide substantial sums, free of extra tax burdens on the State, free of the taint of deficit spending, and with no possibility of Federal interference or control.

I intend to offer my bill as a substitute for the administration proposal. I hope it may win the approval of all who truly want to give more money to education without control, and that even those who believe added funds are not needed will recognize it as a desirable alternative to the control-type measure.

Admiral Hogan

SPEECH

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. FEIGHAN. Mr. Speaker, upon the retirement as Surgeon General of the Navy, Adm. Bartholomew Hogan, I wish

to join with his legion of friends in extending to him my good wishes.

Admiral Hogan's naval service has been a dedicated one. He had already embarked upon a noble career—the medical profession, when he entered naval service 36 years ago. His record of bravery during combat, under fire, is an inspiring one, and his devotion to the wounded is heartwarming.

It is men like Admiral Hogan who have given our Navy an enviable record. The strict discipline inculcated in all service men, did not derogate the warmth of his personality. His understanding, compassion, and sympathy to those who sought his medical care gained for him the respect and friendship of all who knew him. His record is one of valor. The gold on his sleeves and the blue of his uniform he wore with grace and pride. Most recently the unique responsibilities of his high office, Surgeon General of the U.S. Navy, have brought him abundant acclaim. His leadership, his brilliance of mind, and the decisive role he has carried as Surgeon General of the Navy will long be remembered with gratitude by all patriotic Americans.

German Exchange Student Trains at Encinal Terminals

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. GEORGE P. MILLER. Mr. Speaker, as part of the people-to-people program and to further a better understanding between the maritime practices of our country of those of friendly nations, a German exchange student is training at Encinal Terminals at Alameda, Calif., according to an article in the Times-Star of that city.

Don Dullum, president of Encinal Terminals, conscious of the position of the American merchant marine, arranged for this student to come to this county through conferences with Hamburg-American Line officials.

In my opinion, this type of activity not only improves understanding but also contributes to the flow of goods in international trade.

There follows an article appearing in the Alameda Times-Star for February 27, 1961:

GERMAN EXCHANGE STUDENT TRAINS AT ENCINAL TERMINALS

A young, future ship's officer from Hamburg, Germany, is learning how an American waterfront terminal operates. An "exchange student," he is a guest at Encinal Terminals, Donald L. Dullum, president, announced today.

Dieter Mueffelmann, 25, an officer trainee with Hamburg-American Lines, has spent 3 months at Balfour-Guthrie & Co., Ltd. (Hamburg-American agents), San Francisco, and will study at Encinal 6 months. He acquired the equivalent of a junior college education prior to joining the steamship company. He will study ashore 2 more years, spend 2 years at sea, then return ashore for additional study.

Dieter is Hamburg-American's first ship's officer offshore trainee to study abroad and he's at Encinal through a set of fortuitous circumstances. Although Hamburg-American regularly sends its shoreside trainees to various ports around the world for indoctrination, ship's officers-to-be, in the past, studied at home—or at sea.

Dullum, in Hamburg last year to confer with Hamburg-American officials, casually remarked that Encinal would be happy to host one of its young trainees. Soon after, Dieter suggested to his superiors that the offshore trainees might also benefit from oversea study. Dieter became the first student.

Dieter, who already speaks knowledgeably about cargo movement and stowage, said, "Because the loading and carrying of cargo is the main function of a vessel, I thought relations between the ship and the dock might be improved if ship's officers knew the problems and procedures in moving cargo onto the ship."

And that's exactly what he's learning. Although Encinal officials are insuring a pleasant visit for the young German, they're also making sure he returns to Germany thoroughly indoctrinated in terminal and stevedore operations.

His curriculum includes the shipping, billing, and operating departments. He'll personally handle work in servicing accounts, complete a biweekly progress report, and at the end of his visit, seminar with each department head to evaluate the training experience.

Dullum, who feels that such training programs work to the mutual benefit of terminals and shipping lines, said other trainees probably would be invited to study at Encinal in the near future.

A Washout

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Ottawa (Kans.) Herald of Tuesday, March 7, 1961, and respectfully call it to the attention of my colleagues for their thoughtful consideration:

A WASHOUT

The recent, much-awaited interview with the two Topeka fliers shot down by the Russians nearly a year ago was a disappointment.

After elaborate preparations the Air Force held a press conference for the two captains, John McKone and Bruce Olmstead. It was widely attended, drawing newspaper, radio, and television men from across the Nation.

Most of what these newsmen heard was contained in two phrases—"That is classified information" and "for security reasons we can't divulge that."

Even the spot where the Air Force RB–47 was shot down remains a mystery. The fliers were allowed to identify the location no closer than "50 miles from the Russian coast."

The two were allowed to say their plane was equipped with two cannons which "fired to the rear" and this was about the extent of any new information newsmen were able to get out of them.

What transpired at the Topeka press conference could have been told as easily 6 weeks ago when the two men were first released.

In all probability the powers that be who put the original silence order on the freed fliers felt that the press conference was a necessity.

About all they accomplished was lip service to the odd belief that the people have a right to know what's going on in the world.

Legislative Program of Young Women's Christian Association

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. MACK. Mr. Speaker, the Young Women's Christian Association of Springfield, Ill., was kind enough to inform me of their legislative program before the 87th Congress convened.

Their organization for years has been very active and has given detailed study to the problems confronting our Nation.

Therefore, Mr. Speaker, I wish to include the following letter from Mrs. J. P. Murphy, chairman of the Public Affairs Committee of the Springfield YWCA:

YOUNG WOMEN'S CHRISTIAN ASSOCIATION,
Springfield, Ill., December 13, 1960.

Hon. PETER MACK, Jr.,
House of Representatives Office Building, Washington, D.C.

MY DEAR MR. MACK: The recent election has again reminded us of the legal barriers that keep millions of persons from voting each Presidential election.

The Public Affairs Committee of the Young Women Christian Association of Springfield, Ill., has been studying this problem and would like to share with you our convictions.

1. We favor granting the franchise to residents of District of Columbia.

2. We believe there should be a uniform residence requirement for voters who move from State to State, and we favor 6 months within the State and 30 days within the precinct as a reasonable residence requirement. In this age of instant mass communication and of great mobility of population, national uniformity of residence is essential.

3. We concur with our constitution that the State should retain the right to prescribe the method of registration and the regulations for voting procedures so long as the State makes it possible for every citizen over 21 years of age who is of sound mind and not a criminal, the right to cast a ballot. This would include absentee ballots for members of armed forces, college students and civilians who cannot be in their home precinct on election day.

4. We favor electing the President by direct popular vote.

We realize that hundreds of thousands are prevented from voting through literacy tests (such as Puerto Ricans in New York), but we feel reform of this nature should occur within the State.

We feel sure you have given much thought to election reform and would be interested in knowing that the board of directors of the Springfield YWCA has authorized the Public Affairs Committee to write this letter to you.

Very truly yours,

Mrs. J. P. MURPHY,
Chairman, Public Affairs Committee.

Secretary Dillon Gives Views on the Bearing Which Foreign Aid Costs Have on Our Imbalance of International Payments

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. EVINS. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD copies of correspondence between the Honorable Douglas Dillon, Secretary of the Treasury, and myself regarding the costs of our foreign aid programs with particular reference to their bearing on our currently unfavorable balance of international payments.

Texts of the letters follow:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., February 18, 1961.

Hon. DOUGLAS DILLON,
Secretary of the Treasury,
Washington, D.C.

DEAR SECRETARY DILLON: It seems to me that we need an emphasis on reduction of our foreign aid costs which we are not getting.

American spending for foreign aid during the postwar years in which we have extended this form of international assistance has reached a staggering total in excess of $80 billions.

As you know, our national economy has been adversely affected in recent years by an increasingly unfavorable balance of international payments—an annual deficit roughly equivalent to the amount we spend each year for foreign aid. We were asked by the previous administration for $4 billion in foreign-aid appropriations for the fiscal year 1962.

The Congress and the country want to cut and reduce but President Eisenhower insisted and urged more spending and increased foreign-aid appropriations. Obviously, a dangerous gap exists which must be closed at the earliest possible moment. The money we are sending abroad for foreign aid is needed at home to help quickly restore a favorable balance of payments, stop the flight of gold, and serve our own economy and country.

If we were getting the desired beneficial results from our foreign-aid expenditures, more might be said in favor of continuing these outlays at present levels. However, the evidence seems overwhelming that a large part of our foreign-aid money is not being spent wisely or effectively and with bad results for our country.

We are all too familiar with the shocking evidence of misdirection, mismanagement, and waste in our foreign-aid programs. The situation is one which calls for a complete review of these programs, with a view to a substantial reduction in American expenditures.

Such a review is required further by the fact that for quite some time our country has been bearing a grossly disproportionate share of the costs of international assistance.

In view of all these facts, it is puzzling and disturbing to read statements attributed to you in the press indicating that you are opposed to reduction of our foreign aid spending at this time. I find it even more disconcerting to read that you regard this Nation's economic problems as no reason to reduce our foreign aid expenditures. And that is followed by a statement dismissing the size and importance of our formidable foreign aid bill as a mere three-fourths of 1 percent of total output.

It needs to be underlined, Mr. Secretary, that "mere three-fourths of 1 percent of total output" is a vital factor in our national security at this time.

I had hoped, along with many others, that you, in your new post as our Secretary of the Treasury, would be in a position to give somewhat different consideration of the economic and financial aspects of foreign aid than was perhaps possible in your former office as our Under Secretary of State. I must confess to a disappointment caused by statements credited to you in the press indicating that you hold to the view that we can make no rational reductions in our foreign aid outlays.

We are all working for the same end, a stronger and more secure Nation, and I would appreciate a further expression of your views on this subject, toward the reaching of a fuller understanding of what we can do and must do to strengthen our own economy while effectively cooperating with our allies in constructive programs.

With kindest regards and best wishes, I am,

Very sincerely yours,

JOE L. EVINS,
Member of Congress.

THE SECRETARY OF THE TREASURY,
Washington, March 8, 1961.

Hon. JOE L. EVINS,
House of Representatives,
Washington, D.C.

DEAR MR. EVINS: Thank you for your letter of February 18, 1961. I am glad to have your thoughts concerning the relationship of our foreign aid program to our balance of payments.

The President in his message to the Congress of February 6, 1961, dealt with this question which concerns us all. As there indicated, the sharp increase in our balance-of-payments deficit in 1958 and 1959 resulted principally from lagging exports and rising imports. Our deficit last year was largely the result of significant movements abroad of short-term capital.

Under our foreign aid programs, primary emphasis is now being placed on the procurement of U.S. goods and services. As I am sure you understand the purchase of American goods from our factories here at home and the shipment abroad of these goods as part of our foreign aid program to countries that could not have purchased these goods does not in any way affect our balance of payments or the flow of gold. With this procedure, as the President stated, our economic aid programs no longer have a significantly adverse effect on our balance of payments. In addition, a much broader approach to international imbalance of payments within the free world is being undertaken. Under this approach larger economic assistance programs are being sought from other industrialized countries who are in a position to make increased contributions on behalf of the less developed countries. Success in this effort should help our balance-of-payments position.

On the military aid side, the gross payments impact on our balance-of-payments position has been roughly one quarter billion dollars, representing expenditures we make abroad for military offshore procurement and for NATO infrastructure. We are expecting to obtain some reduction in this figure. We are also engaged in trying to achieve an actual increase in our international cash receipts by transferring a portion of military equipment deliveries to some of our allies from an aid to a sales basis.

We intend to pursue with all vigor our efforts to expand our international receipts and to achieve a reasonable equilibrium in our balance of payments, while meeting our national and international commitments and while expanding free world exchanges of goods, services, and investments.

Sincerely yours,

DOUGLAS DILLON.

Mr. Speaker, the case for a complete review of our foreign aid programs "with a view to a substantial reduction in American expenditures," requires a more specific answer than here given by Secretary Dillon.

Deep Concern Expressed Over Reports of Change in Defense Policies

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. RHODES of Arizona. Mr. Speaker, a letter written by Mr. Philip V. Brennan, Sr., of Deerfield Beach, Fla., has come to my attention.

Mr. Brennan, a veteran of World War I who sacrificed his hearing for his country, expresses deep concern over reports of a change in our defense policies. I believe that his letter accurately reflects the views of many thinking Americans.

Mr. Speaker, under unanimous consent, I include in the RECORD excerpts from Mr. Brennan's letter:

I just read this article by David Lawrence entitled "Limited War Fear Disturbs Washington," appearing in Fort Lauderdale News, March 6, 1961 and thought I would write you about my own thoughts on what seems to be the trouble with all this talk about fighting limited wars.

When Eisenhower took office in January 1953 he immediately let it be known that we would never fight another limited war like Korea. If the Communists started any more wars we would use all our weapons, including atomic, and we would go to the source of the trouble. Result: No more Koreas.

During Kennedy's campaign, he repeatedly stressed the fact that he would change all this and be ready to fight limited wars all over the globe. That's right up the Communist's alley. Just what they want.

Now is the time for responsible Members of Congress to come right out and fight this trend before it is too late. If they do not take a public stand right now so that the Communists know there will be opposition to any such idea by the administration we will shortly be engaged in limited wars all over Africa, etc.

I may be wrong but that's what it looks like to me and it has me worried. We can't beat the Communists in limited wars. They have too many slaves that they are perfectly willing to sacrifice.

Salute to General Eisenhower

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. EVINS. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD, the following editorial from the Nashville Banner, on the move to restore the rank of five-star general to Dwight D. Eisenhower:

[From the Nashville Banner, Mar. 3, 1961]

SALUTE TO GENERAL EISENHOWER

An overwhelming number of Americans, regardless of party affiliation, are in accord with President Kennedy's announcement that he will urge Congress to restore to the immediate past Chief Executive, Dwight D. Eisenhower, the rank of five-star general.

Mr. Kennedy stated—and the Banner concurs—that this move is appropriate because of Mr. Eisenhower's outstanding military record and his long public service to the country in peace and war.

Mr. Eisenhower, when advised of the President's views, said he was "highly pleased and complimented" and that it would be a great honor to again be a five-star general.

Except for a relatively short period as a private citizen—when he served as president of Columbia University—Mr. Eisenhower, now 70, has served this Nation since early manhood; first as a soldier and ultimately as President, twice elected by large majorities.

He was the architect of victory in Europe; the man who charted the invasion of the continent which led to disintegration of the Nazi Germany war machine.

And later as President, he exemplified dedication to peace—not peace at any price, but a peace with honor, completely devoid of any hint of appeasement.

Thus, it truly is appropriate that the former President, who still stands ready and able to be of service to his country, be known again as General Eisenhower; the title fits the man.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Wheeling, W. Va., Celebrates Its 125th Anniversary—Govs. J. Lindsay Almond, Jr., and W. W. Barron Extend Greetings—Hundreds Join in Colorful Program

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, March 13, 1961

Mr. RANDOLPH. Mr. President, on March 11, it was my pleasure and privilege to participate in a notable community celebration of the 125th anniversary of the granting of the charter to the city of Wheeling, W. Va.

The ceremonies were presided over by the Honorable Charles L. Ihlenfeld, vice mayor of Wheeling, and attended by hundreds of the citizens of Wheeling, ranging in age from young toddlers linked in hand with their parents to one of the city's elders, Mr. William Bye, who carries his 89 years with vigor and alertness.

The economic, social, and cultural accomplishments of the citizens of Wheeling have shed luster not only upon the State of West Virginia, but also upon the Commonwealth of Virginia, from whence the original settlers came—as attested to by the congratulatory messages sent by the Governor of the Commonwealth of Virginia, and by the Governor of the State of West Virginia. As the Honorable J. Lindsay Almond, Jr., stated in his message, "Virginians are proud that they had a part in its birth." Congratulatory messages were also received from the West Virginia delegation in Congress, including Senator ROBERT C. BYRD and Representative ARCH A. MOORE, JR.

The colorful observance of March 11, which was enlivened by the Wheeling High School Band and the drill team of the Benevolent and Protective Order of the Elks, is but the first of the festivities which will mark the 125th anniversary year proclaimed by the Honorable John J. Gast, mayor of Wheeling. The active cooperation of the city council and of business, service, and civic groups is being given to the planning in order to make this a memorable year in the history of Wheeling.

In order to give wider acknowledgment to this event in the life of one of the cities which played a significant role in the early development of our Nation, and which continues to occupy an important place in the economic and cultural life of America, I ask unanimous consent, Mr. President, that the mayor's proclamation, the original incorporating act of 1836, and my remarks at the 125th anniversary commemoration, be printed in the Appendix of the RECORD:

THE MAYOR OF THE CITY OF WHEELING, W. VA.:
A PROCLAMATION

Whereas on March 11, 1836, the general assembly of the Commonwealth of Virginia passed an act organizing the inhabitants of the town of Wheeling, in the county of Ohio, into a body corporate under the name of "the city of Wheeling," thus giving the town of Wheeling, established December 25, 1795, corporate status; and

Whereas on this 11th day of March, 1961, we gather to celebrate the 125th anniversary of the incorporation of the city of Wheeling, W. Va., with appropriate ceremonies; and

Whereas the 125th anniversary committee of the city of Wheeling has planned observances of the city's anniversary during the coming year;

Now, therefore, I, John J. Gast, mayor of the city of Wheeling, do hereby proclaim the year beginning with this, the 11th day of March, 1961, as the 125th Anniversary Year of the city of Wheeling; and I invite the people of this city and surrounding communities to observe this day and the coming year as a landmark in the history of Wheeling, keeping in mind the great accomplishments of the citizens of this city during the years of its existence and the bright promise of the future growth and attainments of this community;

And I urge the citizens during this coming year to take part in all activities planned by the 125th Anniversary Committee of this city.

In witness whereof I have hereunto set my hand and caused the seal of the city of Wheeling to be affixed this 11th day of March, in the year of our Lord one thousand nine hundred sixty-one.

JOHN J. GAST,
Mayor.

ACTS OF THE GENERAL ASSEMBLY OF VIRGINIA, PASSED AT THE SESSION OF 1835–36, IN THE 60TH YEAR OF THE COMMONWEALTH

"CHAP. 235.—AN ACT TO INCORPORATE THE CITY OF WHEELING IN OHIO COUNTY (PASSED MARCH 11, 1836)

"1. Be it enacted by the general assembly of Virginia, That the inhabitants of so much of the county of Ohio as is within the bounds prescribed by the act of the general assembly, entitled, 'an act to enlarge, define and establish the corporate bounds and limits of the town of Wheeling in the county of Ohio,' passed January 6, 1836, as the bounds and limits thereof, and their successors, shall be, and they are hereby made a body politic and corporate, by the name and style of 'the city of Wheeling,' * * *."

REMARKS BY SENATOR JENNINGS RANDOLPH, OF WEST VIRGINIA, AT THE 125TH ANNIVERSARY OF THE CHARTER OF THE CITY OF WHEELING, W. VA., MARCH 11, 1961

MAYOR GAST. Mr. Chairman, ladies and gentlemen, I am most grateful for the invitation to participate in the celebration of your 125th anniversary as an incorporated city. I anticipate the fulfillment of your plans for a more formal and ambitious observance, hopefully with the President in attendance at a later date, and I shall assist in every way to bring that to fruition.

We speak often these days of the New Frontiers. No city in the country has been more closely identified with the adventurous and explorative frontier spirit of America—both past and present—than has Wheeling.

At every phase in our Nation's history, the town of Zanesburg, later the town and now the city of Wheeling, has been in the vanguard of development. Whether as one of the westernmost outposts of the frontier during the Indian wars and the Revolutionary War, or as the chief port of entry and exit in the commercial traffic of East and West, or as one of the leading centers of the industrial revolution of the 19th century, Wheeling has always cast its eyes to the future. So be it now, as we approach the even more exciting frontiers of tomorrow, bringing with you the confidence borne of your vigorous and creative tradition from the past.

Perhaps this tradition is no longer quite as stern as that expressed during the siege of Fort Henry in 1782, when Betty Zane—volunteering to run under Indian fire to replenish the dwindling powder supplies of the fort—declared "Tis better a maid than a man should die." But this tradition—in your men and women alike—lives on in the citizens of Wheeling, and I have every confidence that it will carry your city and its people to notable achievement.

Dear Sis

EXTENSION OF REMARKS
OF
HON. VERNON W. THOMSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. THOMSON of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Reedsburg Times-Press, Reedsburg, Wis., of March 9, 1961, and respectfully call it to the attention of my colleagues:

DEAR SIS: We have news for J.F.K.

There is no depression in Sauk County.

The hard-working farmers, businessmen, employees and laborers just keep plugging along at their jobs, paying no attention to the scare headlines emitting from our Nation's Capital and the office of President J.F.K.

Tax payments were completed as of last Tuesday and Reedsburg property owners put their money on the line. Only 1.55 percent of the amount required to run our city, county, and State was put in the delinquent list by Alice Brunhoefer, city treasurer. That's a small percentage on a total of $479,771.32.

Over at Loganville the villagers paid up 100 percent, as they have done for a number of years. Other townships and villages also paid nearly 100 percent.

Federal tax payment time is coming close, and we'll bet that Sauk County folk will again have their checks in the mail by the deadline.

Of course paying the Federal bite is a little more unpleasant and for a good reason.

We just can't comprehend where all the money goes and why. Every year some branch of the Government comes up with a new way to spend our money, and that's getting to be a bit discouraging.

But if we keep on expecting Washington to take over and manage our requirements—do things which, with a little guts, we could do ourselves, we've got to pay the piper.

YOUR BROTHER.

We Teach Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. MONAGAN. Mr. Speaker, John Crosby has made an eloquent play for public action to cut down the volume of programs stressing physical violence on our television today.

The continuation of these programs will have an unfortunate influence on the children of this country and I append Mr. Crosby's column herewith in the hope that it may help to bring about concerted action to eliminate these programs.

WE TEACH JUVENILE DELINQUENCY
(By John Crosby)

After a 7-year vacation, Mickey Spillane is writing another of his Mike Hammer books. But Mr. Spillane declares that his hero, who popularized the shooting of naked women in fiction, will probably be considered mild stuff. Now even women writers, said Spillane, purvey more tough talk and violence than he did.

That is the truth. The other day, Police Commissioner Kennedy said that New York City's crime was up for the seventh straight year, which, in a city whose population is declining, is depressing. The steepest climb is again in the ranks of the young. The arrests of those under 16 years of age are up almost 7 percent; the arrests of those 16 to 20 went up almost 9 percent in 1 year. Does this surprise you? It shouldn't. It should alarm you but it shouldn't surprise you. These are the children who have been conditioned since birth to violence—to commit, to acquiesce in it, to consider it normal.

On my television program, Alfred Knopf, the publisher, said that it's out of date to complain about sex in fiction; it's been replaced, he said, by sadism. Not only in fiction either, everywhere. In TV Guide Dr. Frederic Wertham, the psychiatrist, says: "We have been conditioned to an acceptance of violence as no civilized nation has ever been before. How? That is very simple. You crowd the minds of the people with violent images—continuously, relentlessly, in every context and costume * * *. We have silently passed an amendment to the sixth commandment. Thou shalt not kill but it is perfectly all right for you to enjoy watching other people do it, the more the merrier and as brutally as possible."

You are surprised at the rise of juvenile delinquency? We teach juvenile delinquency on television and in books and in the movies. No other civilized country in the world permits the horrors we allow on our television screens. In Washington we have a sublimely blind, hopelessly inefficient and frequently corrupt Federal Communications Commission which has permitted the abominations of "The Untouchables" and of all other TV felons to continue without taking a single step to enforce its powers.

No other country allows this, not even uncivilized ones. The Wall Street Journal reports that the sale of American TV abroad is booming but adds: "Excessive violence on some U.S. video programs has already raised difficulties abroad. Australia's censorship board barred 42 U.S. (TV) films and demanded cuts in 1,594 additional films. Sweden and Japan and other countries have also voiced objections to brawling and shooting in American programs. Says Mr. McCarthy of the TV export group: 'There's no doubt about it. We're going to have to tone down our violence, if we want to get the most out of the foreign market.'"

The last time I was in France, a country notoriously openminded, a representative there of Ziv TV films told me the French simply would have nothing to do with our violent TV films. He added: "The French agree that the violence would probably be just as popular in France as it is in America but they say simply that it isn't good for the little ones or for the big ones."

Is this censorship? Hell, no. It's plain commonsense, which is conspicuously lacking in our treatment of the subject. When those who are making a fortune out of making juvenile delinquents out of our children start pointing out (as they do) that "Hamlet" has lots of violence, too, the answer should simply be: "Oh, come off it, Charlie. Behave yourself or I'll yank your license." With perhaps a good swift kick. There is no decent rationalization for this mayhem being committed on television. No other civilized country permits it except us.

The Federal Communications Commission, by simply flexing its muscles at the networks and at the stations who show the tripe, could do much toward abolishing violence on television tomorrow. The "public interest, convenience and necessity" clause of the Communications Act is plenty of authorization. It wouldn't even take any official reprisals much more serious than a telephone call or a public reprimand.

The public itself ought to raise the roof over the misuse of violence—not only on television, but in comics and movies and books. The ordinary citizen has at his disposal vast powers of social disapproval—and this, used against the corner drugstore which sells and displays sadistic pocket books, or against the TV station, or against any store selling those awful sadistic comics, should accomplish much.

A $13,500 Home Would Cost $33,437 With 40-Year Loan

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. DERWINSKI. Mr. Speaker, it is impossible for a mere Member of Congress to match the torrent of words that is pouring forth from the White House these days, but this brief comment on one of the aspects of the proposed housing legislation is extremely appropriate:

A $13,500 HOME WOULD COST $33,437 WITH 40-YEAR LOAN

WASHINGTON.—Monthly payments under President Kennedy's proposed new program for 40-year no-down payment mortgage insurance on low-cost homes would be lower than under the present system; but home buyers would pay more for the house because of the extra 10 years of interest outlays.

Under the Federal Housing Administration's present program, the buyer of a $13,500 home can obtain an insured 30-year mortgage at the maximum 5½ percent rate. The required downpayment is $450, and the monthly payments thereafter total $74.12 for principal and interest. At the end of 30 years, the buyer will have paid $27,133, including the down payment—or about twice the price of the house.

Under the proposed program, the buyer of a $13,500 home could get an insured 40-year mortgage at the maximum 5½ percent rate. With no downpayment, the monthly interest and principal payments on the full $13,500 loan would be $69.66. After 40 years, the total cost would amount to $33,437—or about 2½ times the original price.

Time To Take a Second Look

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 13, 1961

Mrs. NEUBERGER. Mr. President, I believe we need to take a second look at our quotas on importation. I have been reading with considerable regret that some unions intend to boycott Japanese goods. The long-range effects of such an action must be considered.

I recall that the matter of Japanese plywood imports played far too great a role during the recent congressional campaigns in my State. The percentage of importation of the Japanese hardwood plywood was minute. Yet men were out of work and men who are out of work and men who are hungry and unable to feed their wives and children instinctively strike out to protect their special interests.

We need education at home and abroad to increase world trade in order to improve balance of payments.

The editorial entitled "Unwise Boycotts" which appeared in the New York Times, notes:

The purpose of protection should not be to protect indefinitely—at the expense of the American consumer—those who refuse to meet this competition on its own ground of cost, price, and quality.

I ask unanimous consent that the full text of the March 11, 1961, New York Times editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNWISE BOYCOTTS

Both President Kennedy and Secretary of State Rusk have spoken out vigorously and properly this week against the boycotts of Japanese goods planned by some unions. As the President pointed out, such unilateral action by private groups seeking to serve their own interests conflicts with the national interest, and in any case point the road to chaos. If a private group in this country boycotts one type of Japanese goods, the Japanese would be only human if they re-

taliated with counterboycotts. The result could only be the growth of bad feeling between the two nations, disruption of the orderly flow of international trade and political gains for Communist China and the Soviet Union.

The proposed boycotts, of course, are only one aspect of a more general problem. Demands for protection against foreign competition come not only from unions but also from businessmen, and the competitive goods against which one or another interest would like protection cover a wide range of commodities from many nations. With almost 6 million unemployed in this country arguments for greater protection tend to receive more sympathetic attention than in times of fuller employment.

A balanced view of the general problem must take into account at least three factors that are too often ignored. First we must import, if we wish to export. In 1959, for example, Japan bought almost $1 billion worth of our goods, providing a large number of jobs here which would not exist if Japan did not have the resources, derived from our purchases, to pay for these goods. Second, the only real long-range protection against effective foreign competition is increased productivity and lower costs of production here. Third, the purpose of such protection as is given by tariffs or other measures should be to ease the transition while one or another interest makes appropriate adjustment to a sudden sharp increase in foreign competition. The purpose of protection should not be to protect indefinitely—at the expense of the American consumer—those who refuse to meet this competition on its own ground of cost, price, and quality.

Mineral Developments in Southern Missouri

EXTENSION OF REMARKS
OF
HON. RICHARD (DICK) ICHORD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. ICHORD of Missouri. Mr. Speaker, southern Missouri is experiencing a mineral exploration and development boon which promises to be of great importance to the future of the area and our Nation. This development has been aided substantially by the cooperative services provided by the State geologist, the U.S. Bureau of Mines, the U.S. Geological Survey, and the Missouri School of Mines located at Rolla, Mo. An excellent editorial written by Mr. Edward W. Sowers, publisher of the Rolla Daily News, points up the need for continuing support of these agencies and the services they offer. Under unanimous consent, I include the editorial in the Appendix of the RECORD:

NEW STATUS FOR SURVEYS, BUREAUS HERE
(By Edward W. Sowers)

The terrific, almost fantastic, iron and lead strikes, and some copper, in the area not far south and east of Rolla have given new status to Rolla and its surveys and bureaus pertaining to minerals and other resources.

The other day when State Geologist Tom Beveridge asked the Missouri Legislature for $550,000 for a new Missouri geological survey building here, our first through—as a taxpayer—was: "What's this, another half-million-dollar building for the survey, when the building it now occupies looks pretty good to us?"

On second thought, however, one doesn't have to be a geologist, or a miner, to realize that the new impact of mining discoveries in Missouri—and within a 40-mile perimeter of Rolla—has forced the need for better facilities for the State's own survey. Authoritative sources picture this area of mining development as one of the three hottest spots in the entire United States of America.

A kindred activity, also influenced by the new importance of our mineral and forest resources, is likewise seen here in the announcement by the Missouri National Forests to build a new headquartesrs building here this spring. Much of the activity in mining, and forest resources, development, is within the lands serviced by Missouri national forests.

There is also the U.S. Bureau of Mines station here, working constantly with ores and their application to industry. And, of course, the University of Missouri School of Mines and Metallurgy is important in this picture, as emphasized recently by its International Symposium on Mining Research. No little help comes, too, from the U.S. Geological Survey at Rolla, providing maps for the ever-changing and increasingly important area.

Another factor in this scene is the growing importance of the Eighth Congressional District of Missouri, which blankets the entire mining and forest-products development. Our Congressman, DICK ICHORD, recognizes this vast potential in his (and our) district, and has, in fact, legislation before Congress now to help realize more from the vast resources within the new eighth district.

While there is talk of "recession" in parts of the United States it should not apply to this part of the Eighth Congressional District of Missouri. We must not let it. We must back up our bureaus and agencies (which happily for our economy and for their strategic location in Rolla) and our governmental representatives with positive action as a community and as individuals each and every time we have the opportunity.

Need for Greater Education on Anti-U.S. Activities by Communists

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 13, 1961

Mr. WILEY. Mr. President, across the Nation there are an estimated 25,000—and in all likelihood many more unaccounted for—Communists working against the best interests of this country.

The Red strategy ranges from agitation for social unrest and strikes to sabotage, espionage and ultimately the overthrow of the Government.

According to FBI Director J. Edgar Hoover, for example, the Communists played a prominent role in the riots in San Francisco during the 1960 hearings of the House Un-American Activities Committee.

Currently, too, there is increasing evidence that the U.S. Communist Party—an arm of the international conspiracy headed by Moscow—is engaging in stepped up activities against the best interests of our people and the country.

As a people, I believe we need to be more alertly attuned to the great dangers of these cancerous cells in the heart of America.

Recently the Milwaukee Sentinel published an informative article by Jack Lotto, entitled "Reds Push 1961 U.S. Hunger Marches." The article reflects some of the ways in which Communists currently are attempting to stir up unrest because of our economic problems. I request unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REDS PUSH 1961 U.S. HUNGER MARCHES
(By Jack Lotto)

The Communists are drumming up nationwide "hunger marches."

Thirty-one years after they led the big March 1930 demonstrations, the Reds are working to spark new mass struggles.

The plans to sharply increase agitation among the Nation's unemployed were OK'd in a recent secret meeting of the party hierarchy.

A letter-directive to all district and State Communist locals ordered immediate concentration on the task.

A special "depression issue" of 100,000 copies of the party's newspaper was printed and is being distributed in key unemployment areas across the country.

Every article had one theme: The mass demonstrations and battles of the depression days have "lessons for today's struggle." Meaning: Get such marches going again in major cities and State capitals—with one march toward Washington.

"Prepare for sharper struggles" was the word sent to the comrades by Gus Hall, national secretary of the Communist Party.

Indications are the Reds will begin setting upon local, State and national levels so-called "unemployment councils," as they did in the 1930's. Where such groups are already organized by legitimate labor unions, the Reds will attempt to infiltrate or guide them.

Said an editorial in the Worker, official party paper:

"Only struggles like those waged by the unemployed and many unions during the 1930's can force new urgent advances on the welfare front * * * conferences of a few public figures along with union officials will not impress anybody * * * we need grassroots action and conferences of many thousands, if the country is to be really aroused * * *."

Thus, the Reds belittle the efforts of the anti-Communist AFL–CIO on the jobless problem. They claimed that only the Communists truly represent the needs of the unemployed.

The Communists see wonderful trouble-making opportunities in the real unemployment problem. Discontent is the breeding ground for the Reds to find recruits among those who have nothing to lose, and to push their divide and conquer strategy.

Among the proposals being peddled by the party supposedly to aid the jobless was one for a big increase in trade with Red China and Russia. Shipping strategic goods to the Communists to build up their war potential—now banned by law—would make plenty of work, the local Reds claimed.

Another demand in the peddling of Utopian ideas to pose as the friend of the needy and unemployed: The U.S. Government should pay two-thirds of every jobless worker's wages indefinitely.

Work Ahead in Mental Health

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include remarks entitled "Work Ahead in Mental Health," made by William P. McCahill, executive secretary of the President's Committee on Employment of the Physically Handicapped, and made at the Workshop on Social Action, National Council of Catholic Women, 13th National Convention, at Las Vegas, Nev., on November 3, 1960.

The views of Mr. McCahill in this important field of human thought and action are worthy of deep consideration. Mr. McCahill is dedicated to improving the conditions and the outlook on life of the handicapped.

The remarks follow:

WORK AHEAD IN MENTAL HEALTH

Last May the executive committee of the President's Committee on Employment of the Physically Handicapped voted to take steps to aid the employment of the mentally restored and the mentally retarded—two very different groups of people indeed. For the past 13 years, the committee and cooperating Governors' committees have concerned themselves almost completely with the physically handicapped. In these 13 years we have seen a decided change for the better in the acceptance of employers and fellow workers of the qualified physically handicapped worker in the labor market. It is our sincere belief and great hope that the next 13 years will see an even greater accptance of the mentally restored and mentally retarded as responsible employees in a great variety of jobs in this country. The restored are people like you and I who have suffered severe mental illness. The retarded are persons, generally, with lower IQ's than most of us.

Groups like the National Council of Catholic Women and its parent body, the National Catholic Welfare Conference, can aid materially in speeding the day when mental disability will be better understood in America. There is plenty of work ahead for all of us in the field of mental health. This is the first major speech on the subject that I or any committee staff member have made since it was formally accepted as part of our promotional program. So we are pioneering here together, you and I, the committee and the Council, and perhaps this may be used as a bench mark in the future from which to measure employment progress.

Your social action committee assistant, Irma Piepho, advised me in September that your social action national chairman, Mrs. Bayard Kurth, would deal with the mentally ill in your monthly message. Then she said something which I hope will be prophetic. She said: "So much can be done in this field by the lay person, particularly in helping people back on their feet." I can say "Amen" to that.

Today, I should like to discuss a vital part of the mental health field. I am concerned primarily with attitudes toward the proper utilization of all the available manpower resources of the mentally handicapped, a term which includes those we have chosen to call the mentally restored and those we all know as the mentally retarded.

In our Program Guide for 1960, the President's Committee has a page on those with mental handicaps. It reads in part: "In America, there are more than the lame, the halt, and the blind who need our assistance. Our country's No. 1 medical problem, the problem that is responsible for filling more than half of all the hospital beds in the United States, is mental illness.

"Obviously, a hospital bed is not the end of the line for a person suffering from mental illness. We have long since emerged from the dark ages when we would throw the mentally ill into poorly kept overcrowded, dank asylums—and purge them from our thoughts.

"Today, the mental hospital is a way point on the road back to the community and to a useful and productive life. Modern techniques, modern drugs, modern research have enabled the mental hospital to work miracles. But—What happens to the patient when he leaves the hospital? When the hospital staff breaks the good news: 'You can go home now; we think you're ready.'"

It is obvious that if we are to get ahead faster, the community must better learn to accept and properly use the mentally restored and the mentally retarded. Catholic women and all persons of good faith have a responsibility to learn more about opportunities for additional opportunities for the mentally restored and the mentally retarded. You women who wish to be modern pioneers have only to consult local lay and medical authorities to learn, to know, to understand, and to appreciate the nature of individual differences and specific ways you can be or help.

A panel of distinguished physicians have advised us that discrimination in fact does exist in employment and reemployment of persons with histories of mental disabilities. They have advised deliberate speed in better educating the public to the shape of the problem and have recommended education be undertaken at all levels of management, including the unions and the doctors themselves. Motivation of the mentally restored employee was considered vital and in this area, groups such as yours certainly can play a very large part.

Illustrations of what has been done may be helpful to our consideration. You who have been closely associated with the Veterans' Administration during these past years, already know the work ahead in mental health will be made easier as a result of VA planning.

The VA is undertaking a study of jobs now held by veterans with histories of mental illness, some 200,000. Regional offices have identified the veterans and are obtaining a good-sized sample of what they are doing, whether they are working to the best of their abilities and what employers think. The study will be completed and in pamphlet form by next spring and will be distributed jointly by the Veterans' Administration and the President's Committee. Another pamphlet, "Jobs Held by Veterans With Epilepsy," was released last spring and 15,000 copies distributed the first month. The VA for the first time is now attempting to sell benefits to a particular class of veterans. All those with 100-percent disabilities or those with 70 percent or more for mental conditions are now being contacted by VA training officers and encouraged to take vocational rehabilitation training if it appears to be necessary.

The Office of Vocational Rehabilitation is doing more and more research and special project work with the mentally retarded. Many State divisions of vocational rehabilitation have full-time counselors working in mental health hospitals jointly with patients and doctors, helping to prepare the way for return to work of the mentally restored. More is also being done with the mentally retarded in discovering the kinds of work they can do best.

A number of State employment service agencies have entered into formal agreements with State and Veterans' Administration mental hospitals to provide counseling and placement assistance to emerging patients. Others cooperate with mental hospitals and other agencies on an informal basis to help discharged patients find suitable employment. Both formal and informal arrangements between State employment service agencies and mentral treatment facilities, public and private, for counseling and placement services to the mentally restored are steadily increasing and employment service agencies, generally, have for many years been providing specialized service to mentally retarded persons as a recognized disability group. Many State agencies have developed interviewing guides to assist their personnel in serving this group.

My purpose in mentioning some of these things is not to paint a rosy picture, but to keep faith with my assigned topic and to point out that if you are willing to move into an area where it might have been said that angels have feared to tread, you will have available new tools, new techniques, and new allies as the Nation makes a concerted attack on increasing job opportunities for the mentally handicapped. The President's Committee with its small staff and cooperating Governors' committees can't by any stretch of the imagination be expected to win the battle. All we can do is raise the issue, sound the battle cry and possibly point the way, as I am trying to do here today, and hope that the real troops, the vast army of volunteers in organizations such as the NCCW will form ranks, establish committees and get on with the work ahead.

Whenever I mention formation of committees I wince a bit, for I heard a statement at the first meeting of the Richmond Diocesan Council of Catholic Men this September which paraphrased a quotation from the Scriptures. The phrase was: "I was hungry and you formed a committee, I was thirsty and you formed a committee, I was naked and you formed a committee." Well, you already have a committee.

I have assembled some opinions from laymen and experts in the field, however, and this may help us. Perhaps you would do well to consider the words of a prominent Methodist layman, the Secretary of Health, Education, and Welfare, Dr. Arthur S. Flemming, who said at a news conference last year: "It is apparent that some progress is being made to facilitate the return to employment of patents discharged from mental hospitals and to help the mentally retarded to lead normal, self-sufficient lives. It should be emphasized, however, that considering its scope, far too little effort is being expended to deal with this problem, particularly by most of the individual States."

My background is that of a newspaperman turned bureaucrat. Newspapermen ask questions and we have been asking questions of doctors, laypeople, former mental patients, association executives, and parents of the retarded. I'd like to share with you some of the reactions and some of the thoughts which have come to us.

A prominent psychiatrist for a large insurance firm told us: "At this juncture, more is to be lost by going too slowly on the problem of employing the mentally handicapped than on possibly going too fast. Initially, there is the semantic problem to overcome since we do not usually associate the concept of handicappedness with individuals who have or have had emotional problems." He said we should keep in mind

that there are all sorts and degrees of emotional illness, and that above all, no stereotype of the emotionally ill should be allowed to crystallize. After several years with industry and in occupational psychiatry, he has found more and more willingness to go at the subject of the emotionally ill "objectively and scientifically," even though he conceded there are still many pockets of resistance, both individual and involving the outlook even of some very large organizations. But, our expert witness advised: "All in all, however, I think the mistake to be avoided is overcaution."

An amateur, but one whose interest is just as intense as a housewife and mother, wrote us recently: "I think it is time right now that something definite be done for these poor forsaken retarded adults. Why should they be neglected and cast aside? Something must be done and right now. Why can't there be more workshops—or a workshop where they could do packaging, circular work, assorting and things like that, which would hire physically handicapped, mentally restored, and mentally retarded adults? The mentally retarded would be willing to work for less, just so they would be occupied and be a part of this world. I certainly do not want to spend the next year like I spent the past 4 years, seeking employment for my daughter with deadends all around, closed doors, and despair looking at you from all sides." The capital letters in her letter are hers, not mine. They were the words now and right now this, too, is part of the work ahead. Of course, we do not recommend that anyone work for less than a fair wage but rather, that people be paid equal pay for equal work.

The consultant on vocational rehabilitation and sheltered workshops on the staff of the National Association for Retarded Children said that during field trips around the country he urged special educators to dovetail their programs with that of vocational rehabilitation for the mentally retarded. The way he put it was to the effect that it goes like the song "Love and Marriage," which says "You can't have one without the other."

I brought some background material along with me for tucking in your purses for sober reflection when you get back to places like Milwaukee, Dayton, Fort Wayne, Minneapolis, and Pittsburgh. I select these five not to slight the other places from which you good women come, but because I have lived in all these cities and know something of the work that can be and has been accomplished by groups such as yours when they decided to tackle a community problem. For, in the final analysis, this is a community problem, for it is at the community level where these people live, are hospitalized, are cared for and to which they return seeking employment.

The National Association for Retarded Children which places incidence of retardation at 3 percent or 5 million Americans, has just last month released a general information booklet titled, "The Retarded Can Be Helped," and this certainly is part of the story of the work ahead. The booklet emphasizes that 25 out of 30 metally retarded can aspire to "marginal independence." It says, "with special schooling these educable retarded can learn the three R's. Special programs emphasizing social development and occupational training enable most of them to become self-supporting, contributing citizens. Able to manage their own affairs under normal circumstances, their need for help will be reduced to times of crisis or undue stress."

Another 4 of this 30 will become semidependent adults. Most may never learn to read or write but they can learn to take care of personal needs and help with tasks at home. Many will be able to work at simple jobs, in sheltered workshops or under supervision, some will be happiest and safest carrying on their lives in an institution with others like themselves. One child in thirty will always require nursing care.

Writing in our magazine, Performance, the former executive vice president of the National Association for Mental Health, said last May:

"Last year 165,000 people were discharged from public mental hospitals in the United States. At the very same time that these ex-patients were being discharged, another 80,000 were being readmitted. Many of these people, we know from experience, had to be readmitted because on their discharge they were thrown into an intolerable situation—a situation in which they were met with outright rejection, or were unable to find suitable living arrangements, or adequate followup medical care, or a suitable occupational situation.

"Rejection cuts deeply, whether it comes from a friend, a relative, or an employer. And when rejection is coupled with denial of the opportunity to earn a gainful living, and to enjoy the fulfillment of achievement, then it can be utterly devastating.

"Unfortunately, the former mental patient has an additional handicap to overcome, and that is the age-old stigma and prejudice which still attaches to mental illness, despite the almost miraculous changes in public attitudes during the past half dozen years. He may be fully recovered—retain no impairment whatever in his ability to perform adequately in his chosen occupation or profession. Yet, he will, in most instances, be denied his old job—or one of equal technical or professional level—because of persistent misconceptions about the permanence of mental illness.

"Yet, from experience we know that this unfortunate stereotype is unfounded and that the very great majority of recovered mental patients are as good as new, or at least as good as they were during the 10, 20, or 30 years they performed satisfactorily on the jobs they held before their breakdown, and the ones which are being denied to them on their return."

In a foreword to the excellent 1959 NAMH annual report, its president, Mrs. A. Felix DuPont, Jr., said:

"We are concerned not only with the sick, but with the well—not only with the relief and recovery of the 17 million Americans who suffer in varying degrees from mental and emotional illnesses, but also with the preservation of the mental health of the 150 million others.

"To carry out our task, we are relying on the American volunteer spirit—the spirit which already has drawn hundreds of thousands of dedicated men and women and thousands of membership organizations into mental health activity, and contributed so much toward alleviating the plight of the mentally ill. And as we face the future in this golden anniversary year, we share a philosophy of faith—faith in ourselves and in others; faith in the capacity of each person to improve and grow; faith in the essential decency of mankind."

Mental Health in America is 50 years old this year. We stand on a bridge halfway across a century, behind is much progress, ahead is a great challenge. I am sure that the Catholic women of America are equal to this challenge and that they will help do the things that need to be done in their States and communities.

There has been much on this subject in the Catholic press of late and both the Catholic Digest and the Family Digest have had feature stories. Lay people can do a great deal to help the professionals, as Mrs. DuPont so well said, both with children and adults. This is a heartland where women have raised magnificent monuments before and this certainly comes within the social-action field. You've done it before, you can do it again.

May I close with a prayer for the handicapped written by the Right Reverend Monsignor Paul A. Tanner, general secretary of the National Catholic Welfare Conference:

"God of mercy and compassion, make us understand that every man whom misfortune has touched is our neighbor. Help us by Thy grace to see that by ministering unto them, we really are serving Thee. In a materialistic age when men are infatuated by the cult of the body, restore in us a right mind which acknowledges in human personality absolute spiritual values far transcending mere physical integrity. Bless our efforts to persuade America to accord justice and equity to those souls among us who have been signed with the seal of calvary. As they courageously serve Thee, may we honor and assist them: All of us together working in redemptive charity toward the glorious advent of Thy eternal kingdom, wherein, as Isaias has said, 'The eyes of the blind shall be opened, and the ears of the deaf shall be unstopped; then shall the lame man leap as the hart, and the tongue of the dumb shall be free and the redeemed of the Lord shall return and shall come into Sion with praise, and everlasting joy shall be upon their heads.' Amen." (IS: 35; 5, 6, 10)

The Fight Against Obscene Literature

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 13, 1961

Mr. WILEY. Mr. President, I have recently introduced a bill, S. 1195, which would stiffen the penalties for dealers in obscene literature. I believe that this filthy business poses a very serious threat to the morality of our youth and population generally.

I have, in recent days, received many communications from my own State, and from other States, urging Federal action to combat this danger.

I hope the Senate will take speedy action on the bill I recently introduced. Yet, it is obvious that the solution to the problem is not only through Federal legislation: There is a need for community action; there is a need for action on the part of church groups. Most important of all, there is a need for greater responsibility on the part of parents.

In this connection, I would like to have placed in the RECORD an article which recently appeared in the Catholic Herald Citizen of February 18, 1961.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PARENTS CAN TACKLE PROBLEM OF YOUTH AND SMUT AT MANY POINTS

(By Fr. John L. Thomas, S.J., assistant professor of sociology at St. Louis University)

"I have lately found that our 17-year-old son has been reading and exchanging sex magazines with his schoolmates. This has left us at a loss as to what has gone wrong and what should be done about it. Our son has a good Catholic education. How can

we best fight this in our home? These magazines are so easily accessible that it is impossible to keep our children from coming in contact with them in one way or another."

Your letter raises a problem that many modern parents will have to face up to realistically. I suppose there has always been a limited amount of obscene pictures and suggestive literature surreptitiously circulated among youth. But, at present such material is flooding the newstands and pouring through the mails in ever increasing volume.

Although we need not assume that young people are the principal consumers of this product, they are freely exposed to it at every turn. Granted the normal curiosity of youth in such matters, it is not surprising that some of them are tempted to become users.

What can parents do about it? The problem is highly complex, involving both social and individual, negative and positive aspects.

Yet, it can be dealt with effectively only if it is tackled at many different points. Let us consider them separately though they all must be included in an adequate program of action.

First, young people must be prepared to face this challenge as individuals. Such preparation requires that both parents and teachers take a positive approach in training youth for chastity. What does this mean?

Since chastity consists in following the order of right reason in the use of one's procreative faculties, young people must be helped to understand and appreciate the nature, function and purposes of sex, together with what might be called its mechanism of arousal or excitation.

This is to say that educators must have two major aims in training youth for chastity. Young people must be taught to regard sex as essentially lifegiving or precreative. The personal, social, and spiritual significance of sex is based on its relationship to the transmission of life.

The traditional negative approach to chastity, consisting of a series of don'ts, is so inadequate because it does not help people make sense of their sexual drives and powers.

The proper use of sex can be defined only in terms of its lifegiving purpose.

Training for chastity primarily involves an understanding and appreciation of sex as a procreative privilege, for this is the positive value that gives meaning and significance to the norms regulating proper use.

Further, educators must help youth acquire some understanding of the mechanisms of sexual arousal. Like all human faculties, sex responds to a definite set of stimuli.

The process is relatively simple; if the proper stimulus is received, the faculty responds by preparing for action.

Young people must be taught to recognize the usual sources of sexual stimulation. They must see the connection between what they think, see, hear, or do and sexual arousal.

This understanding is so important because one avoids sexual arousal by controlling the stimuli. Young people need careful instructions on this point, since lack of experience, curiosity, and the normal desire to manifest or receive affection frequently disguises the sexual nature of some stimuli.

Second, although your children are being adequately trained for chastity, they are still immature. Hence you must carefully guide their reading by providing good material and rejecting trash.

When your son brings home sex magazines, use this occasion to explain the connection between such material and sexual arousal. Speak plainly.

Explain that you understand youth's normal curiosity in such matters but point out that he is filling his mind with thoughts and images that are designed to cause sexual arousal.

That is their purpose. Why should he try to fool himself?

Remind him that he will be a man only when he has learned self-mastery in sex. If he continues to stimulate himself by such magazines, he cannot hope to control his sexual drives, for God has designed them to respond to such stimuli.

This is his problem and he must learn to face it honestly before God. You have only limited control over what he does outside the home.

Either he himself resolves to avoid such sources of temptation, or he is not sincere in his desire to serve Christ.

The third approach to the problem consists in an attempt to control the production and circulation of such magazines.

This must be a community effort in which all men of good will cooperate for the common good.

Current laws and court decisions render legal action quite ineffective, but community pressure can be a powerful force at the local level, and a concerted, intelligent long-range program supported by earnest citizens can bring the force of public opinion to bear on State and Federal legislatures.

As I have indicated the problem has many aspects. We need more adequate training for chastity, more vigilance on the part of parents, and an aroused public opinion that will support legal action.

Bear Creek Dam Prevents Serious Flooding

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Hazleton, Pa., Plain Speaker of February 28, 1961, which reports the very gratifying and thankful news that the Bear Creek Dam has prevented serious flooding in Allentown and Bethlehem, Pa., as well as in other communities along the Lehigh River.

The article follows:

CREDIT BEAR CREEK DAM WITH PREVENTING FLOODS IN ALLENTOWN AND BETHLEHEM AREA

Allentown and Bethlehem and other communities along Lehigh River were saved from flooding yesterday because of the giant $11,700,000 dam at Bear Creek.

Efficacy of the mammoth reservoir as an impounding basis for rampaging flood waters of Lehigh River and its tributaries was put to a good test over the weekend for the first time since its completion. It came through with flying colors because it kept approximately 20 communities along 75 miles of the river from serious flooding.

Army Engineers, who built the huge 234-foot-high earthen dam over a 5-year period, reported the downstream industrial and population centers were spared flooding Sunday and yesterday because of the dam.

Sluice gates, at the intake end of the outlet tunnel, automatically went into operation last week, with the result that flow of murky water through the 16-foot tunnel was reduced to a minimum so floodstage downstream was minimized.

Spokesman for Army Engineers reported two of the 5-foot 8-inch by 10-foot gates were closed and a third was kept about one third closed to impound the water draining from a 288-square-mile area. Gates will remain closed until water passage below the dam returns to normal flow.

Water in the reservoir rose slowly until it leveled around 11 a.m. yesterday at an elevation of 1,353 feet above sea level—97 feet below the spillway crest of 1,450 feet.

Water was reported to have backed several miles from the dam, but it still had a long way to go to reach the reservoir's estimated 35-billion-gallon capacity. Army Engineers estimated the reservoir at 11 a.m. contained approximately 5,200 million gallons of water, slightly more than one-seventh of capacity.

Inasmuch as the dam was designed to cope with a 7-inch runoff of rain and melting snow, Army Engineers spokesman was quick to point out yesterday the reservoir could have taken a much greater deluge and still come through the test nicely.

Questioned as to how long the floodgates will be kept closed, he said it will depend upon the behavior of the river and its tributaries downstream from the dam. It is expected several days will elapse before the river will return to normal.

When the danger of flood has passed and the river stages have returned to normal, the floodwaters will be released gradually from behind the dam until the river resumes normal flow. The dam is designed to create a 90-acre conservation pool for recreation purposes at elevation 1,300 feet, but for the present the reservoir will be kept empty.

Item Veto for President Is One Method of Halting Waste and Inflation

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. SCHWENGEL. Mr. Speaker, I have three resolutions pending in committee which would authorize the item veto authority for the President. No action has been taken on these resolutions, but I find growing support for the item veto as a method of controlling government spending and curbing the inflationary spiral.

Another case in point is a recent editorial in the Muscatine (Iowa) Journal entitled "Item Veto for President Is One Method of Halting Waste and Inflation." Under leave to extend my remarks, I ask that this editorial appear in the Appendix of the RECORD:

ITEM VETO FOR PRESIDENT IS ONE METHOD OF HALTING WASTE AND INFLATION

Waste and inflation have no declared friends, but many of their alleged enemies back policies that actually aid these evils.

One way to reduce wasteful expenditure has been suggested for many years without getting anywhere, the latest attempt being by President Eisenhower.

This is a permission for the President to veto single items in appropriation bills in-

stead of, as now, having to take the whole bill or veto it all.

This is no new power to American Government. Some State governors have it. It was contained in the constitution of the Confederacy, whose draughtsmen had had long observation of the operations of Congress.

Congress has even included it in drawing up the framework of government of our territories and insular possessions.

It is to his credit that Representative FRED SCHWENGEL of the First Iowa Congressional District has renewed his efforts in the present session of Congress to obtain item veto for the President.

Opinions differ as to whether giving the President this power would require a constitutional amendment, or whether a mere new law would suffice. SCHWENGEL has introduced resolutions leading to a constitutional amendment.

However, the sufficiency of an ordinary statute was strongly maintained a quarter of a century ago by Michigan's noted Senator, Arthur Vandenberg.

But there is one huge obstacle: This would involve getting through a measure which would reduce "pork barrel" items.

This is a mighty undertaking.

Appeasement in Canal Zone

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. FLOOD. Mr. Speaker, as the result of personal experience over a period of years, I have noted two types of sources of information as to matters affecting the Canal Zone, especially relations with the Republic of Panama.

One of these is the body of United States citizens resident on the isthmus, who also know what they report. A second group consists of our diplomats accredited to Panama and certain other officials who either act under instructions or seem bent on currying favor.

The latter never lose an opportunity to wine and dine official delegations of our country, thus contributing toward denying the Congress and the Nation an accurate picture of the situation. With rare exceptions, our controlled press and other news media have likewise served to propagandize policies inimical to the best interests of the United States and to make our career employees objects of contempt.

As evidence of what has been, and still is, going on on the isthmus, I quote a letter to the editor published in the March 8, 1961, issue of the Panama American, the leading afternoon newspaper on the isthmus:

APPEASEMENT IN CANAL ZONE REACHES THE LIMIT

SIR: There is an opinion abroad that the United States is losing the Panama Canal Zone. If that should occur, it will be a loss by default—by the failure of those who are charged with protecting U.S. interests to exercise the authority which has been vested in them and thus comply with their duty.

I do not suggest that this is the only reason. There is one, equally as convincing, which is the determination of the commies, pinkos, and others of the Alger Hiss vintage in the State Department, who appear determined to dismember the United States completely and make a gift of its rights to other countries and persons.

Let me cite one example of what I have in mind. Some years ago, it was the custom of the Canal Zone Police to maintain a patrolman on duty at "the Limit." What could be more natural and proper than that? "The Limit" is a most sensitive point where the U.S. jurisdiction ends and the jurisdiction of the sovereign Republic of Panama begins.

During the past few weeks, it has become painfully apparent that there is no Canal Zone policeman at "the Limit." That area now is overrun by howling, insulting, rock-throwing, and club wielding youngsters who appear to have taken complete charge of the Canal Zone at that point.

These shrieking urchins and others run in front of automobiles and navigate around on skates creating a menace to traffic and to themselves. One of their favorite tricks is to stop in front of an automobile and prevents its progress. Their attitude is eloquent of the new position, "Yes, white man, you run me down and see what Lumumba will do to you."

You will never be able to prove this, but I venture to suggest that the Canal Zone Police no longer are stationed at that point because they wish to avoid trouble by the ostrich method of burying their heads in the sand and saying, "Breach of the peace? Disturbance of the public order? Can't see none nohow."

I did not see this myself but a most reliable person told me of having observed a gang of youths shouting insults at a Canal Zone policeman in a patrol car on the road which leads to the new bridge. When nothing happened, they became bolder and threw rocks at the police vehicle.

Frankly, I never thought I'd live to see the day.

While it is pretty obvious that the State Department Reds, do-gooders and one-worlders are conspiring to give the Canal Zone to Panama, it seems to me that while the United States still retains technical jurisdiction over that area, such authority should be exercised in furtherance of the interests and in the upholding of the dignity of the United States.

This is not being done. Now the Canal Zone Police appear to be reluctant to arrest a Panamanian in the Canal Zone, no matter what he has done. They are still eager and willing, however, to produce a grim curl of lip and a harsh word for their fellow Americans who may have incurred some breach of the traffic regulations.

Not only that, let some of our American youngsters begin to play around on Canal Zone streets like those Panamanians do in the U.S. jurisdiction at "the Limit" and rapid action would be taken.

With all that, I find it difficult to be critical of the zone police. They have been publicly chided in court for doing their duty where Panamanians were involved, and without official backing they become the accused and not the accusers, even where they are unquestionably in the right.

All of this appeasement, of course, is in accordance with the current U.S. policy as dictated by the State Department. "Whosoever shall smite thee on thy right cheek, turn unto him the other also."

This, comrades, is our meat.

MICHAEL MUNICH.

Our Incredible Farmers

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 13, 1961

Mr. WILEY. Mr. President, the American farmer—through greater efficiency—including the advantages of the technological revolution—has written the greatest food production success story in the history of the world.

Over the years, the volume of production has increased tremendously, while the farm population has reduced substantially. In 1916, for example, there were 32 million persons on U.S. farms. By contrast, in 1959, there were only about 15.6 million persons on the farms, including about 5.8 million production workers. Yet, these fewer farmers produced an abundance—yes, and a surplus—of food for consumers of this country, now totaling 180 million—as well as feeding hungry mouths elsewhere in the world.

In comparison with agriculture in the Soviet Union, also, the U.S. farmer is doing a tremendous job in greater efficiency and volume of output.

Regrettably, success, in far too many instances, has meant hardship rather than reward. Why? Because a small margin of surplus over consumption levels unfortunately creates a supply—demand imbalance that results in a depression of farm prices—and thus, ultimately, the income of the American farmer.

I am hopeful that soon a realistic solution can be found.

The outstanding record of the American farmer—particularly in national emergencies—in producing its most vital resource—food—warrants, I believe, are favorable—not an unfavorable—reaction of the people of the Nation.

Recently, the Milwaukee Journal published an informative article, putting the production picture of U.S. agriculture in better perspective.

I ask unanimous consent to have the article entitled "Our Incredible Farmers," printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR INCREDIBLE FARMERS

Government figures show that the Nation's total farm population as of last April was only 15,635,000—a little more than 8 percent of our 180 million people.

On this farm population only 5,800,000 are actually engaged as production workers. This relatively small group is producing so much food and fiber that it results in surpluses such as the world has never seen.

Soviet Russia, by comparison, has half of its population on farms—and does not meet its needs in food and fiber. This results in a national standard of living much below that which Premier Khrushchev says is needed.

Our greatest agricultural population was reported in 1916, when there were 32 million persons on farms. The figure today is just about what it was at the time of the Civil war—when the total population was 31,440,000. In other words, just 100 years ago it took half of our people to produce food and fiber for a much lower standard of living than we have today. We were in the position Russia is now.

It all makes Khrushchev's boast that Russia will overtake us in standard of living by 1965 sound a bit hollow.

The Confectionery Industry in Massachusetts

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. MARTIN of Massachusetts. Mr. Speaker, the manufacture of confectionery products occupies an important place in the economy of my State of Massachusetts. In fact, this industry is 1 of the 10 leading manufacturing industries on the Bay State, employing about 10,000 of our population. I believe the following facts may be pertinent in demonstrating the importance of maintaining this industry in a sound economic position, not only so far as it concerns Massachusetts, but the economy of the Nation as a whole:

FACTS ABOUT THE CONFECTIONERY INDUSTRY IN MASSACHUSETTS—REVISED TO DECEMBER 1958

Confectionery manufacturing is one of the 10 leading manufacturing industries in Massachusetts.

There are 155 manufacturing confectioners in Massachusetts including 30 manufacturing wholesalers and 125 manufacturing retailers.

For many years Massachusetts ranked first in the manufacturing of candy and still is the leading center for packaged chocolate candies.

The candy produced in Massachusetts has a retail value in excess of $200 million.

Massachusetts produces about 12 percent of all candy made in the United States with only Illinois, Pennsylvania and New York exceeding that percentage.

Capital invested in real estate, machinery, inventory and other assets is in excess of $50 million (not including rented property which is quite substantial.)

There are approximately 10,000 employed in the industry of whom 3,500 are men and 6,500 women.

The total payroll is in excess of $25 million. Wages are in line with prevailing rates of other industries.

Massachusetts candy manufacturers use millions of dollars of dairy and agricultural products produced or processed in part at least in Massachusetts: 13,500,000 pounds of milk, butter, eggs; 143 million pounds of sugar; 79 million pounds of corn syrup; 18 million pounds of peanuts; and 5 million pounds of tree nuts.

Massachusetts candy manufacturers also use vast quantities of fruits, flavoring materials from domestic sources and cocoa beans, coconut and other products grown in other parts of the world.

On the candy consuming side of this picture, 83 million pounds with a retail sales value of $60 million are eaten annually in Massachusetts.

Communism? A "New" Continent Wants To Look at It

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mrs. GRIFFITHS. Mr. Speaker, Judd Arnett, one of the top reporters of the Detroit Free Press, was sent to Africa by the Free Press to cover the trip of G. Mennen Williams, Assistant Secretary of State for Africa. In my judgment, his views as expressed in a recent column should be of interest to everyone:

(By Judd Arnett)

LEOPOLDVILLE, THE CONGO.—I have just returned from a walk to the American Embassy and en route a thought recurred that has haunted me in other cities:

This must have been the way our South looked, sounded, and "felt" immediately after the Civil War.

For, all at once, the African has been swept up in an enormous tide of independence. In most instances, he is no more prepared for it than the American Negro was in 1865, but there is this difference:

For better or worse, the white man is finished on this continent.

Oh, some will stay here in subordinate official capacities or as merchants or technicians, but from now on "Africa for Africans" will be just what the British suspect—the black man will be calling the tune.

I do not argue against the justice of this. After all, of the estimated 200,000,000 inhabitants of Africa, fewer than 6,000,000 are European or Asian. This continent belongs to the natives and, at long, long last, they are coming into their heritage.

But there is also this for an American to consider:

Will the self-determination now evolving be to our liking? For the product of our genius and toil—dollars—will we receive any guarantee that the emergency governments will stand with us in the moral and political conflicts yet to be waged on behalf of freedom?

Frankly, with a few exceptions I am pessimistic to the point of depression.

AND HERE'S WHY

African leaders are the next thing to brazen in their demands for aid without obligation.

Surely, most of them understand that their countries are already involved in the cold war. But they pretend that this is not true and in the process pit one side against the other, saying:

"If the United States does not help us, Russia will."

Generally speaking, Africans have little understanding of the ideologies separating the free world from communism. This is unfortunate. But far worse, and of far more danger to the ultimate triumph of freedom, is the fact that many African leaders are determined to discover for themselves what communism is all about.

They are perfectly willing to run the horrible risks of such contamination.

This is not the hasty observation of a reporter who has been exposed to too much African sun. To the contrary, it is the studied opinion of one of the few great men of this continent—Julius Nyerere, the political and spiritual leader of Tanganyika, who has been acclaimed in the United Nations for his wisdom and courage.

Before leaving Dar es Salaam a few days ago, I had the opportunity to talk at length with Mr. Nyerere. He told me this: "The leaders of Africa will demand a definition of communism before they will be willing to agree that it is dangerous."

Other quotations from the same conversation:

"Many African leaders will ultimately agree that they cannot accept the position that the Russians must be locked out of Africa. * * *

"This will be their conclusion even though they have some realization of the fate of other nations—Poland and Hungary included—that fell within the Red orbit. * * *

"African leaders know that only 40 years ago the Soviet Union was a primitive country. They realize that within this span two great wars have been fought on Russian soil. Yet, despite its late start and the conflicts that ravaged it, Russia is now challenging for world leadership.

"For these reasons, Africans refuse to accept the statement that they have nothing to learn from communism. They are convinced the Russians must have something in their philosophy beyond ruthlessness."

Julius Nyerere is not a communist—his country is the least inclined in that direction. But he is a realist and better than most men, he knows the African mind.

A CITY SLEEPS

At night, Leopoldville is a ghost city. The brilliantly lighted streets of the downtown area are deserted. The restaurants languish from lack of trade. The white man, entrenched in the lovely homes of the residential districts or packing the hotels to absolute capacity, keeps to himself. The African retires to his own devices, too.

But with the coming of a new day, the African emerges to dominate the city. Scores take station in front of the hotel entrances and offer "services" of every conceivable nature. Sitting at a sidewalk cafe, you are approached by children begging alms, by men with cheap trinkets to sell, by persistent newsboys, by countless others on the make. On my walk to the Embassy this morning, I was confronted with a dozen implorations.

The African is everywhere, doing the best he can for the nonce—and waiting. For what? Why, for the "fruits of independence" to show themselves.

And unlettered as he is, he, too, will accept the best deal he can get and the sooner the better.

The Communists know this and that is why they are practically everywhere. I have been in Africa. They are in Ethiopia, Somalia, Kenya, Uganda, Zanzibar—now they are in Zanzibar—and here in the Congo, although underground in this immediate area for the moment.

This society—at loose ends, disillusioned with "freedom," unemployed, restless, frustrated, angry, jealous of the possessions of the race it greatly outnumbers—well, it seems made to order for the anarchy of communism.

Hon. William F. Norrell

SPEECH
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1961

Mr. FISHER. Mr. Speaker, one of the most respected Members of this body has been called to his reward. BILL NORRELL was a man of principle who could always be counted upon to act with courage and wisdom. He disdained the petty things, and always voted and acted in terms of what was best for the country. The country needs more men of that caliber today.

This great American will be missed. His wise counsel and his sober judgment will no longer be available. But his principles and his philosophy will be remembered, and they will continue for a long time to inspire many of us.

I join with BILL NORRELL's many friends in extending to the family my deepest sympathy.

Lifting Ban on Russian Canned Crab

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1961

Mr. RIVERS of Alaska. Mr. Speaker, the Russian political offensive to spread its Communist ideology and control throughout the world is being matched by its economic offensive which is becoming of increasing concern to all of us. From its rapid construction of vast hydroelectric projects and reportedly accelerated gold mining to increase the monetary impact of the ruble, to intensive exploration and exploitation of the resources of the seven seas, the Russians are forging ahead.

In speaking of the resources of the ocean I refer to a subject which has come uncomfortably close to home. Because the Russians have for 2 years now operated a massive trawling fleet in the Bering Sea, capturing bottom fish on a large scale, which they have a right to do in the international waters involved, those of us interested in the great wealth of the North Pacific fisheries have developed a mounting and frustrating concern. This concern became enhanced when the Russians last year expanded their activities to the taking of king crab from the Bering Sea and processing the crabmeat on mother ships. Russian ocean exploration was also expanded. The Russians have now stated that their next move will be exploration of the Gulf of Alaska, the site of halibut banks long fished almost exclusively by United States and Canadian fishermen.

It has been bad enough to watch these developments backed by the Russian Government as against the feeble efforts of privately owned and operated fishing vessels of the United States, but the worst recent development is the declared intention of the Department of the Treasury to lift the ban on Russian canned crabmeat. This ban was effectuated 10 years ago because Russian caught crab was being canned by convict labor. Now that this practice has been reportedly discontinued, the Treasury Department is all set to lift the ban. Presumably, of course, the consideration for such a step was weighed against the impact upon our own crabmeat industry which produces about 29 percent of crabmeat consumed in the United States. Perhaps also our own producers, who are expanding their crabmeat enterprises, can be protected by realistic quotas, but on this score I have been given no assurance whatsoever. Even if such assurance were given, I feel that this latest concession to Russia is not warranted, if only for the following reason: The North Pacific Fisheries Convention between the United States, Canada, and Japan will expire in 2 years. Under this convention the Japanese have limited their high seas salmon fishery to an area of the North Pacific west of a provisional line set at 175 degrees west longitude. Through tagging and other research, it has been determined that many salmon caught by the Japanese in their presently prescribed area are spawned in Alaskan streams. It has also been established that many are spawned in Russian streams and that the Japanese North Pacific fishery has a considerable impact upon the Russian coastal salmon fishery as great, if not greater, than the impact of such Japanese fishing upon Alaska's Bristol Bay red salmon runs. It is my considered opinion that about 2 years hence, when United States negotiators will be working with the Japanese toward revision and extension of the North Pacific Fishery Convention, they will have to reckon with the Russians one way or the other and that a reappraisal of the whole subject will have to be brought to bear. Therefore, I strongly oppose the Treasury Department's proposal to lift the ban on Russian caught crabmeat at this time, which will not only encourage Russian exploitation of the great king crab resource of the Bering Sea off the coast of Alaska, but weaken the bargaining position of the United States in the approaching clash of interests with the Russians in regard to the utilization and conservation of the fisheries of the North Pacific.

Miguel Ydigoras Fuentes: President of Guatemala

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1961

Mr. FLOOD. Mr. Speaker, in the course of my studies of the countries of the Caribbean and other nations of Latin America, I have become increasingly conscious of the statesman-like stature of their leaders and the parts that they are playing in resisting conquest of the Americas through subversion by the world revolutionary force known as the international communistic conspiracy.

Outstanding among these statesmen is President Miguel Ydigoras Fuentes of Guatemala, whose grasp of the current crisis and capacity to surmount its dangers have been proved by his effective handling of an attempted invasion of his country.

On the weekly broadcast of the Manion Forum Network on February 26, 1961, in an exclusive interview with Marilyn Manion, distinguished daughter of Dean Clarence Manion, President Ydigoras Fuentes emphasized that intervention by Communists in Cuba in the internal affairs of other countries of the Western Hemisphere must be stopped.

In order to give the stirring message of President Ydigoras Fuentes wider circulation, I quote it as part of these remarks:

THE MENACE OF COMMUNISM IN CUBA

Dean MANION. When we are considering the grave danger of Communist footholds in the Western Hemisphere, it is important to remember that Cuba is not the first Latin American country to be victimized by a Communist government. The first direct hit by the big guns of the Communist conspiracy in the Western Hemisphere was made upon the Republic of Guatemala.

The Red penetration of Guatemala began when Juan Jose Arevalo assumed power in that country in 1944. When Arevalo was succeeded as President by Moscow-trained Jacobo Arbenz Guzman in 1950, the Communist conquistadores came out into the open in Guatemala and instituted a typical Red reign of terror.

Like his Communist prototypes in Russia, China, and Cuba, Arbenz posed as an "agrarian reformer." In his ruthless execution of the Communist blueprint, private property was confiscated, while Guatemalan patriots were being jailed, persecuted, tortured, and killed. As is now the case in Communist Cuba, all of the resulting trouble and confusion was blamed by the Communist government upon the greed of the rich and the imperialistic exploitation of the United States.

In 1954 the 10th conference of pan-American governments assembled in Caracas, Venezuela. This convention declared officially that communism is incompatible with American freedom and that the domination or control of any American state by the internationalist Communist movement would require strong counter measures.

As expected, the delegation representing the Arbenz government of Guatemala strenuously objected to this resolution and recorded the only vote cast against it. Shortly thereafter Arbenz received a big shipment of arms directly from the Communist government of Poland (May 17, 1954). Our then Secretary of State, Mr. John Foster Dulles, declared publicly that these Polish weapons would enable the already heavily armed Communist government of Guatemala "to dominate the Central American area" and "to threaten the Panama Canal" (London Economist, May 29, 1954).

Nevertheless, it soon became evident that the oppressed patriotic people of Guatemala were ready and anxious to risk everything in a desperate effort to free themselves from the Kremlin-directed apparatus that had taken possession of their incomparably beautiful country.

Significantly, on May 19, 1954, Guatemala's next door neighbor, Nicaragua, severed diplomatic relations with the Arbenz government. Alarmed by the signs and portents of revolution that were becoming evident in and around Guatemala, Arbenz appealed to to the United Nations for intervention and protection.

At the U.N. the Kremlin's stooges promptly echoed the hue and cry against "imperialist aggression" that was threatening the "peaceful" government of Guatemala. Fortunately, before the U.N. could act, Guatemalan patriots, led by the distinguished Col. Castillo Armas, penetrated Guatemala from Honduras on June 18, 1954, and began their historic march toward the capital of their country.

From all sides the people of Guatemala rose up to join and support the anti-Communist revolutionary army. The entrenched Communists fought bitterly, but the valor and determination of the patriotic tide was too much for them.

SUCCESSFUL ANTI-COMMUNIST REVOLUTION STAGED IN GUATEMALA

When Arbenz saw that his Red jig was up, he took all the money remaining in the Guatemalan treasury that he could lay his hands on and fled to the protection of Communist Czechoslovakia. In a few weeks Castillo Armas became the new President of Guatemala and thus the first, and to date, the only successful anti-Communist revolution staged anywhere since the end of World War II became history.

In officially acclaiming the success of the Guatemalan revolution, Secretary of State Dulles bitterly castigated the Soviet Government for its sustained attempt to establish the Arbenz government as a Communist foothold in the Western Hemisphere. A few years later the Kremlin got its revenge for this public humiliation. On July 26, 1957, Guatemalan President Castillo Armas, the hero of the anti-Communist revolution, was assassinated by a Communist agent.

But in spite of the death of its revolutionary hero, the anti-Communist determination of Guatemala has remained firm to this day. Because of this determination and because of its distinctive history as the one country on earth to break the chains of Communist tyranny, Guatemala is an indispensable key point in the delineation of strategy for the destruction of Communist control in Cuba.

We, the people of the United States, need to know a great deal more than we do about the freedom-loving people of Guatemala who have suffered terribly from the disease of Communism and want no more of the same.

What about the present government of Guatemala? Is it operating in the militant anti-Communist spirit of Castillo Armas? Is it duly apprehensive about the Kremlin's menacing penetration of Cuba?

I switch you now to the capital city of Guatemala where my daughter, Marilyn Manion, is transcribing an exclusive interview with the President of the Republic of Guatemala. Here is Marilyn Manion.

MARILYN MANION. I am here in Guatemala City with the distinguished President of Guatemala, President Miguel Ydigoras Fuentes. Preisdent Ydigoras has graciously consented to say a few words to the people of the United States, through the radio facilities of the Manion Forum, about the threat of communism in Latin America. Your Excellency, what is your opinion regarding the danger posed to the Americas by the Communist forces in Cuba?

SOVIET BLOC IN CUBA DANGER TO PRESERVATION OF PEACE

President YDIGORAS. The presence of civilian and military forces of the Soviet bloc on the island of Cuba signifies not only an imminent danger to the preservation of peace for the American hemisphere, but also constitutes a flagrant assault on Inter-American solidarity. There is no doubt that the treacherous designs of the Communists go beyond the protection of their satellite in the Caribbean. It is urgent, therefore, to take prophylactic measures to prevent the spread of this terrible disease.

MARILYN MANION. Mr. President, would your government back the necessary measures to reestablish a free government in Cuba—for instance, would you recognize and support a responsible Cuban Government in exile? Would you favor a "pacific" blockade of Cuba to prevent free countries trading with this Communist government?

President YDIGORAS. My government respects the principle of nonintervention in the internal affairs of other nations. But it is no longer a secret that for communism and its Soviet directors this principle has no meaning. There insolence has carried them to the extreme of pentrating our American Continent, where they have taken over control of the destiny of the island of Cuba.

But they are not content with that. They continue to attempt to invade new territories. Panama and Nicaragua, for example. And they wished to do the same in Guatemala. But here we were—and shall be, always—prepared to receive them as they deserve and throw them back into the ocean. Our democracy will know how to defend itself from Communist aggression at any time and under any conditions.

INTERVENTION BY CUBAN COMMUNISTS MUST BE STOPPED

Peru, Uruguay, Venezuela, Argentina, and Brazil, among other countries in South America; Honduras, Nicaragua, Costa Rica, Panama, and recently El Salvador, in Central America, have accused Cuba of trying to intervene in their internal affairs. Nonintervention, then, is respected only by the democracies. Urgent measures must be taken by our side to stop the attempts at intervention of the Cuban Communists.

Perhaps the most adequate and proper would be that an inter-American congress face up to the problem. Or, considering the nature of the problem, charge the Inter-American Defense Board with its solution.

MARILYN MANION. Mr. President, I am sure that the millions who hear this broadcast would appreciate your frank recommendations as to how my country, the United States, could help the people of Guatemala and of other Central American countries to resist the attempt by the Communists to conquer and enslave such free republics as Guatemala. What are your opinions?

President YDIGORAS. The best way in which the United States could help the people of Guatemala and of other countries of Central America would be:

(a) Paying good prices for our raw materials and products, such as coffee, bananas, sugar, meat, citronella, lumber, seafood, and so forth.;

(b) Make available long-term loans to encourage the development of agriculture, light industry, transportation and culture. Our peoples, through their governments, need sufficient funds for the development of programs of social justice, health, better nourishment, sources of employment, social welfare, social security, education, housing, land reform, and so forth.

All this would help our peoples to resolve their most immediate problems, thereby destroying the false and demagogic approach of the Communists, who would offer anything in their attempt to enslave humanity.

We have a great deal of hope in the administrative program of the new President of the United States of North America, Mr. John F. Kennedy. We trust that he will understand us better and comprehend that the responsibility for the struggle against the Communist danger is not ours alone, and that his great Nation must help our developing countries, because the seed of communism flourishes in poverty, whereas democracy prevails when standards of living reach a higher level for our peoples.

We are anti-Communists by conviction, because we know the evil of that doctrine and the effects of the tyranny of the dictatorship of the proletariat. But in order to fight communism we need better means to enable us to extend the advantages of democracy throughout our land.

MARILYN MANION. For the Manion Forum and for all of my fellow citizens of the United States, I wish to thank you sincerely, President Miguel Ydigoras Fuentes, of of Guatemala, for this frank and helpful contribution to the cause of continued freedom for Guatemala and for the U.S.A. I now return you to my father, Dean Manion, in South Bend, Ind., U.S.A.

Dean MANION. Thank you, Marilyn Manion. We are deeply obliged to you, Mr. President Miguel Ydigoras Fuentes, of Guatemala, for this message to the American people. The whole world has reason to be proud of your wonderful country for its spirited and singularly successful resistance to what you have so aptly described as the terrible disease of communism.

You may be sure that this direct message from you will strengthen our resolution strongly to support our Government in its every proper effort to remove this deadly plague from your doorstep and our own, where it now ravishes and despoils the neighboring island of Cuba. Beyond that, rest assured that we will all work and pray to prevent the reappearance of this disease in your own lovely country.

Our hearty congratulations once more upon Guatemala's patriotic deliverance from this scourge of tyranny that now grips more than a third of the world.

From my observations here, Mr. President, I know that the people of the United States are united with your own people of Guatemala in firm determination that this menace to God-given freedom will not be tolerated in this hemisphere.

J.F.K. and Conservation

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1961

Mr. COHELAN. Mr. Speaker, to a very large extent this Nation's basic wealth and progress has stemmed from its natural resources.

The San Francisco Examiner, in a recent editorial, has succinctly expressed the sentiments of many Californians regarding President Kennedy's natural resources message and I believe that it is pertinent to have this sentiment brought to the attention of the Congress:

J.F.K. AND CONSERVATION

The program proposed by President Kennedy for the conservation of national resources embodies a great volume of good news for California, and the entire West. The bulk of the remaining undeveloped resources of the Nation are in the West. The time is short for effective conservation. The President's grasp of the problem is remarkably complete, considering his brief period of responsibility and the sparse opportunities for study and appraisal.

The endorsement of the Point Reyes National Seashore project is particularly pleasing to northern California, where a 30-year fight at last has the scent of victory. With the subdivision bulldozers already moving in, the air of last chance hangs heavily over the project.

The larger wilderness program, preserving the Nation's dwindling resources of wild lands, is the heart of western aspirations to keep the American heritage of scenic and natural beauty intact.

In the fields of air and water pollution, flood control, and desalination, where the Federal Government is already heavily committed, the President's message offers the prospect of even more Federal action.

An especially important prospect that emerges from his brisk rejection of the old Federal policy of "no new starts" in

water conservation is that California may expect with new hope and confidence that the Feather River project will be given additional Federal financial support.

President Kennedy has moved forward swiftly and earnestly and with exceptional vision in all these matters. He is obviously impressed with their urgency. Delay in the fulfillment of his purpose inflates the ultimate costs of conservation, but even more than that it means the loss of opportunities that will never come again. The Congress should act with the same sense of urgency on these matters that the President has displayed in reporting on them.

Coordinated Water Policy

EXTENSION OF REMARKS
OF

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1961

Mr. JOHNSON of California. Mr. Speaker, one of the most vital problems facing my great State of California is the adequate and timely development of our vast water resources. The people of California have voted to bond themselves in the amount of $1,750 million to initiate a statewide water development program.

All elements of our economy including local, State and Federal Government and private enterprise must work closely together in order to achieve our goals. To convey to this Congress the position of our State legislators, I would like to insert herewith two statements on water policy presented to the Governor by the following five State Senators: Hon. Stanley Arnold, Hon. Carl L. Christensen, Hon. George Miller, Jr., Hon. Virgil O'Sullivan, and Hon. Stephen P. Teale:

STATEMENT ON WATER POLICY

California voters have agreed, under proposition No. 1, to bond themselves for a series of water projects. These projects, they were assured, would add up to a balanced statewide plan.

But, the $1.75 billion in bonds is not enough to complete all the works that were promised. The State's consultants have confirmed this. So, this program for the vital future development of California is in trouble.

We face two choices:

1. Either our State water policy is to remain singular and static. We can continue to hold to "go it alone" concepts.

2. Or California, as the fastest growing State in the Nation, can join the New Frontier. We can play a dynamic role in supplementing a Federal water development plan for all the Western States.

This is not a hard choice.

Obviously, we should avail ourselves of the assistance of the Federal Government, as Western States have in the development of water resources throughout this century. This is the right choice. This is the historical choice. The current state of our national economy demands it.

This choice means that the keystone of the State water plan, No. 1 project in proposition No. 1—Oroville Dam—can and must be built. It can be built without delay and it must be built as a true multipurpose project. It should be built as a Federal reclamation project.

We point out there is precedent for Federal-State cooperation in California for the construction of Federal multipurpose projects. Black Butte Dam on Stony Creek and New Hogan Dam on the Calaveras River were initiated with funds advanced by our State and are being constructed by the Federal Government. The San Luis project is on a combined Federal-State basis.

Let Oroville Dam be the first of a new series of needed cooperative Federal-State projects to develop our natural resources.

In addition to Oroville Dam, there are a host of eligible fresh Federal starts. Within the system proposed by the State there are a number of works in which there is high Federal interest. Federal agencies are studying problems in the San Francisco Bay and the delta area. Surveys have been made by government agencies of virtually every stream and water course in California.

STATE FUNDS INADEQUATE

We point out that our State government simply does not have the money, in any available bond fund, tax revenues, or other financial resources, to complete the program promised to the people of California.

Furthermore, our State needs a dynamic program of development. We need an expanded industrial, agricultural, and commercial base to accommodate our exploding population. Without water, our economy faces stagnation.

Right now, California is caught in the throes of a nationwide business recession. Five great areas in our State already have been classified as distressed. Throughout the State more than 5 percent of our working force—1 man out of each 20—cannot find a job. An accelerated construction program for needed water development would help close this employment gap.

HISTORIC PARALLEL

There was a parallel situation in the 1930's, when the State of California, by itself, planned with a $170 million bond issue approved by the voters to undertake a basic water program. But funds were short and the U.S. Bureau of Reclamation constructed the Central Valley project.

To date, more than $1.3 billion of Federal money have been invested in California water development. The State's central valley project bonds are still held in reserve.

BROAD COOPERATION

We believe our State government should cooperate with intensified Federal efforts in the whole field of water and other resources development.

SALINE CONVERSION BREAKTHROUGH

This would include a crash program for a breakthrough in the conversion of saline and brackish waters. Scientists tell us that while such a breakthrough may be 10 or more years away, intensified work would bring that date closer. The timing of this breakthrough could very well have important international significance.

A successful, economic conversion process would mean a source of water supplies for our population which faces the Pacific Ocean, especially to meet the demands for more industrial and domestic water use. Any surpluses that result from present sources could be diverted to the interior areas, particularly for agricultural use.

RESEARCH, WATER DEVELOPMENT, AND NEW SOURCES OF POWER

This kind of water development is tied in with the creation of new sources of power. We commend to Federal interest the research talent available in California in our State and private institutions for the coming breakthrough in the fields of solar and nuclear energy and their application to water development and conservation.

IMPORTANCE OF OROVILLE DAM

Oroville Dam fits precisely the standards for a Federal project. Its construction by the Government would mean reasonable rates for water users, and the low-cost power the dam would produce could be taken by the State, as a preference customer, for use in the remainder of the State system.

The Oroville project, however, should supplement, not replace other Federal projects in California on which advanced planning has gone forward.

WATER CONSERVATION PROJECTS AND THE DELTA

For example, we commend to Federal authorities, the Auburn Dam project on the American River, the Folsom-South Canal project, Nashville and New Melones Dams in the proposed Eastside development, and Bullard's Bar Dam on the Yuba River. We look forward to Federal activity on California's north coastal streams.

These are water conservation projects—and only by building upstream water conservation projects can we provide enough water to maintain the great Sacramento-San Joaquin delta's economy. To rob water from the delta before additional water supplies are added would be an engineering and political mistake of immeasurable consequence.

END THE ARIZONA DISPUTE

A go-it-alone philosophy has for too long been the rule in California water policies. A "good neighbor" water development program must be inaugurated in the West. This means, for instance, an end to disputes that led to costly litigation such as that between California and Arizona. Experience has shown that lawsuits, expensive to the taxpayer, do not develop one additional drop of water. Cooperation will.

THE GOAL: A COORDINATED PROGRAM

We repeat that our immediate goal is the welding of a combined Federal-State water conservation program. We point out that California should join other States in the great western region to accomplish this. We believe that our California plans should be carefully fitted into an integrated program of development for all the West.

The new Democratic administration in Washington has promised to sweep away stand-pat policies of the previous administration. For 8 years a ban has been enforced on the initiation of wealth-producing and job-creating resource projects in the Western United States. This ban will now be lifted.

We therefore call upon the Governor of California and other State officials, as well as our U.S. Senators and Congressmen, to put before the new administration in Washington, a proposal to bring the Federal Government into a coordinated program with California and its neighbor States for full development of our western water resources.

STATEMENT ON WATER POLICY—II

Since our December 22 statement on water policy which called for California to take the lead in proposing a Federal-State coordinated program for full development of our water resources, these events have cast their consequences westward toward Sacramento:

1. A new Chief Executive, committed to strong national purpose, has taken office.

2. In his state of the Union message, President Kennedy pointed out the problem of our dwindling clean water supply, as well as our neglect of saline water conversion—a field where we stated a crash program should become a vital part of any Federal-State cooperation effort in water development.

3. A Presidential task force recommended:

(a) Earliest possible action to authorize Federal flood control projects.

(b) Easier requirements for localities to qualify for flood control, power, and reclamation projects built under Federal authorization.

(c) Development of long-range research programs for conversion of saline and brackish waters.

(d) Establishment of a Council of Resource and Conservation Advisers in the President's Office.

4. The U.S. Senate Select Committee on National Water Resources issued a report urging Federal and State cooperation for the full development of river basins.

5. The House of Representatives Science Committee warned the Nation must start new stepped-up research programs on converting salt water into fresh water. (Previously, we commended "to Federal interest the research talent available in California in our State and private institutions for the coming breakthrough in the fields of solar and nuclear energy and their applications to water development and conservation".)

6. Also, in his state of the Union message, President Kennedy promised a separate message to the Congress outlining a program to increase the development of our natural resources.

7. The U.S. Army Corps of Engineers put an end to stripping trees along the Sacramento-San Joaquin Delta channels and levees.

8. The U.S. Bureau of Reclamation instituted an engineering review of the Sacramento-San Joaquin Delta.

9. Congressional bills to meet the Federal-State commitments for Black Butte Dam and New Hogan Dam are in the hopper.

10. California Senators and Congressmen are busy with additional Federal flood control legislation.

All this has happened on the Federal side.

What signs of cooperation do we see from the State side?

Will the State administration and the Department of Water Resources move in the direction of a Federal-State coordinated water development program?

If a request for Federal assistance can be made in the field of metropolitan transit problems, why not for statewide water development?

FEDERAL ASSISTANCE

Our earlier Statement on Water Policy dealt with the timely opportunity of availing ourselves of the assistance of Federal Government financial and technical resources, the reasons why Oroville Dam—No. 1 project in proposition No. 1—should be built as a multipurpose project on a combined Federal-State basis. It gave proof why upstream water conservation projects for full basic development policy, as antirecession measures, are needed to maintain the industrial and agricultural economy of the upstream and the Sacramento-San Joaquin Delta areas.

Two parallel problems in the field of water conservation deserve special emphasis. They are flood damage and water pollution, both prime areas for Federal-State cooperation.

FLOOD CONTOL

State support of the present flood control system is essential to help protect us until such time as upstream water conservation projects are constructed.

Present flood control measures are merely stopgaps. These measures must be augmented by additional storage dams for flood control and multipurpose dams with full flood control features. State participation in a larger program, promised in proposition No. 1 is essential now.

Nationally known authorities find that flood damage is at its highest level in history, despite the billions of dollars spent throughout the Nation in past years.

The potential is accentuated in California. Our population growth rate is one factor, but we are also vulnerable because our residential and industrial expansion in the State is greatest into the areas subject to flooding.

In 1955, flood waters doomed the lives of 64 Californians. The Feather, the Yuba, the Klamath, and the Eel Rivers, raging out of control caused an estimated $167 million in property damage, not counting the large destruction of fish and wildlife.

To show California is not ahead of the flood menace, let everyone understand that while the Federal Government has spent more than a half billion dollars on going flood control projects in our State, since 1937 property damages from floods have approached the half billion dollar mark.

Though these figures look about even, they aren't. Another flood season like 1955—for which we still remain ill-prepared—would take a cruel and calamitous toll. Therefore, we feel compelled to warn, as sure as human lives are in danger, responsibility for such a calamity must inevitably fall at the feet of policymakers.

WATER POLLUTION

The present water supply of California must not be further polluted.

Immediate steps should be taken to reduce the pollution of the waters of California.

This should take the form of (1) assurance that existing pollution control measures be enforced, (2) establishment of a water quality base line" on a stream-by-stream basis.

In this field our greatest need is in the area of research. An expanded program is required on a nationwide basis.

We do not know, for instance, what the so-called natural quality is of many of our streams and other water sources. Without such a base line, it cannot be told whether or not such sources are being polluted.

The causes and agents of water pollution are multiplying rapidly. New materials for use in the homes have raised new problems of detection and elimination.

On the farm, weed and insect killers of increasing diversity are being used in growing quantities. Expanding irrigation use intensifies the problem of disposal of seepage and drainage waters.

New industrial processes add their quota of pollutants. Meanwhile, far too little is known of the effect on plants, fish and wildlife of new substances in water.

All these developments have prompted a new use for water to compete with the traditional uses for domestic, agricultural, industrial and other purposes. In the future, greater quantities of water are going to have to be used to flush away waste water no longer fit for use, or to dilute it to usable quality.

Where neither process is possible, a host of new techniques are needed to detect and remove impurities.

We believe that the control and regulation of water pollution should remain in State and local hands. But we urge that the U.S. Public Health Service and other Federal agencies take the lead in basic research in the detection and removal of water pollutants.

Careful consideration should be given in the engineering plans for the San Joaquin Valley Drainage Canal, proposed in proposition No. 1, to prevent any further aggravation of water pollution in the Sacramento-San Joaquin Delta.

We see in the problems of flood damage and water pollution a broad new vista for Federal-State cooperation.

Peace Corps Idea Praised

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. REUSS. Mr. Speaker, I place in the RECORD a letter which appeared in the New York Times on March 12. This letter should be of interest to the House in considering President Kennedy's Peace Corps proposal. This is particularly true because the writer, Mr. Kenneth Holland, has a wealth of experience in this field. He has had extensive experience as a participant in work camp activities, and more recently he has made an extensive study of these camps. His studies, "Youth in European Labor Camps" and "Youth in the CCC," have been published by the American Council on Education. Since 1950 Mr. Holland has been president of the Institute of International Education.

I also include an article which appeared in the Christian Science Monitor of March 10, 1961.

The letter and the article follow:

To the EDITOR OF THE NEW YORK TIMES:

The proposal for a Peace Corps made by President Kennedy during his campaign has appealed to the imagination of both young and old Americans. Those who remember the successful Civilian Conservation Corps camps established in the early days of the Roosevelt administration and various other youth service projects conducted at that time by both Governmental and private organizations do not find the President's proposal impractical or visionary.

The idea of providing an opportunity for American youth to serve and to gain experience in real life situations probably grows out of our belief in the constructive effect of frontier experience on previous generations of young American men and women. George Washington, the surveyor, Abraham Lincoln, the rail splitter, and Daniel Boone, the scout and explorer, are all part of our heritage from days when we were extending our frontiers.

As the physical frontier in the United States disappeared, some of our best minds proposed substitute experiences for our youth. In 1912 Willian James in his essay "The Moral Equivalent of War" proposed a type of Peace Corps.

YOUTH SERVICE

He suggested "a conscription of the whole youthful population to form for a certain number of years a part of the army enlisted against nature. No one would remain blind, as the luxurious classes now are blind, to man's relations to the globe he lives on * * * our gilded youths would be drafted off, according to their choice, to get the childishness knocked out of them, and to come back into society with healthier sympathies and more sober ideas." This proposal and others resulted in many projects and experiences with youth services.

Immediately following the First World War a Swiss Quaker, Pierre Ceresole, organized a group of young men, some of whom had fought on opposite sides during the war, to help in the rebuilding of the devastated area of northern France. This voluntary

service for peace spread to other countries.

In 1919 Bulgaria developed a compulsory labor service that required every young man upon reaching the age of 20 to give 8 months to "compulsory community labor." In the period between the two World Wars most governments of Europe developed some kind of a labor service for their young people, and there were also many privately financed projects.

Most of the governmental projects were designed to provide real and satisfying work for the unemployed. Most of the privately sponsored camps were established to give college and university students from many other countries an opportunity to work together improving underdeveloped areas, while becoming acquainted with the peoples, their problems, hopes, and aspirations.

MINING EXPERIENCE

In 1932 I worked in a camp in a depressed coal mining village of Wales, sponsored by the National Union of British Students. This camp was building parks and recreation facilities. We had some 15 different nationalities in the camp.

We slept on straw mattresses on the floor of a school. We had our meals in the rectory of a little Church of England. We started working with pick and shovel at 6 a.m. leveling talus slides and piles of debris from coal mines.

I worked in another camp sponsored by the National Union of Swiss Students at Auserberg in the Swiss Alps. There we constructed a "studentweg," or studentway, from the village of Ausserberg to the village of Luerig. Some of the students in these camps, especially the girls, also did some teaching, directed discussion groups and recreation projects for children.

I also worked in camps during the summer of 1932 administered by the Bruening Government of Republican Germany which brought together unemployed workers, peasants, and students to attempt to overcome the violent antagonisms of Nazis and Communists.

As these few examples indicate, there is a wealth of experience with voluntary services, civilian conservation corps, work camps, and other projects that demonstrates the feasibility of the President's recommendation of a Peace Corps.

Universities and other nongovernmental organizations should be encouraged to utilize corps members in connection with their projects overseas. Agreements with governments that welcome the corps should be developed in writing, setting forth the project's administrative plan.

The Peace Corps is basically a sound idea. If care is used in its planning and administration it will contribute greatly to the practical education of our young people, to better understanding of the motives of the United States and at the same time assist the developing countries of the world.

KENNETH HOLLAND.

NEW YORK, *March 9, 1961.*

PEACE CORPS PITFALLS

(By Josephine Ripley)

If the President's Peace Corps program touches off half as much enthusiasm abroad as here, it is assured of success. But experienced officials who head voluntary agencies operating similar programs abroad warn of pitfalls.

The prospect of giving a more human touch to foreign aid has wide public appeal, to judge by the thousands of expressions of interest and offers of service which have been pouring into the White House.

Yet the very sweep and momentum of this enthusiasm is causing some concern among those experienced in such programs.

"If we don't go too far, too fast, I feel confident the program will be a success," says Representative HENRY S. REUSS, Democrat, of Wisconsin, author of the bill which started the ball rolling about a year ago.

"You have to do it right or not at all," warns Warren E. Schmidt, who heads the international youth farm exchange program for the national 4-H Club. "It is a wonderful thing if it is handled properly. But you have to go about it cautiously."

Another expert in this field of work, J. F. Noffsinger, executive director of the International Voluntary Service, also cautions against "starting too large." The important thing is not to "go, go, go, as many Americans are prone to do; it is how you go that counts."

There is every indication that the administration plans to go about it just that way. Officials welcome the public enthusiasm; they need it to put the program on the road, to get the best possible candidates for the job, to win public and congressional support.

They also need to know that these teams of young people—teachers, public health workers, farmhands, and sanitation experts—will be welcomed. No team will budge a foot except on invitation of the recipient government.

The prospect of such a program has its critics abroad among the anti-American elements who are suggesting that the project is a method of spy infiltration.

This sort of charge is to be expected and will be recognized for what it is. But it does give warning that Peace Corps members must be prepared to combat this type of reception.

Their orientation training will prepare them for this. Social workers in this country often have to overcome similar hostility among those who resent their benefactors. It is not an uncommon attitude, and indeed the problem of breaking it down is part of the very job itself.

Recognition of this and other problems that a youth corps might encounter in putting technical assistance on a personal level has already prompted a number of decisions. One of these is that the youth corps should be made up of college graduates.

Another is the plan to feel the way along by means of a pilot program. Moreover, the pilot group will be one primarily made up of teachers. This is an area of greatest need of many of the newly developing countries.

Much fieldwork has already been done in this area by organizations such as those previously mentioned who have been sending Peace Corps teams abroad for many years. The administration is working closely with the heads of these organizations, and in fact will carry out some of its projects through them.

This will be done by means of Peace Corps grants to these groups of the expansion of programs already in operation. Some colleges and universities, fired by the idea of Peace Corps service, have developed their own programs.

Experience indicates the importance of having a program extend over a period of time. Two years, in general, is considered the minimum for good results. Some may go over into a 3-year term of service.

Those who have worked in the field put great emphasis on the desirability of heading up each team with a mature leader. They have found that his leadership is important to the morale and good work of the group.

The American Friends Service Committee trains its workers for both domestic and oversea assignments. Most of those sent abroad have had experience in at least one project in this country.

Some 10 or 12 countries, according to Sargent Shriver, head of the corps, have already expressed interest in the project. They were not named specifically but described as in Asia, Africa, and Latin America.

The program adds a new, human dimension to American foreign policy, a kind of grassroots approach seen as one of the most wholesome and encouraging developments of the day.

Resolutions by the Dodge County Constitutional Conservatives

EXTENSION OF REMARKS

OF

HON. RALPH F. BEERMANN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1961

Mr. BEERMANN. Mr. Speaker, because of a widespread belief in sound, conservative government within my native State of Nebraska, there is a current move there to organize persons of this belief in units.

One of these units has been formed in Dodge County, Nebr., with Mr. Robert C. Lambourn as chairman. Mr. Lambourn's group considers questions of national importance. Just recently, one question concerned the House Committee on Un-American Activities. After considerable discussion, the Dodge County Constitutional Conservatives adopted the following resolutions which I include in the CONGRESSIONAL RECORD:

Whereas the filmstrip "Communism on the Map" shows how serious errors in U.S. foreign policy have contributed to the spread of communism and shows further how some leading U.S. publications have contributed to these disasters by articles they have printed; and

Whereas the U.S. Department of Defense has ordered that this filmstrip not be shown by the Department of Defense to public gatherings; and

Whereas members of the Dodge County Constitutional Conservatives have seen the filmstrip "Communism on the Map" and from information available to the members have observed nothing untrue or unfair in it, and believe that the only thing controversial about the filmstrip is that it presents the truth and the truth is embarrassing to certain individuals and organizations; and

Whereas the best way to avoid future mistakes in our fight against communism is for the public to be fully informed as to past errors; and

Whereas it is contrary to American principles and would be disastrous in our fight against communism to hide from the public errors committed by Government officials: Therefore be it

Resolved by the Dodge County Constitutional Conservatives—

1. That the Dodge County Constitutional Conservatives urges the Department of Defense to withdraw its order against showing of the filmstrip "Communism on the Map"; and

2. That the Department of Defense be urged instead to encourage the showing of the filmstrip "Communism on the Map" wherever possible; and

3. That a copy of this resolution be sent to Robert McNamara, Secretary of Defense.

Adopted March 5, 1961, at Fremont, Nebr.

DODGE COUNTY CONSTITUTIONAL CONSERVATIVES,

By ROBERT C. LAMBOURN, *Chairman,*

DORIS MARKLAND, *Secretary.*

Whereas the House Un-American Activities Committee has been attacked by some organizations and individuals as having engaged in unfair tactics and an effort has been made to abolish this Committee; and

Whereas from information available to members of the Dodge County Constitutional Conservatives it appears that the vague charges against the Committee have been unsubstantiated; and

Whereas from information available to members of the Dodge County Constitutional Conservatives it appears the House Un-American Activities Committee has done an excellent job of leading in the fight against Communist subversion and deserves the confidence and support of all citizens: Therefore be it

Resolved by the Dodge County Constitutional Conservatives—

1. That the Dodge County Constitutional Conservatives organization expresses its utmost confidence in and support of the House Un-American Activities Committee and urges that other Nebraska organizations pass similar resolutions; and

2. That a copy of this resolution be sent to the legislature of the State of Nebraska and that the legislature is hereby urged to pass a resolution expressing support of the House Un-American Activities Committee; and

3. That copies of this resolution be sent to the Nebraska Constitutional Conservatives and the Americans for Constitutional Action, urging their enactment of similar resolutions.

Adopted March 5, 1961, at Fremont, Nebr.

DODGE COUNTY CONSTITUTIONAL CONSERVATIVES,
By ROBERT C. LAMBOURN, *Chairman.*
DORIS MARKLAND, *Secretary.*

Plight of the Captive Nations

SPEECH
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. MARTIN of Massachusetts. Mr. Speaker, it is appropriate that the U.S. House of Representatives should devote this time to recognition of the plight of the oppressed peoples of the so-called captive nations. These are the little countries which have lost their independence and liberty through the forcible seizure of their governments by international communism. These unfortunate and tragic people are kept in subjection by ruthless military power—the gun and the tank. No thoughtful person can doubt that if these little nations had a choice, if their Communist rulers would permit a plebicite in which they could vote as free men and women for a government of their own, they would throw off the rule of their oppressors in overwhelming numbers.

The real importance of this observance is the message which will be carried back beyond the Iron Curtain to these people who exist under the yoke of Communist slavery that the Congress of the United States, the leader of the free world, continues to recognize their tragic situation and is ever mindful of their desire for freedom and independence. This may reassure them that the people of this Nation and of the free world have the deepest sympathy for their aspirations and that there is among us a unity of hope and determination that they will eventually regain their freedom.

Government whose power is derived from the sword and the secret police rests upon a thin reed indeed. Such governments cannot endure indefinitely. It is the universal desire of mankind to be free. Hope for the deliverance of these nations has a solid basis in the conviction that while they have captive governments they are not really captive peoples, as long as the torch of liberty still burns in their souls.

May God speed the day of their liberation.

Children Have Sense

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. WESTLAND. Mr. Speaker, the International Peace Arch at Blaine, Wash., has existed since its dedication in 1921 without fences and without guards, both in the area administered by the State of Washington and the Province of British Columbia. Now, the Bureau of Public Roads is requiring that fences be constructed along the proposed interstate highway that will terminate at the United States-Canadian border in the middle of the park.

Hundreds of my constituents, including more than 500 schoolchildren, have written to me or have signed petitions protesting these fences. Among these letters are about 100 from grade school pupils at Blaine. Their arguments, it appears to me, are better than the arguments presented by bureaucrats in the Federal Government.

A number of letters pointed out that more than 660,000 person visited the park last year. Other letters document the fact that there has never been an automobile accident nor a person injured in the park during its 40-year existence.

The fifth and sixth graders who wrote me also pointed out that in 1929 the children in the Blaine Elementary School contributed pennies and nickels toward making the park what it is today. They say the park belongs to the children of America and Canada as much as anyone else. Therefore, they should have as much say about building a fence as the Bureau of Public Roads or others.

Mr. Speaker, I agree that these children should be heard and further agree with their statements that it is silly to fence off the highway on the American side when there will be no fences on the Canadian side. It appears that the children of Blaine have more sense than the Bureau of Public Roads.

Youth to the Rescue

EXTENSION OF REMARKS
OF
HON. HENRY C. SCHADEBERG
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. SCHADEBERG. Mr. Speaker, I commend the following editorial from the Jamesville (Wis.) Gazette of March 7, 1961, to the membership of this House. The idealistic reasons which have inspired such a tremendous interest and response to the proposed Peace Corps impose a tremendous responsibility upon its administrators and directors to screen out potential "ugly Americans" or misfits.

YOUTH TO THE RESCUE

If misgivings come to mind in connection with the administration's plans for a worldwide Peace Corps, good reasons for them can be cited. Over the years efforts to build improved relations with foreign nations have been less than a success, even with the expenditure of billions in foreign aid, missionary work under the point 4 program and gifts of food and supplies.

The poor results up to now might be advanced as an argument for a new approach. But certainly the assignment of inexperienced youth to problems which have stumped the experts will raise doubts in the minds of many citizens. If the fresh young viewpoint is to prevail and have a chance of success, it would seemingly be necessary to cut it loose from the supervision of systems and individuals which have a record of substantial failure.

But the activities of a youthful Peace Corps unrestrained by a background of policy and experience certainly contains some elements of dangerous international complications.

One of the questions which seem to have been overlooked completely in the Peace Corps enthusiasm is the effect of such service upon young Americans. It is assumed, of course, that the young people will patriotically carry the American message to foreign populations, and wage a counterpropaganda war against the Communists. With the awareness of the frequent gullibility of youth and the known cunning of the Communist masters of propaganda, we ought at least give thought to the possibility that our boys and girls might be outgeneraled, or worse yet, made tools of the opposition.

These doubts, of course, are not the only ones which are bound to arise in the minds of some citizens. The word that a Peace Corps may be utilized not only overseas, but also on the home scene, provides one of them. While the system is touted as a high-minded adventure in improved foreign relations (and domestic improvement too) it certainly holds the seeds of a mass Democratic political organization aimed at the youthful sector of the population. The employment of thousands as Peace Corpsmen, both here and abroad, could make some of the old-fashioned patronage systems look—well, old-fashioned.

If young men and women can succeed where others have failed, steering populations in various parts of the world away from communism and toward close relations with the United States, they should be encouraged to do so. But there are various existing youth programs aimed at this very purpose, and which could be expanded with suitable encouragement. From the Washington viewpoint, of course, this would be

a disadvantage because they would not be added to the public payroll, or beholden for their appointments to Federal bureaucracy.

Sell

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I wish to include an editorial by J. Worth Bernard, editor and publisher of the Orange County News. This editorial is very timely as it is written to stimulate business and sales activity in southern California. All industrial indices are higher today than they were 1 year ago in my congressional district. This includes employment, construction of new homes, and retail sales. By positive thinking, instead of gloom and doom, America can move forward:

SELL

Now is the time for salesmen to sell.

Now is the time for salesmen to prove that they are more than order takers, that they are really salesmen.

Now is the time for company sales and advertising programs to be stepped up.

Careful study of economic conditions shows that production has outrun sales, but has not exceeded the capacity of consumers to buy.

No product is ever finished until it is sold to the final user. Goods may be sold (?) by factory to distributor or dealer, but the production-distribution jobmaking process is not complete until the items have moved into the hands, homes, garages, stomach or onto the backs of the ultimate consumers.

Boiled down to their essence, the actual facts of the present "economic transition" prove that nothing is wrong except that consumers (including corporations) have been saving more money and buying less of durable goods.

The saving-more, buying-less action of consumers (you and me and our friends and neighbors across the country) has clogged the production-and-sales pipelines of certain important items across the Nation and thrown millions of Americans out of work.

Here's why we say "Now is the time for salesmen to sell"—

If all salesmen will get out and sell their own products to the millions of their fellow Americans who are at work and saving more, buying less—the production distribution process will be complete and millions of unemployed can be returned to work. Then everyone will have more money and the salesmen will have an even greater market.

Here are the facts on the year 1960:

The total value of all goods and services produced (gross national products) reached a new alltime high at more than $500 billion.

Personal income topped all previous years at more than $400 billion.

Disposable income (income after taxes) exceeded all former peaks at more than $350 billion.

Retail sales reached a higher total than in 1959; $215 billion in 1959 and over $220 billion in 1960.

More American civilians were at work in active jobs than ever before in history—a total of 67½ million (6¼ million of them in California).

Construction put in place topped $55 billion.

Installment loans were being paid off faster than new loans were being taken out.

The amount of money spent on soft goods, travel, recreation, and education topped all previous records.

The sale of so-called durable goods, including homes, furnishings, appliances, autos, and new plant construction and equipment dropped off from previous peaks.

Personal savings reached a new alltime high.

There were more unemployed by year-end than at any time in recent years.

What does it all add up to?

More sales are possible.

The money is in the hands and pockets of consumers. Better selling will help the employed to enjoy life more and will help put the unemployed back to work.

If you are an auto salesman are you sitting in the showroom idly twidling your thumbs, bemoaning the fact that so many are unemployed, while waiting for customers to walk in to take a new car away from you, or are you investing every available minute phoning owners of your make of car, inviting them to come in for real service at your shop and meet you; then, when the come in, are you showing them the new cars (or better used cars) and offering a good trade-in deal?

If you are selling new homes are you siting on your haunches greeting home shoppers with a smile as they walk into your model home inviting them to "look through," shaking hands as they leave and inviting them to "come back anytime," or are you taking them through pointing out the features of your home—its construction, low down payment, possibility of tradein, good location, fine climate, proximity of schools and shopping, advantages of suburban living, etc., getting their names and addresses as they leave, following up the next day or so with a reminder that you are offering a good value?

If you are selling furniture or appliances or carpets are you "gassing" all day with your fellow salesmen about "how bad times are," or are you busy phoning families who are building new homes, buying in subdivisions near you or now moving in, offering to to show them what you have that will make their new homes complete and comfortable, inviting them to come in and get acquainted, or, better yet, making a date to visit them "after hours"? (You or your sales manager or your "boss" can get the names and addresses.) Are you working or just waiting?

If you are the owner of a small production plant are you becoming a nervous wreck as you review your reduced income and steady "outgo" for payroll, rent, and payments while waiting for the phone to ring with new orders, or are you leaving the "phone answering" to someone else while you use this rare opportunity to get out and meet your customers, learn their problems and show them how you can help them? (This is the time, because they are probably not too busy to visit with you now.)

If you are a sales manager are you laying off salesmen and trimming expense accounts, or are you fighting for budget, spending more time with your salesmen and customers, helping to perfect new products and services?

If you are an advertising manager, are you cutting the budget as sales drop off, or are you fighting for a budget based on a higher percentage of present sales to finance a hard-hitting, smart-sell advertising campaign that will bring your company more than its share of the so-called reduced market to build sales back up to where your advertising budget will become a smaller percentage of sales?

Let us all realize that the facts show that the market is here, that in most lines of business we can speed fully prosperity by selling but we are going through the post-war adjustment which brings us to a new, longtime period in which competitive conditions will bring success only to those companies that keep ahead with new products and services, reasonable prices, smart advertising and real selling.

Salesmen must realize that selling is the best paying hard work, the poorest paying easy work in the world.

Papa Knows Best

EXTENSION OF REMARKS
OF
HON. PAUL FINDLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. FINDLEY. Mr. Speaker, Mr. Carroll P. Streeter, editor of the Farm Journal, is the author of this cogent analysis of the administration feed grain bill, H.R. 4510. It presents clearly the danger and weakness in this bill, and deserves the thoughtful consideration of all Americans.

The article follows:

PAPA KNOWS BEST

The feed grains bill may be law or it may be dead by the time you read this, but it is very much worth your attention anyway. For it puts in clear view for all to see just what the farm philosophy and program of the Kennedy administration really is. It tells you what you can expect from here on.

On this page last month we said we were in favor of the land-retirement purpose of the bill. But now that the whole plan has been unrolled we oppose it (whether it's dead or alive) with all the vigor we can summon. Urgent as the feed grains problem is we might better solve it right than make another major mistake. Here are some of the things wrong with the administration's plan:

1. The office of the Secretary of Agriculture would become the feed grain market of the United States. One man, the Secretary, would determine what the cash grain farmers would get for their crop, and what the livestock, dairy and poultry farmers who buy feed would pay. The plan puts no ceiling on the prices the Secretary could set. It allows him to take grain out of Government bins and sell it as much as 17 percent below support levels. That's a great deal too much power to give any one man. A very great deal too much.

2. The program gives the Secretary a whip to use on reluctant farmers. You don't have to join his program, but if you don't he can make it cost you—up to 17 percent of the support price. He has a persuader to make you crawl into the Government tent—unless you want to pay. How typical this is of the big Government crowd, the planners, and how revealing of their philosophy. "Papa knows best," and can remind you of it if necessary.

3. Wheat can be a feed grain, a big one, but wheat is ignored in the bill. We can't do anything about the wheat now in the ground but we could provide for what we're going to do when seeding time comes around again.

If there's anything we should have learned after 20 years or more of sad experience it's this: You can't legislate soundly for just one segment of farming at a time. Anytime we try it we only rotate the problem to another segment and wind up with a worse muddle than before. Yet here we are trying it once more.

4. The bill makes no provision for retiring whole farms, which in some instances is best for all concerned.

5. The bill introduces the Brannan plan by the back door. Farmers who comply would get the support price but the Government could sell the grain at 17 percent less—a direct payment without name.

6. Fruit and vegetable growers would get new competition—you could put the idled feed-grain land into fruit or vegetables if you want to forgo a Government payment.

7. Soybean farmers are about to see their markets hurt by an increase (that they don't want) in their support price from $1.85 to $2.30. The bean farmers have been doing fine. They've increased production of beans from 180 million bushels at the close of World War II to 550 million in 1960. They've taken 12 million acres a year out of other crops. They've exported a fourth of their beans—for dollars. In short, they've been a problem to nobody, and everybody's happy.

So what happens? Without consulting the bean farmers the planners up the price support by 45 cents. Why? Because they first decided it would be good to raise corn supports to $1.20. When one went up the other had to for we already have too much corn and too few beans.

Actually we need about 2½ million more acres of beans but we were going to get them anyway with prices the way they are. What's likely to happen now is that we could wind up with about as much corn as ever and one more surplus crop—beans.

Isn't it wonderful when the planners get going?

Preserving Our Wilderness

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1961

Mr. COHELAN. Mr. Speaker, in both the 86th and the 87th Congresses I have sponsored legislation which would establish a national wilderness preservation system. With our rapidly growing and expanding population I believe that it is important to preserve a portion of our wilderness heritage for both present and future generations of Americans.

A recent editorial in the Washington Post has urged prompt enactment of a wilderness bill. I commend this article to my colleagues:

Each year more people, more houses, and more industry encroach on the remaining open land in the United States. Only diligent conservation will preserve for future generations the wilderness areas which were the mark of frontier America and which are an important part of the Nation's patrimony. Once again Congress has a chance, at very little cost to the taxpayer, to secure this heritage of forest, river, and wildlife by a speedy enactment of the national wilderness protection bill now reintroduced by Senator ANDERSON.

As Mr. ANDERSON noted in presenting the measure, it has been 5 years since the first wilderness bill was introduced by Senator HUMPHREY; through two Congresses and four printed volumes of testimony the Committee on Interior and Insular Affairs has considered such a bill. "Objections, eliminations * * * and the inclusion of various special provisions." There should be no responsible opposition to the Senator's new bill.

The measure is not a sweeping change. It envisages no reorganization of present land agencies; no new bureaus would be created. It merely sets aside certain wilderness areas, unspoiled by manmade changes, in perpetuity. There are ample safeguards for cattle grazing and industrial interests and provision for periodic review of the wilderness tracts.

Indeed, all the lands that could be dedicated to wilderness use and protection are already within established national forests, parks, or refuges. They make up only 5 percent of the Federal lands. This bill is, in reality, only the beginning of what is needed for the future, but it is the necessary first step. Unless lawmakers act soon much of the opportunity for preservation of these natural havens and retreats will be forever lost.

Stringent Farm Controls or What?

EXTENSION OF REMARKS
OF
HON. CLARK MacGREGOR
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. MACGREGOR. Mr. Speaker, the Minneapolis Star serves the upper Midwest, and particularly the people of my district. It make a great contribution to the understanding of farm problems. Before the feed-grains legislation receives final consideration by the Congress, I should like my colleagues to have the opportunity to read the following excellent article taken from the editorial page of the Minneapolis Star of March 8, 1961:

STRINGENT FARM CONTROLS OR WHAT?—NONE OF THE ALTERNATIVES IS COSTLESS OR EASY, AND NONE BY ITSELF OFFERS A READY SOLUTION

(By Dale E. Hathaway)

The present problem of commercial agriculture is not that of temporary surpluses in one or two commodities, which, if removed, would solve the price and income problem. If this were the situation, stringent Government controls on one or two crops would be the most effective solution.

The problem, however, is one of too many total resources in agriculture to allow good earnings, not just too much wheat and corn. We have been chasing resources from one crop to another via acreage allotments long enough. It is now time to look at the total problem and do something about it.

There are several alternatives to stringent controls as a solution to the over capacity currently existing in agriculture. Some alternatives deal with the problem and others merely tidy up the symptoms of the problem enough to make them bearable—at least for a time.

Many of the alternatives would appear preferable to what we have now, and to most farmers would be preferable to really effective direct Government controls. Furthermore, the alternative may be appealing to urban Congressmen who must be getting tired of spending $3 or $4 billion per year to help farmers only to find out that situation is worse than before.

What are the alternatives to stringent controls? One is to continue the present program. This seems unlikely. Despite the current slackness in our economy, our major problem is to find enough resources to meet our defense and foreign policy commitments without reducing our standard of living. The current farm program uses resources to produce farm products that have very low value both at home and abroad. We are using valuable manpower, and machinery, gasoline, and chemicals to produce crops; more manpower to buy them, and manpower, steel, and concrete to store them.

The argument that, as long as we have urban workers unemployed, it's all right to use resources to produce surplus farm products, doesn't impress me. Most Americans would prefer to see schools, churches, homes, roads, and defense items produced if the Government has to pay someone to use excess resources.

A second popular alternative to stringent controls is an expansion of demand, at home and abroad, sufficient to insure satisfactory earnings for all of the present resources in agriculture. Great hope for such a program is fondly held by the operators of smalltown businesses who sell feed, seed, machinery, and supplies to farmers, and who understandably take a dim view of production reducing schemes which will shrink their sales appreciably—even if farmers' incomes thereby could be maintained.

Such hopes also are held by the operators of big businesses who produce steel and other supplies and who buy, sell, store, or process farm products and thus have a stake in continued high farm outputs.

The recently announced expanded domestic distribution program and food stamp plan are useful examples of this alternative. These are useful because we have excessive resources trapped in agriculture, and it is desirable to use as many of these resources as possible to improve the well-being of deserving persons.

But, as a recent study at the University of Minnesota pointed out, even if all American consumers had an adequate diet, domestic demand would fall far short of absorbing all of the current excessive capacity in agriculture.

Expanded use of our farm surpluses abroad is even more appealing, for the needs are obvious, and we may be saving our hides in the process. However, even here, there are practical limits to such disposals, and many acute observers believe we have reached, or in some cases, exceeded, these limits. Many agree that the food for peace program can be more helpful and every effort should be made to develop and implement it wisely. This may mean that we have to set it up and operate it through the United Nations. If not, we may create more international problems than we solve.

A third alternative which would make the symptoms more bearable is the use of direct Government payments to farmers to provide income protection while market prices are allowed to seek their levels. This is a program dear to the hearts of many economists, but apparently to few others. Direct payments would encourage consumption, allow market prices to influence resource allocations in agriculture, and end Government stock accumulations.

However, a recent study shows that direct payments sufficient to maintain farm income at present levels would cost the taxpayers about $5 billion annually. Since this would be in addition to some other program expense, it appears unlikely that nonfarm people would allow such a program to operate for very long.

For the remaining alternatives, we turn from programs which may make the symptoms bearable to programs which attack the basic problem of excessive resources in

agriculture. The solution requires temporarily reducing resources in agriculture and preventing future excessive resource commitments. Direct Government controls is one such program. Other favorites are free prices, land retirement, and voluntary farmer bargaining groups.

Free prices are especially appealing to those not subject to their income-reducing effects, and to those who mistakenly assume that the adjustments would be quick and easy and rewarding for all concerned.

Moreover, they must assume that free prices can maintain stability and satisfactory earnings in agriculture.

Increasingly, the evidence suggests that free prices in agriculture would result in serious price declines, that the adjustment period would be an extended one, and the results might not achieve the desired goals.

Land retirement, or the soil bank, is another method for removing some of the resources from agriculture. Of course, land is only one element in producing farm products, and a great deal of it must be taken out to achieve a given cut in production. Sometimes an effective land retirement program will induce the retirement of other inputs, including farm operators. This is good, for there is too much labor in agriculture as well as too much land.

I recognize the serious community problems of concentrated land retirement programs, yet the realities must be faced that certain areas are marginal for some kinds of farming. A good land program would alter and improve land use—not just remove it completely from use.

It has been estimated that a land retirement program sufficient to end surplus stock accumulation and maintain farm incomes at present levels would require the retirement of 15 to 25 percent of our present cropland, the exact amount depending on the location of the land retired. To end wheat surpluses, it would have to be concentrated in the Great Plains, with severe impact on communities as a consequence.

Land retirement would not be an inexpensive program. Initially the cost might be $2 billion annually and costs would rise rather than decline over time. Even so, this probably is less than our present program will cost under the same conditions.

Land retirement programs have many merits, although in recent years they have not been used effectively. I think they are a program accepted by farmers. Actually, much of the protest over the whole-farm soil bank has been from the nonfarm areas affected, not from the farm people. However, the nonfarm economy, too, must decide sooner or later whether it really wants to reduce the excessive resources in agriculture, or whether it merely wishes to talk about it.

Every program we have discussed thus far fails to deal directly with the most important resource in American agriculture—its people. There still are too many people in agriculture, just as there still is too much land currently under cultivation. None of the programs that we have now or that have been discussed deal positively with reducing the excess labor in agriculture.

Direct Government controls would force people out of agriculture, "free" and low farm prices would force people out of agriculture, and land retirement would encourage people to quit farming. But nothing is proposed that would really help, in a positive way, those people who want to leave agriculture for other occupations. The excess of human resources in agriculture is the really important national waste in our present farm program.

The alternatives to direct and stringent Government controls for agriculture are neither costless nor easy. All of the alternatives I have discussed should be used to achieve the best possible solution. None, by itself, offers a ready solution, yet the proper combination could improve farm incomes, reduce public expenditures, and move toward more permanent solutions.

I do not envy those who will have the responsibility for these programs, for the criticisms will be great and the compliments few. Even so, the national gain will be great from any permanent improvement in our major farm problem.

Aid to Education or Dixie Dole?

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. DERWINSKI. Mr. Speaker, some newspaper columnists attempt to mold public opinion by means of their nationwide syndicated columns. I have always felt that nothing is equal to the native wisdom of a homegrown product. I respectfully include the March 8 Chicago American column by Jack Mabley in the hopes that it will receive the attention of the Members of the House:

JACK: IS IT AID TO EDUCATION OR DIXIE DOLE?
(By Jack Mabley)

There's nothing complicated about Federal aid to education if you understand one fact.

Every dollar in taxes has to come from our pocketbooks, no matter who extracts it—the mosquito control district or the Government of the United States.

Walter Lippmann, a senior thinker in the Washington press, says of Federal aid to public schools:

"Those who oppose the program in principle have almost certainly not understood the problem."

He sounds like a petulant professor lecturing a class of not too bright freshmen. "If you do not agree with me, you simply do not understand what it's all about."

Lippmann says giving Federal money to public schools does not mean Federal control of education will follow. The Kennedy administration insists States will retain control.

Fine. Now does anyone believe that once this aid is started, it will ever end, that it will not be renewed in 4 years.

What about the administration that succeeds Kennedy? Or the administration 20 years from now? Sooner or later a government handing out billions for education is going to want a say in how it's used. Like on an approved curriculum.

Lippmann and backers of the plan say some States can afford to educate their young properly but some do not have adequate resources.

This means nothing else, then, but the Federal Government will extract money from the taxpayers of Illinois and will give part of it to the taxpayers of Mississippi for their schools.

I don't like the way they run the school system in Mississippi, but the Federal Government still is asking that I help support it, at the expense of my own schools.

Again, no matter how you slice it, every tax dollar has to come from your pocket or mine. If we pay our dollar locally, thru the real estate tax, it goes almost wholly to the schools.

But the Federal Government wants to help us with that dollar, extract it from us, take out a handling charge, skim off a little more for Mississippi, and give us back the rest—about 66 cents for every dollar we send to Washington.

Tipoff for this plan is found in Lippmann quoting Beardsley Ruml that "State and local taxes are encountering stiffer resistance."

This is true. At the State and local level, we know what we're paying. Voters in my town last week turned down an $800,000 bond issue for parks which would have raised taxes slightly.

It's hard to hide taxes at this level. There is resistance.

The Federal aid to education plan makes nice reading down in Louisiana and Mississippi.

To an Illinoisan or a Californian, it means they are taking our school money, charging us for taking it, using part of it to support school systems which are run in a way many of us vigorously oppose, and are giving the remainder of the money back to us.

Mr. Lippmann, I guess I just don't understand the problem.

Good Housing Plan With Dubious Gimmick

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star, under date of March 11. This very stimulating, perhaps it would be better to say provocative, editorial calls attention to some points about the President's housing program that deserve thorough scrutiny. I respectfully call the editorial to the attention of all of my colleagues, especially those who will have the opportunity in committee to study the points raised by the editorial:

GOOD HOUSING PLAN WITH DUBIOUS GIMMICK

The major proposal of President Kennedy's housing program would step up urban renewal grants to more than 600 million dollars a year, virtually double the present spending rate. The purpose is to encourage replacement of blighted city areas with new construction. This is the feature of the program of special interest to American cities and to their lower income populations. The proposed increase in spending might be opposed for budgetary reasons but the purpose is good.

The strangest part of the program is the proposal that would experiment with 40-year FHA mortgages on small homes with no down payment. It appears to assume that people of lower incomes should necessarily buy new homes instead of renting or buying older homes.

In spite of the political pressures, so far, the FHA has managed to operate successfully on business principles. This nothing down lending plan is at least a move in the direction of using the FHA for welfare purposes. And it isn't necessary.

Of course the soundness of FHA loans depends on more than downpayments and the number of years to pay. Even now many loans on small houses are made with down payments as low as $500. The chief protec-

tion for the loans is in rules which require the borrower to show his financial ability to keep up the payments. The future character of the FHA will depend on its overall policies. If the 40-year loan plan indicates a general relaxation, the FHA could soon lose its business character.

There is nothing in the national record to show the need for a radical departure from business principles in home purchases. This country has been building more than a million homes a year for 12 successive years, a fantastic record. In the history of American home construction, there is nothing remotely comparable to this 12-year record.

There is some slackening in the current market which may cause a reduction in building this year. One reason for it is the past unprecedented construction that has been catching up with demand. Another is the cautious attitude brought on by the recession. The easy-money proposals might stimulate some additional buying but they are superficial palliatives that could have little effect on the causes of reduced demand.

The President's urban renewal proposal should offer a more direct benefit to people of lower than average incomes. Building of apartments under urban renewal offers good places to live without the necessity of taking on a lifetime mortgage. And urban renewal is having a profound effect on the future of American cities. By this means the cities are battling the old disease of slums. Congress could carry out the main and good purposes of the Kennedy program without getting involved in any easy mortgage gimmicks.

Feed-Grains Program Will Aid Taxpayers

SPEECH
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 4510) to provide a special program for feed grains for 1961.

Mr. MAGNUSON. Mr. Chairman, I supported H.R. 4510, a measure designed to introduce a 1-year program of emergency legislation in the feed-grains area. At present the Government has $4,255 millions invested in feed grains, which each year cost the Government millions in tax dollars, and to which, each year, additional surpluses are being added. By the program proposed in H.R. 4510, it is hoped that the taxpayer will be saved $500 million during the next year.

The present bill is intended to alleviate the conditions of oversupply and low prices which have added additional burdens to one of the most troubled and unstable segments of our domestic economy. It is hoped that this will produce an amelioration of market conditions by allowing the Secretary of Agriculture to dispose of quantities of feed grains now held by the Commodity Credit Corporation, at any price not less than 17 percent below the 1961 support price for such grains. Further, it is hoped that through the expedient of acreage retirement—with the marketing of grains presently in storage—our surpluses will be depleted, thus reducing the public tax burden. This measure should present greater security to the feed-grain producers, reduce surpluses with a concomitant reduction in storage costs, and stimulate rural buying power.

The allotments allowed for acreage retirement are to be calculated on a basis of 60 percent of normal annual production. This, however, does not prevent the producer from marketing increased production per acre over the normal yield. Thus there would be no deterrent to the producer's incentive to increase the efficiency of his operation through the use of improved farming practices, fertilization and irrigation. Any bill which would tend, however inadvertently, to decrease the producer's incentive to agricultural efficiency, in the name of preventing surpluses, could only result in a form of agricultural featherbedding, would have a generally deleterious effect upon the agricultural industry, and ultimately would result in higher prices to the consumer.

The incentives offered in section 3 appear as a vital portion of this program. It would be unthinkable to expect certain producers to submit voluntarily to a land-retirement program with production cutbacks, from which noncompliers would be free to benefit. The bill cannot be expected to work unless there is a high percentage of compliance.

To be sure, we must make every effort to reduce our agricultural surpluses, most logically, perhaps, through a program of food for the hungry peoples of the world—as the administration has assured us will be done—of course, without injuring other nations whose production surpluses are in the same areas.

H.R. 4510 is not to be considered a final solution to the feed-grain problem, but rather as emergency legislation for a 1-year period. The Secretary of Agriculture can work out a more comprehensive program after further study.

A Solution for "Soapy"

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. DERWINSKI. Mr. Speaker, the following comment from the March 7 issue of the Chicago American should be especially interesting to the officials of the State Department and USIA who are attempting to upgrade the language requirements of our oversea personnel:

A SOLUTION FOR "SOAPY"

We're relieved to see that "Soapy" Williams, now touring Africa as Under Secretary of State for African Affairs, has been learning Lingala. This is a Congolese native dialect, and "Soapy" has been doing better with it than he did with English; at least, he hasn't set off any new international crises recently, and the Congolese seem to get a kick out of his accent.

Maybe "Soapy" had better stick to Lingala. He might pull some more diplomatic boners like his famous "Africa for the Africans" statement, but at least he'd be able to claim he was misquoted.

Hope Increases for Cape Cod National Seashore Park

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1961

Mr. BOLAND. Mr. Speaker, as one who, back in the 85th Congress, introduced one of the first bills to authorize a national seashore park on Cape Cod, I wish to express my gratitude to my colleagues in this 87th Congress, and particularly to the members of the House Committee on Interior and Insular Affairs, for the sense of urgency as well as the earnestness with which they are considering this nationally important conservation measure.

The National Parks Subcommittee last week held hearings on the Cape Cod National Seashore legislation, which has the full support of President Kennedy. It is clear that we all agree with the President, with Secretary of the Interior Stewart L. Udall, with other sponsors of this legislation and with the committee members who have heard testimony in the past, that Cape Cod has top priority among conservation measures now before the Congress.

Mr. Speaker, when I introduced my first Cape Cod National Seashore bill in 1958, basing it upon the findings of the National Park Service studies of the cape and of the Atlantic coast, I was deeply impressed by two things. One was the truly terrifying speed at which our superb natural shorelines were being preempted for developments of all kinds which would destroy their beauty and remove forever the opportunities which future generations might have to know and enjoy this aspect of their national heritage. Within the past 20 years whole stretches of natural seashore have vanished completely under developments or have become priced out of the reach even of Government.

But an equally impressive fact, and one which fills us all with a great hope, is that one of the finest seashore areas of the entire Atlantic seaboard yet remains largely unspoiled and constitutes a major conservation opportunity.

This is Cape Cod, an area so close to the country's largest centers of population that one marvels at how its unspoiled character has survived for so long. Here is not only a spectacular shoreline, beloved and written about for generations, but also inland areas of surpassing charm, scientific values of extraordinary significance, and evidences and traditions of an inspiring history.

Since establishment of a Cape Cod National Seashore Park will affect the lives and interests of many private citizens and their town and State governments, it is evident that great care must be taken to reconcile national and local interest in this conservation legislation. The recommendations of the National Park Service already had done much in this direction. However, more was

needed, and we of the Massachusetts delegation in Congress are proud to sponsor legislation, unique and unprecedented in its scope and purpose, which we believe will be successful in protecting individual rights and interests within the larger framework of the national purpose.

But working out such complex protective and reconciling provisions, based on further studies of the economic and other consequences of park establishment on the cape, have taken time, and time is running out. Since I introduced my first Cape Cod Park bill, new roads have been cleared, new subdivisions staked out, and the blight of honky-tonk development has crept further up the peninsula.

And the delay is costly in dollars as well as beauty. Seashore land prices have in some places risen as much as a thousand percent in the last 20 years. Each passing year sees conservation of Cape Cod growing more costly, with less and less to conserve.

I recommend to the Congress that prompt and effective action in conservation matters carry through all the legislative process, reconciling remaining differences with dispatch so that a nationally significant Cape Cod national seashore can become a reality.

Mr. Speaker, under permission heretofore granted, I include with my remarks an editorial from the Springfield, Mass., Union of March 11, 1961, concerning the proposed Cape Cod National Seashore Park:

HOPE INCREASES FOR CAPE COD PARK

Chairman ALAN BIBLE of the Senate Public Lands Subcommittee, said Thursday that he sensed an atmosphere of give and take between Cape Cod town officials and the National Park Service on the reduction of boundaries in the proposed Cape Cod National Seashore. The chief stumbling block to establishment of the great park is the reluctance of towns in the area to relinquish taxable property for the project in the face of the National Park Service's decision that it can reduce the acreage no further.

The Park Service already has substantially cut its original request for land in order to placate local objectors. But the objections still continue, though an adjustment at last appears hopeful. Senator LEVERETT SALTONSTALL holds that Cape Cod officials are unduly upset over the boundary problem and that they serve "only to frustrate both national and local interests in an irresponsible manner."

They also appear to be using their piecemeal demands for excluding more land from the park to mask their aim of killing the whole idea. Great areas of the proposed park have lain undeveloped through all the years of Massachusetts history and have produced little tax revenue for the towns in which they are located. The fact that the developers now have their eyes on these areas and, in fact, are eating away at them, accounts for the immediate crisis. Underlying the whole plan for the park is the desire to conserve the tract in its natural state for posterity and to stem the tide of commercial development before it engulfs the land. In view of the park's importance as a magnificent tourist attraction and an asset to the whole state, the objectors appear woefully shortsighted in their efforts to discourage the plan and, in effect, kill it by shrinking the land available for it to an acreage so small as to force the National Park Service to abandon the project.

Secretary of the Interior Udall, whose appearances at the hearing he admits indicate President Kennedy's deep interest in the proposal, tersely and accurately analyzed the issue recently when he said:

"Unless action is taken in the near or immediate future to acquire and preserve lands at Cape Cod for public enjoyment, it seems quite evident that the Cape's traditional atmosphere and character will vanish under construction activity now under way there."

Housing: New Frontier Style

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. DEROUNIAN. Mr. Speaker, two excellent editorials appeared in the Wall Street Journal this morning that every Member of Congress should read and think over:

TWO FRONTIERS

About a century ago, a young man on the eastern seaboard gathered together a few personal effects and started walking. In time, he reached the home of a relative, 1,000 miles to the west. Five years later he had saved enough as a farm laborer to buy land of his own. He hacked down trees and blasted out stumps to make arable land; he cut up trees and build himself a house. In time two sons went forth from this farm home, put themselves through college and made productive lives, and good homes for their families.

This is not an unfamiliar story; there were, once, many such men. But all that was on the old frontier.

Now, on the New Frontier, the President's housing message makes it clear that individuals are to be freed from the responsibility for caring for their own housing needs. In the phrases of this era of groupthink, would-think and dollar-think, Mr. Kennedy has pretty well washed out whatever attachment his frontier ever had with that other one.

"A nation that is partly ill-housed is not as strong as a nation with adequate homes for every family," he said. And he left no doubt that an "adequate home" derives not from the strength of the individuals in it, but from how much money, especially Federal money, is spent on building the floor and walls and roof.

"A nation with ugly, crime-infested cities and haphazard suburbs does not present the same image to the world as a nation characterized by bright and orderly urban development," the President added. And so the "brightness" and "orderliness" of our cities is somehow to become a weapon in the cold war.

There are many things wrong with the President's program. But it is not so much that there is no discernible ceiling on the spending entailed. Nor that the program is a patent effort to single out a lagging basic industry—construction—and spur it with massive Federal assistance. Nor even that the program contains the seeds of almost certain inflation, as bad as that would be for all the people.

What is most disturbing is that this Housing and Community Development message is of a piece with other proposals by Mr. Kennedy. He has told us that the responsibility for medical care in old age is not the individual's concern but Government's. He has told us, that the responsibility for educating the young is not an individual or local one but the Government's. And now, "we as a nation have before us the opportunity—and the responsibility—to remold our cities, to improve our patterns of community development, and to provide for the housing needs of all segments of our population."

The old people, the young people, the farm population, the city dwellers, the suburbanites, the citizens with middle incomes, low incomes and even high incomes are to be the beneficiaries of a benign and all-knowing Federal Government. All are embraced in the housing message, and there is something for each.

For people with moderate incomes, there are to be federally insured mortgages—temporary and experimental—with no money down and 40 years to pay. For old people and others with low incomes, there are to be 100,000 additional units of public housing.

Someone has also decided that "almost a fifth of the occupied houses in rural areas of America are so dilapidated that they must be replaced" so the Government will see to it, in the form of insuring "adequate credit." Furthermore, "we must do more than concern ourselves with bad housing * * * our urban renewal efforts must be substantially reoriented from slum clearance and slum prevention into positive programs for economic and social regeneration." There is even to be a Federal "long-range program and policy for dealing with open space."

And so it goes. Here is the welfare state in one of its central aspects—provision of homes for all, homes that the planners consider "decent." And if there must be public absorption of the cost of housing rehabilitation that cannot succeed on a voluntary basis, we have it on the administration's word that it must be done, because it is "socially desirable."

To be sure, Congress has yet to have its say. But whatever Congress may say, the administration has plainly stated its philosophy. Housing is to join medicine and education and other areas of national life in which the Government thinks that "socially desirable" goals cannot be achieved by the individual.

On numerous occasions Mr. Kennedy has spoken movingly about "meeting our responsibilities." In this message to the Congress he said it again "* * * to achieve our Nation's housing goals, to meet our appropriate Federal responsibilities * * *."

We would not claim that the old frontiersman led other than a hard life; probably the house he hacked out of the woods was not decent by Federal standards. But at least he met the responsibility of housing himself.

It is a measure of the difference between the two frontiers that responsibility is now defined as the responsibility to accept what Government says is best.

HOUSING INTEREST

It has been calculated that a $13,500 home, bought under President Kennedy's 40-year mortgage plan, would cost the buyer $33,437 by the time the place was paid off.

This may strike some people as high, but then again that $33,437 may be worth only $13,500 by the time A.D. 2001 rolls around.

A Journey to Ireland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following: Mr. Speak-

er, on Friday of this week St. Patrick's Day will be observed. I think it a most appropriate time to insert in the RECORD another in a highly informative and often humorous series of articles written by Mr. Thomas Heffernan, editor, Sunday Independent, Wilkes-Barre, Pa., on the experiences he had on an extended trip through Ireland last fall. Today's article appeared in that newspaper on March 5, 1961. Mr. Heffernan's article follows:

A JOURNEY TO IRELAND—IRISH FOX HUNTING IS NATURAL; CUSTOMS ARE CENTURIES OLD

(By Tom Heffernan)

It appears we left some confusion last week when we wrote that in hunting as it is known in Ireland, the rest of Britain and Europe, no guns are used, so some wondered just how the hunt was completed—also if trapped foxes were released to assure a chase.

The answer to the first is that guns could not be used and furthermore none is necessary since the hounds kill the fox.

He is killed in an instant when these 40 or 50 big foxhounds catch up to him.

As for whether foxes are released to be chased, the answer is in the negative since fox hunting in Ireland is completely natural, which is one reason we picked it to try the sport.

As for results, we got up to four foxes a day.

The fox is classed as vermin, the farmers want them kept down and but for the hunts chasing them for sport they probably would have been eliminated by poison long since.

FOX IS A KILLER

You see, when a fox manages to reach a chicken yard or gets into a coop at night, he does not run off with a chicken to make a meal.

While he does that in the end, he first kills every chicken he can reach and leaves them lying where they fall.

We have an idea that to keep the farmers from complaining, the hunts pay a little fox damage, just as in Pennsylvania the game commission, for the same reason, pays farmers for damage done by deer and bear.

As for being cruel, we have to feel that no one who does any kind of killing either of game or vermin for sport should call the sport or any other person cruel.

The rabbit in Luzerne County does not exactly enjoy being chased by a beagle or shot by the beagle's owner, with the same applying to all other hunted animals and fowl.

It can be said, however, there are no wounded foxes, crawling off to a lingering death after the kind of fox hunt we joined in Ireland.

Those foxes either are killed with the flick of a big hound's head—as a cat kills a rat—or they get away.

There is nothing in between.

OLD TRADITIONS IN CUSTOMS, CLOTHES

Traditions and customs are ancient, honorable and extremely strong in fox hunting—riding to the hounds—though we were assured, when we knew part of our attire was wrong to be concerned not at all since "anything goes in Ireland."

While that isn't exactly true, they were anxious to help an ignorant stranger.

Perhaps it might be mentioned at this point that since they have done a pretty good job of preserving their sport for all these hundreds of years, it may well be that the traditions and customs have served well.

At any rate, if one doesn't care to abide by their customs, one does not have to go hunting with them.

We wore the plain black Melton coat of rather heavy cloth to meet the chill of December, two well-used pairs of breeches, one buff and one fawn, and the black bowler—derby to you.

GOOD PROTECTION

It is a specially reinforced derby to fend off the wallops you get when smashing into heavy branches of trees jumping over a bank. A soft hat would have resulted in at least painful injuries.

Our boots were black, with a tan cuff at the top and these were wrong, as we knew.

The tan cuffs are worn only with the jacket of scarlet (red) or the special color a particular hunt may adopt.

With these jackets, which are of different and slightly longer cut than the Melton, white breeches as well as those of fawn or buff may be worn, also the high silk hat.

The hunting cap, which also is hard and serves as a protection, is worn only by the master, the huntsmen and whips, and women.

They say that, at one time, everyone wore caps but eventually its use was restricted to distinguish these leaders of the hunt.

WE HAVE CUSTOMS, TOO

However, a chap who knew America as well as the British Isles, said "The foolishness of a custom depends on the viewpoint.

"For instance," he said, "in your country, straw hats are not worn before May 15 nor after September 15—regardless of the weather or climate.

"The custom is quite general to wear a black tie with a tuxedo and a white tie with tails (full dress suit), which also is purely a matter of custom and tradition, too.

"Men who wear a morning coat for their wedding—though they might never have worn such a coat before and never will again—wouldn't think of wearing a pair of blue serge or tweed trousers with it, would they?

"No, indeed, only striped trousers.

"So. * * * You see. * * *"

We do.

One more item.

At the back of the hunting cap is a black bow of ribon, which, we had read, always is worn with the ribbon's ends pointing up.

That of Lord Daresbury, master of the County Limerick Hounds—and those of everyone we saw—hung down.

He said he had never seen anything else.

USE LITTLE TERRIERS TO FLUSH FOXES

Every so often, when a hunted fox goes to ground—deep in a hole from which he cannot otherwise be flushed—a terrier is sent in after him.

Frequently the terrier succeeds and often the result is really worth while.

There was one day, for instance, while hunting with the Scarteen Black and Tans of Thaddeus Ryan, MFH, that a terrier was used with complete success.

Furthermore, as it happened, the terrier had the fox out of the hole and well under way before the hounds recognized the situation or could be put on the trail in chase.

RIGHT AFTER THE FOX

So the picture produced was that of a good-sized fox running full speed across the field with the spunky little terrier, its short legs pumping like mad in its wild effort, racing right behind Sir Reynard.

Yipping like a dandy at every stride, the pint-sized terrier was full of courage as he—all alone—went after the fox that was bigger than he.

The two of them were almost across the big field and gone before the hound pack got underway.

The terriers, these in charge of 83-year-old Jack Dargan, are carried about in a jeep as the hunt goes on, seeking to keep as close to the hunt as the roads will permit.

When needed, the terriers are seldom far away and soon can be put to work.

STEERS AND CARTS ARE ROAD HAZARDS

There are more hazards on Ireland's roads, for an American visitor, than having to drive on the left.

There are steers—and carts without lights.

Every day, no matter where, you meet from 5 to 50 steers coming down the road as the owner brings home some to be fattened or takes a bunch to market.

Try and get by them.

Then, at night—and the lonelier or more remote the road the more likely—you can round a sharp curve in inky darkness and see, we hope in time, the dim outline of a horse-drawn cart.

There were a couple we haven't yet figured out how we missed.

A GOOD HUNTER HAS LOTS OF LEP

Instead of using the word "jump" in connection with the prime requisite of the horse used for hunting, the Irish horseman will say "lep."

When we climbed on a big chestnut for our first try at foxhunting we made some remark about hoping he would do well for us.

"Ah, he's a grand lepper," we were told.

"Sure an' he's got a lot o' lep in him," said Paddy O'Toole.

BEAGLE PACKS ARE FOLLOWED ON FOOT

There is another sport in Ireland, akin to hunting, which would be beyond most of us.

The packs are of beagles, their quarry is the hare.

And the followers go on foot. Running.

The men—young, naturally—with the harrier pack we saw near Limerick wore jackets much like those of the foxhunters but shorter and, we believe, lighter, and of green.

They wore green caps like hunting caps and long green stockings.

In between were white track pants.

Distinguished Service

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. CANNON. Mr. Speaker, a few men receive all the credit due them in this life. And while our colleague from Ohio MIKE KIRWAN, is no exception to the rule, he has received more awards, honorary degrees, citations, medals, diplomas and other notable honors than any other Member of Congress in either body.

The latest came just last Thursday when at the 12th annual banquet of his industrial area, sponsored by the Industrial Commission of Ohio, he was awarded the coveted medallion which for 12 years has been conferred on captains of industry, community builders, and outstanding benefactors of State and Nation, including the executives of United States Steel, Youngstown Alloy, Ajax Magnethermic, Hutch Manufacturing, Concrete Steel, Frandee Corp., Johnson Lumber, Super Laundry, Carbon Limestone, Frank Sherman Co., China Craft, Youngstown Lamp, Ward Baking, Coca-Cola, and Republic Steel.

The beautiful medallion which is a work of art in itself is engraved: "To honor MICHAEL JOSEPH KIRWAN, 1961."

The citation given at the close of the speech in recognition of his exceptional career of public service reads:

IN TRIBUTE TO THE HONORABLE MICHAEL JOSEPH KIRWAN

As a self-made man who is recognized among men for his great capacity for understanding and accomplishment. Coming from a humble, austere beginning, he fought his way to the top by sheer force of his own character and determination. His life is a symbol of success and light of hope to the people of the world—the American success story.

As a dedicated public servant, believing and practicing that public office is a public trust, he has served his congressional district, State, and country with distinction as the Representative to the U.S. Congress from the Youngstown, Ohio, area for 25 years. A steadfast defender of the rights of the individual, a leader in the development of our natural resources, a spokesman for conservation and reclamation, a respected and admired subcommittee chairman on the important Appropriations Committee for 18 years. He has been elected to the high post as chairman of the Democratic National Congressional Committee for 8 consecutive Congresses.

As a Christian gentleman whose devotion to his family and country exemplify the high traits of character possessed of a man who lives his religion. If one trait must be paramount in a life so full and complete, it must be his devotion to his church, which is an inspiration to all who know him.

As a husband and father ever mindful of the great rewards derived from his devoted wife and family. Ever responsive to those benefits reserved to fatherhood and an inspiration to his family of children and grandchildren.

How Urgent Is Study of the Color of Pork?

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. MICHEL. Mr. Speaker, serving on the Agricultural Subcommittee of the full House Committee on Appropriations and coming from the heart of the Corn Belt in Illinois, I was more than amused to note the editorial appearing in the Columbus Dispatch of February 18 and entitled "How Urgent Is the Study of the Color of Pork?" For the edification of my colleagues, I ask, Mr. Speaker, unanimous consent that the editorial be reprinted at this point:

HOW URGENT IS STUDY OF THE COLOR OF PORK?

At his most recent press conference, President Kennedy said every possible step would be taken to bring about economy in the Federal Government. With an annual budget of $80 billion, he said, undoubtedly there are unnecessary expenditures.

We suggest one place for a small beginning. A recent news item from Washington revealed that the Agriculture Department has hired a scientific institute in Communist Poland to find out more about the color of pork.

The Department announced the grant, amounting to nearly $43,000, would go to the Institute of Animal Physiology and Nutrition of the Polish Academy of Sciences in Warsaw.

The very same day the grant was announced a New Jersey Congressman introduced legislation which would permit the United States to make loans to Communist-dominated countries.

He explained that the proposal was an administration measure intended to implement President Kennedy's suggestion for improving relations with Poland and other satellite countries.

Frankly, we doubt whether many Americans are very much concerned about the color of Polish pork, and, furthermore, it is unlikely they approve of their hard-earned tax dollars being used to further communism.

In light of the current unemployment problem and the national economic slump, the Federal Government would do well to concentrate on helping its own citizens and pay less attention to wooing Communist nations.

The $43,000 assigned to study the color of pork in Poland would feed quite a few unfortunate people in the United States.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter of March 11, 1961:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

MARCH 11, 1961.

The Third Supplemental Appropriation Act, 1961, passed handily without a record vote. Seldom is there opposition to these catchall spending bills because of the unique congressional system of authorization and appropriation. After all, we must pay for the programs we authorize. What I once thought a blessing, namely, Congress' double consideration of each legislative matter involving expenditure, I now see as weakness hiding behind procedure. Here's how it goes. When a new program is thought of, the cost is shrugged away with a "this doesn't cost anything; it's only the authorization; we'll consider the cost under the appropriation bill later." When the appropriation bill comes up later, we're reminded, "You must spend this money because you've already authorized it." The result too frequently is reduced discipline in the spending of money. While this may reflect the House's will on any specific occasion, yet the procedures unduly abet the natural inclination to spend someone else's money.

Within this framework, I made a mistake, a vote cast I wish could be changed, the first in 7 years. During debate, an amendment was proposed adding approximately $30 million to the already large sums of Federal aid given to impacted school areas where Federal Government workers cause a hardship on local school facilities requiring financial aid. I voted for this amendment thinking of the relative merits of aiding impacted areas only or Federal aid to all school districts, without knowing of an important procedural omission. This additional sum had not been studied by the appropriation subcommittee but was added on the House floor, a violation of our own sensible, committee procedures, which at the least assure some knowledgeable consideration of the how much and why of our spending. After further thought, I am even dubious of the merits of continually increasing aid to impacted areas and shall study the possibilities of our gradually retrenching in this area as communities become adjusted to the increased Federal population. We must remember that tax rolls increase as Federal workers buy property and settle permanently in the various communities. Even in error I am reminded of some important lessons. (1) A vote should be based on a knowledge of all the salient facts. (2) Correct procedure must never be forgotten since this is the bulwark of good government (reemphasizing the importance of our earlier squabble over the Rules Committee).

The feed program for 1961, involving corn, grain sorghums, soybeans or other feed grain and oil seed crops, is almost unbelievable. The administration's further effort to strangle the farmers with Federal concern and attention is impossible to define or describe, except for repeating the words of the bill. Few agree on what it means. I will send a copy to anyone interested in attempting to understand it. Most agree it means more Federal control and less freedom for the farmer. All agree that we're almost buried in surpluses. All agree it will cost the taxpayer much more. One grave danger recognized by many is the potential destruction of the free market by permitting the Government to sell its holdings below the market level. Yet this is only one of many of the dangers of bureaucratic control of the farming industry. As one Member summarized the bill, "I can foresee the year ahead as a time when a farmer's skill at farming will not depend so much on his knowledge of soil and crops as it will on his skill at interpreting regulations."

The Peace Corps finally got a comeuppance when a Congresswoman flatly called it a terrifying prospect. She felt that the thought of sending too-little trained young people overseas in the name of building good-will belied and contradicted the smooth-sounding designation of Peace Corps. Perhaps our younger citizens can give us some light on the subject.

The Ways and Means Committee has some busy times ahead. (1) A bill to exempt from income tax foreign banks' holdings of U.S. obligations will give foreigners a tax break not extended our own citizens. (2) Five changes in social security will cost at least $1 billion more per year and will cost all employees another ¼ percent and employers ¼ percent, and self-employed ⅜ percent. I predict that when taxpayers start to really examine social security and its cost, there will be public indignation beyond anything heard to date. Thus far the political handout aspect of something-for-nothing has overshadowed the cost and actuarial unsoundness which must someday be recognized by all. The field of taxation is confounding at best. Recent Kennedy administration admissions of the benefit of tax reduction to stimulate business and expand purchasing power contradicts everything otherwise championed by the administration. Simultaneously, many tax increases are being recommended—unemployment compensation, social security, highway users, and others. As to the logic of cutting taxes to stimulate business, with which I agree, then why wait? Further, why simultaneously recommend increased spending hand-over-fist that requires higher taxes? On the contrary, the logic suggests that less Federal spending and more money left in the hands of our people will continue to accelerate prosperity. The hitch, of course, is that the Federal programs would be trimmed and eliminated and less power reside in Washington. Unless the public demands it, the Federal Government will never turn back money to the taxpayers, despite the recent administration statements, because with money goes power. Power, the liberals believe, must stay in Washington and Federal hands.

Soil Conservation

EXTENSION OF REMARKS
OF

HON. HORACE R. KORNEGAY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1961

Mr. KORNEGAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made by our colleague, the Honorable BASIL L. WHITENER, of the 11th District of North Carolina, to the Lower Catawba River Soil Conservation District, March 10, 1961, on the very timely subject of soil conservation. This is such an excellent and well-documented presentation that I thought it would be of great interest to the Members of the House, as well as to the public generally:

ADDRESS BY BASIL L. WHITENER, MEMBER OF CONGRESS, 11TH DISTRICT OF NORTH CAROLINA, ANNUAL LADIES NIGHT DINNER, LOWER CATAWBA RIVER SOIL CONSERVATION DISTRICT, GASTON COUNTY AGRICULTURAL CENTER, DALLAS, N.C., MARCH 10, 1961—7 P.M.

I am very happy to be here tonight to discuss for a few minutes with so many of my friends soil conservation and what it means to the survival of our Nation.

Land, its proper use and care, is basic to our survival.

The history of agriculture is the story of man's use and misuse of land and the natural resources from land. In fact, we can trace the rise and fall of great civilizations and nations that existed in the past through a study of the use they made of the land in their possession.

The history of agriculture goes back approximately 7,000 years ago to the Biblical lands of the Middle East. In the fertile valleys of the Tigris, Euphrates, and Jordan Rivers it is said that man had his beginning.

From the Bible we know that it was a land of milk and honey and an area of great natural forests and verdant valleys. The great cedars of Lebanon were used to build King Solomon's temple, and every variety of agricultural product was cultivated in what was to be known in history as the Fertile Crescent.

Mankind, however, has never been able for some strange and unexplainable reason to learn how to use, protect, and enrich the land with which he has been so richly blessed. Only during the past 50 years have we come to realize the need for conserving land. Only in recent times has come the knowledge that unless land can be preserved our civilization in the end will perish.

Although agriculture began in the Holy Land 7,000 years ago, the people who lived in that area did not know how to conserve what God had given them. In time the great Cedars of Lebanon were laid waste. The fertile soil washed away to the Red Sea and to the Mediterranean. The land that flowed with milk and honey became a desert, and the rose of Sharon failed to bloom.

In the place of plenty there was famine. Instead of wealth there was poverty, and today as we fly over the birthplace of agriculture we see only a wasteland and a monument to man's inability to conserve the basic gift so necessary to his survival.

This story has been repeated a hundred times during the course of history. Egypt, the birthplace of cotton, became in a large part a desert. The fertile soil of Italy was washed away, and the collapse of the Roman Empire was inevitable.

Four thousand years ago China was one of the richest and most productive nations on earth. Today its vast interior is a wasteland of gullies, arid mountains, and unproductive deserts.

Everyone in the world, therefore, has a very vital stake in soil conservation.

Our forefathers followed the historic pattern and in the beginning paid very little attention to soil conservation.

It has been said that they hacked, chopped, and burned their way across America, leaving in their wake ruined and abandoned fields and gullied hillsides. Certain sections of our country to this day bear the mark left by our forefathers. The land is still unfit for cultivation and defies even modern attempts to bring it into use. Such sections exist up and down our eastern seaboard and in many areas of our Midwest.

I think it is interesting to note that the first man to become interested in soil conservation in the United States was a New Englander by the name of Jared Eliot. Eliot, a native of Connecticut, lived from 1685 to 1763. At an early age he realized that New England was literally washing away due to the lack of conservation practices on the part of his neighbors.

He devoted his life to the study of conservation and wrote a book which became the "conservation bible" of his day and time. Unfortunately Eliot's teaching of conservation and the great work done by his successors in the field had little effect on our forefathers.

Only within the past 50 years has the lack of good land, a growing population, the need for increased timber, and the destruction wrought by great floods brought home to the American people the realization that conservation must be removed from the realm of discussion and placed into practice.

The United States has over 600 million acres of land with characteristics favorable to crop production. About 400 million acres of this land is used every year. We have a population of 180 million people at the present time, and it is expected that by the year 2,000 we will have a population of approximately 300 million people.

It does not take the vision of a prophet for us to realize that this vast population must make intensive use of natural resources gathered from the soil if our Nation is to survive. We have great surpluses of food at the present time, but experts tell us that the day will surely arrive when it will take every acre of land capable of being cultivated to supply the wants of our people.

Soil conservation, therefore, is not just a question for persons engaged in agriculture. It is a matter of grave concern to everyone.

I am particularly pleased, therefore, to be here tonight with the leaders of one of the outstanding soil conservation districts in the United States. The work you are doing will insure that a dynamic and growing North Carolina will continue to have the natural resources that come from the soil for the uncertain days that lie ahead.

I think we can all be proud of the the fact that the first soil conservation district in the United States was created in North Carolina. Organized in Anson and Union Counties on August 4, 1937, it was the forerunner of over 2,860 soil conservation districts we have in our land today. The original 120,000 acres in the first North Carolina soil conservation district has expanded to over 1,665,256,000 acres in every one of our 50 States, Puerto Rico and the Virgin Islands.

More than 4,538,000 farms in the United States are in soil conservation districts. In fact, approximately 91 percent of the land in farms and 95 percent of the farms in our Nation are now in soil conservation districts administered and controlled by you and other outstanding citizens.

When we speak of the need to conserve the natural resources of our Nation we are dealing with a question vital to the security of our freedom and that of the world. The Soviet Union has a far greater land mass than does the United States and is capable in the future of placing into cultivation hundreds of thousands more acres than can the United States.

Russia is engaged in a deadly race with the United States on all fronts, including that of agriculture. One of the great objectives of the Soviet Union is to surpass our Nation in the production of foodstuffs.

Russia is still, to a great extent, a have-not nation when it comes to adequate clothing and food for her people. Thus, she is striving to overtake us, and when that day arrives we are in serious difficulty.

At the present moment 50 million people—more than 40 percent of the labor force of the Soviet Union—are engaged in agriculture. When we compare this with the 7½ million Americans engaged in agriculture, we can visualize the magnitude of the effort that Russia is making.

The underdeveloped nations of the world have a tremendous need for food, proper shelter, clothing, and the other gifts of land. Many of them are countries carved out of the dead and arid empires which I mentioned a few moments ago as having perished from the lack of proper conservation practices in the past.

The Communists know that if the day arrives when the Soviet Union can supply food and the other products of a rich agricultural economy to the ill-fed, poorly housed, and half-clothed peoples of the world, the battle for world domination by communism will be won.

We in North Carolina can be proud of the progress that our soil conservation districts are making to aid our farm economy and conserve our national resources. I am particularly proud of the very fine work that is being done by the Lower Catawba District.

As you know, your district was formed in 1940 and was the 11th created in our State. Today we have 43 soil conservation districts.

The people in the Piedmont area of North Carolina have always been interested in soil and water conservation. You will recall that the Civilian Conservation Corps had camps at Gastonia and Cherryville between 1935 and 1942. The work which the young men of that organization did has had a tremendous effect in the improvement of our land and timber resources.

President Kennedy has said, in promising his support of an expanded soil and water conservation program, "We in America enjoy a situation that is rare in human history. We have enough to eat." He also reminded us that: "There is too little public recognition of how much we all depend upon farmers as stewards of our soil, water, and wildlife resources."

The lower Catawba district has an outstanding record among the soil conservation districts of North Carolina and the Nation. I noted recently that as of June 30, 1960, the district had nearly 3,300 cooperators with basic soil surveys completed on more than half a million acres and with basic conservation plans on more than 230,500 of their 283,500 acres.

You are to be commended on the wide range of conservation measures you have used successfully, such as conservation cropping systems, contour farming, cover cropping, pasture planning, tree planting, and farm ponds, to mention some your fine practices which I have observed.

Your magnificient record has been indicative of the work performed in North Carolina by the other 42 soil conservation districts. I have been pleased to note that for the State as a whole more than 92,000 district cooperators, operating 9⅓ million acres, have

nearly 67,000 basic conservation plans on 6¾ million of those acres and that soil surveys have been completed on 16¼ million acres. This certainly is an impressive record.

I have always been interested in soil conservation, and during my service in the Congress I have kept advised as to the progress of all legislation on the subject. I think that all of us in the State of North Carolina, and for that matter in the Nation, can be proud of the fact that President Kennedy has realized the position of leadership that our State has in agriculture.

He has seen fit to name three distinguished North Carolinians as members of his administration. These men, all dedicated to a better farm economy, are Charles S. Murphy, our Under Secretary of Agriculture; Horace Godfrey, the Administrator of the Commodity Stabilization Service; and Harry B. Caldwell, who has been named Chairman of the Secretary's Agricultural Advisory Committee.

I feel sure that with these able men in the President's administration we can look forward to a new era in our agricultural economy. While it is too early to predict what sort of farm and soil conservation legislation we can expect at this session of the Congress, I am confident that the steady progress that has been made during the years will be accelerated.

Secretary of Agriculture Freeman said recently: "One of our major objectives in agriculture is to turn America's abundance into a blessing. Another is to insure the production of enough food and fibers to supply high standards for all Americans now and in the years ahead." With the great team of North Carolinians working with him I am sure that the Secretary's objectives will be realized.

The members of the lower Catawba soil conservation district can also take pride in the caliber of leadership which the district has on the local level. Chairman Dane Rhyne, who has long been active in agriculture and who has served with distinction as past president of the State Association of Soil Conservation Districts, together with R. B. Watterson, R. A. Jackson, and Hugh Helms of Gaston County, as well as supervisors like A. H. Beam of Lincoln County and Neal Craig of Mecklenburg County, exemplify the high caliber of people who are working to preserve our soil, our wildlife, and our timber resources. I commend them and every member of the Lower Catawba River District for the splendid efforts that are being accomplished.

In conclusion, I want to say that I am happy to see so many of the ladies out for this occasion. You know conservation is not only a man's job. It is also a job for all of us. I feel that it can be truthfully said that much of the fine work being done in the lower Catawba district can be attributed to the inspiration and interest on the part of the ladies present here tonight.

I want to assure you of my continued interest in the fine work you are doing. I hope you will continue to keep me informed as to your activities. At any time that I can be of possible service or help to you in the great work you are doing I hope you will call upon me.

As one final word, I would like to point out that there is nothing wrong with the land that our Lord has given us. It has been mankind who has wasted his precious resource. Our charge and responsibility is to give our full efforts in avoiding future dissipation of this great and vital resource which is a great legacy given to us by Almighty God.

May 1961 prove to be a very fruitful year in all of your endeavors.

New Frontier Disagrees With Webster

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. DEROUNIAN. Mr. Speaker, Mr. John Crosby was an avid supporter of the New Frontier's candidate for the Presidency. This is what he said about slum clearance and blighted areas in the New York Herald Tribune this morning:

WHO SAYS WHAT IS A SLUM?

(By John Crosby)

I suppose Russia must be like this. You never know when they are coming to order you out of your house. President Kennedy has just packed off to Congress a plan for huge Federal assistance to provide more and better housing. New York is already loaded with the stuff, so let me tell you what to expect when it hits your area.

First, the press will be full of stories from housing officials with such phrases as "urban renewal," "blighted areas," and "substandard dwellings" and all that. The next thing you know a man will show up and, to your stunned surprise, you will discover that your house is in a blighted area, is substandard. You consider your house rather nice. High ceilings, fireplaces, handsome cornices, beautifully designed and built. Nonsense, the man will tell you briskly. Those are the hallmarks of slums.

What he want to build there is a modern building with ceilings just barely high enough to stand in, rooms 9 feet square, paper-thin walls, badly ventilated, noisy, crowded, and charge you $100 a room for it. This is urban renewal. It will be built and financed by people who wouldn't dream of living in the awful thing themselves or even in the neighborhood. They live in Westchester on the profits they make from urban renewal.

This is what's happening in West Village in Greenwich Village. The city's Housing and Relocation Board announced on a Tuesday that they would propose a plan for Thursday with Washington's Birthday in between. Villagers call it 24-hour democracy. Walter Fried, one of the commissioners of the board, who appeared before a group of angry villagers to explain this, said "We have learned from experience in other neighborhoods that it is best to try for the fastest possible action in order to avoid unnecessary local disturbances."

Translated, that means: Hit them with the bulldozers before they have a chance to organize and protest the destruction of their homes. "Unnecessary local disturbance" is the very essence of democracy. I had lunch the other day with Eric Sevareid of CBS, who's been living in England, and Eric was talking about how long it took in England to inflict progress on the English because every last individual right was scrupulously observed. But this is what a democracy is.

Mr. Fried was asked—and provided no real answers—who decides what is a slum? And why should any neighborhood look forward to the prospect of public housing when the concrete pillboxes being erected in the name of public housing have created the most dangerous and depressing slums yet?

I am not arguing that all public and semi-public—that is private housing with Federal and State assistance—is unwise. It's got to be done. But this is the worst possible way to go about it. The first consideration in any of these urban renewal (ugly phrase which fits the houses) programs should be the psychological values of the neighborhood. The psychological beauties of a neighborhood, where people live together in their own harmonies, is far more precious than the paint job on the houses. (Let the Government redo the houses, not demolish them and build substandard—aah, there—anthills in place of them.) The psychology of cities and of people is being absolutely ignored in these brick monstrosities of appalling conformity and ugliness called urban renewal. A neighborhood is a viable community of people who have learned to live together. West Village is an example of complete integration of races and income groups, for instance.

While the Federal Government is fighting racial segregation, it is building a whole new kind of economic segregation, erecting these anthills for people of similar incomes. There is also a very bad smell about this whole plan. A group called Mi-Cove (Middle Income Cooperators of Greenwich Village) who are not villagers seems intent on throwing people out of their homes with the assistance of city officials and making a fancy profit out of what is erected in place of the lovely 18th century homes that are there now.

But the village keeps its sense of humor. One of the coffee houses, called Phase 2, has a number called "Please, Mr. Tishman, leave me alone." It tells about a girl looking for an apartment for 3 years, finally finding a hole in the wall—but it's home. Then she finds they're painting X's on her windows. No spot on earth can put its problems into a song or a skit faster than a villager. Well, now it can. But if the bulldozers arrive, they will bulldoze not only the buildings but the spirit of the place—and that would be a loss beyond price.

H.R. 2798, a Bill to Repeal the Commodities Clause in Part I of the Interstate Commerce Act

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. VAN ZANDT. Mr. Speaker, on January 16, 1961, I introduced H.R. 2798, a bill to repeal the commodities clause in part I of the Interstate Commerce Act.

Under the so-called commodities clause a railroad company is prohibited from transporting in interstate commerce any article or commodity other than timber and the manufactured products thereof which it may own in whole or in part, or in which it may have any interest, direct or indirect, except such commodities as may be used in its business as a common carrier.

The commodities clause, Mr. Speaker, was enacted in an era when the railroads occupied a monopoly position in transportation. Its enactment reflected a governmental policy to separate the production and manufacture of commodities from their transportation. Today,

the railroads carry only about 45 percent of the Nation's traffic and are confronted with fierce competition by other forms of transportation, but they continue to be the only transport agency to which the prohibitions of the commodities clause apply. Thus, as to over half of today's transport there is no governmental policy separating it from production and manufacture.

The fact that a tremendous growth of competition in the transportation industry has not led to repeal of the commodities clause, or to the extension of its prohibitions to other forms of transportation, offers a striking example of the failure of regulatory policy to keep pace with changing conditions. This failure to adjust regulation to today's facts has resulted in inconsistent treatment among the several forms of transport that has been almost invariably discriminatory against the railroads as the transport form that was first regulated in point of time and as the one that has been, as a matter of degree, most intensely regulated.

This discriminatory treatment cannot be justified by any claim that the railroads possess a superior economic power. The fact is that, measured by dollars, the position of the railroads today is secondary to the motor carriers, and the rail share continues to decline. Furthermore the waterways and the highways are traveled by many of the largest and most prosperous corporations in America carrying their own commodities in their own barges, ships, and trucks. Two-thirds of the trucks on the road today are either private or exempt carriers. Only an estimated 10 percent of domestic water transportation is regulated by the Interstate Commerce Commission.

So the commodities clause should, in fairness and in the interest of equality of regulatory treatment, be repealed. Since it first became effective in 1906 the jurisdiction of the Interstate Commerce Commission has been greatly increased. The ICC now has full power to correct and prevent every conceivable kind of undue discrimination and prejudice. These other provisions of the Interstate Commerce Act are entirely sufficient to prevent any reappearance of the alleged abuses that the commodities clause was long ago intended to prevent.

I urge, Mr. Speaker, that the Committee on Interstate and Foreign Commerce favorably report, and that the Congress enact, H.R. 2798.

H.R. 3647: Bill To Repeal the Auto Excise Tax

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. CHAMBERLAIN. Mr. Speaker, as many attempts as there have been to repeal the auto excise tax, as many times as I have raised my voice in that demand, and despite much discouragement and inaction in the past, there still exists a large, persistent, and I believe, growing body of public opinion that strongly declares this tax reform to be both desirable and important, economically, and unqualifiedly necessary in terms of tax justice. Under leave to extend my remarks in the RECORD, I wish to inform my colleagues of another instant of this public feeling which is contained in a letter from the Honorable Ralph W. Crego, mayor of the city of Lansing, Mich., expressing the city council's endorsement of my bill H.R. 3647. I believe that able statements such as this one indicate the degree of sincerity and reasonableness that characterizes the thinking of those who advocate this repeal:

CITY OF LANSING, MICH.,
March 7, 1961.

Hon. CHARLES E. CHAMBERLAIN,
House Office Building,
Washington, D.C.

DEAR MR. CHAMBERLAIN: This is to advise you that I, and the City Council of the City of Lansing, and all civic groups who are aware of the problem are strongly in favor of H.R. 3647 relative excise tax on automobiles and trucks.

Your similar proposals, in years gone by, have been a recognition on your part of the discriminatory burden carried by the major industry in our State. The repeal of this tax is long overdue.

Since the war, the excise tax has either been removed or reduced with respect to most articles upon which it had been placed. It is impossible for us to comprehend why an article upon which so many Americans are dependent and which contributes so greatly to our prosperity should continue to be taxed in this manner.

The automobile industry should not be asked to assume this unfair burden in ordinary times. It is doubly important that your colleagues should appreciate its effect upon our economy at the present time, when so many areas, dependent upon the manufacture of automobiles, have been declared depressed areas, and when at the same time this industry must meet the very real competition of the foreign-made car.

The workers in our community are proud American citizens; they prefer jobs to a dole. The removal of this tax would, in our opinion, provide a direct stimulus to the automotive industry upon which we are so dependent and would result in many of our workers being recalled and production being increased in our factories.

May I, at this time, commend your efforts on behalf of the people of the city of Lansing and of the State of Michigan who are so dependent upon the production of automobiles and urge you to vigorously press your attempt to remove a tax which has, in the last few years, had a deplorably depressing effect upon a key industry.

Sincerely,

RALPH W. CREGO, *Mayor.*

Red China by the Back Door

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted to extend my remarks, I wish to insert an article written by Ralph de Toledano entitled "Red China by the Back Door."

It is frightening to me to read of pronouncements by our Ambassador to the U.N., and by others, adopting a defeatist attitude toward keeping predatory Red China from the U.N. Such pronouncements cause our friends to doubt our will to win this fight.

Let it not be forgotten that this House has voted overwhelmingly several times to the effect that Red China should be kept from the U.N. Neither let it be forgotten that Red China is the same unrepentant monster which, 10 years ago at this very time, was making war on the United Nations and inflicting casualties on the sons of the United States. Neither let it be forgotten that appeasement has never sated a Communist, and never will. Most of all, let it not be forgotten that if we act with resolution, we can keep the U.N. free of Red China.

The article follows:

RED CHINA BY THE BACK DOOR

(By Ralph de Toledano)

Very quietly, where Foggy Bottom and 1600 Pennsylvania Avenue meet, a persistent whisper can be heard that we must be realistic and face the inevitable on the Red China question. The inevitable stands for admission of the Red Chinese into the United Nations and eventual recognition of the brigand state by the United States. Why it is inevitable is never fully explained and all the arguments for this disastrous course of action seem to peter out into mumbled statements that "you can't ignore the Chinese mainland."

Propaganda for a sellout to the Chinese Reds has very skillfully hidden the fact that the United States can very simply and effectively keep Red China out of the United Nations. If the Soviets, the Afro-Asians and part of the Latin American bloc join forces in the General Assembly, they need a two-thirds vote to succeed. And even this is not enough. The Security Council must approve, and there both the United States and the Chinese Nationalists have the veto. The Soviet Union has employed her veto freely to keep other nations out, when it suited Communist purposes, but we are being told constantly that it wolud be bad for the United States to make use of this prerogative.

It is forgotten that our Ambassador to the United Nations warned last autumn that the United States might withdraw if Red China were admitted to the world body. This shocked some of the more sensative souls in the State Department, but it had considerable impact in the halls of the United Nations. Among diplomats, there is a substantial body of agreement that should the United States unequivocally announce that it would use the veto, the effect would be very salutary.

It used to be said that we must show our flexibility by going along with admission and recognition of Red China. The new argument, which the State Department has encouraged the British Government to stress, concerns disarmament. How, it is asked, can the Soviet Union and the Western Powers discuss disarmament without including Red China. The quick answer, of coourse is that we can if we wish discuss anything with the Red Chinese, and have been doing it for many weary months in Geneva. The second answer is one which the British, despite their hopes that we will cease to block admission, were honest enough almost to admit. In debate before the House of Lords, the British Foreign Secretary Lord Home really let the cat out of the bag when he said:

"We can make no progress with disarmament unless China is there. I do not know whether we can make very much progress if China is there, but that remains to be seen."

In short, the British are telling us, while the State Department softly applauds, that in exchange for the admittedly paper-thin hope of getting the Chinese Reds to act civilized, we should increase Communist strength at the United Nations, make the U.N. Charter a dead letter by giving moral sanction to a series of belligerent acts, and authorize the establishment of one or more Communist espionage center in New York City.

Neither the Soviets nor the Chinese Reds want disarmament—except for the West. To the point of utter boredom they have made it clear that disarmament to them means a scrapping of Western nuclear weapons without any check on their reciprocation. Since 1945, America's experience has been that negotiation of any kind with the Communists ends up in one of two ways: either in a stalemate or in an agreement violated even before the ink is dry. President Roosevelt learned that at Yalta, President Truman at Potsdam, President Eisenhower in Paris. President Kennedy must learn it too, but I hope the price he pays will not be so high for himself and the Nation.

Along with the disarmament argument, the proponents of Red Chinese recognition have come up with something else—a kind of sleeping pill for the Nation. You hear it over and over in Washington. "There's no need to fear admission of Red China to the United Nations," it is said. "The Chinese Communists won't come in unless we kick out the Republic of China and put the mainland regime in the Security Council." Just last week, the State Department made public a statement by Red Chinese Premier Chou En-lai: "The United Nations must expel the Chiang Kai-shek clique, otherwise it will be impossible for China to have anything to do with the United Nations."

Experts on Communist strategy and tactics are convinced that this is nonsense. Let the U.N. General Assembly seat the Red Chinese and Chou En-lai will leap to it. It will give him the forum he wants in the West, enhance his prestige in Asia, and provide a base of operations for ousting the legitimate Government of China. Like all good Communists, Premier Chou knows that infiltration and the flank attack are often far more successful than the frontal assault. To him, anything we offer will be an opening wedge.

So far, Secretary of State Dean Rusk continues to speak out in support of our commitments to the Chinese on Formosa. But the whisper down in Foggy Bottom is that he will gradually edge away from this stand. It may be a rumor, spread to weaken anti-admission forces. Or it may be fact.

This Will Be Something New

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Scott (Kans.) Tribune of March 8, 1961. I believe this editorial makes a reasonable request of labor, management, and government in behalf of the consumers and general public. I hope that the editorial, along with other things being spoken in the same vein, will be met with good response, and that it admonitions will not be lightly taken:

THIS WILL BE SOMETHING NEW

President Kennedy's announced intention to encourage both business and labor to hold the line on costs will receive loud and widespread support. How people in business and labor organizations perform when faced with their own decisions that determine whether costs must continue upward or be held in restraint, however, will speak far more impressively than present words of commendation.

How the Kennedy administration big spending plans designed to stimulate business and employment recovery could be reconciled with promises to prevent inflation has not been clearly explained. At present, the expressed hopes that costs will be held are somewhat less strong than expectations for greater spending and more inflation.

At least it is something to have a goal, and there is no doubt but that pressure, if applied intelligently from Washington offices, can encourage both business and labor organizations to restrain prices to some extent.

The lack of such pressures in the past has tended to give free rein to boosting costs both of goods and services. Increased labor costs used as the excuse for high prices of manufactures, and vice versa, have accounted for the inflation spiral.

It will be a bright new day if planned prosperity can be purchased without the price of more inflation. Here indeed, a new, albeit foggy, frontier is being faced.

Open Wide the Doors to Foreign Visitors

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. LINDSAY. Mr. Speaker, I have been gratified by the favorable response to my remarks in the House on March 2 on the problems of attracting foreign visitors to the United States. Comments by both the press and private individuals indicate widespread support for legislation to establish a new Office of International Travel and to liberalize substantially our rigorous visa and entry requirements.

I was also gratified that on March 5 the State Department announced it was making substantial revisions in the application processes for visas. The Department has had the option of asking foreign visitors to fill out short-form or long-form application blanks. The long-form blank has been too often used and it contains many unnecessary and sometimes offensive questions. This revision of administrative practices is welcome.

Mr. Speaker, under unanimous consent, I wish to insert in the RECORD an editorial on the subject of the legislative approach to the visa question which appeared in the New York Herald Tribune on March 10, 1961, under the title "Open Wide the Doors to Foreign Visitors":

OPEN WIDE THE DOORS TO FOREIGN VISITORS

If you invite a guest to your home, both courtesy and commonsense dictate that you not harass him at the door. Yet this is what the tourist-hungry United States too often does, and—equally damaging—what it has a reputation for doing.

This is partly, though by no means entirely, because of restrictive provisions of the law governing visas. It contains, for example, a clause specifying that "every alien [applicant] shall be presumed to be an immigrant" until he proves otherwise. With very limited exceptions, it bars reciprocal agreements with other countries providing for the waiver of visas. It denies the Secretary of State authority to overrule a consular officer's refusal of a visa.

New York's Representative JOHN V. LINDSAY has introduced a bill to change all this, and also to simplify entry procedures by stationing immigration and health officials overseas as a convenience for the would-be visitors.

Probably the most controversial aspect of the bill will be the one he considers its key provision—authorizing the Secretary of State to waive nonimmigrant visas for nationals of any country which grants reciprocal privileges to U.S. citizens. A lot of Americans are still haunted by a distrust of anything foreign, and are readily susceptible to visions of undesirable hordes slipping in unless alert consular officers are there to bar their way.

But the point is that the United States now needs visitors more than it needs protection against them. In a selfishly economic sense, it needs their money. A 1960 gap of $1,150 million between what foreign visitors spent here and what American travelers spent abroad made a hefty contribution to the balance of payments deficit. But more fundamentally important, this country has everything to gain from encouraging the widest possible spread of firsthand information about what the United States is really like. Those intent on spreading lies will spread them anyway, whether they come here or not. But those seeking the truth (and this, after all, means practically every one in those countries with which reciprocity is likely) ought to be welcomed with enthusiasm.

One of the best evidences of the sincerity of that welcome would be such a reciprocal waiving of visas.

It's time the Federal Government overhauled its whole approach to the encouragement (which sometimes has seemed discouragement) of travel to the United States. An active and well-financed tourist promotion program, which Mr. LINDSAY also espouses, seems like elemental commonsense. But we ought to remember, as he has told the House of Representatives, that "if our tourist program is to succeed, we must first encourage people to come—and we must then let them in."

Udall's Excellent Suggestion

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. WIDNALL. Mr. Speaker, I heartily endorse the suggestion of our former colleague, Interior Secretary Stewart Udall, that a wait of 50 years be made mandatory before allowing erection in Washington of a statue or memorial honoring an individual or event.

An editorial supporting this view appeared on March 11 in the Herald-News, published in Passaic, N.J. It

very ably represents my feelings in the matter, and, under unanimous consent, I include it in the Appendix of the RECORD:

MR. UDALL'S EXCELLENT SUGGESTION

The suggestion of Interior Secretary Udall to make a wait of 50 years mandatory before permitting the erection in Washington of a statue or memorial honoring an individual or event has great merit. It should receive sympathetic consideration from the Congress.

The plan to erect a jumble of monstrous concrete headstones to honor Franklin D. Roosevelt shows the necessity for preventing hasty action. The modernistic memorial could conceivably look ridiculous a half-century hence and become an eyesore in the Nation's Capital. The passage of time tends to show up fads for what they are and, on the other hand, to deepen appreciation for that which has genuine artistic merit.

The passage of time also tends to put individuals and events into their proper place in history. Washington has numerous statues and memorials to persons who were merely near great and others who have been long forgotten. These statues were the products of momentary enthusiasms and of the mistaken notion that the erection of a monument guarantees immortality.

Washington, Jefferson, and Lincoln, whose memorials are the most impressive and moving in Washington, received these evidences of reverence and appreciation from posterity, not from their contemporaries.

The Forestry Situation in the South

EXTENSION OF REMARKS
OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1961

Mr. BOYKIN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include therein a statement presented to the House Appropriations Committee and Subcommittees on the Department of the Interior and Related Agencies by two of this Nation's outstanding foresters, Mr. Frank A. Albert of Jacksonville, Fla., and Mr. J. Walter Myers, Jr., executive director of the Forest Farmers Association. Every tree farmer in this Nation or anywhere else will be very much interested in the wonderful information contained in these two statements which were given to our House Appropriations subcommittee today:

STATEMENT PRESENTED TO THE HOUSE APPROPRIATIONS COMMITTEE, SUBCOMMITTEE ON THE DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES, MARCH 13, 1961

(By J. Walter Myers, Jr., Executive Director, Forest Farmers Association)

Mr. Chairman and members of the committee, my name is J. Walter Myers, Jr., and I am executive director of the Forest Farmers Association. It is a pleasure to appear before this committee again as a representative of our association. As you may recall, the Forest Farmers Association is an organization of timberland owners—primarily small owners—in 15 Southern States. Our association headquarters is in Atlanta, Ga.

The Forest Farmers Association is, naturally, very interested in the forestry situation in the South, and in the progress the area is making in developing its forest resources. Our association feels that the Federal Government is a partner in the development of our forests, especially since it receives 52 percent of all the profits of the wood processing business in the form of taxes. For these reasons we feel that the Federal Government has a tremendous stake in the continued development of our forests and the markets for wood products.

The wood-using industries in the South have shown tremendous growth, due primarily to the fact that we have had and are continuing to maintain an abundance of raw material which is readily available. A well-guided program of sustained research is, however, essential if we are to maintain and further develop our forest resources to keep pace with the expanding economy.

The benefits from this research will accrue to the Federal Government and all segments of our population, in addition to the timberland owners and wood-processing enterprises. This committee has repeatedly demonstrated its interest and support in maintaining a strong program of Federal research in forestry, and this has been most gratifying. The committee, I am sure, is well aware of the outstanding manner in which the private timberland owners, wood-using industries and the States are cooperating with the Federal Government in promoting forest reesarch activities, and particularly at the local level. These groups logically, however, continue to look to the Federal Government for leadership in these activities.

In recent months, representatives of the Forest Farmers Association have carefully reviewed the status of forest research activities in the South with various key individuals and groups, including the U.S. Forest Service. We have also reviewed the 1962 fiscal year budget estimate as prepared by the previous administration. We were happy to note that it contained an increase of $1,500,000 for forest research activities, along with certain increases for cooperative programs, including $1 million for cooperative fire control. We endorse this original budget estimate and hope these important increases may be maintained, and possibly further increased.

It is our understanding that the original budget estimate may currently be undergoing further revision by the Secretary of Agriculture, as regards the Forest Service items particularly; and also that Senator STENNIS of Mississippi has indicated that he will ask an additional $6,500,000 for increased research activities under the important program to step up development of the national forests. We concur in the desirability of the additional $6,500,000 for research included in Senator STENNIS proposed amendment; and should such an amendment be approved by the Senate, we hope that it will be carefully considered by this committee with a view to concurring in that increase.

In reviewing the original 1962 budget estimate, so far as I can determine, any increases for programs in the South are relatively small. Under the propoesd amendment by Senator STENNIS; however, I believe most, if not all, of the minimum needs for the South, as we see them, would be included to a generally satisfactory degree.

As the Forest Farmers Association sees the situation, an increase of $1 million in Federal funds, above the original 1962 fiscal year budget estimate, is clearly indicated, if essential forest research needs in the South are to be maintained. Included in this increase would be forest research programs in eight Southern States, as follows:

INSECT AND DISEASE INVESTIGATION CONTROL RESEARCH

A minimum of $400,000 is urgently needed to step up this work centered primarily in the States of North Carolina, South Carolina, Mississippi, Louisiana, and Georgia. We believe that $300,000 of this amount should be for investigations on two serious southern forest diseases—fomes annosus and cronartium fusiforme.. The remaining $100,000 is urgently needed to strengthen existing investigations of southern forest insects.

HARDWOOD MANAGEMENT

Two hundred thousand dollars is needed for strengthening hardwood management research in the South. What is known about hardwood management in the South is pitifully small compared to what is needed. These additional funds are needed to maintain and expand programs in Mississippi, North Carolina, and Texas.

WILDLIFE HABITAT STUDIES

One hundred thousand dollars is needed for research on wildlife habitat and forest recreation so that increasing pressures can be met in an orderly manner. Work centered in North Carolina and Texas.

WATER PRODUCTION AND CONTROL RESEARCH

It is highly desirable that forest owners learn how to manage their lands for water production and flood control as well as for timber and other purposes; and $100,000 is needed this year for strengthening programs in Mississippi and North Carolina.

SPECIES IMPROVEMENT STUDIES

Tree improvement studies indicate outstanding opportunities exist for tree species improvement. Much has been done with corn and other agricultural crops. An additional $200,000 is urgently needed to maintain and expand this work in Mississippi, Georgia, and Florida. The total increase needed to maintain satisfactory progress in these important programs is $100,000.

I hope this committee may give consideration to recommending sufficient additional funds to meet these minimum research needs in the South. I thank the committee for its courtesy in hearing me.

STATEMENT PRESENTED TO THE HOUSE APPROPRIATIONS COMMITTEE SUBCOMMITTEE ON THE DEPARTMENT OF INTERIOR AND RELATED AGENCIES, MARCH 13, 1961

(By Frank A. Albert, Jacksonville, Fla.)

Mr. Chairman and members of the commitee, my name is Frank A. Albert. I have had the pleasure of appearing before this committee before, when I was director of the Georgia Forest Research Council, and it is a pleasure to appear before you again. I am now the manager of lands and forests for the southern woodlands division of St. Regis Paper Co. with headquarters at Jacksonville, Fla.

I wish to concur in the comments made by Mr. Myers on minimum research needs in the South as prepared by the Forest Farmers Association. I want to endorse his statement and also to speak briefly in special support of the insect and disease item which he mentioned.

Forest products are major elements in the southern economy, but the present investment in research on forest pests is exceedingly small in comparison to what is being spent on the control of other crop pests. This is exceedingly significant when we consider that insects and disease are reducing timber growth by 4 billion cubic feet annually, or by nearly 40 percent of the South's potential net growth.

Research can help meet the Nation's expanding need for timber by finding ways to reduce the volume of wood destroyed by such agencies as annosus root rot, fusiform

rust, bark beetles, hardwood borers, tip moths, and sawflies.

Fomes annosus or annosus root rot and cronartium fusiforme are two diseases which are currently causing great concern among foresters and timberland owners. Millions of dollars in timber are currently being lost as a result of these two diseases. Actually, more timber is lost from insect and disease attacks than from forest fires.

While these are old diseases, they have become increasingly serious problems in the management of our vast slash and loblolly forests in the South. Annual losses, or growth impact, due to fusiform rust is estimated at over $10,600,000 worth of sawtimber and 97 million cubic feet of growing stock, according to the Timber Resource Review prepared by the U.S. Forest Service. I imagine the committee is quite familiar with this report.

Loss figures from annosus root rot in this country are not yet available since the disease is just now beginning to work on our southern pine plantations. In the older forests of Europe, however, annosus root rot is generally considered the most serious forest disease, and in Denmark, a country half the size of South Carolina, the annual losses are figured at $1,200,000.

These two diseases have become so important in forest management that a group of professional foresters working for various forest industries in the South recently formed the Southern Forest Industries' Committee on Forest Diseases, which assembled a summary of the threat from these two diseases and published a booklet, "Twin Disease Enemies of Southern Pine." I would like at this time to give each member of this committee a copy of this report, so that you will have it for your review and consideration.

A major expansion in research is urgently needed on these two serious threats to southern pine management. Very little investigation work has been done on either one of these two important diseases. Even today there is no direct control measure suggested by forest pathologists for fusiform rust. Our leading books on forest pathology note under control measures for fomes annosus: "No direct control; plant disease-free seedlings." If the situation were not so serious, these control measures could be considered quite humorous. Just don't plant diseased trees.

A small scale program on control measures for annosus root rot has been started at the Southeastern Forest Experiment Station on stump treatments similar to those used in Europe. I hasten to point out that such treatments do not prevent the occurence of root rot, but merely control its spread.

An enormous planting and thinning program is currently underway in the southern forests. The resulting stands will provide the bulk of our Nation's future timber supply. Too much is at stake, however, to gamble in going much further with this program without knowing what to expect and how to deal with these twin enemies of southern forests—fusiform rust and annosus root rot.

Our goal of healthy, profitable stands of timber can be reached only by better unified research efforts. The forest industries in the South stand ready to cooperate fully with the Federal Government in expanding such a program, which is urgently needed.

The problem of insect damage prevention and control is also tremendously important. I believe that the additional funds requested by the Forest Farmers Association will allow satisfactory progress to be made in both our insect and disease research programs; and I hope that this committee will give consideration to approving these requests.

In addition, I am familiar with the other requests of the Forest Farmers Association for strentghening existing research programs in the South and wish to endorse them as being well-conceived and sound.

I appreciate the committee's courtesy in hearing my views. Thank you.

"Freedom Insurance" Theme of Address by J. J. Davidson, Jr.

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. WILLIS. Mr. Speaker, I have been much impressed by an address delivered before the Louisiana Association of Mutual Insurance Agents by Mr. J. J. Davidson, Jr., of Lafayette, La., a distinguished attorney and a leader in his profession, on the theme "Freedom Insurance."

Referring to the Constitution of the United States as the greatest insurance policy of all times, Mr. Davidson asked:

Where else can we find better and more comprehensive coverage providing insurance for all our freedoms?

Member of the law firm of Davidson, Meaux, Onebane & Donohoe, Mr. Davidson is a former president of the Louisiana State Bar Association. He is a member of the Order of the Coif, Council of the Louisiana State Law Institute, American Law Institute, American Counsel Association, American Judicature Society, American College of Trial Lawyers, Association of the Bar of the City of New York, American Bar Association, 15th judicial district and Lafayette Bar Associations, and International Association of Insurance Counsel. A larger part of his practice is in the field of insurance and he is particularly recognized for his ability in that connection.

The address to which I refer, delivered at Baton Rouge, La., follows:

FREEDOM INSURANCE

(By J. J. Davidson, Jr.)

It is indeed an honor to be invited to speak to this distinguished gathering of men who are experts in the field of insurance. I feel confident that most of you are now reviewing in your mind the entire history of insurance and thinking to yourselves that in this modern day, one can get insurance against almost everything except having to listen to after-dinner speeches. The insurance world today has become so complex that it includes lawyers and adjusters who try to economize with the company's assets, agents who desire that every claim be paid in full so as to stimulate sales, actuaries who think in terms which are so abstruse as to be understood by no one except other actuaries, liberals who would be happy if the courts would go even further than they do in deciding that everyone is liable to someone for almost everything that can be insured against, solid citizens who worry about where the money is coming from, and many who view with alarm everything relating to the field of insurance. In such a situation, it is with great fear and trepidation that I attempt to address you, who have made the cause of insurance your life work.

Insurance being an agreement to guard against disaster and loss in its many forms, is closely regulated to prevent possible abuse. I believe the Babylonians are given credit for thinking up the idea of insurance, some 4,000 years ago. Thereafter, regulation of that concept came into play in the 13th century when the Pope prohibited bottomry loans which avoided the application of the law of usury. Apparently the first legislation having to do with insurance was enacted in the Italian City State of Genoa in the last quarter of the 14th century. The first insurance commissioner was appointed in Florence pursuant to a statute of 1523, and the first commissioner in the United States was appointed in Massachusetts in 1827. The early laws dealt primarily with taxation of insurance companies and regulations to insure their solvency. However, as the business grew, the laws were expanded to take charge of almost every facet of insurance enterprise, and today, as we all know, insurance is one of our most completely regulated businesses, and this regulation is becoming more and come complex. Investment laws are changing. Policy forms are being altered. Rating formulas are becoming more involved. Judicial decisions and legislative enactments are limiting the scope of operation and causing us to realize that this is in truth a business affected with a public interest. Freedom to contract is definitely circumscribed by the State under the overall declaration that such action is necessary in order to protect the public.

It is essential that the public be protected against insecurity, sharp practice or abuse, but, at the same time, it is likewise essental to our American way of life that the public and the individual citizen be kept secure in the exercise of those fundamental freedoms guaranteed by the greatest insurance policy of all times, the Constitution of the United States. Where else can we find better and more comprehensive coverage providing insurance for all our freedoms?

From the earliest moment of our history, we have believed that every human being has an essential dignity and integrity which must be respected and safeguarded. We believe that the welfare of the individual is the final goal of government, and in order to be secure in the rights one wishes for himself, he must be willing to respect the rights of other men. The Bill of Rights found in the first 10 amendments to the Constitution of the United States were not intended to set forth any novel or new principle of government, but the purpose was simply to clearly and unmistakably declare certain guarantees and immunities which had become fundamental in the American concepton of government. The fundamental principle is that government must be kept within bounds, denying to it the right to exercise any powers except those that the people have specifically granted to it.

The Constitution stands as the policy insuring the protection of all our freedoms, including our freedom of speech, freedom of religion, freedom of press, freedom of the right to make contracts and prevent their impairment by government, freedom to exercise private property rights without encroachment by government or private citizen, but the continuance of that protection depends upon us. And, what are we doing? It would appear that we are all seeking security at the expense of the state. We are gradually allowing our Federal Government at Washington to take over in the fields of finance, agriculture, business and commerce, social welfare, and now perhaps education. We stand by and watch our courts interpret the provisions of our policy of freedom insurance so as to take from the State and vest in the Central Government authority and power which gradually but surely is destructive of fundamental rights.

We watch the "welfare state" gradually emerge, and we foster its growth in our desire to get free security at the expense of the state. In the Book of Genesis, we are told that Joseph as the agent of Pharoah benevolently fed the Egyptians and in a few short years, all the land of Egypt belonged to the Government. In their eagerness for free security at the expense of the state, the Romans became so insecure that they lost everything, and a few thousand barbarians were able to overthrow the mighty Roman Empire.

Are we in America moving along the same highway? Are we losing the rugged individualism which has been the strength of our national life? Are we so engrossed in our everyday affairs, so busy practicing law, selling insurance, adjusting claims, selling soap and razor blades, that we are losing sight of our duties and obligations as citizens in a democracy? Are we, by our indifference and preoccupation, permitting theories and philosophies which seek to undermine our entire democratic system to grow and flourish? Our situation may be rather aptly paraphrased by the Mother Goose rhyme:

"The American men are in the counting-house, counting out their money.
The women are playing bridge, and eating bread and honey.
The laboring classes are in the garden, hanging out their clothes,
Easy prey for communism to lead them by the nose."

In the present day, far more than in any former period in history, ideas govern mankind. Not individuals, nor societies, nor kings, nor emperors, nor fleets, nor armies, but ideas; ideas which overturn established systems, subvert and reorganize governments, revolutionize society, and change the course of history.

Ideas combined with foresight, ingenuity, and initiative have built America, and the insidious spread among our citizens of ideas based on communistic doctrine can destroy those fundamental freedoms on which our Nation stands. Not only do we face serious internal and domestic problems which endanger our fundamental freedoms, but they are also subject to severe and repeated attack throughout the world.

We live in a world which is filled with turmoil and strife, and find outselves confronted by dangers on every hand which carry with them the threat of the destruction of liberty itself. No nation can live to itself in this modern day. The economic developments of the 20th century have produced a solidarity of humanity which no international hatred can destroy. Each nation is its brother's keeper, and the greater the power, the greater is the responsibility. If this be true, no nation owes a greater duty to civilization than does the United States. Regardless of how we should like to view our world, we cannot escape the fact that America holds the key position in world affairs. There is no donger of overrating the importance of the part we are now playing in the affairs of mankind the world over. This knowledge should inspire us with a deeper and more solemn sense of our privileges and our obligations to mankind. We stand at the crossroads with the privilege of voluntarily choosing the road we wish to follow. But, unless we make our choice promptly; unless we step forward with a firm resolve, the decision will be made for us, and we will be literally pushed along the road chosen by the masses of mankind.

Four-fifths of the people of the world are illiterate. Two-thirds of the people of the world are hungry and on the verge of starvation. With a total of 2,200 million people in the world, when 1,700 million who have been in want, hungry, and unhappy all their lives grasp the determination to change their status in life, the surge will be so overwhelming that nothing can stem the tide.

Our Government has spent billions in various forms of aid to other countries. However, along with some gratitude, we have won a large measure of distrust and ill will. Somehow, our foreign policy has not been able to overcome certain human reactions. With the masses of the world hungry, when, through our magazines, movies, and radio, we tell these masses of our overabundance, our wealth and our ease of living, they do not react with love and respect—they only pull their belts a little tighter and hate us a little more. It would seem that we have made a pretty poor job of trying to manage our world and its resources. A little poem seems to quite effectively express our plight:

"MONKEYS

"Three monkeys sat in a cocoanut tree,
Discussing things as they're to be;
Said one to the other, 'Now listen, you two,
There's a certain rumor that can't be true

'That man descended from our noble race;
The very idea is a disgrace!
No monkey ever deserted his wife,
Starved her babies and ruined her life;

'And you've never known a mother monk
To leave her babies with others to bunk,
Or pass them on from one to another
Till they scarcely know who is their mother.

'And another thing, you will never see;
A monk build a fence 'round a cocoanut tree,
And let the cocoanuts go to waste,
Forbidding all other monks to taste.

'Why, if I'd put a fence around a tree,
Starvation would force you to steal from me!
Here's another thing a monk won't do,
Go out at night and get in a stew;

'Or use a gun, a club or knife,
To take some other monkey's life;
Yes, man descended, the ornery cuss.
But, brother, he didn't descend from us!' "

However, apparently the people of America are coming to realize that there is another way to help the people of the world, insure their friendship, and thereby protect our own liberty and freedom. Through technical aid programs we are helping the people to help themselves. The new foreign policy places emphasis on the individual citizen. Such private organizations as CARE, agricultural missions, various church groups, are sending to these foreign people the aid they really wish, which does not carry with it the suspicion which they always felt for a foreign government. Through these programs of direct assistance, the villagers of India, as an example, are being taught to use steel plows instead of crooked sticks, to dig wells, to put chimneys on their stoves, instead of suffering from smoky huts, to control flies, insects, and disease. The person-to-person idea is the keystone of the new process. As we destroy ignorance, poverty, hunger, and suffering, which are truly the causes of strife and war, we can build understanding, and thus effectively combat the Communist propaganda which thrives on the misery and unhappiness of people, and further underwrite freedom insurance for ourselves.

After all, on the success or failure of America and the American way of life depends the future of all the unborn races of mankind. If the example we set, if the part we play in world affairs, fails to demonstrate that individual rights and liberties can be maintained in a peaceful and cooperative society, where else may the world look for models of freedom? This great and overwhelming responsibility brings us face to face with the obligation of each individual as a citizen to protect our freedoms at home, to get back to the fundamentals of constitutional government, recognizing the importance of the individual and the dangers of the "welfare state," in order that those freedoms may likewise be protected from the destructive forces of foreign ideology. Men may be protected against murder, but they cannot be guarded against suicide; so government may be shielded from assaults from external foes, but when it disintegrates from within, when it chooses to lay violent hands upon itself, nothing can save it. We must have "men to match our missiles," so that we can enforce the provisions of our policy of freedom insurance, through dynamic action consistent with the idealism of America.

The need is obvious, and the responsibility of America and individual Americans is overwhelming. But we ask, "Where does this group fit into the picture?"

This is an election year—and now as never before the attention of the entire world is focused upon us. What we do and what we say will determine not only our own future, but that of the entire world. The principles for which America stands are being, and will be, discussed throughout our country, and those voices will resound throughout the world. In the final analysis, the people of America will determine the course to be followed.

At this time in our history, when America needs more than ever before the constructive thinking and dynamic action of men and women who are dedicated to the cause of individual freedom at home and abroad, the influence of those connected with the vast insurance industry is immeasurable. The very principle of insurance is one of service to others. By means of contracts freely made, in a free society, the individual is able to make himself secure in certain of his fundamental freedoms—freedom from fear—from worry—which is found in the freedom which insurance brings, enabling the individual to carry on his everyday affairs with the confidence that in the event of unexpected losses, or of disaster, he will nevertheless have that financial security which will enable him, or his family, to carry on despite those difficulties. Freedom from want, made certain by the contract of insurance. Insurance brings these guarantees of independence, based on full freedom of contract, through which the individual establishes his own security and welfare—protecting himself—with his own money and initiative in the tradition of the American system.

Men and women engaged in the field of insurance must realize better than anyone else, the vast importance of insuring those things of great value, and this group, and groups of similar character throughout America, have the opportunity and the obligation of seeing to it that America insures its own freedom and that of its individual citizens.

Here then is the challenge to the insurance men of America.

The prophetic story is told that Nero once ordered a procession to pass before him, depicting all of the nations of the earth, with typical women taking the part of the lands dominated by his empire, which Nero fondly believed would last forever. One by one the representatives of many lands passed before him, and one by one passed the women representing the conquered nations. First came Gaul, subjugated and impoverished by the military might of the Caesars. She passed before the emperor and bowed low in submission. Then came Greece, the home of immortal learning—hungry and despondent. One after another they came—all victims of tyranny.

Last came a woman clothed in purest white—beautiful beyond the boast of any Roman maiden, who failed to bow in submission as had the others.

The emperor, indignant that she should not follow his command and bow down to him, demanded her name. Slowly she answered: "I am the land of liberty and freedom—the realm of service to mankind. Thy power shall pass, but I am the hope of a world on the brink of destruction by the errors of tyranny."

And so, in our world, torn by the errors of greed and tyranny, where governments and philosophies and ideas strike at the fundamental freedoms of the individual, may we refuse to bow to those adverse forces, and firmly establish in our land those principles which constitute our freedom insurance.

Peace Corps, Private Style

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. BARRY. Mr. Speaker, it is very heartening to me to see the spark that has been struck in youth across the land by the proposals for furthering mutual understanding with peoples of other countries. The Peace Corps idea has aroused enthusiasm on every college campus. But not content with programs led by the Government, a resident of my hometown, Yonkers, N.Y., with a group of five young friends, is setting off on a private good will tour of South America. Their object: to bring better understanding of America and especially American youth to college students the length of Central and South America. Since in Latin America it is the students who are often the most easily misled by agitators, these young men from the United States will be doing a very worthwhile job. They plan to visit about 80 Latin American colleges, using as transport an Army surplus duck.

La Pata Valiente, whose English name is *The Brave Duck,* is a 7-ton Army amphibious landing craft, and it will carry William Hayes, of Yonkers, and Walter Kutrieb, of Tarrytown, on an approximately 27,000-mile journey.

The mission, which will take them by land and water on a 6-month jaunt, has been dubbed "Operation Americanas." It gets underway this summer after well over a year in the planning stage.

The ambassadors will get rolling July 1 at the campus of Cobleskill College. The whole plan had its beginnings there while Robert Hinds of Gloversville, was studying at the Agricultural and Technical Institute and where he met Walter. The idea was carried by Bob to Drew University, where he and Bill Hayes are fellow students now.

YONKERS MECHANIC

Bob is president of Operation Americanas, which has gained support from communities, industry, college groups, and individuals. He will serve as skipper and chief linquist on the venture, and Bill, son of Mr. and Mrs. William R. Hayes of 75 Rossmore Avenue, has been signed on as mechanic.

The Yonkers man, newest addition to the crew, also is equipped with a repertoire of folk songs and a command of the Spanish language, which he studied at Roosevelt High School. Bill and brother Howard formerly delivered the Herald Statesman in their neighborhood and a third brother, John, is a carrier now.

Walter, son of Mr. and Mrs. Otto Kutrieb of 85 North Washington Street, Tarrytown, was in on the early plans at Cobleskill. He has postponed further studies at Cornell University to join the duck's crew as navigator and cook.

The rest of the crew are: Daniel Twomey, of Worcester, N.Y., another Cobleskill graduate and student now at Albany State, who will be the radioman; his twin brother, Tom, Cobleskill alumnus now at Cornell, who will be the quartermaster, and Edwin Naylor of Mayfield, N.Y., and Middlebury College, the duck's medic.

INSPIRED BY MISUNDERSTANDING

Unknowingly, Pedro Recio, of Barranquilla, Colombia, while an agricultural major at Cobleskill, instigated the good will project through his own misconceptions about North American people, according to President Bob:

> Pedro was antagonistic. He didn't understand American ways or our philosophy, but, after many months of working at it, we became fast friends.

It was at this point, some 14 months ago, that Bob began thinking about promoting friendship between North American students and their neighboring counterparts. His idea caught fire as he found the right men around the upstate campus and later at Drew to carry out his plan.

The first step was acquiring the amphibious vehicle from an Akron, Ohio, war surplus dealer, and then came a gift of $250 worth of plastic paint to transform the 31-foot duck into a gleaming white dove of peace. Four weeks of sandblasting prepared it for eight coats of paint.

The young men have written letters to prospective backers and have made speeches appealing for interest in their undertaking and, incidentally, for funds and equipment. Bob Hinds' hometown, Gloversville, has contributed $2,000.

> The success of our project depends on people and organizations giving their time, work, or donations,

He said.

Already they have received a nylon folding cabin for the duck, which will be their home on rivers, in jungles, and mountains as they travel through Mexico into Colombia and on southward.

Stories about the forthcoming adventure have preceded them and paved the way for Operation Americanas. Bob visited his former schoolmate at Barranquilla last summer to lay the groundwork at that end. Colombian papers have told their plans.

The students are writing to South American colleges in the hope that some sort of a schedule for classroom visiting and meetings will be arranged. They plan to show films of American life to village people.

They also will be making a study of road conditions in Latin America; will represent the motorists of the United States, and will send back monthly reports of their mission, all at the request of the American Automobile Association, the skipper said.

Next step? Washington, D.C., where they expect to visit their Congressmen, Pan American Union officials, and President Kennedy on the continuing rounds of seeking support and sanction.

"Mutual Understanding" is their motto, and *La Pata Valiente,* which itself is bound to attract interest because it has a real personality, will be a little moving America.

> But we're not going to stand on top of it and wave the flag,

Bob hastened to add.

In the meantime, the crew applies itself to a public relations whirl hoping to arouse community interest throughout the East and to raise money wherever they can.

Immediate needs: Outboard motors, depth finder, liferaft, radio transmitter, cameras, and film.

This sort of enterprise on the part of young Americans is really inspiring. It is the stuff of which U.S. greatness is made. I am sure we in the Congress all join in wishing these six young New Yorkers Godspeed and good luck.

Tax Reforms and Federal Aid to Schools

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. QUIE. Mr. Speaker, the March 3 edition of Life magazine expressed itself editorially on its concern for the ever-increasing amount of tax money collected by our Federal Government, compared to the amounts collected by other levels of Government. The editorial points out several hopelessly complex and inequitable features of Federal tax collection.

Since I believe this editorial is thought provoking and on sound ground, I recommend its reading to my fellow Members:

TAX REFORMS AND FEDERAL AID TO SCHOOLS

President Kennedy's program for Federal aid to schools and colleges ($5.6 billion in 5 years) reminds us of nothing so much as the need for Federal tax reform. We are really not trying to change the subject; there's a connection. For, once the Federal tax structure is reformed, States and municipalities can have more ample tax sources of their own; and the chief excuse for massive Federal school aid would vanish.

In contrast with 20 years ago, when the ratio was about 50–50, the Federal Government now collects about twice as much in taxes as all State and local governments together. It does this through a patchwork tax system that has become hopelessly complex and inequitable and requires drastic rewriting. This system has also preempted or crowded all tax sources except real estate, now virtually the sole source of local school taxes.

Despite their cramped resources, States and localities (as well as private institutions) have done a heroic job of keeping abreast of the need for more and better schools. Total expenditures on U.S. education have more than doubled since 1952. This was done with practically no Federal aid or stimulus. After sputnik, the people of the United States did not need to be told by Washington that their educational system was in trouble.

The unceasing strain on local money, and the need for still further school improvement in the decade ahead, have steamed up the lobbies for massive Federal aid. More steam came from the unevenness of our recent progress—the fact that Alabama, for example, spends only $217 per pupil on public schooling, while New York spends $585. This gross inequality of educational opportunity is undemocratic and there is plenty

of precedent for steps by the Federal Government to correct it.

The simplest way would be by such a formula as the Committee for Economic Development proposed last year which confines Federal aid to the poorer States. But the Kennedy plan subsidizes everybody—$30 extra per child in Alabama, but $15 extra in New York and California too.

By moving massively into education, however, the Federal Government would compound the very problem—i.e., Federal taxes—that keeps the chief and proper sources of school funds under such strain. The school boards would become increasingly dependent on Federal aid, as have the farmers, veterans, the aged, etc., before them. This is too bad because if Kennedy would shift his legislative priorities, the traditional supports of American education could still prove strong enough to meet all foreseeable requirements. His administration is studded with experts who realize that the basic reform of our tax laws is an absolute must for the health of the whole U.S. economy. This reform is on Kennedy's agenda, but not for this year. His immediate "musts" are some 16 other bills, including school aid, most of which cost money and therefore tend to make the tax mess even worse. If tax reform came first, the problems behind these bills would be a lot easier to handle.

Tool Bank Plan Arouses Interest

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 13, 1961

Mr. KOWALSKI. Mr. Speaker, under permission to extend my remarks, I offer the text of a statement I made recently outlining a proposal for the establishment of a tool bank.

As a result of press reports about this proposal, inquiries have come in from all parts of the country. In view of this great expression of interest, which has also been reflected in business, industry, and labor publications, I believe it appropriate to present the text of this statement, as follows:

THE DEVELOPMENTAL MACHINERY AND TOOL BANK

(A proposal by Hon. FRANK KOWALSKI, of Connecticut.)

THE PROPOSAL: A DOUBLE-BARREL APPROACH

A. To stimulate, by appropriate incentives, U.S. business activity and employment, through stepped-up modernization of the machine park currently used by U.S. Government, industry, and agriculture.

B. To help equip the developing nations with machinery and tools, suited to their particular needs, environment and stage of development, and thus to accelerate their productive capacity and economic growth.

(A and B add up to the developmental machinery and tool bank, hereinafter called the tool bank.)

The tool bank would derive its assets from deposits consisting of machinery, tools and equipment transferred to it by industry, agriculture or the government, because of obsolescence in terms of age and/or design, or excess capacity.

The developing nations would be enabled to draw on the tool bank, in accordance with clearly defined objectives and regulations, without any charge to them for the tools.

U.S. voluntary agencies, engaged in overseas development work, would equally be able to draw on the tool bank to carry on and/or expand their programs.

THE RATIONALE

A. The current recession in the United States as the administration has indicated, requires immediate remedial action. The tool bank proposal is designed to meet this requirement in a number of ways:

1. Modernization, through replacement, of America's machine park would stimulate an important sector of our industry and thus help to create more employment opportunities.

Such a program would affect not only the machine tool industry, but steel and related industries supplying machine toolmakers.

2. Modernization of America's machine park would put U.S. manufacturers in a better competitive position, especially vis-a-vis such up-to-date competitors as Japan and Germany, in international markets. It would, therefore, be a contributing factor in the expansion of U.S. export markets, especially in areas where price considerations have proved a deterrent to the acceptance of U.S. products.

3. The importance of early introduction of U.S. machine tools to secure future markets canont be overestimated. A worker accustomed to working on machines with the metric system, for instance, is difficult to break of his working habit. Familiarity with U.S. tools is likely to stimulate demand for better and newer ones later.

The tool bank proposal, therefore, holds out two promises of direct and immediate benefit to the United States—stimulation of the domestic economy, and expansion of export trade with all the attendant benefits.

B. There is a demonstrated need for a multitude of different tools in the developing nations. They may used to:

1. Equip vocational schools which train nationals in the much needed skills the country requires.

2. To further, or help establish, small businesses (the bulwark of democracy) such as a one-man repair and machine shop, for instance, which otherwise could not afford to purchase machine tools.

3. Machines considered obsolete by U.S. standards may well be better suited to the current needs and state of development of a developing nation, than the most modern presently available. The so-called hand-me-down machinery, therefore, can assume an important function in filling the intermediary needs of a developing nation.

To combine efforts to stimulate modernization of America's machine park, while at the same time helping the developing nations, would multiply the effect of U.S. development assistance programs. While preventing an inundation of the U.S. market with secondhand equipment, the tool bank would actively increase the training and productive capacity of developing nations.

Since amortization and tax writeoffs have fully paid for most of the machine tools discussed in this proposal, the development assistance aspects of this program can, in effect, be carried out with little or no cost to the taxpayer and private enterprise. The tool bank, therefore, is a proposal which meets President Kennedy's criterion "ask what you can do for your country." Here is one answer.

DEMAND POTENTIAL FOR U.S. TOOL BANK SERVICES

At this time there exists no international inventory of tools. However, that there is a pressing demand, worldwide, for tools is well documented by a series of uncoordinated, individual transactions:

The Government of India availed itself of GSA declaration of excess tools to the tune of $16.9 million.

Yugoslavia was the recipient of such tools valued at $2 million.

Mexico received $500,000 worth of excess Government tools.

Technico, a private voluntary organization with no paid employees, has recently collected, from private industry, 150,000 pounds of small machine tools. So far, without much organization and strictly in the spare time of the individuals involved, 14 shipments of tools have been made, to almost as many countries. Eight more are about to be dispatched. Without solicitation Technico, for lack of organizational facilities, has some 35 requests on its books which it has not yet been able to process.

Individual citizen and private corporations are currently working with and through CARE to provide self-help throughout the world.

CARE itself is engaged in operations in developing countries to which it sends tool kits of all sorts.

The Journal of Commerce reports from Japan a heavy flow of inquiries from the developing African nations for machine tools.

A spot check of embassies, representing developing nations in Washington, reveals a keen interest in the tool bank.

ORT (Organization for Rehabilitation Through Training) has equipped and is operating 663 training units in 19 countries. All are vocational training schools.

DEPOSIT POTENTIAL FOR THE TOOL BANK

Industry studies indicate that there are currently some 3 million machine tools distributed over the United States. Out of this total, some 60 percent are 10 years and older, nearly 20 percent are 20 years and older.

There are more than 100,000 machine tools in storage or surplus.

The U.S. Government holds millions of dollars' worth of standby tools, and annually disposes of large quantities of "excess" equipment. (See General Service Administration's excess declarations.)

Considering tools in a broader sense, there are untold quantities of obsolete farm implements, hospital equipment (including U.S. Army hospitals in moth balls) and similar items scattered throughout the United States.

While the degree of obsolescence naturally varies from industry to industry, the historical trend shows a constant proportional increase in obsolescence of the U.S. machine park.

Obsolescence in age and design go hand in hand, since continuous development and improvement increase machine productivity.

For the sake of national security and international competition, the United States cannot afford to continue the historical obsolescence trend.

Understandably, the percentage of obsolescence is higher among older, less complicated tools than it is among the more modern, complex tools. In that lies the significance of a tool bank for the developing nations.

Obsolescence need not be equated with uselessness. On the contrary, the less complicated machines are more likely to find widespread application in the developing countries than some of the more complex machinery. Here are some examples of potential availability of machine tools (10 years and over):

	Percent
Lathes	64
Milling machines	61
Drilling machines	59
Grinding machines	60

A large percentage of these tools is in excess of 20 years, and of the type which would lend itself more readily to adaptation for use by the workers of the developing countries.

Similar percentages pertain to metal farming machines, and other tools.

TO MAKE A TOOL BANK A REALITY

The author has no illusion about the number of complex problems which will have to be resolved to initiate the proposed program. They include:

1. To provide incentives for U.S. industry and agriculture to replace and modernize their machine park. A number of solutions, possibly in combination with each other, come to mind. Accelerated depreciation, and/or tax allowances and credits for the purchase of new machine tools. Facilitating of new purchases through a system of low interest credits. Financial aid to machine tool manufacturers, where necessary, to permit them to sell their products on easy credit terms.

2. Arrangements for warehousing, and where necessary, rebuilding of these machines. Possibly, an arrangement could be worked out where the original owner stores the replaced machinery himself, but provides the necessary information to a central clearing house (the tool bank) describing the machine's pertinent data. This system would avoid the necessity for large storage depots, but would ultimately lead to a national surplus inventory.

3. Crating, shipping, insurance costs will have to be worked out in such a manner that the recipient nation which is to pay for it, will still find it advantageous to draw on the surplus machine stocks.

4. The bank itself can be established as part of a Government agency, or possibly be administered by a private organization (i.e., the machine tool industry's trade association) with Government assistance.

Solutions to these questions might well fall within the realm of a special task force composed of representatives of private enterprise, trade unions, Government, and Congress.

OVERCOMING PITFALLS

There are, as in any daring program, inherent dangers attached to sending used machinery abroad. Proper controls and execution of the program can, however, overcome such dangers.

1. Proper matching of requests and available stocks is imperative. Here the service of the tool bank is of tremendous value, since a large, varied inventory will permit an easier matching of demand and supply, reduce notorious time lags between the two.

2. Malfunction of machinery is a distinct possibility. To avoid the repercussions that this might bring about, technical advisers supplied by the trade unions, the Youth Corps, etc., would be stationed in recipient countries. Their function would be to supervise installation of machinery, help with repairs, where necessary, and assist in training nationals where this is required.

The possible pitfalls of this program are negligible compared to the possible benefits, especially when adequate safeguards are taken to avoid such pitfalls.

IN SUMMARY

The tremendous inventory of surplus machinery in the United States—overage, obsolete excess—can either be an important national asset or a tremendous liability.

It will remain a liability if it is continued to be used in our productive effort, where we need the most modern equipment to improve our competitive international standing. It might also be a liability if it were disposed of in such a manner as to flood our domestic market with second-hand machinery.

On the other hand, this surplus machinery can become a national asset if we stimulate its replacement and make it available to those countries which are in dire need of it, and can put it to good use. In this manner, we can help stimulate our economy and turn a potential liability into an asset by making it work as part of our national development assistance to the developing nations.

As outlined, this program can be expected to command the support of a large segment of the manufacturing industries and trade unions. Some, who have been sounded out so far, have expressed a most favorable reaction.

Needy Nations To Get More of U.S. Surplus Machinery

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1961

Mr. CONTE. Mr. Speaker, an exciting new proposal for the establishment of a tool bank for the dual purpose of stimulating production and employment in the United States, through the replacement of obsolescent machines and of aiding underdeveloped countries, was recently made by our colleague the gentleman from Connecticut [Mr. KOWALSKI].

An excellent article on this proposal and related subjects was printed recently in the Chicago Sun-Times under the byline of the distinguished correspondent, Frederick Kuh.

Under leave to extend my remarks, I offer the text of this article on the Kowalski plan from the March 5 issue of the Chicago Sun-Times:

NEEDY NATIONS TO GET MORE OF U.S. SURPLUS MACHINERY

(By Frederick Kuh)

WASHINGTON.—The Kennedy administration is preparing to enlarge the supply of American used machinery for underdeveloped countries. Plans are being studied for turning into an asset the tremendous accumulation of overage surplus U.S. machines.

The program was launched in 1956. It began modestly. In the first year only $2,416,313 worth of secondhand machinery was shipped to economically backward nations from America and from U.S. oversea military centers.

The flow gradually grew until in 1960 it reached a value of $31,205,259. Over the past 5 years—1956 till the end of 1960—the total equipment thus provided amounted to $92,804,648.

U.S. officials, perhaps a little optimistic, now estimate that in 1961 alone the figure will approach $100 million.

THIRTY-ONE COUNTRIES GET SURPLUS

All this material was Government surplus, almost wholly from military stores. Its most important component was machine tools and of these some 75 percent went to India. The rest was allotted to 31 countries scattered through south Asia, the Far East, Latin America, south Europe, the Caribbean and a trickle to the Sudan in Africa.

What is new in the discussion now proceeding in Washington is possible extension of the enterprise from Government-owned equipment to obsolescent machines belonging to U.S. private industries.

It is estimated that more than 100,000 machine tools are now in storage or are surplus in American private industries. And another assessment says some 25,000 U.S. Government-owned machine tools become surplus each year.

MACHINERY AND TOOL BANK

A Democratic Congressman, FRANK KOWALSKI, of Connecticut, is active as a one-man ginger group working for a machinery and tool bank on which laggard regions of the world can draw.

To enlist private industries in this important project, KOWALSKI suggests tax incentives. He also mentions Government credits to private companies to help them buy new machine tools and Federal financial aid to machinery manufacturers to enable them to sell their products on easy terms.

U.S. officials emphasize the dual purpose of the scheme:

First, it tends to substitute new, modern machinery for outworn equipment used by the American Government, industry and agriculture.

Secondly, it provides machinery and tools to speed the economic growth of less developed countries.

ANTIRECESSION MEASURE

KOWALSKI met during the week with State Department and foreign aid officials and with other Congressmen. He presented his plan for a machinery and tool bank as an antirecession measure, arguing it would create more employment and stimulate a significant sector of industry. By increasing the demand for new machinery it would promote not only the machine tool but also the steel industry.

KOWALSKI made the further point that modernization of America's manufacturing plant would improve U.S. competitive ability on the world market, especially against rivals like Germany and Japan. It would therefore help expand U.S. exports, he said, especially where American high prices have hampered acceptance of U.S. products.

He also underscored the advantage of introducing American-made machinery into countries which are important potential customers for the years ahead. Familiarity with U.S. equipment, he explained, is likely to stimulate demand for better and newer ones later, especially if the workers become accustomed to using American appliances.

He concluded that the machine bank proposal holds out the triple promise of immediate benefit to the U.S. domestic economy, promotion of exports and assistance to the have-not regions.

Under the Kennedy administration, new vigor is being applied to reviewing the whole excess machinery policy. The aim is to find more practical uses for such equipment within the foreign aid program.

During the past 5 years only a minor part of such material went to the underdeveloped nations from U.S. military depots abroad. The ratio of such machinery drawn from the United States to that taken from oversea installations has been about 1 to 4.

U.S. officials estimate that some $300 million worth of surplus machines belonging to the American Government become available overseas each year. In recent years, however, only $3,700,000 to $7,300,000 worth have come from those sources.

NO DUMPING GROUND

One object of the reappraisal now being made is to discover whether considerably more of this aging U.S. equipment lying abroad could be funneled to needy countries of Asia, Africa, and Latin America.

The project is by no means just a method of dumping wornout machinery on unsuspecting nations.

For instance: A mission from Pakistan came to the United States, inspected and selected some Defense Department surplus equipment produced in 1941 and gladly acquired it.

India has derived great advantage from this program in the past few years and is pressing for an increased flow of used U.S. machinery. It has gone into India's railroad workshops, small industries, and coal mining. Altogether India received between 2,500 and 3,000 pieces of American secondhand machines.

SURPLUS MACHINERY LISTS

The U.S. Foreign Aid Administration circulates lists of available used machinery to South American, Asian, and other potential recipients. Interested countries then express their wishes. To obtain the equipment, it must become part of their development projects.

Who pays for it?

The recipient government foots the bill for packing, inspecting, and transporting the machinery. In the past, some have paid up to 5 percent of the amount the machines originally cost the Government to acquire. Now even this 5-percent system has been dropped.

U.S. officials stress that by unloading overage plants and getting modern machinery, it is not only peacetime American factories, farms, and mines which gain but also those actually or potentially fitted for military production.

Luring the European Tourist

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 13, 1961

Mr. DERWINSKI. Mr. Speaker, considerable discussion and some action has been taken in the area of reducing our international spending deficit. One small aspect, tourism, has received penetrating comment in the March 6 issue of the Chicago Daily News:

LURING THE EUROPEAN TOURIST

Americans traveling abroad spend $1 billion a year more than foreign tourists do in the United States. The Kennedy administration has a program for reducing this spending gap.

First steps include establishment of a travel promotion agency and the appropriation of $5 million for advertising to tell foreigners that they can, too, afford to visit America. While practically every major country has such an agency here, it might be smarter for the United States to begin at this end and, so to speak, prepare the product for the sales campaign.

For one thing, we are so security conscious that our visa restrictions are laughable to Europeans—when they are not infuriating. For another, American institutions, from hotels down, have a reputation abroad for being both expensive and unaccommodating.

For the same reason that Americans revel in the courteous and extensive service they receive in Europe, Europeans find the typical American reception rude and ungracious. An American abroad can quickly find someone to speak his language in shops, hotels, or bus stations. There are good reasons why Americans are poor linguists, but that doesn't help the hapless visitor to these shores who knows no English.

Beyond all these considerations is the hard fact of prices that often seem prohibitive by European standards. J. J. Horan, chairman of an association of travel agents, told an audience in Copenhagen the other day that a desperate tourist could live in the United States on a dollar a day.

Just possibly a man who knew his way around skid row might subsist on a dollar a day in Chicago, but a bus trip to the museum of science and industry would sure cut into his allowance for souvenirs that day.

Europeans aren't dopes, despite Mr. Horan's apparent opinion, which is one reason why, on incomes half the average prevailing here, they have not been swarming to see the sights of America. A successful effort to attract them had better start with some accurate information about what it costs. Any who really tried to do it on $1 a day would most likely wind up in jail or a hospital.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Shall State Be Master or Servant of the People?

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks, it gives me great pleasure to include an editorial written by my esteemed friend, the editor of the Council Bluffs Nonpareil Council Bluffs, Iowa, Mr. A. M. Piper.

The Freedom Foundation at Valley Forge awarded the top National George Washington Honor Medal in the editorial category to A. M. Piper, which appear in the Nonpareil December 4, 1959.

Having known Mr. Piper for a quarter century or more, and having read most of his editorials during that long period, I was not the least bit surprised when I learned he had won this coveted honor from the Freedom Foundation, whose members are known far and wide for their unexcelled patriotism and love of the freedoms we all enjoy. Let every American strive mightily every day of our lives to keep the blessing of our American freedom so plainly and ably expressed by a dedicated American patriot, Mr. A. M. Piper.

The winning editorial follows:

SHALL STATE BE MASTER OR SERVANT OF THE PEOPLE?

The supreme issue of this century is whether the state is to be the master or the servant of its citizens.

Freedom of speech nearly always goes hand in hand with economic freedom. Those who try to set human rights against property rights are making a great mistake.

Where there is no security for property, such human rights as freedom of speech and of the press and guarantees against arbitrary arrest, execution, and slave labor are invariably absent.

When the state goes beyond its proper functions of maintaining law and order at home and providing protection against foreign aggression, there is no place to stop. One power after another is seized until no freedom is left.

The importance of liberty was proved during the century between the end of the Napoleonic Wars and the outbreak of World War I. During that century there were great gains in political and economic freedom. Old fetters which absolute monarchy and fuedalism placed on individual initiative and enterprise were broken in some countries and loosened in others.

There was not a country in the Western World where people were not better fed, better clothed, better schooled, better cared for medically in 1914 than in 1814.

Political institutions varied from country to country, but the trend everywhere was toward more freedom. The century following the fall of Napoleon was the most progressive in human history.

It brought an end to slavery in the United States and of serfdom in Russia, and a wide spread of education.

World War I ended these trends in many countries. In addition to the toll of human lives and the enormous destruction of property, World War I unloosed a revolt against liberty which took two forms.

It paved the way for outright dictatorship in Russia. In Nazi Germany a dictator outlawed all poltical parties except the one composed of his own followers. Other European nations were influenced by these developments.

In the United States the change took a different form—in the creation of the so-called welfare state. The Government has undertaken functions designed to help individuals and groups but in the process controls have been established which have dulled initiative. Enormous taxes have been imposed which have increased the burdens of all groups, under the guise of helping them solve their problems.

Reckless spending is the rule rather than the exception, with the results the purchasing power of the dollar has shrunk more than half in the last two decades.

We are continually being flooded with propaganda for bigger spending and more controls.

At the present time we are being warned that we must spend more and submit to more controls to keep Russia from getting ahead of us, and perhaps destroy us either with new weapons or economic measures, or both.

The basic strength of the United States lies in being as different from Russia as possible. Our future depends upon adhering to the principles of the free market, consumer free choice, complete opportunity for the individual. But powerful forces in this country use the mistaken fear of Russian competition to drive us along the path of economic statism.

Aside from military attack, the only thing we need fear from the Soviet economic pattern, is that we should imitate or adopt it.

Only if we maintain the historic American principles of individual economic opportunity can we continue to prosper as we have in the past.

The United States will be a great and prosperous nation only so long as the State is the servant of its citizens, not the master of its subjects.

The Military-Industrial Complex—Farewell Address by President Eisenhower

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14, 1961

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "On Independence," published in the March 1961 issue of the Officer magazine of the Reserve Officers' Association of the United States, containing an excerpt from the farewell address by President Eisenhower, dealing with the military-industrial complex.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ON INDEPENDENCE

In his farewell speech, President Eisenhower dealt frankly with a problem relating to a development which largely had arisen during his administration—the military-industrial complex.

So that you may comprehend the danger to which reference is made, and in order not to distort the statement by removing it from context, we reproduce in whole this part of his message to the Nation:

"Our military organization today bears little relation to that known by any of my predecessors in peacetime, or indeed the fighting men of World War II or Korea.

"Until the latest of our world conflicts, the United States had no armaments industry. American makers of plowshares could, with time and as required, make swords as well. But now we can no longer risk emergency improvisation of national defense; we have been compelled to create a permanent armaments industry of vast proportions. Added to this, 3½ million men and women are directly engaged in the Defense Establishment. We annually spend on military security more than the net income of all U.S. corporations.

"This conjunction of an immense Military Establishment and a large arms industry is new in American experience. The total influence—economic, political, even spiritual—is felt in every city, every statehouse, every office of the Federal Government. We recognize the imperative need for this development. Yet we must not fail to comprehend its grave implications. Our toil, resources, and livelihood are all involved; so is the very structure of our society.

"In the councils of Government, we must guard against the acquisition of unwarranted influence, whether sought or unsought, by the military industrial complex. The two potentials for the disastrous rise of misplaced power exists and will persist.

"We must never let the weight of this combination endanger our liberties or democratic processes. We should take nothing for granted. Only an alert and knowledgeable citizenry can compel the proper meshing of the huge industrial and military machinery of defense with our peaceful methods and goals, so that security and liberty may prosper together."

Perhaps as at no other time, our association is put to the test when measuring its goals against this requiem to the Eisenhower administration.

For well more than 38 years now ROA has sought to support programs adequate to deliver complete national security.

Yet, in so doing, we have never surrendered our independence.

ROA is supported by dues paid by its individual members. The association's constitution wisely requires approval of the national executive committee for any gift

or revenue outside the pale of the membership dues.

So far as the editorial board of the officer can ascertain, the occasion for action by the executive committee has never arisen.

Against all pressures, ROA has declined to enter the contest for military-industrial subsidization, whether it be in the form of funds spent in entertainment at our conferences, in the guise of advertising in our publications, or in any other form.

Occasionally, an individual member will express disappointment that we are outstripped in these fields—that we are not taking advantage of opportunities which are apparent.

Yet, we all need reminding that what ROA possesses is of a value far beyond that which can be expressed in gold. When our association becomes willing to sell its character, which is built on precious independence, then we should yield our charter, for there would no longer be a primary reason for our existence. We do not believe that time will ever come.

Address by District of Columbia Commissioner Tobriner at His Swearing-In Ceremonies

EXTENSION OF REMARKS
OF
HON. ALAN BIBLE
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14, 1961

Mr. BIBLE. Mr. President, it is an invigorating experience to chart revitalized and realistic goals in government whether such be international, national or more localized in scope.

Hon. Walter N. Tobriner, the new president of the District of Columbia Board of Commissioners and President Kennedy's choice for that position, in his first official public expression about the Nation's Capital, set forth succinctly, yet illuminatingly, his goals for this great Capital City. In his address at his swearing-in ceremonies on March 3, Commissioner Tobriner capsuled the tempo of what he hopes may be achievements under this new administration in the District of Columbia.

I commend to the Senate the reading of his brief address wherein he sees President Kennedy's New Frontier as a concept which has captured the imagination of the country and kindled the spark of new effort for people everywhere.

I ask unanimous consent that the text of Commissioner Tobriner's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Judge Edgerton, colleagues on the Board of Commissioners, distinguished guests, and friends, the years ahead are a challenge and an opportunity. I hope that I shall be equal to this privileged honor of helping to govern my beloved city with wisdom and with the strength to do the right as is given me to see it. I would hope to bring to the city, with the aid of my fellow Commissioners, the concept of the New Frontier, the New Frontier which has so captured the imagination of the country and kindled the spark of new effort. The New Frontier is not just a campaign slogan. It is not a shibboleth appropriated and copyrighted by the Democratic Party. To me, it is a revitalization of American life on all levels. It involves, once again, a holding high of our heads and a reaffirmance of the destiny of our country to lead the world to a new freedom. It is a rediscovery of what has made us great and will continue to sustain us in the struggle ahead. It is a realization of the "Promised Land" of Mary Antin and the moving words of Thomas Wolfe, who said: "To every man regardless of his birth, his shining golden opportunity, to every man the right to live, to work, to be himself and to become whatever his manhood and his vision can combine to make."

I would wish, among many other things, that it come to pass as part of this revivifying concept that the citizens of our city shall feel free to walk the streets in any part of it, night or day, without molestation or fear; that we should have a more direct voice in the control of our local affairs; that we provide for our young citizens the same post-high-school education at public cost as that provided by every State in the Union; that there shall rise within the core of the city a new and beautiful residential area where people of good character and good will may live in harmony; that every citizen shall be secure in person and in reputation against unwarranted arrest or detention; that job opportunities shall be available for those with skills, and the opportunity to achieve skills shall be open to everyone. I should like to see a city where life will be so full of constructive opportunity, where the standards of living can be so elevated that frustration will be lessened and the old answers found only in drugs, alcohol, and gambling will tend to diminish; a city where new highways will feed the growing activities of the community and where the young with children, as well as the old, will return from the suburbs attracted by our city's parks, its fine schools, and its cultural opportunities.

All this, ladies and gentlemen, may seem like Utopia. But no worthwhile advance, however small, has ever been made without sight of Utopia in the distance. These things will not come to pass during my term of office, nor during the term or terms of my successors; but, keeping in mind the vision of the New Frontier, let us so act within the years immediately ahead that no historian can say we have not at least made a good beginning.

Admiral Rickover Donates to Charity Fees for Talks and Writings

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. KOWALSKI. Mr. Speaker, in fairness to Vice Adm. Hyman G. Rickover, whose contributions to our national security have been of immeasurable value, I bring to the attention of the House a brief newspaper article pointing out that he donates to charitable and educational causes the fees he receives from his speeches and writings.

Here is the article, from the New York Times of March 9, 1961:

RICKOVER AIDS CHARITY—ALWAYS DONATES FEES FROM SPEECHES AND WRITINGS

WASHINGTON, March 8.—United Press International, in a dispatch on March 6, listed Vice Adm. Hyman G. Rickover among those who would face reduced incomes under a White House order that administration officials must donate to charity the fees received for speeches, articles, and books.

Actually, Admiral Rickover has always donated such fees, and also cash awards, to charitable and educational purposes.

"This will reduce my income by zero," he said after having read the dispatch.

Chesterfield County Was First To Secede

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Pageland Journal, Pageland, S.C., of March 9, 1961:

A MATTER OF HISTORY: CHESTERFIELD COUNTY WAS FIRST TO SECEDE

(NOTE.—The Journal is indebted to W. B. Burch of Killarney, Fla., a great-grandson of Col. Stephen Jackson, secessionist leader, for the following account of a meeting held at Chesterfield Court House as reported to the Charleston Mercury by one of its correspondents, which establishes the fact that Chesterfield County was the first county in the State to adopt a secession resolution.)

THE STATE OF PUBLIC FEELING IN CHESTERFIELD

CHERAW, S.C., *November 19, 1860.*

Knowing the deep solicitude you and many of your readers feel in the movements of the people of the State at this momentous period, I have to inform you and them of the events in Chesterfield in the last few days. Last Thursday there was a parade for the upper battalion, there was quite a large turnout. After the parade the people were addressed by the Honorable J. W. Blakeney, our Senator, and Representatives, Colonels McFarlan and Prince, and also by Col. Stephen Jackson.

At the close of Colonel Jackson's speech he submitted the question of submission, or resistance by immediate seccession to a vote of the battalion, and requested all in favor of the latter to advance four paces, the whole battalion advanced four paces, leaving not a solitary man for submission. The course of our Senator and Representatives was unanimously and most enthusiastically endorsed.

Saturday last was parade day for the lower battalion. I had the pleasure of being present. The same speakers with Maj. A. McQueen and F. M. McIver, addressed the people. The addresses were received with enthusiastic applause. After the speaking the military spectators were requested, if they approved the action of the legislature in calling a convention, to make their approbation known by advancing four paces to the front, a unanimous forward movement was the response. Immediate separate secession, and a Southern Confederacy were vociferously demanded. At both the upper and lower battalion the lone star flag graced the fields.

I, this evening, returned from our courthouse where one of the largest meetings ever assembled in the district was held today. The object of the meeting was to nominate candidates for delegate to the convention. The meeting was organized by the appointment of Hon. J. W. Blakeney, chairman.

A committee of 24, 3 from each beat, were appointed to nominate a ticket. The committee retired, and after due deliberation returned having unanimously agreed upon a

ticket, and reported the following ticket: Hon. John A. Inglis, Col. Stephen Jackson, Henry McIver, Esq. During the absence of the committee the meeting was most ably addressed by Colonels Prince and Macfarlan. At the conclusion of Colonel Macfarlan's remarks, the committee made their report, whereupon the nominees were severally called out in the following order: Colonel Jackson, H. McIver, and Chancellor Inglis.

All the nominees in the most emphatic language declared themselves in favor of immediate separate secession. The whole question was fully discussed in a clear and forcible manner, and with a fervence and eloquence that could only have been inspired by a due sense of its vast importance. At the conclusion of the speeches of the nominees, the nominations were submitted to a vote of the meeting, and it was unanimously concurred in.

The Honorable J. W. Blakeney, Col. Alfred M. Lowry, and Gen. E. B. C. Cash were then called upon to address the meeting. Their remarks though brief were to the point. They fully endorsed the action of the legislature in calling a convention, believing the immediate separate secession was the only remedy, and that nothing short of that could save the honor, and protect the rights and interests of the State. The meeting was not only the largest and most enthusiastic, but also one of the most harmonious ever held in the district.

The people including beardless youths and grayheaded grandfathers, were eager and interested listeners from an early hour in the day 'till a late hour in the evening and for the first time in my recollection, a goodly number of the fair sex graced with their interesting presence, and encouraging smiles, a political meeting in Chesterfield district.

The ticket nominated will certainly be elected without opposition. For talent, integrity, and firmness of purpose it will not be surpassed by that of any other district. Our delegates will represent a district that is a unit in opposition to black Republican domination, and in favor of immediate State secession. Indeed, we have but one party in the district.

A neatly gotten up flag of medium size, having on it a Palmetto tree with a rattlesnake curled around it, with its rattles sprung and in the attitude of striking, a lone star in one corner, and the inscription, "Immediate State Action," floated over the public square.

After the adjournment of the meeting the whole concourse of ladies and gentlemen assembled under it and saluted it with three deafening cheers. Altogether it was one of Chesterfield's most glorious days, her citizens a unit in their stern resolve to resist to the death the domination of black Republican fanaticism—to die free rather than to live slaves.

"South Carolina Secedes," by John Amassa May and Joan Reynolds Faunt, published by University of South Carolina, Columbia, and printed in December 1960, carries biographies and pictures of Chesterfield's delegates—Chancellor Inglis, Stephen Jackson, and Henry McIver.

An Administrative Conference Procedure for a Quasi-Judicial Agency

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 14, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Stuart Rothman, General Counsel for the National Labor Relations Board. The article was published in the February 1961 issue of the American Bar Association Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN ADMINISTRATIVE CONFERENCE PROCEDURE FOR A QUASI-JUDICIAL AGENCY

(By Stuart Rothman, General Counsel of the National Labor Relations Board)

Borrowing a leaf from the book of the Federal judiciary, the Office of the General Counsel of the National Labor Relations Board has had a Regional Advisory Conference on Administration convened in each of the agency's more than 20 regions.[1] Just as each Federal judicial circuit has a judicial conference "for the purpose of considering the business of the courts and advising means of improving the administration of justice within such circuit," [2] so each regional office of the Board will have an advisory conference for analogous purposes.

Judicial conferences, or councils as they are sometimes called in State judicial systems, are normally provided for by statute. Since their inception in the Federal system, they have proved to be an invaluable adjunct in developing improvements in the operation of the courts within the circuits. The system has worked so well in fact that it seems appropriate and desirable to apply a similar technique in the administrative field. A multitude of conferences, councils and committees exist to advise the heads of Federal and State administrative agencies on many types of questions, but so far as is known, however, this is the first time an independent Federal administrative agency has established advisory groups at the regional level for the consideration of techniques for handling the business of the local regional offices.

This new development is only one phase, but an extremely significant one, of a comprehensive program which has been undertaken by the Office of the General Counsel for the improvement of its function in the administration and enforcement of the National Labor Relations Act. Improvement is necessary for a number of reasons, not the least of which is the fact that the number of cases filed with the agency has been steadily increasing, and the passage of the Landrum-Griffin amendments [3] in 1959 is expected to bring further increases. Since 1947, when the act was extensively revised for the first time since its enactment, over 185,000 cases have been filed in the regional offices. Of these, between 80 and 90 percent were disposed of at the regional level. Thus it becomes self-evident that the efficient, effective handling of the business of the regional offices is a key factor in the ability of the agency to fulfill successfully its responsibilities to the public interest it was created to serve.

An advisory conference has been established on a permanent basis by the regional director of each of the Board's regional offices, with the regional director serving as moderator. While a limited number of regional office staff members have attended the conferences to contribute background information, the membership of each conference has been drawn from the ranks of those in the regional area particularly interested in the law of labor-management relations—practicing attorneys representing labor and management, and teachers of labor law and industrial relations.

RESPONSE IS ENTHUSIASTIC

The response of those invited to participate in the conferences has been enthusiastic. This is encouraging. But perhaps more significant, it is a positive reiteration of a truth demonstrated by the response of the bar to the Federal judicial conferences. The members of the profession are vitally interested in improving the procedures of the bodies they practice before, whether those bodies be judicial or administrative. The members of the regional conferences contribute their thoughts, imagination, and time. They also pay their own expenses, for the agency has no funds for this purpose. It would, therefore, be difficult to imagine a more positive affirmation of legal professionalism, and for this the members of the labor bar deserve sincere commendation.[4]

Students of labor law, whether in the academic world or in private practice, have long been fascinated with theory. If the number of published papers, books, and articles is any criterion, primary attention has been focused on legal theory and the impact of cases on the development of labor-management relations law. The Office of the General Counsel is no less interested in this subject. But the advisory conferences do not concern themselves with the interpretation of the National Labor Relations Act, for that is solely the province of the agency and the Federal courts. Rather, the attention of each local group has been devoted to the consideration and recommendation of techniques for improving the administrative operations and procedures of the regional office so as to eliminate unnecessary delay and wasteful or ineffective practices in the handling of cases at the regional level.[5] These matters, though local in nature since they are found within the framework of the particular regional office, are national in scope.

And improvements developed in one region may appropriately be considered for general application throughout the regional office system. Indeed, one change for the better has already been instituted nationally as a result of the initial meeting of these conferences. Heretofore, regional directors had not uniformly been in the habit of fully informing charging parties of the reasons for the dismissal of charges which were found to be lacking in sufficient merit to warrant the issuance of an unfair labor practice complaint. The discussion at several of the conferences made it evident that this had resulted at times in dissatisfaction, confusion and even misunderstanding of the law or the motivations of the regional offices or the Office of the General Counsel. As a result, all the regional offices were instructed to insure against such results in the future by making explicit the reasons for the dismissal of an unfair labor practice charge.

NEW PROCEDURES AND TECHNIQUES

Prior to the meeting of the advisory conference, agenda developed by the regional director were, insofar as possible, circulated among the members in advance in order to obtain their suggestions about other matters which might be covered and to enable them to consider and develop any comments they wished to contribute at the meeting. Since the primary objective of these gatherings is to devise new procedures and techniques by which the regional office may better serve the public, initial agenda included a brief description by the regional director of the handling of cases by the regional office as a springboard to discussion. Further agenda items included such matters as the question of cooperation in obtaining expeditious handling of cases, methods for locating and interviewing potential witnesses, timing of and responsibility for settlement of cases, the use of pretrial conferences, and the desirability of making pleadings more informative and effective. But these were by no means all the matters which were discussed, for, as was expected, agenda for the various conferences differed because the problems the regional offices encounter are diverse rather than uniform.

Footnotes at end of speech.

Since the concept of the conferences is in its infancy, a complete or fixed program seems undesirable at this point. Only with the passage of time, permitting the development of refinements based on evaluated experience, will they mature as an institution.

By means of discussions stimulating the interplay of ideas, regional office personnel, attorneys practicing before the agency, and members of the academic world will have the opportunity to become better acquainted and reach levels of understanding and cooperation heretofore unattained for the lack of an appropriate forum. Any group with a general common interest may profit from a mutual exchange of ideas and experiences, and these new advisory conferences can be of real value to their members, the agency, and the public by providing a vehicle for eliciting, examining, and testing suggestions for new or improved techniques and procedures in handling the business of the regional offices. If this proves to be true in the case of the National Labor Relations Board, the concept of regional advisory conferences may well recommend itself to administrators in other agencies. Certainly they will bear observation as a creative experiment in improving the practical operating procedures of a quasi-judicial agency in the dispensation of administrative justice.

---

[1] Two series of these Regional Advisory Conferences have now been held, the first in February 1960, and the last having been concluded in January 1961.

[2] 28 U.S.C. § 333 (1959 ed.).

[3] Public Law 86–257, title VII, 73 Stat. 341–546 (86th Cong., 2d sess.).

[4] Morris D. Forkosch, Regional Advisory Conferences on Administration, Labor Law Journal (September 1960), page 857. Professor Forkosch says "on procedures it was remarkable how many areas of agreement were found, how many excellent suggestions came forth and how splendidly the conference tree bore fruit."

[5] There is, however, an increasing interest on the part of conferees in discussion of the more complex passages of the act, as amended by the Landrum-Griffin Act.

An Industry That Is Expanding in North Dakota

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. SHORT. Mr. Speaker, last week, the House spent a large portion of three sessions considering the feed grain bill which was designed to stop the buildup of surpluses of feed grains in the feed grain producing areas of the Nation.

This is a somewhat frustrating problem, with no easy answer, as was evidenced by the lengthy debate on this bill and the narrow magin by which the bill passed the House. The real answer to this problem is to move feed grains into their proper use; namely, that of feeding and fattening livestock and poultry.

My State of North Dakota is apparently doing its best to put together the livestock we raise and the grain we produce, with the end objective in view of increasing the agricultural income of our State. The Bismarck Tribune, North Dakota's oldest newspaper on March 8 carried an interesting story on the subject of the expansion of livestock feeding in North Dakota. I believe the information contained in this editorial should be of interest to all Members of Congress, and under unanimous consent, include it with my remarks in the Appendix of the RECORD:

NORTH DAKOTA CATTLE FEEDING GROWS

Throughout North Dakota, more farmers are putting more cattle in feedlots. Not only big farmers are doing this but also smaller farmers, who are feeding 10, 15, or 25 steers and heifers while wintering their foundation herd.

Thus economists think the agricultural stability and economic security of the State is developing a broader foundation which means that North Dakota will be better able to weather the vicissitudes of drought and recession.

The Federal Reserve bank at Minneapolis has just issued a report which discloses that North Dakota has increased both its beef cattle numbers and the number of cattle on feed for market by more than any other State in the Ninth Federal Reserve District.

According to this report, there are 40 percent more cattle on feed in this State than there were a year ago. This compares with the district increase of 21 percent. Beef cattle numbers have grown by 8 percent compared with the district growth of 3 percent. Meanwhile, Iowa, one of the very biggest feeder States, showed a decline in the number of cattle on feed for market.

One of the big reasons for this development in North Dakota, of course, is the growing utilization of rolled barley for livestock feeding. It provides a relatively cheap feed, easy to handle, and North Dakota has a relative abundance of it. One Sheridan County livestock producer said the other day that he fed absolutely nothing but rolled barley in the latter weeks of their fattening to his 30 steers, recently marketed, and they prospered on it. This appears to have been the experience of all livestock men using rolled barley, which they can raise themselves if they want to.

If the number of cattle on feed in North Dakota continues to grow anywhere near the rate of recent years, it won't be long before fat cattle are a major source of North Dakota farm income with vast effects upon the State's entire economy.

How To Save a Billion

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. HARVEY of Indiana. Mr. Speakers, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor:

HOW TO SAVE A BILLION—AN INTIMATE MESSAGE FROM WASHINGTON

(By Neal Sanford)

There is a new twist to that old maxim: "A penny saved is a penny earned." The twister is that Member of Congress, economist-professor Senator PAUL DOUGLAS, Democrat of Illinois, who has come up with the modern version: "A billion dollars saved is a billion dollars earned."

He has passed this on to his former Senate colleague, now President Kennedy, as the latter begins looking around for new money to pay for some of the new defense costs he is planning.

The President does not have to go outside of the Pentagon itself, asserts Senator DOUGLAS, to find the money he wants for paying new Pentagon bills, for starting on a Zeus antimissile missile program, for modernizing the Army, for more Polaris and Minutemen missiles.

There are $2 to $3 billion to be saved each year, insists the Senator, by squeezing "scandalous and appalling" military waste out of the Pentagon. And the Senator is not alone in this conviction. A joint congressional committee last year, chairmanned by the Senator, reached the same conclusion. It spelled out in some detailed examples of what is called mismanagement, waste, duplication.

That there is going to be some slippage in an operation the size of the national defense program (between $45 billion and $50 billion) is obvious. But when it gets into the billions of dollars it takes on the aspects of a national scandal. Senator DOUGLAS, however, is finding it hard to dramatize it. He can't understand how people whose money is being thrown away can be so disinterested.

Here, for example, are a few instances of this waste, duplication, mismanagement—which he says could be duplicated ad infinitum:

Inventory showed the Department of Defense with 1,082,740 yards of cotton duck cloth above its needs. The Post Office Department (which wanted cotton duck cloth for patching its mail bags) asked for some. It offered to take the total amount off the Defense Department's hands, but it refused to pay the Pentagon the market value for the cloth. As as result the Defense was stuck with this yardage, and the Post Office went out and had a new lot made up.

The Air Force contracted for a shipment of 4-foot cables with a plug at each end. It paid $10.67 for each one. The identical article, meanwhile, was selling in retail supply stores in the Washington area for $1.50, which means the Air Force was charged at least six times the value of the item.

The Navy contracted for a small socket for a lamp, at $21.10 each. A box of 500 acquired by the Navy came to $10,550. Identical items were located in a Maryland electronics retail store selling at 25 cents apiece, or $125 for a box of 500.

The Army's inventory listed 5,739 small wrenches priced at $1.84 apiece, or $10,559.76 for them all. Similar wrenches were available at not more than 25 cents each in District of Columbia hardware stores.

The Marine Corps supply center at Albany, Ga., reported 49,514 feet of 3-inch iron pipe in new condition and excess to its needs. Fort Jackson, S.C., said it could use 10,000 feet, but the offer was refused. Fort Jackson then bought what it wanted new.

Estimates indicate that there are some $14 billion worth of supplies in stock that are surplus to the armed services. Defense Department surplus sales run to about $10 billion annually. But it gets only a return of about 2 percent on the original cost. So the argument goes: why not let other branches of the Government use surplus items, even for nothing, instead of having to buy them new?

Another problem is lack of standardization of even the commonest items the Pentagon buys. There are, for example, some 3,400,000 items in the various military supply systems alone. The Pentagon admits that every time it can eliminate a thousand items by standardization it saves over a million dollars. Annual savings of about $450 million could be made by completing the standardization program.

There are signs that the President is impressed with the charges of waste, duplication, overbuying, by the Pentagon. His Budget Director David Bell has called on the Illinois Senator to learn more about the possible "gold in them thar' Pentagon hills."

Mr. DOUGLAS says the vein runs to $2 or $3 billion, which, as it just happens, is about what the President wants to cover the added costs of his increased defense program.

The question now is: Can he mine it?

Development of the Creative Arts

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14, 1961

Mr. WILLIAMS of New Jersey. Mr. President, citizens and legislators of New Jersey are expressing a growing interest in proposals to increase State encouragement of creative arts. A cultural center has already been authorized; a cultural council has been proposed. This interest is shared in many other States. A national realization is growing: The vitality of a nation is expressed not only through its industry and its principles, but also in the abilities of its citizens to express themselves clearly and meaningfully.

State activity is encouraging and overdue. Interest at the Federal level: Thanks to the efforts of such legislators as Representative FRANK THOMPSON of New Jersey and Senators HUMPHREY and CLARK, we are finally considering proposals to demonstrate Federal interest without imposing any form of Federal control.

Mr. President, an editorial in the Camden (N.J.) Courier Post of March 9 discusses one of those proposals, and it expresses the growing realization I mentioned earlier. I ask unanimous consent that the editorial entitled "Development of the Creative Arts" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

New Jersey's Senator WILLIAMS is hoping for action this year on legislation which would speed development of the creative arts throughout the Nation.

Cosponsor of bills which would help define the Federal role in this area, the Democratic Senator wants a clearer statement of Federal intentions on plans to encourage performance and practice of the arts. A Federal Advisory Council would be established under terms of one of the bills.

In recent years, a step forward was taken with the founding of a National Cultural Center in Washington. At the State level, New Jersey has authorized the establishment of a cultural center, and a proposal for a State art commission has been made.

But WILLIAMS feels such efforts will yield the greatest return if, from national to local level, the citizens prove to themselves and the rest of the world that their interest in creative activity and widespread appreciation of the arts is deep and growing.

The Federal Advisory Council would recommend ways to maintain and increase the cultural resources of the United States, propose methods to encourage private initiative in the arts, and strive to stimulate greater appreciation of the arts by our citizens.

The council would have 21 members widely recognized for profound interest in one or more of the arts. They would represent the major art fields including music, drama, dance, literature, architecture and allied arts, painting, sculpture, photography, graphic and craft arts, motion pictures, radio and TV.

The Government certainly has a role to play in support of cultural activities. It should do a lot more than it does. Of all the civilized nations, our Government probably does less to promote the arts than any of them.

The proposed council could give national perspective on the development of a basic national resource—our own fine arts.

It looks, too, like the time is ripe for the effort by WILLIAMS and others to promote this. President Kennedy has already made it clear that he will take a deep interest in the arts.

Congress should do all within its power to offer programs to achieve that purpose and related purposes.

The Economics of Medical Care for the Aged—Resolution

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14, 1961

Mr. ANDERSON. Mr. President, in all of the buildup by the American Medical Association against S. 909, the legislation recently introduced by me and other Senators to include health care insurance within the social security system, little attention was given by newspapers and magazines to the quiet but significant decision of a positive nature by the general board of the National Council of the Churches of Christ. On February 22, the council of churches general board, consisting of 250 members, unanimously adopted a resolution approving wholeheartedly the principle of using the system of old-age, survivors', and disability insurance for financing basic health care for America's growing population of older citizens.

I ask unanimous consent to insert the resolution into the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

THE ECONOMICS OF MEDICAL CARE FOR THE AGED

(A resolution adopted by the General Board of the National Council of the Churches of Christ in the United States of America, February 22, 1961)

The good news of God's redeeming love and saving power, declared in the teaching of Jesus Christ was proclaimed in His concern for suffering and His ministry of healing. From the beginning, Jesus went directly to the sick and suffering. To all who came or were brought to him, he expressed his loving concern for the health of body, mind, and spirit. This divine concern has received repeated emphasis in Christian life and teaching. The Apostle Paul wrote that the strong should bear the burdens of the weak.

Through the generations Christians have turned to the victims of disease with increasing concern and at the same time have sought resources which might bring healing power to the sick. Consciously or unconsciously sharing God's purpose that mankind should have health, a ministry of healing has become an inherent aspect of a civilized and humane society.

As new health needs have appeared, new resources have been discovered for meeting them. In our day, as the number of aged persons have increased, there are among them many men and women who require financial assistance if they are to have physical and mental health and that spiritual health which may be dependent thereon. On their behalf today ways should be sought and found to further the will of God once so clearly made manifest by Jesus Christ that men and women should be enabled to enjoy health.[1]

For the Christian, means are as important as are ends; but no more so. In our endeavor to achieve Christian ends we must choose those methods best calculated to develop and maintain Christian character and relationships.

No method is better suited to do this than sharing the unpredictable incidence of the cost of medical care through the various mechanisms of mutual aid that have been developed. The most widely accepted of these is the mechanism of insurance—both private and public.

To the extent that Christian duty can be discharged by the assumption of individual, family, and group responsibility and without resort to governmental action, this is to be preferred.

On the other hand, where needs of people can be met only by united, socially planned action, the Christian will choose such action rather than the neglect of basic human need.

Therefore, we should seek to bring the blessings of modern medical care within reach of all by nongovernmental action to the extent that such methods can accomplish this. But we should not fail to support governmental action in circumstances where other methods are clearly inadequate or impossible.

On the average, American families spend nearly $300 a year for health purposes. Most of this money is spent to secure hospital and physician services, medicines, and prosthetic and other appliances after illness has already become serious. Comparatively little of it is spent for the maintenance of optimum

[1] The general board of the national council has already made clear its concern for the provision of adequate standards of health care for all and for the cooperation of both private and public agencies in their maintenance as follows:

1. "Christians should work for a situation wherein all have access at least to a minimum standard of living. Such a minimum should be sufficient to permit care of the health of all and for suitable protection of the weaker members of society, such as the aged. (Pronouncement on basic Christian principles and assumptions for economic life, adopted September 15, 1954.)

2. "The churches' concept of man imposes a more fundamental obligation for the furtherance of health. Therefore, the availability and financing of medical care of high quality is of deep concern to the churches. If voluntary prepayment plans cannot accomplish the desired ends, government should protect the health of the people by making possible the prepayment of health service." (Pronouncement on the churches' concern for health services, February 25, 1960.)

health. This contributes substantially to demands on hospital facilities and to a lower level of general health and well-being than could be had by a wiser and more orderly expenditure of the same amount of money for preventive care. The rapidly rising cost of modern medical care puts it beyond the ability of most retired persons and low-income families to purchase such care on an emergency fee-for-service basis.

A very wise variety of nongovernmental efforts have been and are being made to meet this problem of medical economics. They range from indemnity health insurance provided by commercial insurance companies to prepayment, group practice health plans providing comprehensive, including preventive, care for nearly all the health needs of their subscribers through teams of physicians which include specialists and general practitioners.

The voluntary sharing among groups of people of the risks and hazards of illness, and the voluntary pooling of some of their funds to meet the cost of care for any in their group who may need it is indeed a Christian approach to this problem, whether this method is utilized by churches, labor unions, industrial managements, paternal organizations, cooperatives, community groups, or by subscribers for health insurance. The National Council of Churches commends it and urges its widest possible application.

It is noteworthy, however, that the cost of health care and consequently of health insurance is rising so rapidly as to make it difficult for the average family to afford adequate coverage for its comprehensive health needs. While some 73 percent of the American people have some form of health insurance, nonetheless, only 25 percent of the total private medical expenditures are paid from such insurance.

About 4 million Americans who are today obtaining comprehensive medical care from group practice or other direct service health care prepayment plans pay for it by monthly subscription premiums amounting to less per year than the average $300 per family annual expenditure. It appears that one method of making the best of modern medical available to more and more people lies in a rapid growth and expansion of voluntary health plans of this character.

There are, however, certain groups in the population for whom even their ordinary medical needs cannot be met by voluntary prepayment plans, namely, low-income families and most people 65 years of age or older. Eighty percent of persons with family income of $5,000 or more have some form of health insurance, but only 33 percent of those with family income under $3,000. Only 35 percent of persons 65 or more years of age have any health insurance.

Voluntary health plans are unable to offer coverage for even a fraction of health care needs at charges either of these groups can possibly afford. Eighty percent of people 65 years of age or older have annual incomes of less than $2,000; about 60 percent incomes less than $1,000. At least 7.6 million older people have liquid assets of less than $500. Yet 77 percent of people 65 years of age and older have chronic ailments, and the percentage increases to 83 percent for those 75 and older. The group 65 and older now requires, for less than optimum health care, more than twice as much hospitalization per person as is needed by the rest of the population, and they spend on the average twice as much for health care as does the population as a whole.

Full advantage should be taken of recent amendment to title I of the Social Security Act which offers Federal funds to improve State medical care programs for aged persons on public assistance rolls and also provides matching funds for States desiring to aid medically needy older people not now on relief rolls but able to pass a means test as a condition of eligibility. This program offers the States opportunity to provide help for older persons at the bottom of the economic scale. However, it does not offer aged persons of moderate means and many of low income any solution to their problem.

About three out of every four policyholders in voluntary group prepayment plans are completely excluded from coverage upon retirement, and studies indicate that less than 5 percent can convert to individual policies without reduction in benefits. The voluntary prepayment plans, necessarily based upon experience rating, discriminate against high-risk groups and are not geared to the problems of chronic illness characteristic of old age. Policies commercially written for older people are not only beyond the means of most, but they are not based upon a philosophy of preventive medicine and optimum health, nor do they include provisions for diagnosis, followup, and restorative medicine.

As previously noted, the general board has stated, "If voluntary prepayment plans cannot accomplish the desired ends, Government should protect the health of people by making possible the prepayment of health services." This is precisely what the social security system would be able to provide efficiently through the mechanism of old age, survivors' and disability insurance. Therefore, the National Council of Churches supports in principle legislation which will extend the benefits of old age, survivors' and disability insurance to include adequate health care for retired aged persons.[2]

There are human values that are inseparable from the economics of medical care. Two call for special consideration:

1. Quality of care. While high quality medical care has been achieved under a number of different methods of payment, it is unrealistic to think that quality is ever completely separable from the economics of medical care. The National Council urges that in the development of prepayment and insurance plans—under both private and public auspices—careful attention be given to arrangements which give maximum encouragement to the highest quality of care and the enhancement of the best relationship between physician and patient.

2. Individual dignity and freedom. Government participation in any welfare program does not necessarily involve loss of individual freedom or affront to personal dignity. In some circumstances, indeed, individual freedom is enhanced by the utilization of government to achieve a social goal, though it is obvious that such enhancement does not come about automatically. As the instrument of government is employed by a free people, they must be ever vigilant to guard their freedom. In planning and developing any government insurance program to help older people meet the cost of their medical care, there is a Christian obligation to include provisions for its administration that will adequately safeguard freedom, dignity, and self-respect.

The counsel, cooperation, and active participation of the medical profession and other health workers in both planning and execution of a government health program are essential. The values to be realized from an improved level of health for America's older citizens are so great that we are confident that cooperation will be forthcoming from all who in our day are custodians of the almost miraculous capacity to maintain the health and cure the diseases of their fellow human beings.

In the light of the above concerns the general board authorizes representatives of the National Council to testify at public hearings along the lines herein indicated.

[2] In its pronouncement on the churches' concern for public assistance, adopted June 4, 1958, the General Board stated: "The National Council of Churches affirms that the use of social insurance as exemplified by old age, survivors' and disability insurance is to be preferred to economic dependence upon the public assistance programs."

The Political Situation in Colombia

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14, 1961

Mr. PROXMIRE. Mr. President, the complexity of Latin American politics leads most Americans to despair of trying to really understand what forces are at work in each of the nations south of our border. It is much easier to generalize and stereotype, to think of all Latin American leaders as strutting caudillos or Communist sympathizers, to overlook the hard struggle being fought by honest and dedicated political leaders in each country to preserve and strengthen their democratic institutions.

Recently I received a letter from Mr. Richard H. Naber who teaches in the high school at Portage, Wis. Mr. Naber has had many years experience as a teacher in Colombia at their major universities. I was so impressed by the careful and perceptive discussion his letter contained on the present political situation in Colombia that I thought it should be reprinted in the CONGRESSIONAL RECORD.

Mr. President, I ask unanimous consent that Mr. Naber's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PORTAGE PUBLIC HIGH SCHOOL,
February 28, 1961.

The Honorable WILLIAM PROXMIRE,
Senator From Wisconsin,
U.S. Senate, Washington, D.C.

DEAR SENATOR PROXMIRE: On April 9, 1948, one of Colombia's leading leftist politicians, Jorge Eliecer Gaitán, was brutally slain in downtown Bogotá. In the subsequent investigations it was brought out that international communism had taken an active role in both the wanton assassinations and later uprisings in various cities of the country. In fact, one very well-known figure in world events of today, Fidel Castro, was expelled from Colombia because there were implications of his complicity in the events which took place during the inter-American meeting of Bogotá. From this infamous day when the Reds released prisoners from the principal jails of the country, managed to burn the greater part of police documents against them, destroyed many business establishments through arson and looting, attacked churches and important political leaders, etc., Colombia has been attempting to establish peace in its territory and put a stop to the senseless slaughter of countless innocent people in the farming communities and the backwoods areas of the country. Having lived in Colombia from 1950 to 1959, having taught in their two principal universities and having traveled widely during my residence there, I can testify to the efforts

made to end the chaotic situation that exists in certain Communist infected regions of Colombia.

Previous to my departure from this potentially wealthy country, Colombians of both parties joined together and made a political pact which would rotate the presidency between the two traditional parties—namely liberal and conservative—and divide positions in government between the two. The pact originally called for the conservatives to occupy the presidency during the first period after the fall of the dictator, Gustavo Rojas. When Dr. Hernando Goméz Tanco (one of my former private English students) turned down the offer by both political parties to be the one and only candidate of both parties, the pact was changed to permit a liberal to become president during the years—1958–62. In the elections Dr. Alberto Lleras Gamargo, one of Latin America's leading statesmen—a firm ally of the United States—a true democrat and believer in inter-American unity—was chosen to become president. Since his inception as president the Communists have left no stone unturned to foment unrest, disorder, and chaos so that Dr. Lleras would find it difficult if not impossible to restore civil liberties, peace, and economic stability to his country. The United States has aided Colombia through loans to stabilize their economy but every day from friends and former students both university and private comes the news that the situation is very dangerous and grows graver and more serious.

The day is fast approaching when Colombians must choose a new candidate for the Presidency from among the conservatives. If for some reason there is no choice agreeable to the liberals, civil war with all its horrible aftermath is a distinct possibility. Among the conservatives there is a man, Dr. Jorge Gutierrez Anzola, who was governor of one of the departments of Colombia and who has shown himself to be conscientious, incorruptible and just to both liberals and conservatives. He has friends among both parties but is little known abroad. So far there are indications that the liberals would look favorably on his postulation as candidate to the Presidency some time this year. As far as I know no other candidate has the approval of the liberal leaders. The other potential conservative candidates all have enemies in their own party which is a much more serious matter in Colombia than it would be in the United States. The Communists know that should someone with integrity like Dr. Gutierrez be found among the conservatives then their possibilities of destroying democracy in Colombia would be diminished. Hence, it comes as no surprise that the Red appointed killers of the 20th century have attempted to assassinate him seven times this year. They know that if he is eliminated, then they are just that much closer to power. The liberals would then have the choice of either continuing in power (pact would be broken) or accepting a candidate who is no guarantee to either liberals or conservatives in continuing the program of the pact. In either case it would bring on a period of great internal strain.

If this were not enough there is increasing indication that agents of Fidel Castro are introducing arms and ammunition to the Communist guerrillas in Colombia through Venezuela. Just the other day we were given an indication of Fidel's popularity among the masses when over 3,000 fellow travelers paraded in downtown Bogotá shouting anti-American slogans. Some 1,000 made a demonstration in front of the Belgium Embassy crying, "Down with the murderers." When Vice President Nixon visited Bogotá, he was protected by Colombia's presidential guard and not more than 300 paraded in demonstrations against him. In the short span of a few years they have increased their strength tenfold. Unless positive action is taken to counteract this rising tide of anti-Americanism, Mr. PROXMIRE, I am afraid we may lose one of our stanchest friends in Latin America. While Mr. "K" from Moscow rants and raves his innocence before the world, his agents murder, slay, and endeavor (under his orders) to disrupt the progress toward true democracy in the underdeveloped regions of the world. I send this report your way in the hope that now that you are aware of a potentially dangerous situation you may do something for our friends to the south before it is too late.

Sincerely yours,

RICHARD H. NABER.

Politics and Postal Rates

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. DERWINSKI. Mr. Speaker, as the concept of the New Frontier is applied to the operations of the postal service, it is sometimes well to review recent political history to help understand the present situation. The following editorial from the Chicago Tribune does just that:

POLITICS AND POSTAL RATES

Postmaster General Day says the Kennedy administration is going to ask Congress to raise the basic first-class letter rate to 5 cents and the airmail rate to 8 cents. This is precisely what Mr. Eisenhower recommended to Congress on January 13, 1958, and again on March 11, 1960. On both occasions the Democrats rebuffed him.

They tried in vain to block Senate approval of the bill in 1958. A committee approved the bill over the objection of its chairman, Senator JOHNSTON, of South Carolina. Senator MONRONEY, of Oklahoma, tried to scuttle the 5-cent rate by an amendment, and among the Senators who voted against the 5-cent rate were Mr. Kennedy and Mr. JOHNSON, now President and Vice President.

Although the Senate approved the bill, House Democrats led by Representative MCCORMACK refused to go along with the 5- and 8-cent rates, and the present rates of 4 and 7 cents were adopted in joint conference.

In 1960, Mr. Eisenhower's request never got beyond the House committee headed by a Democrat, TOM MURRAY, of Tennessee.

Now the Democrats are asking for themselves what they denied to Mr. Eisenhower. As far as the justification for higher rates goes, it is hard to see that anything has changed in the last 3 years. There is still a post office deficit. There is still the threat of an overall budget deficit.

One objection which the Democrats raised in 1958 was that rates should not be raised in time of recession. Today another recession is in progress and the administration tells us it is a serious one.

We are reminded of the hit tune, "Anything Goes," which goes, in part, "Day's night today and wrong's right today." But of course it isn't really that confusing. In 1958 and 1960, the Republicans were trying to balance a budget and the Democrats were trying to embarrass them. Today the Democrats are in office.

Whether 5-cent postage is right or wrong has depended, in the eyes of Democrats, simply on who is asking for it.

Milwaukee Foremen's Safety School

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14, 1961

Mr. WILEY. Mr. President, the never-ending challenge of life conservation is a responsibility which every citizen of a community must accept. This is a basic premise of the safety program conducted by the Association of Commerce, of Milwaukee, Wis.

Last year, the tragic accident toll in America included 92,000 persons killed—1 life lost every 5½ minutes—and 2 million crippled.

In the face of such factors, safety education becomes, not an extracurricular activity, but an essential saver of life and limb.

For 40 years, the Milwaukee Association of Commerce has conducted an annual Foremen's Safety School, dedicated to the training of thousands of employees in the fundamentals of accident control. The school has played an important leadership role in the reduction of occupational injuries and fatalities in this fine community.

The association—now celebrating its centennial anniversary—can be extremely proud of its splendid record in the field of safety.

I ask unanimous consent to have printed in the Appendix of the RECORD a brief résumé of purposes and objectives of the association's safety program, and also a list of officers serving the association to promote safety.

There being no objection, the statement and the list were ordered to be printed in the RECORD, as follows:

INFORMATION

PURPOSE OF SCHOOL

An employee safety training school providing practical instruction in the fundamentals of plant and manpower protection against accidents—causes and control of injuries "on" and "off-the-job."

WHO CAN ENROLL?

Open to all interested employees of business firms in metropolitan Milwaukee. No registration fee. The school is conducted in the community interest as a membership service of the Milwaukee Association of Commerce.

FEATURES

Sectional programs—addresses by outstanding safety authorities, films, discussions, demonstrations. General assembly sessions featuring America's finest inspirational speakers, musical programs by industrial bands.

HOW TO ENROLL

Registrations should be sent in advance by your company to the Milwaukee Association of Commerce. Each employee should be registered in one of the eight sections of the school closest allied to his occupation. Attendance cards and programs will be provided for all enrollees. Individuals not previously enrolled before opening of school may register on meeting nights at the Milwaukee Auditorium.

CERTIFICATES

Will be awarded at close of school only to those enrollees who attend a minimum of

two of the three monthly sessions of school—including both sectional and general assembly meetings. All attendance cards will be collected at closing session.

MILWAUKEE ASSOCIATION OF COMMERCE

President: Harry G. Hoffman, president, Hoffman, York, Paulson & Gerlach, Inc.

Executive vice president: Lester W. Brann, Jr.

Mount Vernon Kiwanis Club Plans Community Project

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 8, 1961

Mr. BROYHILL. Mr. Speaker, I should like to call the attention of my colleagues to a community project planned by the Kiwanis Club of Mount Vernon, Va.

With your permission, I shall read the announcement of this event which has been sent me by the club president, Mr. Thomas Androus:

KIWANIS CLUB OF MOUNT VERNON, VA.,
March 9, 1961.

Hon. JOEL T. BROYHILL,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BROYHILL: Please be advised the Kiwanis Club of Mount Vernon intends to hold a Sunrise Service on Easter Sunday morning, April 2, 1961, at historical Mount Vernon, as one of its commuity projects.

This project is being sponsored on behalf of our club by the chairman and the committee for support of churches. We have invited all of the Kiwanis Clubs comprising the 10th division to participate in this service, and an invitation has been extended to all citizens in Alexandria, Arlington, Fairfax County and northern Virginia to attend. In addition, an invitation has been extended to all public officials in this area, and it is expected that a large number will be in attendance.

Our guest speaker will be Dr. George M. Docherty of the New York Avenue Presbyterian Church, and a very elaborate program has been arranged, complete with a beautiful choral group; and it is anticipated that some 2,000 citizens will be present for this service. Special arrangements have been made with the National Park Commission, who have been most cooperative in assisting us with our community project.

May I, on behalf of the Mount Vernon Kiwanis Club, extend a personal invitation to you, Mr. Speaker, and to all the Members of both House and Senate who will be in the Washington area during the Easter recess, to participate in this beautiful and memorable ceremony.

Special Postage Stamps Commemorating Flags of Particular Significance in the History of the United States

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1961

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the May 9, 1960, issue of Linn's Weekly Stamp News entitled "U.S. Notes," by Carl P. Reuth:

A recurring suggestion is to the effect that our Post Office Department should continue the issuance of the flag stamps in full color. We've had them now with the 48 and 49 stars, with a 50 coming in July. However, the flags for future appearance, and what would be more appropriate than on July 4 each year, are those which have been used since the beginning of our Nation.

This would include famous ones such as the several versions of the pine tree and the rattlesnake ones (don't tread on me), as well as colorful banners as the Bedford flag, the Philadelphia Light Horse and the Rhode Island. Presenting a different one each year would in time provide an excellent educational and pictorial presentation.

Of course, the ultimate would be to have 50 different in one pane of stamps. Making another full pane of 50, in color, would be the flags of the 50 States.

Subsequent to this article, I introduced a bill in the 86th Congress to provide for the issuance of a series of special postage stamps in commemoration of flags of particular significance in the history of the United States of America. The Citizens Advisory Committee in existence at the time did not adopt the recommendations contained in the bill.

Today I am reintroducing this bill, which would provide for the continued issuance of the American flag series stamps on each July 4, subsequent to the 1960 flag issue—50-star, by the Post Office Department.

Since it appears that no more States will be added within the foreseeable future, I feel that this stamp series should be continued by honoring flags used since the beginning of our Nation, such as the following: National flag, 1777; Bennington flag, 1777; Navy jack, 1775—Don't Tread On Me; Cambridge flag, 1775; Continental flag, 1775; Bunker Hill flag; Pine Tree flag, 1775; Taunton flag, 1774; Gadsen flag, 1775; Fort Moultrie flag.

Stamps subsequent to July 4, 1970, would be issued as determined appropriate by the Postmaster General with the advice of the Citizens Advisory Committee.

A "Brief" for the Public Defender

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 14, 1961

Mr. JAVITS. Mr. President, the district attorney of New York County, Hon. Frank Hogan, who has held this high position for 18 years, recently spoke before the National Legal Aid and Defender Association on the need for assistance to indigent defendants. This speech, which was reprinted in the February 1961 issue of the Journal of the American Judicature Society, is one which deserves the attention of all Members of the Congress.

Legislation is now pending before the Senate Judiciary Committee sponsored by myself and Senator KEFAUVER, Senator WILEY, and other Members, which would establish a system of public defenders on the Federal level. I hope that the strong sentiments for such legislation indicated in Mr. Hogan's presentation will secure additional support for the enactment of this legislation which has passed the Senate in the last two Congresses.

I am particularly impressed by the support which Mr. Hogan gives to existing legal aid society efforts, as my bill, S. 854, would permit the provision of such assistance through grants to existing legal aid societies, and not only for the establishment of new legal defender positions, which are, of course, also vitally needed.

I ask unanimous consent that the speech by District Attorney Hogan be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A BRIEF FOR THE INDIGENT DEFENDANT

(By Frank S. Hogan)

I suppose it is rather unusual for a district attorney to file a notice of appearance in behalf of those he prosecutes. But I am here to enter a brief for the defense—for the type of defendant whom you represent, the impoverished defendant.

I am encouraged in my advocacy by the happy recollection that those persons who were most instrumental in the formation of the criminal courts branch of the New York Legal Aid Society in 1917 were former members of the prosecutor's staff in New York

County. Charged with the enforcement of the criminal law, they had become acutely conscious of the problem of the needy defendant.

Supreme Court Justice Frankfurter has said that a defendant's best protection is a fair, honest and competent prosecutor. That is a precept we have tried to live by in my office.

Curious what notions some people have about district attorneys. I suspect they are largely induced by an excessively rich and steady diet of crime movies, television and radio shows. Some time ago, after I had spoken at a dinner, a gentleman sent me a gracious letter in which he said, "After all I have read in the newspapers about prosecutors, I wasn't quite sure what to expect. Well, after listening to you, I decided, in spite of my fears that you are a very human fellow."

Now, wasn't that kind and generous. We district attorneys must try to spread that impression. It will be a great service to law enforcement.

I hope that some of you, during your stay in New York, can visit us in the Criminal Courts Building and see our office in operation. We try to be very courteous to guests, and we get a great many of them. Over 1,000 persons come to see us daily. Only a few are invited to stay, and for them we have special quarters—a bit confining—in the north end of the building. The others—lawyers, policemen, complainants, witnesses—come and go and marvel, I hope, at our efficiency.

The jurisdiction of our office is limited to New York County. That constitutes only a little more than 7 percent of the total area of the city, but nearly 2 million people live in our county. We are joined every day by an additional million who come from a 50-mile radius to work, shop, and to seek recreation.

Such a concentration of people, wealth, and activity attracts criminals. The racketeer, the grafter, the swindler, the killer—those are the sensational cases. To them are added the daily harvest of frauds, thefts, assaults. Upward of 50,000 separate criminal matters are presented to our office for consideration each year.

In spite of this saturnalia of crime, I should like you to believe, with my kindly correspondent, that a prosecutor is not a bloodthirsty fellow who stays awake nights scheming how to get more people into our already crowded jails.

Not at all. Ours is a quasi-judicial function. Our sworn duty is to prosecute the guilty, but it is equally our obligation to protect the innocent and to safeguard the rights of those accused of crime. The most vital and precious of these, of course, are the rights to life and liberty.

PROTECTION OF THE COMMUNITY IS THE PRIMARY TASK

The Office of the District Attorney is not a mere prosecuting machine. We are engaged not in a search for guilt but in a search for truth. Our primary task is to protect the community with all the skill and vigor at our command. But we must proceed fairly and with a scrupulous regard for hard-won civil rights. Their preservation is surely as vital to a free society as is the punishment of the malefactor.

In our office there is a careful scrutiny of each case at every step of the legal process. There is additional investigation, if it be necessary, and a reevaluation of the evidence, both as to the facts and the law, by each of the several assistant district attorneys to whom the case is assigned at successive stages.

In spite of every possible precaution, mistakes are made, usually as the result of honest but erroneous identification by well-meaning witnesses. It is the conscientious endeavor of those entrusted with the administration of justice to eliminate even this minute fraction of error.

EXTENSIVE INVESTIGATIONS ARE UNDERTAKEN

Lengthy investigations are often and enthusiastically undertaken to determine the truth with respect to a defendant's claim of innocence, even where the circumstances of the case seemingly foreclose the possibility of a vindication.

And may I say, parenthetically, that if a lawyer of the legal aid society tells one of my assistants that he believes an injustice is being done—so great is our confidence in the integrity and good faith of that organization—we will turn the office upside down and devote our every resource to make absolutely certain that we have all of the facts.

Every year we have been able to point to cases in which we were able, after careful investigation, to bring about the exoneration of persons unjustly accused of crime. Naturally, there is a very deep satisfaction in this aspect of our work.

Perhaps these are not very modest statements I make about the administration of our office but, then, it is difficult to be modest and proud at the same time. I am like the French friar who was describing his monastic order to a Columbia professor. He said "We are not so famous as the Jesuits for scholarship, or the Trappists for silence and good works, but, when it comes to humility, we're the tops."

Notwithstanding the prosecutor's fairness, his concern for the rights of the accused, his concept of his function as a quasi-judicial one, he is, after all, an advocate in an adversary proceeding. The adversary system is contentious by its very nature. In the courtroom, it may not be possible for the district attorney to present his case vigorously and, at the same time, be giving his concentrated attention to all that might be said in the defendant's behalf.

The judge, too, is ever mindful of the rights of the defendant and will do all that is proper to sustain them. But he cannot abandon his impartial role to sit at the counsel table, consult with the accused, advise him, and direct his defense.

We recognize, therefore, the wisdom of that constitutional right which is embedded in the judicial process—the right to counsel.

Fundamental in our American system is the presumption of innocence. Every accused person has the right to submit the question of his guilt to a court of law. However unworthy he may be, he must be presumed innocent until the contrary is proved.

He has a right to his day in court. He may not be convicted of a crime except by due process of law. This means that he has a right to a fair trial. How can he be assured of that right unless he is adequately represented by counsel? This right to honest and competent representation certainly should not be forfeit simply because he is a poor person.

The practical need of legal assistance for the defendant is obvious. Even the intelligent layman may well be baffled by the complexities and mysteries of legal procedure. To the ignorant, the very language of the indictment is a bewildering foreign tongue. If he is impoverished and jailed, he can do nothing for himself. He doesn't know how to prepare his defense. He has no means to secure such witnesses as might testify in his behalf. He knows nothing of the rules of evidence. He does not know his legal rights, nor how to assert them. He may well be convicted simply because he does not know how to establish his innocence.

All will concede that every person accused of crime is entitled to honest legal advice and competent defense in a trial which involves his liberty.

Yet well over half the defendants indicted for serious crimes here and throughout the country have no money for a lawyer.

All good citizens give lipservice to the principle of equal justice for all. It is a truism that every man has his day in court. We all like to believe that justice is even-handed and knows neither rich nor poor. But can there be equal justice if it is not accessible to all?

THE PRINCIPLE OF EQUAL JUSTICE TO ALL MUST APPLY TO THE INDIGENT DEFENDANT

The good citizen will readily accord every legal safeguard of the accused to a bank president or an archbishop, or to his friends and neighbors. Indeed, he is quite ready to give the affluent racketeer, well represented by counsel, a sporting chance to beat the rap. But he is inclined to be impatient of the law's delays in the case of the less fortunate criminal. All too often, he tries and convicts him with the appearance of the first headlines announcing the arrest and accusation. Now he wants him put away and kept behind bars. He might do it again. And it is not unlikely that the good citizen will find his opinions as to the guilt of such a defendant ready made for him in the editorial columns.

Sometimes there seems to be a feeling that legal assistance for those charged with heinous crimes serves only to hamper the administration of justice and aid the guilty to escape the consequences of their misdeeds.

Even legal aid societies—and I say this in no critical spirit—devote the greater part of their invaluable services to the defense of the needy against civil wrongs. They have been concerned primarily with the problems and heartaches incident to controversies arising over unpaid wages, installment payments, evictions and such domestic problems as alimony and abandonment.

The society in New York has been engaged in its splendid work for the poor for 40 years before it began to represent indigent defendants in the criminal courts. And even today, nationally, the societies perform these vital services for defendants in criminal cases in only a handful of communities.

We are all sympathetic with a worthy cause. But how about the cause of the less worthy, the illiterate, the friendless, the "undeserving poor," in the words of George Bernard Shaw, the defendants who, in all probability, are guilty, at least of the crimes charged against them.

Each is still presumed to be innocent. Each is entitled to test the people's case and to have the evidence and argument in his own behalf fully presented. If this right is denied to the least, it is denied to all.

Once we assume that the accusation is tantamount to conviction, we have abandoned our concept of equal justice. We might as well abandon our free society. For we are on the threshold of the police state where even the accusation may be dispensed with.

The right of counsel exists not merely for the innocent and the unjustly accused. The test is whether it is accorded to the least deserving. And it is further the privilege of every indigent defendant not as a kind of charitable handout, but as a matter of right. It is a fundamental right that can be denied to no one, however unfortunate his circumstances, however unpopular his cause, however abhorrent the charge he is held to answer.

How then are we to meet our obligation to the indigent defendant? The earliest approach, and still the most prevalent, has been assignment by the court of counsel to serve without compensation, either at random or, in the more refined versions of the system, from a panel.

I need not review before this association the inadequacies of this method. With all due honor to the many lawyers who have

unselfishly and conscientiously devoted legal services of a high order to indigent defendants, I think it can fairly be stated that most students of the problem agree that the need is best met by the voluntary or the public defender.

THE PUBLIC AND VOLUNTARY DEFENDER MOVEMENTS

The public defender movement is growing steadily and public defenders are now serving in some 50 jurisdictions. Many distinguished members of your association have been in the forefront in urging Federal legislation to establish the public defender system in the Federal courts.

I have had no experience with the public defender plan so that I am unable to argue its merits.

I find myself partial to the voluntary defender. I confess to a prejudice in favor of the Legal Aid Society. It has been a gratifying experience to work with the able and dedicated lawyers of that society for almost a quarter century in the criminal courts of New York County.

The Legal Aid Society of New York was the pioneer voluntary group that sought to cope with the problem of the indigent defendant. Its record is most impressive and the quality of the service which its capable attorneys have given to the needy defendant has been uniformly excellent.

The society is now in its 85th year. It was organized in 1876 to help poor immigrants collect wages and enforce other legal rights. Consider how the society has grown. In its first year it represented 212 persons. Last year, there were 75,984 applications for legal assistance of all kinds. Originating in the various criminal courts were 35,506 of these matters.

In our own court of general sessions, the Legal Aid Society received 80 percent of all assignments of counsel. In the same year, 1959, the lawyers of the society represented 1,808 felony defendants, a figure constituting 44 percent of all dispositions in that court. This year, to date, the Legal Aid Society attorneys have appeared in 1,784 cases, almost 50 percent of all dispositions.

During the past 10 years the criminal courts branch of the Legal Aid Society, under the dynamic direction of Justice Florence M. Kelley and her able successor, Mr. Anthony F. Marra, has expanded its services impressively.

Today, 26 able, experienced lawyers constitute the staff of the criminal courts branch. Of these, 14 are assigned to the various courts in New York County alone.

One would like to be able to say that the problem of the indigent defendant in New York County has been solved. Insofar as we are concerned with the quality of service which the lawyers of the society give to their clients and to the community, we can say enthusiastically that it has been solved. But when we consider that, for a second successive year, the society has sustained a deficit, although contributions for its support have never been more generous, we may well ask if something further can't be done.

BOTH PRIVATE CONTRIBUTIONS AND PUBLIC FUNDS ARE NEEDED

Must the financial burden be borne entirely by a relatively small group of public-spirited citizens? Does not the community as a whole have a stake in the preservation of fundamental legal rights?

We provide our voluntary hospitals with supplementary funds for ambulance service and ward cases. We appropriate public moneys to assist our libraries and museums. We find money for our zoos.

Does not the work of the Legal Aid Society, in defending a basic right of the poorest of our citizens, partake of the public interest? Does it not merit supplementary assistance from public funds? Does not the community have an obligation to recognize its share of the responsibility and assume it?

A program of public aid, supplementing voluntary contributions within the framework of a privately administered organization operating under its own board of directors, would provide trained specialists in criminal law as attorneys for the society. It would permit expansion of its experienced, on the spot, competent and zealous representation of the needy defendant. It would allow for the employment of additional full-time investigators. It would make possible an expanded training program for less experienced lawyers. It would encourage the development of a wholly independent, nonpolitical career service in this most important area of the administration of justice.

There have already been some promising experiments, along these lines, in Rochester and Buffalo in this State and in Puerto Rico.

THE LAWYER FOR THE POOR

With some hope that you will think it pertinent, I would like to say a few words about a man who lived 700 years ago. He was called Ives of Brittany. He was born in the year 1252. He belonged to a noble family and from childhood was given every educational advantage.

In his 14th year, his parents sent him to Paris where for 7 years he studied theology and canon law. At the university, his habits were consistently unselfish. He slept on a pallet of straw, wore the humblest garments, gave away such money as came to him, shared his meals with the poor.

From Paris he went to Orleans to study Roman law. At the age of 23 he concluded his studies. From that time, it is said of him that "he spent his life in the cause of justice and fair dealing among the common people—assisting without compensation the orphans, the poor, all who had the greatest need of such a ministry of justice."

Although later he was ordained a priest, he continued to serve the poor as a lawyer. His sympathy for the oppressed made him famous throughout the country and he was known as advocatus pauperum—"the lawyer for the poor."

After his death in 1303 there was a widespread movement to declare him a saint. This finally came about. He was canonized as St. Ives in 1347 and is recognized all over the world as the patron saint of lawyers.

I suggest that he deserves another title—patron saint of legal aid—for does not this description of him serve likewise to identify our Legal Aid Societies: He is the lawyer of the poor; he defends the children, the widows, and all friendless people. Not only does he accept their defense, but he seeks them as his clients and offers his good services; he gives them good counsel and pleads for them. And for all of this he receives his reward from God.

Even if I had not consulted St. Ives, I would have been certain that there is a special blessing in store for every one of you who aids in this most charitable work and, of greater importance, there is the warm approval of your own conscience as your continuing efforts make increasingly possible—equal justice for all.

Editorial Analysis of Proposal To Establish Tool Bank

EXTENSION OF REMARKS

OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1961

Mr. KOWALSKI. Mr. Speaker, a detailed analysis of my proposal for the establishment of a tool bank was carried recently in the editorial columns of the Meriden Journal, in my home State of Connecticut.

The comments made in this editorial reflect a keen perception of the plan's twin goals of helping American industry modernize its equipment to increase production and create job opportunities and of aiding underdeveloped countries.

Here is the editorial, printed in the Meriden Journal, March 6:

TOOL BANK PROPOSED

The tool bank proposal set before the administration by Representative FRANK KOWALSKI of Meriden makes good sense. Reduced to its simplest terms, it is a method for removing obsolete machinery from American plants and transferring it to where it is most needed abroad, thus opening the way for U.S. industry to become more productive and more efficient through the installation of modern machinery. Farm machinery, also, would be included under the plan, so foreign agricultural economies would have a chance to benefit along with the American farmer who decided to go along and purchase new equipment on the favorable terms which could be arranged.

The Department of State, the International Cooperation Administration, and the Department of Commerce have discussed the proposal with Representative KOWALSKI, and all these agencies are giving it their serious attention.

In essence, the plan is simple. The tool bank would derive its assets from deposits of machinery, tools and equipment by manufacturers, agriculture or the Government. The developing nations would be able to draw on the bank, under a carefully drawn set of rules, without any charge to them for the tools. U.S. voluntary agencies engaged in overseas development work would also be able to draw on the bank to carry on or expand their programs.

Much equipment in American plants is obsolescent, yet far from being worn out. In some respects, it would be better for the purposes for which it might be used in underdeveloped nations than brandnew machinery. It has also been pointed out, by the originator of the plan, that these nations might well become later customers for new U.S. tools.

The immediate effect in this country would be to stimulate the tool industry and create a large number of jobs. This looked-for effect should be of special interest in Connecticut, which is the seat of many plants, large and small, making tools and other machinery. But many other sections would benefit also, and the general economy of the country would be the principal benefactor.

Of course, incentives would have to be provided by the Government to induce manufacturers and farmers to contribute to the tool bank. However, since amortization and tax writeoffs have fully paid for most of the machine tools which would be sought for the bank, this part of the plan should not be costly to the taxpayer or private enterprise. As Representative KOWALSKI has expressed it, "The tool bank * * * is a proposal which meets President Kennedy's criterion, 'Ask what you can do for your country.'"

The Connecticut Congressman also points out that certainly foreign governments have drawn largely upon the United States for excess tools, a fact which serves to indicate the latent demand which must exist. India, Yugoslavia, and Mexico have imported a considerable volume of excess tools, and a private voluntary organization known as Technico, with no paid employees, has collected from private industry 150,000 pounds of small machine tools for shipment abroad. CARE is also shipping many tool kits to underdeveloped countries.

There are about 3 million machine tools in the entire American industrial plant, and it has been estimated that more than 100,000 machine tools are in storage or surplus. Of the tools now in use, about 60 percent are 10 years old or older, and nearly 20 percent are 20 years old or older. Similar percentages apply to farm machinery and other tools.

Representative KOWALSKI sees the possibility of a number of incentives for inducing toolowners to part with their present tools and buy new tools. Accelerated depreciation and/or tax allowances and credits for the purchase of new tools are among them. Low interest credits might be arranged. Financial aid to machine tool manufacturers, where necessary, to permit them to sell their products on easy credit terms is another possibility.

Of course objections will be found to the plan in some quarters, but it seems to us that Representative KOWALSKI was right in stating that "the possible pitfalls of this program are negligible compared to the possible benefits, especially when adequate safeguards are taken to avoid such pitfalls."

World Federation of Neurology

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14, 1961

Mr. HILL. Mr. President, Dr. Ludo van Bogaert, director of the Institut Bunge, Antwerp, Belgium, and president of the World Federation of Neurology, is an internationally recognized physician in the field of neurology and neuropathology and the personal physician to His Majesty, Baudouin I, King of Belgium. Dr. van Bogaert has been a fellow of the Rockefeller Foundation. Recently he completed a lecture series at the National Institutes of Health and at Johns Hopkins University in Baltimore.

In an address presented this year in Louisiana, Illinois, and California, Dr. van Bogaert described the developments that led to the establishment of the World Federation of Neurology which now has a membership of 9,500 scientists from 46 countries. This organization has as its objective the exchange of scientific information in the field of neurology and the stimulation of neurologic research through international collaborative research projects.

I ask unanimous consent to have the address of Dr. van Bogaert printed in the Appendix in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

With the great expansion in neurology and the allied sciences which contributed to its development during the past 40 years, came the need for a world federation of neurology. The international congresses demonstrated the necessity for such an organization.

There have been six international Congresses—three before and three after the Second World War. I have been closely associated with the preliminary organization of all of them since the first congress held in Bern in 1931. Without going into great detail, I would like to touch on some of the problem areas encountered during my association with the congresses.

The Bern Congress, organized by Charles Dubois, had the support of some of the most eminent neurologists and psychiatrists. During the 3 days of discussion, physiology was represented by Pavlov himself; anatomy was taken into consideration in an attempt to rebuild the "brain commission," which, as you know, was a nomenclature commission established in 1910 but which had seen little activity since the First World War. I worked with eminent neurologists such as Winkler, Monakow, and Economo, but in spite of our efforts, there were no practical results.

These international congresses, and I mention the ones held in London in 1935 and in Copenhagen in 1939, were, in my opinion, only extensions in topics, chairman, and participants, of the usual national congresses or the ones for one linguistic or cultural group. The remote participating countries such as the United States, Japan, and Russia, were represented by well known, but very few, neurologists. During preliminary meetings, the choice of reports and chairmen were settled. The most famous elder neurologists decided this according to their personal knowledge of the problems and investigators. The neuropathologist was not taken into consideration unless he had some clinical standing or was associated with a clinician. The bacteriologists could not present papers unless in collaboration with a clinical neurologist; this also applied to the few biologists then studying problems of the cerebrospinal fluid. Outstanding physiologists or anatomists from neighboring countries may have been allowed to lecture before a limited audience. There were no reports on electroencephalography, epileptology, and radiology. No one ever thought of neurochemistry.

The meeting of the Third International Neurological Congress in Copenhagen in August of 1939 was abruptly terminated in the middle of the program due to the massing of Hitler's Wehrmacht along the Polish border. There was then a moratorium of these congresses for 10 years because of the war.

These prewar congresses stand out due to the high quality of their scientific and social programs; to the high professional standing and authority of the program executive committees who planned and conducted the scientific sessions in their own way. They comprised a small, elite group of senior rank neurologists who had organized excellent scientific meetings in a club-like setting. The ground rules of the congresses, then as now, were based on precedent and tradition.

The first postwar International Neurologic Congress was the fourth, held in Paris in 1949, under President Alajouanine and Secretary General Garcin. Transportation was faster and less expensive and the Paris congress took on an entirely different look from the previous ones. The number of participants had increased. Topics were more varied; neurophysiology was introduced as an essential topic; electroencephalography became an important clinical adjunct; the problem of epilepsy was considered from various viewpoints; neurosurgery had become a challenge and neurologists for the first time realized the importance of keeping the neurological sciences in contact with the mother discipline. Many of us appreciated the importance of the contributions from countries which in the past had not been active participants in our congresses. The outstanding exhibition on the history of neurology displayed in the lobby of the Faculte de Medicine concluded a period of neurological thinking and living.

However, the Paris congress was also the first in which rumblings of discontent about the organization and conduct of the congress was detected. The discontent followed two main streams: the first directed to the organization of the scientific programs and the second to an alleged lack of recognition given to the ancillary disciplines of neurology.

The dissensions expressed by the disciplines related to neurology were most conspicuous among the neurosurgeons followed by the electroencephalographers, the neuropathologists and the epilepsy group. All these groups either had or were considering plans to establish independent international congresses.

This, then, was the eventual background for the Lisbon congress in the fall of 1953. For the first time, at its preliminary meeting, the scientific rank of the designated topic directors was considered to be more important than their friendly relation to our congress or diplomatic and geographic necessities. At the end of the preliminary meeting, the necessity of keeping contact with the other disciplines was again considered and an ad hoc commission was established. After the Lisbon congress, there were individuals who were dissatisfied with the course it had taken, which had not been resolved, in spite of the excellent efforts and generous hospitality of the Portuguese.

The overt failure after the Lisbon congress to keep the allied disciplines bound within the framework of clinical neurology at international congresses resulted in furthering ideas for the organization of a combined congress of neurological sciences which would be an affiliated meeting of several independent congresses attached to the central axis of clinical neurology.

When the national delegates at Lisbon had selected Brussels as the site for the next neurological congress, these needs were studied and in 1955 the Belgian national committee proposed at the meeting of the program executive committee to group all specialized neurologic disciplines along a central axis of neurology by investing them in a coordinated program which would allocate 2 days to major topics of common interest to all constituent groups and 2 days for independent sessions of each participating discipline.

It was further proposed to reduce to a minimum the time allocated for free communications.

The Belgian national committee faced another serious problem: costs of the congress. Increasing attendance and size of the programs at international congresses, inflation of currencies and prices, particularly those concerned with publication, and the introduction of simultaneous translations through electronic hearing devices called for an enormous increase in expenditures. These congresses could no longer be financed on the basis of registration fees which had not increased and on the contributions from constituent national neurological societies. At the end of the Lisbon congress, the secretary general was faced with unpaid bills in the amount of $15,000. Moreover, international neurological congresses, not having a constitution and not being officially registered, did not have the permanency and financial responsibility needed for procuring grants-in-aid from international scientific government bodies or foundations.

The executive program committee for the Sixth International Neurologic Congress convened in a preliminary reunion in Brussels to structure a tentative program for the congress to be held in Brussels 2 years later.

Good or bad, we felt that the best approach would be the interweaving of different disciplines in the given time and space, choosing common topics, recruiting chairmen among representatives of their own disciplines, entrusting the joint meeting to topic directors and the responsibility for the administration to a small number of general local secretaries.

You may realize that an organization of this expanse needs numerous human contracts and large financial means. It would be a waste of energy to establish this for one session only and repeat the entire procedure each time a similar congress was to be held.

Between the preliminary meeting and the First International Congress of Neurological Sciences, we realized that a permanent world organization would have to be established, which would coordinate and supply information during the intervals between the congresses. This organization would be of invaluable help in organizing committees of future congresses. Before the Brussels congress, we asked the different countries to send delegates to discuss the question of a federation and to grant the delegates authority to join in the adoption of any resolutions. Happily, this agreement was obtained, and during the ICNS, the World Federation of Neurology was founded.

We have been asked, "What is the World Federation of Neurology?"

We say that it is an international professional body of delegates from the national neurological societies of 46 countries with 48 societies. Our objectives are the dissemination and exchange of neurologic news and scientific knowledge, the organization of symposia and multidisciplinary congresses and stimulation of neurologic research through international collaborative research projects. The dissemination and exchange of neurologic news and scientific knowledge is promoted through the organization of colloquies. The World Federation does not take on the role of organizations which give substantial help to investigators to accomplish their projects. These organizations remain responsible for bestowing grants to investigators selected by them. The WFN does not give financial help to these investigators, but as many of you know, it is often difficult and sometimes impossible to obtain information on research situations in a determined field; on places where documents and material are available; the names of investigators studying the same problem; the knowledge and application of new techniques to be taken into consideration in a determined part of research; and work already performed by other schools on the same subject.

Our idea was to find a solution to these problems, as there were no such organizations in existence. The WFN took steps to a solution. There would be one general federation of all national neurological societies, each represented by a delegate, an alternate delegate and a secretary. The assembly of the national delegates would constitute the executive committee of the WFN and elect the officers. The present officers were elected in 1957 at Brussels and the committees were also established at this time. Also, the constitution was drafted, submitted, and approved by all members of the committee.

One problem came to our direct attention. Most members of neurological societies are clinicians. Very few who belong to other sciences but who are interested in neurologic problems, are members of a neurological society. Close contact between clinical neurologists and researchers in the basic sciences has been one of the main goals of the WFN.

Early in its planning, the WFN conceived of the concept of creating problem commissions (groupes de travail) of experts to review and evaluate the status of research and research opportunities in specialized areas. The task of these commissions would be to detect and call attention to promising research even when appearing in some obscure laboratory or clinic. In addition, these commissions study whether or not a more effective attack may be made on a given research problem by pooling scientific talent and facilities of several countries into a single collaborative operation. Each problem commission consists of between 8 and 12 members and its secretary is the point or contact between the commission and the WFN. It is essential that each commission be active in its own field and envisage the possibility of establishing a system of replacement of its members periodically. These changes in the composition of the commission are naturally subordinate to the desires of the commission depending upon its orientation or the request of the federation.

Two of the problem areas in which the WFN utilizes the commissions are to ascertain the advisability of including on the agenda of international congresses or neurology, neurosurgery, neuroradiology, and so forth, programs devoted to subspecialties represented by the commission and the advisability of sponsoring symposia suggested by representatives of some subspecialties or allied disciplines.

The commissions may refer to the WFN, problems raised within their own areas, such as organization of congresses and symposia in conjunction with other disciplines; the organization of registries and repositories of research materials; the exchange of technical help and personnel; WFN assistance in obtaining financial support from Governmental or nongovernmental agencies for research; WFN assistance in establishing specialized libraries and publication of special reports and documents. Should a commission represent a specialty which has already formed an international organization, this commission serves as liaison between the WFN and the other federation. The commission has no authority to interfere in the activities of the federation, but acts as a coordinating agency by transmitting information and giving assistance to both federations in every way possible.

The secretary of the problem commission may advised different governments of problems under consideration, available techniques, trained technicians, and existing available material.

Allow me to give you some examples:

The problem commission of neurochemistry organized, in collaboration with a Portuguese committee appointed by the Portuguese Government, for a study of paramyloidosis, a colloquium on paramyloidosis of the central and peripheral nervous system. The Portuguese committee, along with some 10 interested American and European scientists, were invited. The purpose of this meeting was to establish a research plan for the study of this disorder, which is exceedingly rare except in certain parts of Portugal.

A roundtable discussion with the Portuguese investigators was held at the WFN secretariat. They brought with them clinical histories and anatomical pathological material which was made available to clinicians, neuropathologists, geneticists, and biochemists.

Another example was the symposium on cerebral localization held after the inaugural meeting of the liaison committee of the World Federation of Neurology and the World Federation of Neurosurgical Societies in Lisbon.

Most of these colloquia are organized with financial assistance from the scientific organization of the host country and from the WFN. In this way, problem commissions stimulate the exchange of material for human and comparative neuropathological and neurochemical investigations, for research in genetic and rare hereditary diseases.

Along with the organization of commissions and symposia, the permanent secretariat has conducted a survey on the status of neurological training throughout the world.

When national delegates of all countries have submitted their surveys on the training of neurologists, a synthesis will be published in World Neurology. This pool of information will relate to the development of neurology as a science and to the practice of neurology. The permanent secretariat is also collecting theses and periodic scientific publications for the WFN archives. This collection will contain, in particular, books and papers difficult to obtain such as manuscripts, nonserial numbers of journals published for centenaries, transcriptions of the proceedings of colloquia and symposia, governmental documents and annual reports of research institutes. Many medical faculties do not seem to understand the importance of collecting rare documents which are often valuable and often lost. In certain countries, these theses are not published in their entirety, and only an abstract is inserted in a national journal or other periodical. Although only a small number have any real value, the cataloging is being continued to preserve those documents that are valuable. As they are classified, they are forwarded to World Neurology for publication.

An essential prerequisite for concerted world planning and programing of medical research, whether general or specialized, is a greater flow and exchange of scientific information and news than exists today. In this respect, the WFN was fortunate in having a well-known medical publisher in the United States launch an official monthly publication, World Neurology, the first number of which appeared last July. The articles of World Neurology, as you may know, are published in four languages. The editorial board and consulting editors represent 26 countries, many different language areas and a wide interest in neurologic and allied medical sciences. The scientific section contains review articles on invitation, unsolicited original papers, translations of important papers not readily accessible and reviews of important books. The information section contains reports on research activities in various countries, exchange information on the availability or need for research or teaching materials, and material needed for research. The journal also provides a complete calendar of all national and international meetings of interest to neurologists and neurologic scientists as well as the newsletter by Pearce Bailey.

In summary, the WFN has accomplished this:

The total number of countries now represented in the WFN are 46, with 48 societies with an individual membership of 9,500 neurologists and neurologic scientists. We now include the U.S.S.R. and the East German Republic.

We have developed official affiliations with the World Health Organization, the World Federation of Mental Health, and the International Brain Research Organization. Under the auspices of the Association for the Aid of Crippled Children, with Mr. Leonard Mayo, we are affiliated with interested groups in the United States and elsewhere.

In July we launched our official journal. Paid subscriptions already exceed 2,300 and the distribution is mounting rapidly. In addition, mechanisms are underway for the exchange of rare papers, volumes, scientific specimens, and motion pictures. We have eight problem commissions and in March we are activating two more—on neuroophthalmology and neurogenetics in Geneva. In December we founded the Problem Commission of Tropical Neurology in Buenos Aires. We have dispatched members of our staff, consultants, and liaison officers to evaluate research and training potential in key areas in Western Europe, behind the Iron Curtain, the Far East and Latin America. We have sponsored or participated in important international meetings, such as the Milan symposium on medications affecting lipid metabolism; in Varenna on regional

neurochemistry, physiology, and pharmacology of the nervous system; in Hamburg on cerebrospinal fluid; and in Rio de Janeiro on parasitoses of the nervous system.

This may give you some idea of the WFN—the necessity for its existence, the circumstances of its foundation, its achievements and its future goals. In the pursuit of these objectives, whenever possible, the WFN has sought to enroll financial aid, either in kind or in hard currency, from governments, foundations and institutions outside the United States. So far, only a few inroads have been made into this problem. The Danish Multiple Sclerosis Society, for example, following the meeting of the problem commission of biometry and genetics in Copenhagen, supports a project on the epidemiology of multiple sclerosis. The German Federal Republic, with the WFN, contributed to the cost of investigation of multiple sclerosis in South America. The Gulbenkian Foundation contributed to our symposium in Lisbon. The city of Buenos Aires, with the National University of Public Health, the University of Buenos Aires and the Argentine Neurological Society, will give financial assistance to the WFN Commission on Tropical Neurology.

So, you can see that a scientific organization as the WFN can largely contribute to the realization of the unity needed today. We must consider countries who are at the beginning of their technical and scientific development. The WFN is morally in a position which allows it to help them without any political or economic intent. The prosperity and comfort of these peoples are certainly essential since their absence makes them subjects of cold wars—of which there have been too many. But there is even more. By helping them to respect and dignity and independence, we will promote a civilization to which we are deeply attached. Born of the scientific achievements of the Old World, and your New World, the WFN, and this is my sincere feeling—must, according to the ideals which founded it, turn to the countries of Asia and Africa, to the South and Central Americas, where under the ashes of civilizations long gone, burns the same need for knowledge and service.

National Purpose

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Pageland Journal, Pageland, S.C., of March 9, 1961:

STRAIGHT TALK

(By Tom Anderson)

"Better be Red than dead." That's the new national purpose of the appeasers. Appeasers are people who feed a crocodile hoping it'll eat them last. Coexistence is immoral. A gutless, impossible delusion and fraud. Our national purpose, if we are to survive as a free people, must be to free the enslaved peoples of the world and destroy that organized religion of hate, communism. In the coexistence compromise between right and wrong, evil wins. In a compromise between food and poison, death wins. To win the war against the Communists, we must abandon containment, renounce peaceful coexistence and reject a status quo based on millions now enslaved by the Communists. We can coexist with the Communists just like the lion and the lamb coexist. All that is necessary is to pitch a fresh lamb into the cage each morning.

Attack us? The Communists are not insane enough to attack us. They are winning without it. And they want our cities, our industries, our youth intact. They can win without changing their tactics. We cannot win without changing ours.

TERMITES ON OUR PAYROLL

It was at the multimillion-dollar U.S. Embassy building in Stockholm, Sweden. They were having a small cocktail party for our little group accompanying Secretary of Agriculture Benson on a trade development tour. As I joined a group of a dozen or so standing in a circle, one of our Embassy employees glibly expounded: "This ain't bad duty now that McCarthy is dead." Quick as you could say Alger Hiss or Phillip Jessup, I politely inquired: "How've all you pinks, and punks, and perverts been getting along since the Senator passed away?" Uninsulted, he answered: "There are just as many of us and we're getting along better than ever."

I don't see how any red-blooded American could mix with our Foreign Service and State Department people without thinking more of Joe McCarthy. Our oversea employees, like State Department people here, and like groups anywhere, can't accurately be lumped into one category. Some are dedicated patriots. Some are one-worlders, international Socialists, people who've long since lost their patriotism, if they ever had any. Some are people who like to live abroad because they can live better than they ever lived before and can enjoy all the privileges and few of the responsibilities of their American citizenship. Some are dupes and do-gooders who are serving the Communist cause unwittingly by following the Communist line. Some are undoubtedly Communists. Some are merely gutless traitors who'd "rather be Red than dead." Many of these people, deliberately or not, are delivering us to the enemy.

A news service recently carried the story that the United States had just made a grant of $350,000 to Yugoslavia "to aid that country's development of atomic energy for peaceful purposes." That's like giving a supply of hunting knives to Jack the Ripper on his promise to use them only at his dinner table.

I think it would be near treason to sell our surpluses to Poland and other enemies. But we don't do that. We give it to Tito who sells it to his people, who never know where it came from.

In Poland, guess who's one of the men in charge of giving away your farm surpluses to the enemy? An old New Dealer who's been listed on more Communist fronts of the House Un-American Activities Committee so our Communists and fellow-travelers can be made to feel more at home here.

THEY ARE BURYING US

We are in a war for the world, and we are losing. The Communists have taken half the world. Berlin is precarious. Formosa (Nationalist China) may be sacrificed. Japan is moving toward the Communist camp. Laos is on the brink. Cuba is now being fortified by the enemy. Central and South America are Communist infiltrated. Africa may be lost. England and other European allies are talking neutralism more and more. And more of the American people, a survey shows, knows who said "Give me liberty or give me death." More are interested in losing 5 pounds than in losing Quemoy. Finding a parking place is more important than who promoted Peress or who's on the World Court.

Who—we or the Communists—have the necessary courage, the dedication, the fanatical zeal necessary to win? We will soon know. It depends on you. What can one person do? One man, Nathan Hale, brought chills to the spies of generations of patriots with his statement just before he was put to death: "I only regret I have but one life to lose for my country." (Is U–2 spy Powers the modern Nathan Hale? Powers claimed he did not know what he was doing, though he got $30,000 a year for it, and wouldn't have done it if he had.)

YOU ARE THE ANSWER

What can one person do? One man, Adolph Hitler, cast the deciding vote in a beer hall putsch that set the world on fire. One man's vote kept us from killing compulsory military training—3 weeks before Pearl Harbor. One man's influence led to giving China to the agrarian reformers. That man was not a foreigner, but an American.

What can one person do? One person, unknown today, fired the shot heard around the world. He didn't worry about it hurting his business. He didn't check to see if the leaders approved. He was neither paid cash nor guaranteed any benefits by his government. He just did what his conscience told him to do—for his country. You are but one. So were Carrie Nation, and Joan of Arc, and Patrick Henry.

What can one person do? One man, Karl Marx, was a ne'er-do-well. But his religion, communism, has enslaved half the world. What can one person do? St. Paul was an emaciated epileptic. Hitler was a psychiatric paperhanger. Are we inferior to them—or even to Christ's disciples—before they became dedicated men? It is up to you.

Federal Health Program

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14, 1961

Mr. WILLIAMS of New Jersey. Mr. President, President Kennedy has given Congress his proposals for Federal action to imporve health and fight needless illness in our Nation. His recommendations have already stirred wide discussion and much praise; it is evident that growing numbers of citizens realize that the need for well-considered programs is critical.

An editorial in the February 10 issue of the Daily Journal in Elizabeth, N.J., offers a constructive commentary on the President's recommendations. It warns, for instance, that "Unreasonable opposition to the President's plan could well produce a thrust catapulting us into truly regimented health planning."

Mr. President, the editorial is a thoughtful and valuable addition to our thinking about an essential goal for the United States. I ask unanimous consent that the editorial, entitled "Our Prime Resource," be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR PRIME RESOURCE

Health is the Nation's No. 1 natural resource and as such its conservation and preservation are appropriate subjects for Presidential recommendations to the Congress.

The program which President Kennedy sent to the Capitol yesterday envisions Gov-

ernment involvement in the field to an unprecedented degree, and it will be assailed as socialization of medicine. But nowhere in the long list of projects outlined by the President is there a hint that bureaucrats would dictate to doctors, that patients would be restricted in their choice of treatment, or that hospitals would be subject to Federal regulation and control.

Indeed, the program may be the last bulwark against socialized medicine. Skyrocketing medical costs and some disenchantment with the profession have pushed that prospect nearer to reality. Unreasonable opposition to the President's plan could well produce a thrust catapulting us into truly regimented health planning.

The Kennedy proposals appear to be a rational attempt to expand the Nation's abilities, public and private, to meet its expanding health needs. They would provide hospital insurance for the elderly and at the same time stimulate the growth of medical education and research.

The White House plan also would set in motion programs to improve the health of children and youth, encourage and aid construction of nursing homes and hospitals, accelerate rehabilitation efforts for disabled Americans and spur improvement of nursing and home care services for all age groups.

In each of the areas covered by the program improvement and expansion are dictated. In some, notably health problems among the elderly, this need is critical.

Last March the Journal published a series of articles examining the medical care crisis facing senior citizens. Various authorities quoted advocated some form of health insurance, help for the chronically ill among the aged and more nursing homes.

Senator PAT MCNAMARA, Michigan Democrat, speaking as head of a Senate subcommittee on problems of the aged and the aging, was quoted in one of the articles as saying that America's senior citizens have been "neglected and literally cast aside by the Nation which they themselves spent the greater part of their lives helping make strong." President Kennedy's message yesterday outlined a remedy for that situation.

"The health of our Nation," said the President, "is a key to its future. It is to the unfinished business in health, which affects every person and community in this land, that we must now direct our best efforts."

Fulfillment of the goal that the President describes will depend ultimately on the citizen's willingness to participate; the whole heavy cost falls on him. The thinking American will not hesitate to accept the burden.

Employers' Group Supports Improvements in Federal Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. KARTH. Mr. Speaker, during the past few weeks my office has received many communications from businessmen who oppose any amendments to the Fair Labor Standards Act which would further expand coverage of the law to their employees.

It came as a surprise to me then one day when I received from the St. Paul, Minn., chapter of the National Electrical Contractors Association a letter not only strongly supporting the philosophy of the Fair Labor Standards Act but urging an immediate raise in the minimum wage rate.

The gentleman who sent me the views of this chapter is Dan M. Gephart, its manager. When I asked him for permission to reproduce his letter in the Appendix of the CONGRESSIONAL RECORD he further explained his views:

I am sincerely of the belief that America's continuing progress will depend to a large degree on a constantly improving income for its citizens, and particularly for those who are intended to be covered under the amendments to the present outdated minimum wage law.

For over 15 years I have worked as a representative of employers who employ thousands of employees in both production and construction in 18 of our States, and it is my desire to continue to serve not only these employers but our country as well in encouraging an increase in the minimum wage law.

I am indeed thankful that there are Representatives in Congress like yourself who place the overall good of our country and all its citizens above the interests of those who would exploit that group for whom the proposed legislation is intended.

Because I believe his public-spirited views would be appreciated by other Members, I ask that his original letter to me as well as other material be reprinted herewith:

MINNESOTA (ST. PAUL)
CHAPTER, NATIONAL ELECTRICAL
CONTRACTORS ASSOCIATION, INC.
St. Paul, Minn., February 17, 1961.

Hon. JOSEPH E. KARTH,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE KARTH: I am enclosing herewith copy of a letter received from the St. Paul Area Chamber of Commerce in which I am urged to write to you and express my opinion on the minimum wage law now being considered, the effect of which would increase minimum wages from $1 to $1.25 over a period of time. Also enclosed is a copy of an excerpt from "Leader's Digest of Views on Congressional Issues."

I am both shocked and confused as to why any intelligent group purporting to represent the best interests of St. Paul merchants and industries should champion a continuation of the rights of Southern merchants or industries to pay their employees less than a bare minimum required for bare subsistence—which results in severe injury to the employers of this area, practically all of whom pay at least the minimum proposed or in excess of it.

I am quite familiar with conditions in the New England States and many of the Southern States where I have traveled extensively and have found that in most instances employees paid rates less than the proposed minimum are subsidized by either local relief agencies or Federal moneys in order to survive.

This matter, therefore, resolves itself into whether or not the employers involved in the employment of employees at ridiculously substandard wages will be supported in their present program of making it necessary for their employes to rely on tax moneys provided by employers like ourselves who pay a living wage to their employees without being compelled to do so by the Federal Government.

I am, therefore, responding to the plea of the St. Paul Area Chamber of Commerce to write to you regarding this matter, except that contrary to their wishes, I urge you to vote in favor of an increase to the minimum wage rate—not over a period of 3 years but effective immediately.

Contrary to the belief, expressed in this bulletin, of injury resulting to our country from this action, I believe it will do more to strengthen our economy than any single act Congress could undertake. I suggest you not be disturbed over claims that employers of employees with substandard wages will be injured by an increase in the minimum wage law because I assure you that an employer who cannot make a profit except through the exploitation of his employees will not be injured but will, through the increase in the purchasing power of the citizens of his community, be aided.

Yours sincerely,
DAN M. GEPHART,
Manager.

ST. PAUL AREA CHAMBER OF COMMERCE,
St. Paul, Minn., February 16, 1961

DEAR SIR:

You are listed as a member of the Committee of 300 Good Citizens (letter writing). I must now ask you to go to work.

Enclosed you will find a copy of Leader's Digest on the minimum wage issue, which will give you some background on this subject. Expression of your personal views on minimum wage proposals to your Congressman and Senators at this time will be especially meaningful to them.

Will you please write to your Congressman and Senators today expressing your views on the minimum wage issue? You will be performing your rightful duty as a good citizen.

Thank you for your cooperation.

Sincerely,
WILBUR M. BENNETT,
Chairman, Committee of
300 Good Citizens.

Impact of Television Debate on Election

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14, 1961

Mr. YARBOROUGH. Mr. President, as chairman of the Senate Freedom of Communications Subcommittee, I have been especially interested in various reports concerning television's role in the 1960 presidential election.

One of the most interesting articles on this subject which have come to my attention, was written by Mr. Lawrence Laurent of the Washington Post. I ask unanimous consent to have printed in the RECORD Appendix Mr. Laurent's column, entitled, "TV's Election Role Polled," from the January 22, 1961, issue of the Washington Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TV'S ELECTION ROLE POLLED
(By Lawrence Laurent)

Now that President Kennedy has taken the oath of office, a more calm atmosphere permits calm discussion of television's role in the 1960 national elections.

President Kennedy has acknowledged that he couldn't have been elected without television, but this acknowledgement settles nothing. With the smallest margin of votes in the 20th century, it can be argued with equal force that he couldn't have been elected without the city vote, the Negro vote, the southern vote, the Catholic vote or the labor vote.

The most impressive effort to settle the TV question came from CBS President Frank Stanton. He quoted a survey, conducted by Elmo Roper for CBS, which concluded that 4 million voters made their choice after watching and listening to the TV-radio debates betwen Mr. Kennedy and Mr. Nixon.

Of this 4 million, Stanton quoted Roper, 26 percent voted for Nixon and 78 percent voted for Kennedy.

The first argument that ought to be dropped is the one that begins, "Nixon never should have agreed to the debates * * *." From May 16, when Adlai Stevenson appeared before a Senate committee and advocated changes in the Communications Act to permit the debates, Nixon had no choice.

To have refused would have made him a kind of coward. It would have given the Democratic candidate a chance to use the "empty chair" technique.

The argument also presumes that Senator Kennedy would not have had access to the electronics media, except for the debates. When victory is possible, the money for broadcast time can be accumulated.

The rules of the debates were, for Nixon, most unfortunate. He is one of those speakers who depends, greatly, on the feedback from an audience. He needs group and individual reaction to indicate the strength and weaknesses of his argument.

Without audience feedback, Mr. Nixon has a tendency to lapse into apple pie platitudes.

If we have learned anything about the persuasive qualities of the electronics media, it is that they can be most effectively harnessed to create brand preferences. That is, where no real differences exist on a particular product field, radio and TV are most effective in creating a preference. This is why radio and TV do well for the makers of soap, cigarettes, toothpaste, chewing gum and beer.

The electronics media have conditioned the audience to what Madison Avenue likes to call the positive sell. Here, Mr. Kennedy had a clear advantage: The most popular word in advertising is "new" and Mr. Kennedy was ready with a "New Frontier."

In the harshest commercial terms, Mr. Kennedy was able to pitch for a trial of a new product. Mr. Nixon, defensively, was forced to argue that the old product is still good.

It was to Mr. Kennedy's advantage that he happens to fit, in appearance, the stereotype of the television hero: He is tall and slender, fair haired and pale eyed. This has been TV's most popular hero, the guy in the white hat.

Mr. Nixon, no matter how many references he made to Americanism and no matter how crisp his logic, was still the stereotype of the bady guy—heavy of beard and defending what had gone before.

Technically, Nixon has almost no faults as a public speaker. Much of his effectiveness, however, is lost when he engages in give-and-take and, as noted earlier, when he lacks an audience.

That television is better suited to the attacker than to the defender was recognized by President Kennedy's closest associates. Shortly after the results of the election became known, the President's brother, Robert F. Kennedy, told reporters that he doubted a President would agree to debate one who wished to become President.

Thus, the suspicion grows that we shall not see another series of confrontations until two nonincumbents are nominated.

Like Stanton, I am distressed by those who chose to wail that a George Washington, a Thomas Jefferson, or an Abraham Lincoln could not be elected President in this television age. The arguments are intellectually dishonest, for each man of greatness speaks to his own generation in a unique way, in terms his own generation can understand.

Mr. Jefferson—no orator—harnessed the written word and struck fire in men's souls. (He was the first President to give reporters printed copies of his inaugural address.)

The spoken word, unaided by electrical amplification, helped push Mr. Lincoln to his greatness.

In our time, the electron and the atom shape a candidate's future. At best, however, 1960 furnished some valuable clues, but did not provide enough information to allow general conclusions.

Open Letter to the Postmaster General

EXTENSION OF REMARKS
OF

HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1961

Mr. JOHANSEN. Mr. Speaker, since the new administration took office on January 20, a number of statements and reports regarding personnel and other matters pertaining to the Post Office Department have emanated from—or been publicly attributed to—the Postmaster General.

I made a brief reference on this floor early last month to disturbing indications of "shenanigans" with respect to civil service laws and regulations.

The subsequent public statement by the Postmaster General in response to my comment has increased, rather than diminished, my concern as to what is going on.

Meanwhile there have been other public statements and reports relative to other operational matters in the Post Office Department.

In an effort to secure for this House and for the American people a disclaimer of these statements and reports—or a more adequate explanation thereof—I have today addressed a letter of inquiry to the Honorable J. Edward Day, the Postmaster General.

Under permission to extend and revise my remarks, I include the text of this letter:

MARCH 14, 1961.

Hon. J. EDWARD DAY,
Postmaster General,
Washington, D.C.

DEAR MR. POSTMASTER GENERAL: This letter is written to you in advance of the initial appearance of you and your top associates in the Post Office Department before an executive session of the House Committee on Post Office and Civil Service tomorrow, Wednesday, March 15, 1961.

I anticipate that many, if not all, of the questions I list herein may be raised during tomorrow's committee meeting.

Since this is an executive session, and the proceedings, therefore, are not properly subject to public disclosure, I am taking this means of publicly requesting a public response to the questions entirely apart from the executive session.

I do so particularly because most of the items herein mentioned have already been the subject of public comment by the Postmaster General and therefore, in my judgment, the answers to my questions should be equally public.

1. You have been quoted in the past as saying that more than 4,000 persons were picked to staff the 15 regional offices following creation of the regional setup; that "most of these—certainly all in the higher paying positions—were chosen on a purely political basis." You have further been quoted as stating that "the top people in these regional offices have far-reaching responsibilities" and that "just as in private business, persons in such positions of authority must be responsive to the new management."

These statements, if accurate, suggest certain important questions to which I respectfully request your answers:

How many of these 4,000 persons held career civil service status as of January 20, 1961?

How many of these appointees have been replaced—and how many is it contemplated will be replaced—by appointees of the new administration?

What provision, if any, is being made to comply with civil service laws and regulations with respect to the career status employees thus removed from these positions?

Will you please provide me with a complete list of all persons among these 4,000 employees who have been asked to resign, asked to retire, relieved of duties, or demoted, together with the up-to-date civil service records of these employees.

2. There have been numerous reports both in the press and from other sources of career status personnel in the Washington offices of the Post Office Department who have been—or are to be—subject to removal, retirement, or demotion by the new administration.

What are the facts as to such removals, retirements, or demotions?

Will you please provide me with a complete list of all of the persons employed in the Washington offices of the Post Office Department who have been asked to resign, asked to retire, relieved of duties, or demoted, together with the up-to-date civil service records of these employees.

3. I have in my possession the copy of an order issued to postmasters under date of January 25, 1961, reading as follows:

"If all or any part of your supply of the January and February 1961 issues of the Postal Service News has not been distributed to employees of your office, you are directed to withhold distribution and destroy the supply. Please give this your personal and prompt attention."

I would appreciate a statement from the Postmaster General explaining the basis and alleged justification of this order and particularly the alleged basis and justification of the portion of the order applying to the January 1961, issue of the Department's Postal Service News.

4. I have seen published statements attributed to the Postmaster General to the effect that the project Operation Turnkey is not working.

At the same time, I have seen a statement attributed to an official of the corporation which designed, constructed, equipped and is maintaining this operation to the effect that "Operation Turnkey is consistently performing."

I would appreciate a report from the Postmaster General as to the exact situation and the alleged basis for these charges.

5. I have been advised by several colleagues that in connection with post office deducations since January 20, 1961, either the official plaque in the post office or a sign posted outside the building, attributes the project to the Kennedy-Day administration. I have been advised that this is the case even in instances of post offices which were completed and placed in operation prior to January 20, 1961.

Will you please advise me as to whether there is any basis for such reports, if so the exact wording of such plaque or sign, and on what grounds claims of credit for the

new post office are made by the new administration.

6. Finally, I am advised that the Department is giving consideration to a change by administrative order of the procedures under which letter carriers are to receive the $100 per year uniform allowance.

It is my understanding that the proposed new procedure contemplates payment of the $100 a year allowance in cash, rather than the letter carrier receiving an authorization for purchase of such uniforms with the Post Office Department billed by the vendor for the uniforms.

I would appreciate being advised as to the facts in this matter if the reported change is indeed contemplated, the basis for the proposed change.

Respectfully yours,

AUGUST E. JOHANSEN.

Menominee Termination Amendments

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14, 1961

Mr. PROXMIRE. Mr. President, termination of the Federal status of the Menominee Indian Tribe of Wisconsin is scheduled to take effect on April 30. In the past few weeks the tribal delegation, consisting of Mr. Jerome Grignon and Mr. Al Dodge, has been in Washington to discuss the many problems, mainly financial, facing the tribe in connection with termination. The delegates are convinced that termination cannot work successfully unless a substantial financial underpinning is put under the tribe's affairs. The recent history of their enterprise and business operations gives little hope that such a financial basis will be available.

At the request of the delegation, acting on behalf of the tribe, I introduced two bills, S. 869 and S. 870, to amend their Termination Act. I was joined in sponsorship of this legislation by my senior colleague, Mr. WILEY. The tribe believes that the proposals contained in these bills will help achieve a successful transition from their present Federal status.

On March 9 Mr. Grignon was sent a memorandum from Mr. George Kenote, the Bureau of Indian Affairs representative on the reservation and himself a member of the tribe. The memorandum presents the tribe's latest thinking on the need to amend their Termination Act.

Mr. Kenote points out that there are "lacks and gaps" in the legislation as introduced, and hopes that his memo will make the objectives of the tribe somewhat clearer. He suggests to Mr. Grignon: "I think you should stress that this effort is not trying to defeat termination, but it is rather trying to program it under reasonably sound procedures."

I think Mr. Kenote's memorandum is an important supplement to previous testimony on the Menominee situation, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MARCH 9, 1961.

Re Menominee legislation now in Congress.

Mr. JEROME GRIGNON,
Chairman, Menominee Advisory Council:

Because of the obvious lacks and gaps in the legislation as introduced, the urgency of which I thoroughly understand, I asked Mr. Sammond to make a hard, impartial, and critical review of bills S. 869, and 870, and H.R. 4130 and 4444, to see what their practical and legal effect would be upon the community services provisions incorporated in chapter 259, laws of 1959 (the Menominee County bill), and the termination plan. The review by Mr. Sammond should help immeasurably to resolve the lacks and gaps, so that the objective of the tribe can be made more clear, and particularly so that provisions for continued community services are not left in suspense.

The general council resolution of January 9, 1961, calls for a trial and error period of not less than 8 years—practically the same period during which the State legislature put local government on a trial and error basis. The April 30, 1969, date now proposed in S. 870 and H.R. 4444 would fulfill the tribal request. This date would no doubt precede the closure of the 1969 session of the State legislature by 3 to 4 months, as evidenced by recent experience where the legislature has been running into June and beyond. By that time, this community and the business affairs of the tribe should be well enough measured under the new scheme of things, so that the legislature could make an informed judgement on the strength of the community, and on its ability to continue as a full fledged county.

The idea of a Federal chartered corporation is not new. In 1928 the Merriam report on the administration of Indian affairs proposed a somewhat similar corporation for Menominee and Klamath. It would have used Government officials as nontribal members of the board of directors. Our proposal is to use trained and experienced men from the business world. Obviously, the Merriam proposal would have entailed general Federal review authority over actions of the corporation to some extent, and fuller authority to supervise and/or conduct community services, using Federal funds where tribal funds were insufficient.

In 1947, the report to Congress made by Acting Commissioner William Zimmerman (see H. Rept. 2503, 82d Cong., 2d sess., pp. 162–177) proposed a 16-section bill which would have established a Federal chartered corporation specifically for the Menominee Tribe. It would have provided general Federal supervisory authority over the corporation. The corporation or tribe, under this plan, would have contracted with State and local agencies for community services, such as education, health and welfare, law enforcement, roads, etc. Obviously, corporate or tribal funds would have been involved in payment for such services, as they should be as far as they will go. Federal assistance would still be available to fill the gaps and voids. No doubt the corporation would have been freed up to operate the business affairs of the tribe with more flexibility than prevailed under direct Federal management and control.

The general council resolution of January 9, 1961, does not pretend to dissolve the corporate structure developed in the termination plan, instead it proposes to place the management and control of business affairs and property in the corporate organization. It proposes to give this organization a chance to improve upon the organization and to work out of any Federal supervision or control. The end result hoped for is that the business and governmental affairs of this community can be better stabilized before total Federal aids are cut off. As it is, this community will start out under very marginal conditions, both in business and community service affairs. The impact of health and welfare (particularly direct relief at this time, extra medical services to the needy, and institutional charge backs) and educational services is the most worrisome to the community until the economic situation is better established. The water and sewerage systems will also be a heavy drain upon both Keshena and Neopit, and must have further Federal assistance if they are to be feasibly programed into State regulation.

Under the general counsel resolution, the corporation would be exempted from Federal and State income and direct property taxes. The stumpage account would be segregated and from it an equivalent of direct property taxes would derive to support local government and community services. In effect, what is now termed our stumpage profit will be used to pay the local tax levy if Menominee County is fully established under State law. We have explained to our people that either way we go, to full countyhood or continued tribal operations of local government (through the provisional town and county board), we will have to forego stumpage payments, or its equivalent in interest on the income bonds, in order to pay local taxes until the corporation is earning at least $1 million net. The corporation needs some time to get on its feet and in a financial position to meet taxes, other new costs, and interest payments. The deficit spending enforced by full payout of stumpage since 1955 has been disastrous and we need time to recover.

The January 9 resolution also proposes that governmental affairs be conducted according to the forms of State law, without being a fully integral part of State government. This is intended to give our people experience in governing according to State forms before they actually have to function as full fledged officers of a legal community of the State. In effect, the elected town and county board would replace the advisory council to the extent the latter now acts in respect to community services and general government. The provisional town and county board would take over and program for education, health, and welfare, law enforcement, roads, extension and home demonstration agents, public health, and water and sanitation operations. In all of which fields there remains a tremendous reorganizational problem which cannot be oversimplified. Here is one area where we need organizational time and some continued Federal assistance to prevent further distress to this community. The provisional town and county board would have no responsibility in the business affairs of the corporation.

During this trial and error period, the corporation and the individual people would have an opportunity to work out the deeding or leasing of private land holdings, on which the corporation would now have to pay nearly all local taxes in full if termination takes place April 30, 1961. The platting of individual land holdings has just more or less been completed. We do not know whether or not current holders or users of land will take all of the areas platted to them, and will not until they take a title or lease. If the deeding or leasing of land could be more or less completed before the corporation is made subject to real property taxation it would relieve it of a sizable financial burden in the first instance. The county records and tracts could be perfected and ready to begin normal operations without fear of chaotic conditions that will prevail to a large extent under present hurried operations. This is what is meant by "putting the cart back behind the horse," in the termination program.

I think you should stress that this effort is not trying to defeat termination but, it is rather trying to program it under reasonably sound procedures. The success of the total program should not be measured by the carrying out of the mechanics of the termination act, rather its success should depend upon and be measured by what it does to a community of simple people. The general objective of the general council resolution of January 9 is not unreasonable and I believe it is feasible and proper. Mr. Sammond's memorandum will help immeasurably to fill in the gaps. As discussed by telephone, I am sending you sufficient copies to distribute in the Department and in Congress, particularly to Senators WILEY and PROXMIRE, Congressman LAIRD, and committee chairmen, with a copy of this memorandum.

GEORGE W. KENOTE.

Address of O. G. Powell, President of the National Association of Real Estate Boards, Jackson, Miss.

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. WILLIAMS. Mr. Speaker, on March 9, 1961, the President of the United States submitted to the Congress a special message on housing and community development. In this message the President outlined a far-reaching multibillion-dollar program suggesting that the Federal Government is going to help practically everybody to obtain a home at less than cost.

My attention has been called to an address by O. G. "Bill" Powell, president of the National Association of Real Estate Boards, in Jackson, Miss., on Tuesday, March 7. While Mr. Powell's address was delivered before the President's multibillion-dollar housing message, he predicted the salient points of the message and answered them in a most exemplary manner from his point of view. His was a blueprint for strengthening the role of private enterprise with a minimum of interference from the Federal Government and at no cost to the taxpayers.

Under unanimous consent, I include the adress by President O. G. "Bill" Powell, of the National Association of Real Estate Boards, in the Appendix of the RECORD.

ADDRESS OF O. G. POWELL, DES MOINES, IOWA, PRESIDENT, NATIONAL ASSOCIATION OF REAL ESTATE BOARDS BEFORE THE JACKSON, MISS., REAL ESTATE BOARD, MARCH 7, 1961

Not too long ago, a young man stood on the steps of the Capitol in Washington and said, in part:

"And so, my fellow Americans, ask not what your country will do for you—ask what you can do for your country; ask not what America will do for you, but what together we can do for the freedom of man."

Regardless of political affiliation, all Americans—all realtors—will give the President unqualified support in his ringing call for the assumption of personal responsibility.

In fact, when I became NAREB's president for 1961 at approximately the same time that Mr. Kennedy took office, I said just about the same thing; namely, "I see in my election as president of NAREB a step toward the philosophy of the responsibility of the individual for the preservation of society rather than the responsibility of society for the control of the individual."

And the conclusion of my inaugural speech was the reminder that "We have no greater duty than the maintenance of an environment in which freedom of man is paramount to all things."

However, some of the programs and policies proposed by Mr. Kennedy since his inaugural speech contain strong elements of the welfare state and an apparent acceptance of the responsibility of the Federal Government for the welfare of large groups of citizens. They seem at variance with this enunciation of personal responsibility. To the extent that this proves to be the case, we must exercise our critical faculties.

But here today I prefer to stress the positive—to make my humble contribution to national unity on the basis of a great patriotic appeal by our President. Yes, Mr. Kennedy, the realtors of America are with you all the way—as they always have been—in seeking to determine what we can do for our country. Here are some specifics:

1. Realtors believe in a dynamic and growing society in which each man, responsible to law and imbued with a deep sense of man's responsibility to man, is free to use his initiative, talents, and skills in the conduct of his own business. This is what we call the free enterprise system, and nowhere in the land will you find a more ardent group of practitioners of that system than in the ranks of realtors. To say that it is through this system that our country has flourished is to state a truism. But to rededicate ourselves to the exercise of this free enterprise responsibility with full vigor is the first duty of the patriot in an era in which free enterprise is menaced by statism as never before.

A rough measure of the extent to which realtors—more than just real estate brokers—have discharged their vital free enterprise function of bringing together the buyers and sellers of real property is supplied by the fact that today more than 6 out of 10 families own their own homes. We do not say that realtors alone are responsible for this commendable record of ownership. But we do say that realtors—all 69,000 of them distinguished for demonstrated competence and observance of ethical standards beyond the levels required by State license laws—have led the way in this exercise of person-to-person negotiations made possible by a free market.

2. Realtors have always opposed governmental interferences in the activities of the free market.

A prime example of this, of course, is federally subsidized public housing. Today we have approximately 522,000 public housing units in operation, and another 98,000 in various stages of processing. The Federal taxpayers are obligated for the next 40 years to pay annual subsidies which, for the fiscal year 1962, are estimated at $170 million. Of course, this annual price tag will continue to increase during the coming years.

There will be an attempt to expand this program. There will also be an attempt to amend the basic public housing law to permit overincome tenants to remain in public housing provided they pay a so-called economic rent. We are opposing these attempts because we believe that the Government ownership of family shelter is inherently bad for a free people. This does not mean that we do not believe it is a valid function of Government to assist the needy in obtaining the necessities of life. There are means of doing this without making low-income families wards of the Government in the realm of shelter—or clothing, or transportation.

Other examples of the Government's interference with the free market are found in the several Federal direct lending programs having but one thing in common—the direct lending of the taxpayers' money for housing, generally at interest rates less than those prevailing in the free market. Incidentally, it is noteworthy that such direct lending programs generally are approved by the Congress without going through the appropriations process. These back-door raids on the Treasury involve authorizations to withdraw money from the Treasury which, by the magic of some bookkeeping entry, are noted as "public debt transactions."

Today our direct lending programs include programs for veterans, elderly persons, and colleges. Tomorrow, unless we are vigilant, direct lending may be extended to housing for middle-income families. This is no idle warning.

Legislation to accomplish this was actually approved by the Senate Banking and Currency Committee in the spring of 1960, and a similar proposal has been recommended in the recently completed report of the President's task force on housing.

3. Realtors believe in a strong America, and one way to build strength is to conserve it. As a nation, as a people, our sustenance is represented by tax revenues. Any time any group of our people seeks to tap these Federal funds to accomplish goals which they might realize with their own resources and initiative, they are, in effect, asking what their government can do for them rather than what they can do for their government. The current proposal to establish a department of housing and urban affairs in the President's Cabinet is such a request.

Chief proponents of this plan are the mayors of large cities, who, in an apparent desire to get the Government to do something for them, are cutting loose from the traditional patterns of State-local relations. In testifying in favor of this plan last year, many of these mayors defined urban affairs as encompassing everything from metropolitan planning to mass transportation. Realtors will oppose such a department because we do not believe that government's role in the housing industry must necessarily be a permanent and expanding one. In other words, realtors are eager to continue to do their part in making ever-better housing available to the public within the free enterprise system. This is something we can do for our country—and, it should be recorded, it is something that we have been doing for the country for decades without Federal subsidy.

All that we ask is the continuation of something that already has been well established to the great benefit of the country—the creation of a favorable atmosphere for private enterprise on the part of the Government. This is the proper role of government. It is represented by the Federal Housing Administration, the Federal National Mortgage Association, and the Federal Home Loan Bank Board. Under FHA, the borrower pays a premium for his mortgage insurance. In its 26 years of life, FHA has not cost the taxpayers one cent. FNMA, through its secondary market operations, borrows money by issuing fully taxable obligations to the investing public and using the funds to buy mortgages in times of seasonal scarcity in the mortgage market. The FHLBB serves to regulate and stabilize the Federal savings and loan associations of the Nation which have played such a notable part in sound credit expansion—again without Federal subsidy.

The realtors' desire to contribute to, rather than take from, national resources is even more clearly shown in the position of NAREB on urban renewal.

We have supported and will continue to support the system of Federal grants for

urban renewal with some qualifications—important qualifications. The Federal taxpayers pay two-thirds of the net cost of an urban renewal project. To date, almost $2 billion has been obligated, and pressures for continuing such obligations at the rate of $500 million a year are increasing. Our association insists that there is no justification for providing all the money sought by city urban renewal planners who think in terms of clearing vast areas and rebuilding them from the ground up by the "bulldozer" approach.

We believe that more attention should be directed at conserving our communities and rehabilitating structures and areas that lend themselves to rehabilitation. Only in this way will we get a maximum of urban renewal with a minimum drain on our resources.

We are convinced also that much of the money spent on urban renewal will be wasted unless local government makes a greater contribution to preventing the spread of slums. Our association has urged Congress repeatedly to amend the basic urban renewal law to require that before a community can receive financial assistance it must submit evidence that it has an adequate housing code and that it is enforcing such a code. Unless cities take such concrete steps to check the mushrooming of blight, slums will grow faster than they can be eliminated.

An example of the willingness of realtors to participate in this local rehabilitation effort without remuneration and with the devotion of their time is supplied by the Build America Better program of our association. On the invitation of local real estate boards and municipal officials, no less than 10 teams of experienced realtors have been dispatched to as many cities to make on-the-spot surveys and draw up programs to fight blight and the spread of neighborhood decay. Again, realtors have seen an opportunity to be of service to the country, and they have accepted it to the expressed pleasure of all concerned. Several more visits of a team are scheduled this year.

4. Realtors seek to add to the strength of the country by making possible the widest diffusion of landownership and the highest and best use of land.

The preamble to NAREB's code of ethics—which every realtor is pledged to uphold—states our position clearly when it says:

"Under all is the land. Upon its wise utilization and widespread ownership depend the advancement of well-being and the perpetuation of the free institutions that go to make the American way of life. The realtor has husbanded and developed the land resources of the Nation and, with his help, ownership has attained its widest distribution—a distinguishing mark that differentiates this from other civilizations and provides the real safeguard against radical impenetrations."

It is, I submit, in the discharge of this function—effecting the transfer of land by bringing buyer and seller together on mutually advantageous terms and with the greatest competence and integrity—that realtors can continue to serve their country. Ours is a proud function—a basic function—and one deeply invested with the future freedom of men here in America and throughout the world.

5. As another contribution to the strength of the country, realtors have always sought to hold to a minimum the taxation of our people. This attitude springs from a fact and a conviction. The fact: Government produces nothing; it provides services. The conviction: our resources should, to the maximum extent possible, be left in the hands of our people to be used productively in their personal and business undertakings—and Government services should be confined to those of an essential nature that people cannot provide for themselves.

Having made this general statement, let me now be specific.

To begin with, I think it would be a gross understatement to say that our income tax laws were enacted and are administered for the purpose of raising revenue to meet the cost of Government.

In fact, our tax laws today are powerful political weapons which have as their primary objective the redistribution of income. This is the essence of our progressive taxing system.

It is the philosophy underlying our Federal tax laws which makes me uneasy over the plans of our tax writers in Congress and the Treasury to reduce the tax rates but only after broadening the base of our tax laws.

It is said that of the total of $410 billion in personal income only $182 billion is taxable. The $228 billion of income that supposedly escapes taxation makes up the many exclusions and deductions including personal exemptions, interest on real estate mortgages, real property taxes, and the like. We are told that if all these exemptions and all capital gains tax were eliminated, the rates could be reduced to 9 to 42 percent instead of the present 20 to 91 percent. If the $600 personal exemption were retained, then the rates could be reduced to 12 to 55 percent.

Now this sounds very good, but there is one thing that worries me very much.

Many of these exclusions and deductions were placed in the tax code by a Congress whose conscience was troubled over the high tax rates. Most of these deductions came into existence over the past 25 years when it began to be apparent to the American people that the purpose of the Nation's tax laws had shifted from the raising of revenue to run the Government to redistributing income by creating a welfare state. Others such as real property and personal interest go back to the first Federal individual income tax during the War Between the States.

Let us suppose for a moment that the people agree to give up these exclusions and deductions and accept the reward of a simple income tax on gross income at a lesser rate, and suppose that this results in less taxes for everyone. This would indeed make many Americans happier. However, there is one thing wrong with this.

What assurances would the American people have that, once they had given up all these deductions, the next Congress wouldn't start pushing up the rates to meet the cost of expanding the welfare state?

You can be sure of this—as sure as night follows day—that it will be easier to push that 55 percent rate to 65 percent and then to 75 percent than it will be to put back into the law a deduction for real property taxes and mortgage interest and capital gains on investment, to mention but a few of the deductions from taxable income that would be no more.

The promoters of the welfare state could always point to the 91 percent limit as a target to provide the means of raising more money for expanded social welfare programs.

I have a suggestion to make.

If the sponsors of these proposals for broadening the tax base are serious, let them first sponsor legislation which would restore fiscal responsibility to the operations of our Federal Government.

I have in mind these:

1. Adopt House Resolution 125 which would stop backdoor raids on the Treasury by reaffirming the provision in the Constitution that money may not be drawn from the Treasury except pursuant to an appropriation made by law.

During the 86th Congress, 2d session, the Congress enacted legislation authorizing more than $1 billion to be drawn from the Treasury without appropriations. Yet on August 12, 1958, in a letter to Congressman GARY of Virginia, the Secretary of the Treasury agreed that "any legislative enactment permitting money to be drawn from the Treasury is an appropriation." Thus money is drawn every year in violation of the Federal Constitution.

2. Enact legislation which would provide for subsequent income tax reductions out of part of the increased revenue resulting from economic growth.

3. Enact legislation earmarking a certain portion of revenue to retire annually part of our public debt instead of consigning it completely to future generations.

Only by the enactment of these three proposals would the American people be assured that broadening the tax base will mean something more than an invitation for the Federal Government to embark on more and more financial adventures until private enterprize is completely smothered.

This is the challenge which will measure the sincerity of the tax planners of the New Frontier.

This would indeed be a New Frontier which would raise the hopes and aspirations of the American people.

In concluding this review of what realtors can do to help their country, let me sketch for you the current status of the real estate market.

The components of a healthy and active real estate market in 1961 are present in plenty. Right now mortgage funds are in ample supply and are destined to become more so. Population is expanding, and population is moving, east to west, north to south, city to suburb and, to a degree, from suburb to city.

A healthy real estate market, responsive to the stimuli of intelligent and industrious salesmanship, need not be a boom market nor do sales have to depend upon the promise of higher prices and cheaper dollars.

While residential activity may establish no record in units or dollars, either minimal or maximal, the realtor with imagination, energy, and determination, stimulated by competition, will find in 1961 a satisfactory and productive field for his labor.

His threat and his challenge come primarily not from the pressures of the economy, but rather from the misguided, if sincere, ministrations of the politician who would substitute for private ownership of real estate a mammoth public utility controlled and possibly owned by the State.

Every time another unit of State-owned real estate is created, every time another enterprise is removed from tax collection, every time an unsound mortgage is financed by Government funds, every time multiple ownership of a tract of land and buildings is extinguished by a single ownership—at each of these steps we build a barrier not only to the future of the real estate practitioner but to the well being of the Nation and the independence of our people.

If realtors are to continue to seek to serve their country, rather than asking the country to help them, the real estate business must survive and prosper. It can do so only in a land where men are free in mind, in spirit, in the ownership and use of property. To the degree that leaders of real estate are able to preserve that freedom, to the degree that they are able to enhance that freedom—to those degrees does real estate truly prosper and continue to be able to contribute to the national strength.

First Showing of American Men's Fashions in Rome

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. ANFUSO. Mr. Speaker, it is very interesting to note that under our new national leadership American initiative and imagination in private enterprise is once again coming to the fore. People in every economic activity of the Nation are coming up with new ideas and suggestions, some of which are beginning to take root to the benefit of the entire country.

One of the major problems facing the new administration—a problem which has received much attention in the press and has aroused considerable discussion in Government and business circles—is the problem how to stabilize the flow of dollars from this country, and yet maintain a more equitable balance of trade. The Kennedy administration now has under advisement various plans to deal with this important matter in our economic life, which at times has taken on threatening and critical proportions.

As has frequently occurred in the past, in times of peace and in war, American business ingenuity has come forward with worthwhile proposals and ideas in the effort to obtain a solution of critical problems of the period. This time it is no different. Our problems of the present day are being tackled with new ideas and renewed vigor.

Let me cite one such example which has come to my attention. On May 13 of this year an interesting event will take place in Rome, Italy, which has much significance for us. For the first time in the history of the men's clothing industry, an American men's clothing manufacturer will present in Rome a collection of men's fashions before an audience of European businessmen, government officials, social leaders, and others.

Aware of the urgent need to increase American exports and the sale of U.S. products abroad, Petrocelli Clothes, Inc., of New York, a leading manufacturer of men's clothing, will display a collection of such clothing at the Grand Hotel, in Rome. It is hoped that this showing will create and stimulate a new trend in the men's clothing industry.

In the past decide, the fashionable look for men had gone abroad to Italy and to England for its design stimuli. Thus, we had the Italian look, the continental look, and more recently the English look, which have all had their influence on the styling of men's clothing in America. To these fashion forces, the American men's clothing industry has added the know-how of mass production. Until now, however, this was done solely for the American male and the American market.

In order to meet the need for increasing American know-how and business throughout the world, Petrocelli Clothes has decided to reverse the trend and has accepted the invitation of leading Italian business firms to present the international merger collection of American fashions for men. These fashions will now be shown in Italy on May 13.

This common experience of interest in fashion can be a productive force—

Say Mr. Sam Eisenberg and Mr. Tony Petrocelli, executives of the firm—

by showing European retailers and manufacturers how American manufacturers have learned to coordinate Italy's fashion influence with the know-how of American productive techniques, in order to make available clothes of high quality at a price below the cost of custom tailoring. We have here an international merging of ideas which should bring America's famous garment center, with its highly skilled craftsmen, designers, and business executives, closer to their European counterparts.

The American and European press have shown great interest in this international event.

One important phase of this event should not be overlooked. As an added gesture of friendship between our two nations, the receipts of the fashion presentation in Rome will be donated to a very worthy charitable cause; namely, to Monsignor Carroll-Abbing for his work in the world-renowned Boys Town of Italy. Thus, we have here a fine example of combined business and charitable efforts which in itself is a heartwarming relationship.

It is to be hoped that this leadership in international business relations will stimulate other American business firms and executives, even in areas until now devoted almost exclusively to the American market, to broaden their interests and create new ideas. It should serve to increase business throughout the world, as well as create a level of interchange of ideas, methods, and techniques which will undoubtedly prove to be beneficial for all concerned.

Home Builders Support President's Program

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. CLEM MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to a statement by Mr. E. J. Burke, Jr., president of the National Association of Home Builders. It is indeed heartening to see this expression of support for the legislative objectives of President Kennedy in the home building industry. This statement epitomizes the concern of the industry for its own future and the need for effective, concerted action to make it the catalytic agent for the upturn of our economy. The keystone for this effort must be to tap the great middle and low income market by appropriate legislative action:

Our association welcomes the general objectives enunciated in the President's special message on housing and community development.

The fact that the President recognizes the need for a prosperous construction industry as an essential component of general economic prosperity and growth is greatly encouraging to us as we formulate our own plans for this year.

We must reserve opinion on some of the specific proposals until they take actual legislative form and we have had a chance to study them in full detail.

As to the broad tenor of the President's message we certainly concur with the three basic national objectives: urban renewal and sound urban growth; decent housing for all of our people; the encouragement of sound construction industry to promote the general economic welfare.

We are particularly pleased that these basic goals so closely coincide with those of the program the NAHB has just worked out for 1961.

We are particularly interested in those proposals in the message which would make it possible for the private home building industry to broaden its markets and provide more homes for moderate income families.

We hope as the President's program is spelled out in more detail that it will include a Central Mortgage Facility—a proposal we have long advocated—to insure greater stability in the flow of mortgage money. We hope also that it will include proposals for assistance in the proper development of community facilities such as water and sewers, items which could help immeasurably in lowering the price of homes.

We are rather disturbed at the continuing emphasis on public housing, a problem which we hope soon, on the basis of current studies, will be eliminated.

We have long advocated the establishment of a cabinet post for Housing, provided housing was given priority in such a department, and we welcome the President's statement that he will shortly offer such a proposal.

Paging Mr. Goldberg

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lancaster News, Lancaster, S.C., of March 9, 1961:

PAGING MR. GOLDBERG

The administration's reaction to a threatened boycott of imported textiles and manufactured garments has been one of mixed indignation and confusion.

The indignation was expressed mildly by President Kennedy during his recent news conference when he said the Government could not have its trade and diplomatic policies blocked by the action of minority groups.

The Department of Justice is investigating the boycott movement with vague promises to take action against those manufacturers' organizations found acting in restraint of trade.

But the real problem, and one that must be solved quickly, is what to do about the announced intention of the Amalgamated Clothing Workers to stop cutting imported fabrics from Japan on May 1.

It is settled law that when labor and management join together in imposing restraints on trade they have no immunity from prosecution under the antitrust laws. But a union, acting on its own, does have a legal immunity from antitrust action.

No collusion between the ACW and manufacturers was needed to throw a monkey wrench into the import machinery. As soon as the union's intention was announced, manufacturers were compelled to make preparation for May 1.

If the union would not handle imported fabrics, obviously manufacturers could not import them and the boycott would spread, not because of any agreement or collusion, but through simple fear of being stuck with useless bales of Japanese fabrics.

The ACW is a tough union. If its members are determined not to handle Jap fabrics administration leaders may find themselves in the difficult position of the British in meeting the passive resistance program of the late Mahatma Ghandi in India. Neither injunctions nor bayonets will cut cloth. A real problem for Arthur Goldberg and Brother Bobby Kennedy.

Decision Now

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely editorial on the subject of Government aid to private schools, which was in a recent issue of the Pilot, published in Boston, Mass.:

DECISION NOW

Just what does the U.S. Constitution have to say about Government aid to private schools? This is the multimillion-dollar question to which we do not in fact have any final answer at the moment and are not likely to have for a long time. The Congress, it appears, will have to come up with some sort of a judgment on the matter before we can get any kind of Federal aid bill as recommended by the President.

It has been maintained for a long time—with dissents here and there—that direct Federal funds for private and religious schools are in conflict with the Constitution. Such funds, it is generally argued, constitute an aid to religion and so are forbidden by the establishment clause of the first amendment. This argument was clearly expressed in the Everson case and ran like a thread through some others. As a result of all of this, successful Federal programs were directed to the child, not the school, as in the school lunch program, and the constitutional question was avoided.

This arrangement—help the child not the institution—was the kind of formula that was embodied in the eminently successful GI bill that educated a generation of Americans in schools of all kinds. It still offers the quickest and most acceptable way of getting the education job done; as an added advantage it does not discriminate between citizens on religious and other grounds. No one has ever raised any serious constitutional objections to this kind of program, as long as the distinction between the child and the institution has been clearly drawn.

At the same time this sidesteps the present issue of loans and grants to private and religious schools, and eventually this issue must be faced. On the matter of loans—already provided to sectarian colleges and hospitals—there is very little to be argued; such action is surely constitutional. Grants, even though we have good precedent here also, are in a different category and the court decisions in related cases leave room for some doubt in their regard. This is the question which the Congress now must discuss and decide, with the best advice they can get from the constitutional experts.

Professor Sutherland, of the Harvard Law School, no mean constitutional authority, has given his view in the last few days that Federal aid to private schools faces no constitutional problems. While far from being the common position, his arguments nonetheless must be considered and his conclusion examined. Plainly, we have been moving on the edge of this large question for many years but we have never probed it. Now is the time for the Congress to take the initiative and seek a definitive answer. The President has indicated the national need for a new education bill; the only kind worth having is a just one. Congress should see that we get it.

The Late Herman A. Lowe

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mrs. GRANAHAN. Mr. Speaker, I am sure I express the shock and deep regret of many Members of Congress who knew him as a newspaperman upon learning of the death in Philadelphia of Herman A. Lowe, director of development and public relations for the Albert Einstein Memorial Medical Center in Philadelphia. Mr. Lowe was only 55 when he died Sunday of a heart attack, just as he was preparing to expand his activities by opening a public relations office here in Washington.

As a long-time friend of Mr. Lowe, and of his very fine and capable wife, Florence, I find it almost impossible to realize that Herman has been taken from us in the prime of an active and useful life. My deepest sympathy goes to Mrs. Lowe and to their son and daughter, Roger and Mrs. Fred Israel.

Mr. Lowe spent many years as a newspaperman in Philadelphia before joining the Washington Bureau of the Philadelphia Inquirer in 1942. Several years later, he opened his own news bureau here, the Penn-Federal News Bureau, writing for a number of Pennsylvania papers and serving also, in partnership with Mrs. Lowe, in covering Washington for Variety, the entertainment industry's trade journal. He closed his Washington office 3 years ago to join the staff of the world-famous Einstein Medical Center.

Long associated in various capacities with the Republican Party in Pennsylvania, Mr. Lowe never allowed partisanship to interfere with his objectivity in covering news stories involving me, or my husband before me. We were personal friends regardless of politics.

Memorial Favoring the Establishment of a Great Plains Soil-Moisture Research Laboratory

EXTENSION OF REMARKS
OF
HON. PETER H. DOMINICK
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. DOMINICK. Mr. Speaker, the Colorado State house of representatives has enacted House Joint Memorial 9, memorializing the Congress of the United States to establish a Great Plains Soil-Moisture Research Laboratory. The management and conservation of water resources is one of the most vital problems facing the Great Plains area which encompasses a large portion of 10 Western States: Montana, Wyoming, North Dakota, South Dakota, Kansas, Nebraska, Colorado, Oklahoma, Texas, and New Mexico.

The proposal for this laboratory is a worthy one and has strong bipartisan support from the Colorado legislature.

Under unanimous consent, I include House Joint Memorial 9 in the Appendix of the RECORD:

HOUSE JOINT MEMORIAL 9

(By Representatives Poe, Burns, Anderson, Bain, Black, Boyden, Braden, Burch, Burk, Byrne, Calabrese, Clark, Compton, Dameron, Dines, Douglass, Eberhardt, Evans, Farr, Fenwick, French, Gallegos, Gilbert, Gossard, Johns, Johnson, Kane, Kelley, Klein, Knox, Lamb, Lamm, Lennox, Littler, Lorton, Love, Lucas, Mackie, Magnuson, P. Massari, V. Massari, McCormick, McNeil, Morgan, Myrick, Nichols, O'Donnell, Ohlson, Pellett, Propst, Quinlan, Romer, Rubin, Schafer, Simpson, Stalker, Stockton, Streitzer, Thomson, Tomsic, Vanderhoof, Wade, Wertz, West, and Wyatt)

Whereas the Great Plains area of the United States encompasses a large portion of the States of Montana, Wyoming, North Dakota, South Dakota, Kansas, Nebraska, Colorado, Oklahoma, Texas, and New Mexico and is a vital part of the agricultural and livestock production of the Nation; and

Whereas the major portion of the nonirrigated acres in these 10 States experience frequent periods of extensive drought and are subject to severe wind and water erosion; and

Whereas there is an urgent need for intensive research on the conservation and maximum use of available moisture, on soil moisture-plant relationships, and systems of managing highly erodible soils in periods of drought; and

Whereas such need having been recognized by the Congress of the United States by enactment of legislation authorizing the establishment of facilities for such research; and

Whereas the eastern one-half of Colorado is situated in that portion of the Great Plains where a high percentage of the days are cloudless, the light intensity is high and the relative humidity is adequately low to minimize daily operating costs of growth chambers, the wind tunnel and greenhouse facilities: Now, therefore, be it

Resolved by the House of Representatives of the 43d General Assembly of the State of Colorado, the Senate concurring herein, That it respectfully petitions the Congress of the United States and the Secretary of

Agriculture to act favorably upon the establishment of additional facilities to conduct soil moisture research studies for the Great Plains, that funds needed for the construction of a laboratory be appropriated in the immediate future and the facility be located at Colorado State University, Fort Collins, Colo., which we believe to be the site most logically situated to meet the required climatic, physical, and other geographic conditions essential to the conduct of research in the Great Plains area; and be it further

Resolved, That copies of this joint memorial be forwarded to the U.S. Senators and Representatives from Colorado, the Speaker of the House of Representatives, the President of the Senate, the President of the United States, the chairman of the subcommittee on agricultural appropriations for the House and the chairman of the subcommittee on agricultural appropriations for the Senate, the Secretary of Agriculture, and the Director of the Agricultural Research Service.

ALBERT J. TOMSIC,
Speaker of the House of Representatives.
ROBERT L. KNOUS,
President of the Senate.
GENE MANZANARES,
Chief Clerk of the House of Representatives.
LUCILE L. SHUSTER,
Secretary of the Senate.

Nine Promises of a Patriotic Citizen

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. DERWINSKI. Mr. Speaker, recently the chamber of commerce of the community of South Chicago in the Fourth Congressional District of Illinois, printed a pamphlet entitled "How You Can Help Combat Communism." This pamphlet draws up nine promises of a patriotic citizen. I believe that the distribution of this publication by this local group reflects the normal American concept which is best exemplified by the grassroots spirit indicated here:

HOW YOU CAN HELP COMBAT COMMUNISM

NINE PROMISES OF A PATRIOTIC CITIZEN

1. I will value our American heritage of freedom by knowing how and why a free economy works and compare communism, its history, its philosophy, especially its tactics of infiltration and subversion—then tell my friends to do the same.

2. I will oppose Communist conquest by making my convictions known and by writing to Government officials, legislators, newspapers, etc., and encourage others to do likewise, that a combined effort may best neutralize Communist strategy and subversion.

3. I will learn the names of all possible Communists, also sympathizers and front organizations and study the publications of the House Committee on Un-American Activities and the Senate Internal Security Subcommittee.

4. I will unite with other loyal citizens in all community betterment projects and take an active interest in public affairs; I always will vote in elections—and will get others out to vote.

5. I will never participate in mob action evolved around group prejudices and will not join uninvestigated groups who use such appealing words as "peace," "freedom," "youth," and "mother" because of the Communist perversion of these terms.

6. I will teach our children to have a firm moral and spiritual basis of life as the Word of God is the weapon most feared by the Communists.

7. I will earnestly withhold support from advertisers, all magazines, movies, organizations, etc., whenever they sanction or foster communism and will not buy products imported from Socialist or Communist countries—I will also protest to the seller.

8. I will endeavor to know what public school books contain, know the teachers of the local schools and take a vital interest in the education of our children.

9. I will read all possible reports on the capabilities and activities of our elected officials and strongly support the candidates who understand the scope and seriousness of communism and who agree to work for its defeat.

(NOTE.—Your answer being yes to the above nine anticommunistic musts—merely aline the first letter of each key word for your title in this ultra important task.)

Program Launched To Send Young Ambassadors Abroad

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. RAINS. Mr. Speaker, recently some enterprising Alabamians have launched a program to send a young ambassador to a foreign country for the summer. Two cities, Gadsden, my home town, and Tuscaloosa, have indicated participation in this project which, I understand, some 85 U.S. communities now sponsor.

While abroad the young person who is selected as ambassador from each community would spend 1 month in the home of a native family and the remainder of his time traveling about the country, getting to know and understand the people and bringing messages of friendship from the folks back home.

The young persons selected by our communities must be of excellent caliber, for their selection is based on the highest standards of conduct and character. Gadsden is fortunate to have the interest and help of an outstanding young man, Mr. Douglas Lanford, who is well traveled and highly educated and dedicated to this grassroots friendship program. Mr. Lanford is director of the continuing legal education program of the University of Alabama.

Already the press and many radio and television stations have expressed interest in the reports which our community ambassadors will bring home in the fall. The success of this venture for each community which participates depends on the interest and energies of various civic and business and professional groups. Their support is vital to the success of the mission.

I am confident that the two Alabama ambassadors who go forth this year will be a credit to our State and will do much toward bringing a true concept of young Americans to peoples in distant lands. I only wish it were possible for each community in our State to engage in this program.

Mr. Speaker, I am deeply impressed that such a program is conceived and executed at the local level, and that so many of our citizens are anxious to participate in this endeavor. I believe that our young ambassadors and the communities which back them should be an inspiration to the Congress.

House Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. JOHN KYL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. KYL. Mr. Speaker, many of our citizens are aware of the danger posed by the Communist teams operating in our country. The following communication was from one of these citizens who has had personal contact with the problem:

Hon. JOHN KYL,
U.S. House of Representatives,
Washington, D.C.

SIR: Reading in the Appendix of the CONGRESSIONAL RECORD, I noted comments of a Congressman concerning the House Un-American Activities Committee.

This individual severely critized HUAC's activities, expenditures, area of operation, and publications. This disturbed me. Perhaps there have been times when HUAC has made errors; but let us not destroy it for errors that are common in all human undertakings.

If Congress does not investigate and inform the American people, who will? Will we wait until the Reds have created the same chaos in the minds of our youth as they have already have in Europe and Asia? No thank you, I saw too much of the San Francisco type Red action in Europe.

Instead of attacking HUAC let us get at the problem's roots—educating uninformed students and adults concerning Red doctrine and modus operandi. Reveal the fallacies of communism—bring out into the open this vague identity which upon examination is found to be the product of sick minds.

Fortunately, here in the Creston school system we have administrators and a school board which have supported me in presenting the high school student with a 4-day unit on communism. What I offer is largely based on J. Edgar Hoover's "Masters of Deceit," my experiences as a counterintelligence agent serving in Europe, and the publications of HUAC.

My students have been very receptive to this unit. Many found themselves clearing away false and exaggerated ideas concerning this force that seeks to twist their minds. Mystic communism took the form of a well-defined and visible enemy, who can best be defeated by knowing him, his plans, tactics, and aspirations.

Knowing communism as I do I feel that the Red enemies of HUAC are not concerned with the number of their agents brought into the light as much as they are concerned about the committee's strength as

an educating force against communism. HUAC is causing potential dupes to be on their guard—the Reds cannot afford this, for they cannot exist without blind mass support, especially when the time comes to seize power.

JOHN G. BITZES,
Instructor, U.S. History, Creston Senior High.

Policy Statement of National Consumers League

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 14, 1961

Mr. METCALF. Mr. President, recently I had the honor of addressing the annual meeting of the National Consumers League. This organization is now beginning its 62d year of existence. Throughout its long history, it has made tremendous contributions to many of the major social reforms of the 20th century.

It was founded in 1899 in the belief that consumers have a responsibility to help improve the working and living conditions and standards of those who produce the goods we all consume. The league introduced the idea of minimum wage legislation to the United States in the early years of the century, gave valuable support to the great social insurance programs, and was an early supporter of the concept of pure food and drug legislation.

The list of National Consumers League officers, directors, and members of both the past and the present reads like a "who's who" of important Americans. They include Felix Frankfurter and the late Louis D. Brandeis, U.S. Supreme Court Justices; Arthur Goldberg, Secretary of Labor, and Frances Perkins, former Secretary of Labor; Esther Peterson, Director of the Women's Bureau, and Mary Anderson, former Director of the Women's Bureau; Mrs. Eleanor Roosevelt; Arthur Schlesinger, historian; Paul Douglas, U.S. Senator; the late Sumner Slichter, economist; Benjamin V. Cohen, New Deal adviser; J. Douglas Brown, dean of Princeton University; Mary Gibson Blanding, president of Vassar College.

Present officers include president Dr. John Howland Lathrop, Berkeley, Calif.; vice presidents, Elizabeth Brandeis Raushenbush, Madison, Wis.; Mary Dewson, Penobscot, Maine; Mrs. Thomas Fleming, Pasadena, Calif.; Pauline Goldmark, Hartsdale, N.Y.; Alice Hamilton, M.D., Hadlyme, Conn.; John Haynes Holmes, New York, N.Y.; Alice W. Hunt, Providence, R.I.; Archbishop Robert E. Lucey, San Antonio, Tex.; Frances Perkins, New York, N.Y.; Josephine Roche, Washington, D.C.; Mrs. Franklin D. Roosevelt, Hyde Park, N.Y.; Bishop William Scarlett, Castine, Maine; and Robert Szold, New York, N.Y.; treasurer, Hyman Schroeder, New York, N.Y.; board chairman, John W. Edelman, Washington, D.C.; board vice chairmen, Walter Frank, New York, N.Y.; Eleanor Hadley, Northampton, Mass.; Mrs. R. Gordon Arneson, Arlington, Va.; general secretary, Vera Waltman Mayer, Washington, D.C.

The league's long history of service and idealism commands respect. Further, the modernity of the league's ideas and its sensitivity to the important social problems which confront us today is impressive. This is not an organization content to rest on the many laurels of its past achievements. Rather, this is an organization which is continually reaching out for solutions to problems both old and new.

For this reason, I believe the league's statement of policy, adopted last week, will be of interest to the Senate. I ask unanimous consent to have that statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

POLICY STATEMENT OF THE NATIONAL CONSUMERS LEAGUE

A wave of hope seems to be sweeping over our Nation. Although the problems we face are many and grave, the will to confront and solve them is shared by us all. We in the National Consumers League, along with our fellow citizens, face the year ahead with a sense of real expectation.

In the 62 years since the founding of the Consumers League, the nature of the problems we must cope with has changed but the object of the league remains the same—improvements in the working and living conditions of our countrymen. Today, as in 1899, our members believe that, as consumers, we have an active responsibility for the establishment of humane standards of employment and for the protection of the standard of living of our people. Because of these beliefs, the National Consumers League was responsible for introducing the concept of the legal minimum wage in the United States, gave significant support to the social insurance programs, and was among the early advocates of pure food and drug protection.

AREAS OF CONCERN TODAY

The sweatshops of yesterday have given way in many industries to varying degrees of industrial democracy. Yet problems remain—problems about which much must be done and about which we feel great concern. Even today the following conditions exist:

Food and fiber still are produced under conditions which often amount to peonage. "Harvest of Shame" is an appropriate title for many of America's agricultural products.

Minimum wage and maximum hours protection is still denied to millions of wage earners who need it the most.

Thousands of our aged are still without the financial means of living in dignity and health in their declining years.

Unemployment, with its corroding and degenerating consequences, is chronic in some of our regions and recurs periodically in virtually all of them.

The consumer is still too often compelled to buy at his own risk in a marketplace which becomes increasingly more complex.

Legal and social prejudice still robs millions of Americans of their rights as citizens to equal participation in the political, economic, and social life of our country.

These are some of the problems which affect our social health, our national self-confidence and our leadership in a rapidly changing world. In the solution of these problems, the National Consumers League will continue to offer its full support and assistance.

NEW FRONTIER'S FIVE-POINT PROGRAM

Specifically, the Consumers League will support the legislation designed to carry out the already announced five-point program of the New Frontier—legislation we have long called for and have worked to secure. This five-point program would provide for:

1. increasing the minimum wage to $1.25 an hour and extending the Fair Labor Standards Act coverage to additional millions of Americans;
2. providing health insurance for the aged under social security;
3. enacting Federal aid to public education for school construction and teachers salaries, leaving the choice to each State;
4. assisting chronically depressed areas;
5. instituting an omnibus program for housing construction, including especially slum clearance, urban renewal, and housing for the elderly.

FARM LABOR IMPROVEMENTS

The Consumers League would add a sixth point to the program outlined above. The league's goals include extensive improvements in the conditions of the 2 million and more farm workers in the United States. Too many men, women, and children engaged in agricultural work in this country toil and live under shamefully depressed conditions. They are denied the protection of much of the reform legislation enacted during and following the 1930's.

Farm workers currently earn an average of only $829 a year. They are employed an average of only 138 days a year. They suffer from so many privations it is difficult to decide which evil to attack first. The basic problem, however, is their deplorably low wages. Their miserable housing, poor health, illiteracy and the use of their children in the fields, all grow out of their great poverty.

A major cause of low wages in this occupation is an oversupply of labor due to the importation of foreign workers. Half a million Mexican farm workers enter the country annually under the provisions of Public Law 78—originally an emergency war measure.

Therefore, the league's legislative priorities for improving the conditions of farm workers are the reform of Public Law 78, the enactment of a Federal minimum wage for farm workers, and the protection of their right to bargain collectively.

We will also request legislation (1) establishing employment guarantees for domestic farm workers—a protection now accorded to foreign workers; (2) establishing employment referral centers in areas of employment to aid farm workers and employers; and (3) controlling and regulating crew leaders to prevent their exploitation of the migrant workers whom they recruit. We also advocate education, health services, and the regulation of the employment of their children, and the removal of State and local residence requirements for eligibility to health and welfare funds.

CONSUMER PROTECTION AND INFLUENCE

The Consumers League is well aware that an individual's economic well-being is not completely assured by the payment of an adequate minimum wage or the protection of a comprehensive social security system. We know that his standard of living is materially affected by such other things as the purity of the food available for his consumption, the rates he is charged for credit extended him, and the efficacious or harmful qualities and price of the drugs he buys. Much is needed to protect the consumer's interests in such matters, which are largely beyond his individual control, irrespective of his economic status.

Therefore, the National Consumers League will encourage and support legislation that:

1. Provides protection for the consumer in the production and marketing of food and drugs.

2. Safeguards consumer interests through the regulatory agencies and executive departments which control the price and the furnishing of gas, electricity, transportation, communications, etc.

3. Requires the disclosure of the actual interest rates charged on installment purchases and loans.

4. Establishes a consumer department in the executive branch of the Federal Government to represent the interests of consumers, as the Department of Agriculture, Department of Commerce, and Department of Labor represent the interests of particular economic groups.

5. Initiates committees in Congress to study and consider legislation to deal with the problems of consumers as other committees now act on other economic problems.

PROTECTION AGAINST THE DANGERS OF RADIATION

Closely allied to consumer problems is the rapid rate at which radiation is increasing throughout the world and the serious and insidious dangers which accompany it. Uncontrolled radiation kills, maims, and endangers, whether it comes from nuclear warheads or peacetime industrial pursuits. There are no easy means of avoiding the dangers of radiation. But solutions of the problems must be sought, found, and applied. The health of future generations, as well as that of our own, depends upon man's search for means of counteracting the evil effects of radiation at the same time he develops the great potentials of atomic energy for man's advancement.

We will, therefore, continue to follow with care the course of atomic energy development, and support such measures as we believe should be taken to protect the health and life of men.

RECESSION PREVENTION

As a Nation, we can ill-afford the economic waste and human suffering caused by periodic unemployment and business recessions. The new administration has promised a constructive program for economic recovery and the expansion of national production. Parts of that program have long been on the Consumers League list of must legislation. Therefore, we shall continue to support a bill providing for the redevelopment of depressed areas, Federal standards for unemployment compensation laws, and the attainment of full employment.

CONCLUSION

The National Consumers League regards these proposals as a means of meeting desperate human problems facing America in an ever more complex world. America has the ability, the capacity, and the strength to meet these problems.

Captive Nations Week Resolution

SPEECH
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 8, 1961

Mr. LESINSKI. Mr. Speaker, I should like to join in support of the resolution to establish a House Committee on Captive Nations and to commend the gentlemen from Pennsylvania for his action and comment on the subject. The United States certainly should pursue every peaceful means to help the people of those nations achieve their desire to regain their national and individual freedoms.

In addition to the establishment of the Committee on Captive Nations, I believe we should enact a formal program, such as proposed in my bill H.R. 1012, to assist the captive nations, once they have thrown off the yoke of Soviet oppression, in establishing free governments. I realize, of course, that the President and the Department of State do have a certain amount of latitude in that respect, but I believe we should have a statute on the books designed specifically for the captive nations. It would be concrete evidence to the enslaved people that we are interested in their fate and are prepared to help them at the appropriate moment.

Under my bill the President would be given specific authority to furnish technical assistance and services, agricultural and other commodities, and other assistance to strengthen the newly formed, free government and to promote the continuation and growth of freedom and security within the nation, after it was demonstrated that the nation had freed itself from Soviet domination.

I believe it is imperative to have this law enacted now, so that whenever these captive nations do cast off their bonds of tyranny, there will be no delay in rendering them the help in stabilizing a free government.

Petition From Businessmen

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to call the attention of my colleagues to a petition from a group of businessmen in southwestern Kansas. The petition follows:

It has become increasingly evident that the farm situation pricewise has worsened to the point where farmers purchasing power is practically gone.

Businessmen are aware that farmers have never asked for Government handouts, and they do not intend to now. Many of us recognize the fact that the farmers status in the national economy is far below par.

We, the following businessmen, do not profess to be economists, but we believe that the cause of the present recession and the two previous ones can be traced to declining farm income. The agriculture problem is complex and a touchy issue politically, because of that fact, it is believed that many people in Government friendly to agriculture hesitate to voice their opinion. We hope this petition will give you, who represent us, moral and political support. We petition you to speak out for agriculture so that the farmers incomes may reach that point to where their purchasing power will help alleviate the present recession. The ills of our economy and the Nation's economy, we believe, can be cured by a healthy prosperous agriculture.

Frederick Finnup, the Finnup Land Co.; L. G. Perry, President, Garden National Bank.; B. J. R. N. Downie, President, the Fidelity State Bank, Garden City, Kans.; W. E. Rutherford, Manager, Sears, Roebuck & Co.; O. R. Nanningar, Western Motor Co.; Harry Fansler, Fansler Tires, Inc.; Ellsworth Sherman; Preston Burtis, Burtis Motor Co.; Nolan Motor Co.; Southwestern Equipment Co.; Oswalt Industries; Pilands, Garden City, Kans.; J. Hayes Baldwin, Implement Co.; Richard W. Evans, Kalvesta, Kans.; A. N. Hanna, Cashier, First National Bank; Wayne Beery, Hardward Co.; Clark Pharmacy, Fisher, I.G.A., Grocery and Meat; Anawalt-Campbelle Lumber Co.; Koehn Motors, Ford Agency; Walker Sales Co.; Nicolets Men's Wear; Harold Hoskinson, Recreation Parlor; Ralph Herron, Ferguson Radio and TV; Wilson Lumber Co., Inc.; Magouird Chevrolet Co.; Menzie Implement Co., Cimarron, Kans.; Farmers State Bank, George Johnson, Cashier, Ingalls, Kans.; Montezuma Hardward Co.; H. A. Hedlund, Montezuma State Bank, Montezuma, Kans.

Mexico Isn't Just Like the United States or Russia

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star of Sunday, March 12. This penetrating and comprehensive editorial presents some extremely important thoughts and considerations about our neighbor to the South. Latin America, and Mexico in particular, are of great interest to midcontinent United States, and we certainly wish for nothing but the best of relations with our Latin friends. This editorial may help to open the eyes of each one of us, and to further those relations. It is for this reason that I hope all of my colleagues will take the opportunity to read the following:

MEXICO ISN'T JUST LIKE THE UNITED STATES OR RUSSIA

For the foreseeable future Latin America is likely to be an ideological battleground of the cold war. There the United States and Russia are engaged in a continuing contest for the minds of great populations. In such a vital struggle they might be expected to employ shrewd psychological moves. But at this stage a traveler south of the Rio Grande is likely to be impressed with the fact that the Latin American psychology is not too well understood in either big country.

So far, at least, the one advantage of the United States is in the major psychological blunders of Nikita Khrushchev.

This last week the Star carried a report on the evidence that Fidel Castro's effort to stir Latin American revolutionary fervor had bogged down in Mexico. Because Mexico has been regarded as one of the countries

friendliest to Castro, it should provide a fair test at least for the Communists. In fact, Mexico is the one major Latin American country that has actually been invaded by the United States (in the last century). Yet for the present the United States seems to be coming off better than Russia.

Fortunately the representatives of the United States in Mexico and in Washington are much more familiar with Mexican psychology than the Americans who swarm across the border for business or fun.

There is the illustrative story of a troubled American businessman who was deeply disturbed by the printed report of a speech by his friend, a recognized leader in Mexican politics.

The speech reeked with inflammatory and revolutionary phrases—denunciation of capitalist exploitation, resistance to imperialistic intervention, praise for past expropriation of foreign investments and revolutionary flag-waving in general.

This American laid the report before his friend with caustic comments. The politician scanned the story, smiled broadly and said, "You have made the mistake of reading it in English. You should read it in Spanish."

By this the Mexican meant that the old phrases are the accepted cliches of Mexican politics. They are rooted in the revolutions of 50, 100 and 150 years ago. A traditional part of political oratory, they can be compared to American political cliches. The U.S. orator lauds individual opportunity, freedom and free enterprise in a way that implies the old virtues are the sole possession of the United States. Few people bother to consider the meaning.

The dominant party of Mexico bears the name of Party of Revolutionary Institutions. A half-century after the start of the last great revolution the party's leaders live in beautiful haciendas or fine city homes and conduct large business operations. They can speak in the political language of revolution without a passing thought to the meaning of the words.

These are the people with a big stake in the status quo and in that sense they may be regarded as conservative. The cliches of revolution are the catch phrases of Mexico's new conservatism. Of course this doesn't mean conservative by U.S. definitions.

The highly regarded Government of President Adolfo Lopez Mateos clings to a soft and fuzzy line on Castro and his Russian alliance—even when conspicuously troublesome Mexican Communists may be held in jail. Mexican Communists are divided according to the hard-line group that follows Red China and the soft-line followers of Khrushchev. The soft-line Communists make a point of supporting the Government and appear to be socially accepted. They could be dangerous.

The big Mexican Federation of Labor Unions has supported the ruling party and therefore the status quo although its leaders have recently engaged in an open spat with President Lopez Mateos. Labor leadership generally can now be regarded as conservative by Mexican definition.

The ominous development in Mexican labor is the strong Communist influence in the huge teachers' union. The Communists always choose their spots and in this case they grabbed control of the editorial board that publishes the magazine delivered to every elementary and secondary schoolteacher of the country. The issues of last July and August were loaded with unabashed Communist-line articles on such subjects as American imperialists, bleeding Cuba and the wonders of Russian education written by Russians.

On the encouraging side, some influential leaders in the teacher union have become alarmed by the excessive display of Communist infiltration. Since the decline of Castro's influence in Mexico, the magazine has been toned down. The last issue, at least, carried nothing that could be identified as outright Communist propaganda. But the Communists hold to their strategic posts.

To a lesser degree, Americans in Mexico are troubled by the continuing socialistic trend. In the last year the Mexican Government bought control of nearly all the privately owned electric power distributing companies. The Government is expanding ownership in the Mexican airlines. But this is far different from the expropriation policies of the 1930's. The Government has paid a fairly negotiated price for its purchases. Mexican socialism appears to be less extreme than the socialism of Sweden.

There is probably no way for U.S. free enterprises to comprehend the Mexican association with the adroit soft-line Communists. Neither could Mexicans understand our intense feeling on the issue. Up to this point, at least, the Communist influence appears to be on the decline. The Castro vogue of last summer has definitely passed. Except for the old leftist, Lazaro Cardenas, the party leaders are intent on keeping the status quo. And Cardenas is a millionaire.

Any country of low living standards must be regarded as exposed to Communist infiltration. The day laborers you see working on Mexican highways, outside the capital area, receive a wage of around a dollar a day. Considering the difference in purchasing power this dollar might be stretched to the equivalent of $2 a day in the United States. Of course this is the country's minimum wage, a depressing minimum.

But here again, a Missourian or Kansan is not equipped to judge Mexican wage standards. As in the case of the political speeches, perhaps the wage figures should be read in Spanish, not English.

It is easy to see how Nikita Khrushchev could have been misled by the political cliches and leftist conventions in Mexico. Last summer Americans were alarmed by the ominous similarity of Fidel Castro's fulminations to the standard political oratory of Mexico. It appeared natural for the Mexicans and other peoples with revolutionary histories to identify themselves with Castro.

All travelers in Mexico, American or Russian, have been confronted time and again with the bitter mural art of Mexico. The walls of Mexico pour pictorial hate on fiendish Spanish invaders, bloated priests and scheming capitalists. The unabashed Communist, Diego Rivera, set a pattern of Communist-line art that has been widely imitated by less famous artists. From the walls the beaten and lacerated Indians have cried out as a symbol of the persecuted proletariat, goaded to revolution.

Americans look uneasily on Mexico's great and ominous murals. Khrushchev's agents could report that Mexico seems to be dominated by Communist ideological art.

Communist agents in other Latin American countries could see good prospects in populations with varying histories of revolution. Throughout Latin America politicians in one way or another had taken verbal shots at interventionists which plainly were directed at wicked Yankee imperialists.

Given plausible reasons to support him, Khrushchev made what now appears to have been a major miscalculation. Without a nod to the Monroe Doctrine, he moved arrogantly to support Fidel Castro in the Western Hemisphere. In theory he should thereby have proved himself the friend of the persecuted workers. In theory, his show of strength should have given intimidated peoples the courage to defy the capitalists.

In Mexico, certainly, the rather plausible power play didn't come off. And, so far, we have heard nothing to indicate better results in other countries. Perhaps Khrushchev should have read the Mexican political speeches in Spanish instead of Russian. And his agents might take another look at Mexico's Communist murals. It seems that the average Mexican views the murals as art and historical drama, much as a Missourian looks at Tom Benton's traders, Indians, politicians and tick-bitten mules.

Both Americans and Russians can now see that the relationship between the almost identical revolutionary phases of Cuba and Mexico is rather remote—separated by a half century, to be specific. Castro is whirling around in the midst of revolution. Mexico's last revolution started in 1910.

And in their character the two revolutions are as far apart as Mexico City and Moscow. Mexico grew and imported its own Communists. It never turned for support to an aggressive foreign power. Mexicans are sensitive on any foreign power plays. Their revolution of a century ago was directed against the agent of France, the Emperor Maximilian.

A representative of the Star traveling in Mexico found various reasons for the people's reaction against Castro. None has seemed more important than resentment over the reckless interference in the hemisphere by Soviet Russia. This reason is not acknowledged officially by the Mexican Government. It is not unusual for governments to lag behind public opinion.

At this stage, it appears that failure to understand the Latin American psychology caused Nikita Khrushchev to overplay his hand as he has also done in Asia and Africa.

For a Latin American, Fidel Castro has been surprisingly insensitive to the psychology of Mexico. His appeal to the people over the heads of the governments hardly made friends among the ruling groups anywhere in Latin America. And his selp-appointed role of the hemisphere's revolutionary leader now looks much too ambitious for the bearded zealot of a small island.

In Mexico, Castro's grand claim to being the inventor of the model revolution has appeared childishly arrogant. Every literate Mexican child has grown up on stories of Father Miguel Hidalgo and other leaders of the war for independence 150 years ago. Benito Juarez who overthrew the Emperor Maximilian is a household name. Fidel Castor has not rated a place in Mexico's extensive and revered hall of fame.

For the present, certainly, the American people can breathe easier over the threatened impact of the imperialist Communist invasion of the hemisphere. But it would be a serious error to regard the respite as more than an opportunity to understand the Latin American psychology and to act for a united hemisphere. We can't always count on Khrushchev's blunders.

Regardless of the reaction to Castro and his Communist alliance, Soviet Russia is conducting its own long-range campaign for the minds of Latin America. According to current reports, this year the Russians are offering 600 scholarships for Mexican youth to study at Friendship University in Moscow. The U.S. Government has no remotely comparable program. The possibility of a large U.S. scholarship program for Latin Americans deserves consideration.

For a continuing campaign the Russians have the support of a solid corps of Mexican Communists who can be regarded as a beachhead—not in Cuba but in Mexico itself.

We can take encouragement from the fact that the trend of recent years and months has favored the United States. To keep it turning our way we will have to count on a thorough public relations job.

Transportation Education Fund To Begin April 1 With Committee of 200

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. HARRIS. Mr. Speaker, in my service on the Committee on Interstate and Foreign Commerce, it has been my privilege to meet and work with many professional transportation management men—from industry, from the common carriers representing all forms of transportation and from our Federal regulatory agencies. Their tasks are exceedingly complex and difficult, and they perform them with a strong sense of responsibility for the development of a national transportation policy which embraces the public interest and the economy and defense of our country.

The American Society of Traffic and Transportation, which is the qualifying professional organization of transportation management men, will, on April 1, inaugurate its transportation education fund. Its purpose will be to improve and coordinate college and graduate level instruction in the theory and technology of transportation through grants-in-aid, qualifying examinations and sponsorship of needed research projects.

I call this to the attention of my colleagues because I think it typifies the manner in which professional societies, supported by dedicated men and women, contribute through technological advancement to our progress as a nation. The American Society of Traffic and Transportation, its members and the forward-looking businesses which are supporting its transportation education fund, are to be commended for the important work they are doing.

Under unanimous consent, I include in the Appendix of the RECORD a short article concerning the fund that appeared in the "Annals," the society's publication:

A $100,000 GOAL—TRANSPORTATION EDUCATION FUND TO BEGIN APRIL 1 WITH COMMITTEE OF 200

In a recent letter, addressed to over 50 society members who will serve as State and regional chairmen of the transportation education fund, E. F. Hamm, Jr., president, Traffic Service Corp., Washington, D.C., and fund chairman, announced that the board of directors had "decided to get the nationwide drive underway April 1."

Continuing in his letter, Mr. Hamm pointed out that the board of directors "realized that business may not be as good as it might be in some areas, but we felt that we have an excellent program that should be supported and that nothing would be gained by temporizing, for there probably never is a truly proper time to undertake fund raising."

ONE-HUNDRED-THOUSAND-DOLLAR GOAL

The transportation education fund and its 1961 goal of $100,000 was approved by the board of directors, prior to the society's 15th annual meeting held in Cleveland last September. Since this initial announcement, the members of the committee have already contacted 50 corporations throughout the country on a trial basis. Based on the favorable results of these contacts and personal interviews, Chairman Hamm recommended the program be undertaken on a national scale and as soon as possible.

In reporting to the board of directors at their meeting in Chicago on January 27, Chairman Hamm detailed the results of the initial contacts; pointing out that in addition to receiving unanimous favorable reaction to the program from all of the firms contacted, a number of actual contributions had also been collected, and an additional number of companies had pledged specific amounts to be paid during the national campaign.

CAMPAIGN COMMITTEES

It is estimate that over 200 members will participate in the campaign. Each State chairman has been asked to appoint a committee of at least five members, who will contact the corporations in their area. These State committees will be given the names of the companies in their area whose employees are also members of the society. These companies will be the initial source of contact. In the case of a company who has branches or divisions located in different sections of the country, the solicitation will be made through the concern's home office.

Using the names of member-affiliated companies as a starting point, the local committees will then contact other transportation and industrial concerns in their areas. Chairman Hamm pointed out that while "we are after company contributions first, we have already had a number of contributions from individuals." Work is now underway in the preparation of kits which will contain information concerning the fund, and suggestions on how the committee members might best proceed.

PROGRAM SCOPE

Two of the six specific programs which will be made possible through the establishment of the transportation education fund, have already been started. The first is the authorization for the publication of the Transportation Journal (see story p. 6). The second program will be the financing of the attendance of society educator members to the G. Lloyd Wilson Memorial Seminar. This program of enabling the educational members of the society to attend and participate in the biannual seminar of the society was first established in conjunction with the Michigan State Seminar held at East Lansing, Mich., in 1959. Invitations for those qualified educational members will be extended shortly by President Frank J. Ryan.

The remaining four specific programs which will be activated in the near future are as follows:

Provision of regional study group instructors;

Employment of a full-time, paid educational director and staff;

Scholarships to cover cost of examinations for needy applicants and to encourage study at the college and graduate level;

Grants-in-aid to universities and colleges to encourage establishment of additional courses in transportation and traffic management.

Who Would Benefit?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger, Gaffney, S.C., of March 7, 1961:

WHO WOULD BENEFIT?

A total of 4,333,000 workers will be brought under the Fair Labor Standards Act for the first time if President Kennedy's minimum wage proposals are adopted, according to Secretary of Labor Arthur Goldberg. Of this number, 2.9 millions would be employes in retail and service enterprises whose wages tend to be lower than the earnings of presently covered workers.

About 804,000 of the 4.3 million proposed to be covered workers are paid less than $1 an hour, Goldberg said. About 200,000 of these now receive 75 cents per hour.

Other groups of employees that would be brought under the act's coverage for the first time include:

About 800,000 construction workers, 40,000 of whom are now being paid less than $1 an hour.

About 130,000 laundry workers in enterprises engaged in commerce or production for commerce which do $1 million or more in business annually. Of these, 32,000 are now paid under $1 an hour.

About 110,000 employees in interurban and metropolitan transit systems, some 5,000 of whom now receive less than $1 an hour.

About 86,000 employees in gasoline service establishments doing an annual business of at least $250,000. Some 19,000 of these workers are being paid less than $1 an hour.

About 100,000 seamen on American vessels.

No one can tell the Ledger that raising the pay of these workers as proposed under President Kennedy's program is going to ruin the economy of the United States. Instead, the country's business will be benefited by the increased purchasing power.

Africa and Mr. Williams

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. COHELAN. Mr. Speaker, the dilemma confronting the United States in formulating its African policy has been succinctly pointed out in a recent article by Joseph Evans in the Wall Street Journal.

With so much of the world's attention today focused on Africa, I believe that this article deserves the thoughtful attention of my colleagues:

AFRICA AND MR. WILLIAMS

(By Joseph Evans)

NAIROBI.—Whatever sins of excessive talk and deficient thought U.S. Assistant Secretary of State for African Affairs Williams may be guilty of on his get acquainted tour of Africa, there is more to the story than that. The hot water he is in also points up the basic dilemma of the United States' foreign policy in Africa.

Since Mr. Williams arrived in Nairobi about a week ago and left a couple of days later, local papers have been having a terrific time with him and they show no sign of letting up. Articles, editorials and letters to the editor, all lambaste him. One G. C. Dockeray writes to the editor of the East African Standard: "The sayings of Mr. G. Mennen Williams lend support to the view that Christopher Columbus went too far." No conversation with Briton or British settlers here can avoid discussion of Williams' brash remarks.

Such an outcry can scarcely be explained wholly on the basis of alleged diplomatic

malapropisms. Though charged with various other transgressions, Mr. Williams is chiefly accused of advocating Africa for Africans, which was interpreted as dumping Kenya colony's small but important European—mainly British stock—minority into the ash can. Yet the best available evidence is that Williams was not adequately quoted on this in the local press, especially on his arrival at the airport when he was talking to the tune of a warming-up jet engine.

The fact is that Williams' observations became an excuse here to give vent to what is a large amount of anti-Americanism among the European community. Anti-Americanism is perhaps too vague a term; it is more a suspicion that Washington is meddling deep in Kenya's affairs via London.

To begin with, feeling among these British people in Kenya—mostly farmers and estate owners who are the mainstay of Kenya's economy but also including some of the civil servants in the Kenya government—is that their own government in London has broken faith with them by pushing a policy providing a Black African majority in the legislature—just certified in the elections concluded this week—and by leaving up in the air the whole future of settlers' property rights and indeed any other rights in an eventually independent Kenya dominated by Black Africans.

LEERY OF UNITED STATES

Especially since the Suez war of late 1956, these white settlers have been leery of the influence of the U.S. Government on British policy; they figure the United States stopped that war by talking tough to Britain. When London started moving a year ago toward Kenyan independence at what they regarded as an unbelievably rapid and irresponsible pace, they saw the United States as the villain pushing a weak British Government into abject surrender to black nationalist demands in order to win influence in an Africa bursting into independence and turmoil all over the continent.

So Williams' observations, some ill-advised and some perhaps ill-reported, seemed absolute confirmation of Kenya's British settlers' worst fears.

Now this picture of U.S. pressure on Britain regarding Kenya is almost certainly untrue or grossly exaggerated. Nobody knows what President Kennedy has in mind as a new American policy for Africa, if any. But the British Government has ample reasons of its own for proceeding with Kenyan independence at the fastest pace consistent, it hopes, with safety. The simplest reason is, what else can it do?

A likelier explanation of the U.S. purpose, in the view of diplomats here, is that the Kennedy administration did want to use the Williams trip as an indication that the United States intends to take a greater interest in Black Africa's nationalist and independence aspirations, an interest freer than heretofore from America's alleged domination by policies of its colonialist partners.

For here is the other horn of the dilemma of U.S. policy in Africa. Throughout much of the area—Guinea, Ghana, Nigeria and here—you encounter complaint among African nationalists that the United States refuses to take a positive position in favor of African self-determination because of fear of offending its colonialist allies in Europe. This is often bitterly linked with America's own anti-colonial struggle against Britain. So mush was expected of the United States, it is almost tearfully said, and so little received.

Why didn't the United States help Guinea's Sekou Toure, it is asked, when France left him flat after he broke with France? Why hasn't the United States laid down the law to Belgium about its continued interference in the Congo? And so on.

IDENTIFICATION

The point is not the validity of these questions for they have little point indeed; they are not concerned with logic but with emotions and primitive ones at that. The point is the existence of these feelings on the part of numerous educated Africans, including political leaders.

Naturally any U.S. administration would like to identify itself with African aspirations if for no other reason than to try to stem Communist influence in Africa, for the Communists have no inhibitions about what they say. That is, the United States would like to make such identification if it could be done without alienating its European allies. For the European alliance is, and in logic must be, even more important than a massive attempt to court Africa's nationalists and so try to save them from communism.

But here in Kenya a small beginning at disengagement from America's colonial allies, if that is what Williams was up to, brought on a storm among British settlers already angry at the government to which they owe allegiance. Obviously if the United States were seriously to spite its European friends to gain new African ones, it would find itself in dire difficulties in capitals of Europe. The continued existence of the North Atlantic Treaty Organization would be in question. And seeming to abandon allies would hardly win the resepct of African leaders.

The most objective observers here, acknowledging this dilemma, do not excuse Williams. They consider that his loquaciousness, however misquoted or unquoted, was sensationally ill-timed in view of Kenya's delicate political condition. One of the kinder remarks is that he violated the two rules of a diplomat—first know thoroughly what you are talking about before you talk, and second, don't talk anyway.

The trouble is that the problem is a good deal larger than Mr. Williams. If the Kennedy administration is searching for a new pro-African policy more independent of Europe, it may find itself damned if it does and damned if it doesn't

The Spirit of March 15 Lives On in Hungary

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. REUSS. Mr. Speaker, in an age when slavery and tyranny stalk the earth in the name of revolution the 15th of March, like the Fourth of July, recalls for us that "revolution" once meant the end of tyranny and the triumph of individual freedom. For it was on the 15th of March, 1848, that the Hungarian people, under the leadership of the famed Louis Kossuth, won freedom from Hapsburg rule and obtained their charter of freedom. This revolution brought freedom for the serfs, enlarged public representation in political affairs, and the right to create their own Hungarian national government.

Americans of all national origins proudly honor Kossuth on March 15, although the freedom which he obtained for his country does not exist there today. We have faith that the Hungarian people will some day be free again, and that when they are it will be the spirit of Kossuth that leads them.

We know firsthand of the greatness of the Hungarian people for many of them have come to this country and enriched its heritage. They help us to keep alive the spirit of freedom which sparked the Hungarian patriots of 1848 just as it sparked our own patriots in 1776.

Filling Empty Mills

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very fine article that appeared in the newspaper publication the Christian Science Monitor on March 13, 1961, which should give us food for thought:

FILLING EMPTY MILLS—AN INTIMATE MESSAGE FROM NEW ENGLAND

(By George B. Merry)

BOSTON.—Dozens of vacant or partially tenanted, multistory mills from Maine to Rhode Island and from the Berkshires to the Atlantic coast, are silent reminders of New England's changing economic scene.

Shrinkage of the cotton, woolen, and synthetic textile industry has not only dealt a severe economic blow to individual cities and towns but also has tended to funnel off some of the important leadership elements in these communities.

That most of the cities and towns were ill-prepared to grapple with problems of this magnitude is now abundantly clear. Among the most heavily depressed areas in this region are several long-established textile manufacturing centers, hard hit by mill closings over the past three decades.

Within the last 10 years alone hundreds of production jobs in this industry have been wiped out through plant liquidations.

And except for the more highly skilled who in the main are easily placed with other textile firms or industries, men and women idled by shutdowns have had a hard time finding steady full-time jobs.

These displaced workers constitute a lingering hard core of unemployment in several areas long associated with textile weaving, spinning, and finishing operations.

Fall River, Lowell, New Bedford, and North Adams, Mass., Pawtucket, R.I., and Biddeford and Saco, Maine, are consistently on the U.S. Labor Department's substantial labor surplus list.

And each recession only serves to accentuate the lingering job deficit for a growing band of older and middle-aged workers who are often passed up by new industries which move into former textile communities.

For more than a century these virtually single-industry towns had leaned heavily on "king textile" for jobs, taxes, civic improvements, and even community leadership.

People were generally content to let the other fellow take the initiative, and, as long as the local mill prospered, things kept humming.

"We thought we were well off," a Sanford, Maine, merchant recalls in discussing local attitudes on the eve of the closing of the Goodall-Sanford Mill, in August 1954.

"As long as people needed clothes we felt sure we would be all set. Our mill produced the finest of fabrics and operations were near capacity."

Mill liquidations in other New England towns had little impact in the small southern Maine community where one textile firm provided more than half the local employment.

"It couldn't happen here."

Then almost overnight it happened. The long established Goodall-Sanford empire was acquired by another firm, closing the local plant, idling some 3,600 persons.

But this economic tragedy taught Sanford an important lesson it will not soon forget.

"Never again will we depend on one company or even a single industry," a civic leader emphasizes in outlining steps already taken to rebuild a strong economy through industrial diversification.

And with equal determination other former single-industry communities with similar experiences have come to the same conclusion.

"I would rather have 10 new firms each employing 150 workers than one company with 1,500 workers," the mayor of one industry-hungry northern New England city said.

Some communities have been slower than others to woo new firms but in recent years significant strides have been taken.

While some cities and towns have concentrated on filling old textile plants, others with more capital and long-range plans have built up-to-date plants often on prime land sites away from the congested industrial areas.

With industrial parks ranging from 600 acres to single plots dozens of New England communities are vying for new and growing firms to ease employment slack.

Older mill properties are not being neglected. Unfortunately, however, they are generally less attractive than modern one-story buildings. And in the haste to find new tenants large areas of otherwise valuable manufacturing space are turned over to warehousing which adds few jobs. With few exceptions space on upper floors is hard to dispose of.

But these brick, or wooden, multistory giants are especially suited to smaller firms, which cannot afford the rents of newer plant facilities; certain types of industries where employment may fluctuate widely with the seasons, such as the needle trades, and some marginal manufacturers.

In any event long-time New England textile centers are on the move. They are meeting at least to some extent the challenge of finding jobs for idled workers by attracting new firms and are reshaping their industrial patterns.

Army Includes Kaman in Pioneering on Helicopter Project

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. SEELY-BROWN. Mr. Speaker, in my district is located the Kaman Aircraft Corp., one of the fine industries of our State, with additional facilities in other parts of Connecticut in addition to my district.

Not only is employment provided for a substantial number of skilled workers, but the company is alert in research and planning so that there are bright prospects for even greater employment, which will be particularly gratifying in an area that sometimes has been officially listed as "depressed."

There is nothing "depressed" about this industry, however, and as a demonstration of that is information that has just come to me about a revolutionary new power transmission system for possible application as a helicopter transmission, and which will be studied by the Kaman Aircraft Corp. under contract with the U.S. Army Transportation Research Command at Fort Eustis, Va.

Because of the interest in this project, the Kaman Aircraft Corp. has issued a news release, which I include herewith as part of my remarks:

A revolutionary power transmission system called Harmonic Drive will be studied by the Kaman Aircraft Corp. for possible application as a helicopter transmission under contract with the U.S. Army Transportation Research Command, Fort Eustis, Va.

Originally conceived and developed by the United Shoe Machinery Co., Harmonic Drive departs radically from conventional gearbox design. Inherent in the Harmonic Drive system is extremely high efficiency and weight reductions of up to 50 percent from existing transmissions. Very high ratios—as much as 200,000 to 1—are attainable.

Kaman Aircraft is entering into the Army contract under a working agreement with the United Shoe Machinery Co.

Work to be done by Kaman Aircraft will look to the possible use of Harmonic Drive under the high-power input, heavy loading conditions, and high reduction ratios imposed by helicopter operations, especially with gas turbine installations. To date the Harmonic Drive has been used only in relatively low-power and torque input levels in such applications as nuclear reactor control rod drives, antenna drives, power take-offs and servomechanisms.

The typical Harmonic Drive departs from conventional drives in that it makes use of one or more of the flexible mechanical elements. A typical unit of a single stage contains only two moving parts, the input and output elements.

Transmission of power is accomplished not with gears as in existing systems but through the combination of two splines, one rigid and one flexible.

The typical unit consists of three parts: a circular spline with the teeth cut on the inner circumference which is rigidly fixed and is normally a part of the transmission case; a flexible spline with teeth cut on its outer circumference and which is concentrically mounted in the circular splines; and a wave generator which rotates within the flexible spline and which deflects the spline from its normal circular shape into a generally elliptical or oval shape.

With the wave generator mounted within it the flexible spline, or flexspline, attains two definite axes, one longer than the other as in an oval shape with the longer axis occurring at the point of contact of the wave generator. Spline teeth are firmly engaged at the points of the long axis and totally disengaged at the short axis.

The flexspline is designed with two fewer teeth than the rigid circular spline. As the wave generator is rotated by the power input the point of contact of the flexspline rotates with respect to the fixed circular spline. The net effect is the creation of a wave action in the flexspline.

As a point of contact between the two splines moves, the spline teeth continually engage and disengage. Since there are two fewer teeth in the flexspline, this element literally walks around the fixed circular spline imparting rotation to the flexspline in a direction opposite the rotation of the driven wave generator. Rotation of the flexspline is the power output of the drive system.

The difference in the number of teeth between the flexspline and rigid spline determines the reduction ratio. In this example the flexspline has 198 teeth and the rigid circular spline 200, resulting in a 100:1 ratio. Combining two or more stages can produce extremely high reduction ratios.

The Sea: Practical Source of Fresh Water

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. BLATNIK. Mr. Speaker, an adequate supply of fresh water will soon become our Nation's No. 1 resource problem. Already serious water shortages exist in some areas. It is estimated that by 1980 demand for water will exceed the developed available supply by 85 billion gallons per day. By the year 2000 demand will exceed supply by an estimated 300 billion gallons per day.

Two things become immediately obvious when considering these facts. First, the water available for use will have to be used and reused many times over. The greater degree of reuse the greater becomes the pollutional load in the water supply. Thus, in order to permit repeated water reuse we will need strong pollution prevention and control programs at all levels of government and in industry.

Second, we must increase, if possible, the available supply of fresh water. Through presently known methods the Nation's supply of water will reach about 600 billion gallons per day by the year 2000—far short of needs even with repeated reuse. Thus, in addition to pollution prevention and control necessary for reuse we must develop entirely new sources of water. To do so we must turn to the oceans through an extensive program of desalinization.

The winter issue of the magazine Quest contains an excellent article by Arthur M. Brandel entitled "The Sea: Practical Source of Fresh Water." Under leave to extend my remarks I include Mr. Brandel's article:

THE SEA: PRACTICAL SOURCE OF FRESH WATER
(By Arthur M. Brandel)

The sea becomes a practical source of fresh water for the home, for agriculture, for industry. This is one of man's basic quests. Indeed, water is the lifeblood of civilization. With it, civilizations have flourished. For it, wars have been fought. Without it, nations and cultures have perished.

It is bitter irony indeed that the undrinkable seas about us make up 71 percent of the earth's surface. Water, water, everywhere, nor any drop to drink—the ancient mariner's anguished cry has been all too apt.

From the start of recorded history, the search for ways to convert salt water to fresh has intrigued man. And he will take a big

step forward when a $1¼ million complex of pipes and plumbing in a plant on the bogs and salt marshes of the Texas gulf coast goes into operation in mid-March.

The maze of plumbing, at Freeport, 60 miles south of Houston, has been designed to produce 1 million gallons of fresh water a day from the sea. It is not, of course, the first plant to make drinkable water in this manner. But it is the first to make it at a cost as low as $1 per thousand gallons—half the cheapest at any other operating plant. And engineers hope to reduce this to 50 cents or less.

This plant is the result of many years of study—and many years of history. For man's search for ways to produce fresh water from salt dates back well over 2,000 years. Our first written record of this comes from Aristotle, who reported such experiments in 350 B.C. Julius Caesar utilized a primitive sun-powered evaporator to produce fresh water for his troops at the siege of Alexandria, Egypt, in 49 B.C.

Sir Francis Bacon discussed the problem in detail in 1567, for Queen Elizabeth I wanted to be able to produce fresh water on shipboard, so that the crews of her navy would not have to come in to port so often. The queen made a standing offer of a sum equal to $20,000 to the inventor of a machine for making sea water potable.

One record of a solution appears—200 years too late—in the annals of the Second Congress of the United States of America. On November 21, 1791, Thomas Jefferson, then Secreary of State, wrote of witnessing a demonstration of a process developed by Jacob Isaacks of Newport, R.I.

"Mr. Isaacks," Jefferson wrote, "fixed the pot of a small caboose with a tin cap and straight tube of tin passing obliquely through a cask of cold water; he made use of a mixture, the composition of which he did not explain, and from 24 pints of sea water he distilled 22 pints of fresh water in 4 hours." A second experiment involved a furnace and a 5-gallon still. From 32 pints of sea water, Isaacks produced 31 pints of fresh in 7 hours and 24 minutes.

But Jefferson was an intellectually curious man, and the next day, he tried the experiment without Mr. Isaack's secret ingredient. Jefferson produced the same amount of fresh water in 11 minutes more time, but with one-fifth less wood. This process was a rudimentary form of distillation. Today, that 1791 still would be termed wholly inadequate. The skills and energies of many scientists and engineers have been devoted to increasing the efficiency of distillation.

At the end of 1960, fresh water was being produced from salt in at least 17 plants, each having a capacity to make 100,000 gallons or more per day. These are scattered throughout the world—on islands in the Persian Gulf, Aruba, Bermuda, and Greenland, in Italy, Latin America, and the United States. The cost is high—usually upward of $2 per 1,000 gallons.

Most residents of the United States think of water as free, or anyway, inexpensive. And usually, it has been. But our increasing consumption has pushed close enough to the virtually constant daily supply of 515 billion gallons to eliminate much of the margin of safety we have had in the past.

During the 1957 drought, for example, people in nearly 1,000 communities across the Nation, had to cut down on their use of water, one way or another. One of every seven persons in the United States suffered some kind of water shortage. In Dallas, water was sold for half a dollar per gallon, with the populace queueing up for their purchases. In Orange, N.J., people were subjected to fines for leaky faucets.

These are not indications that we now face emergency. But with our increasing population and expanding economy, the United States will indeed face a national water shortage within the next 10 years—unless we plan ahead.

One area for planning is in control of water pollution. We use and reuse water many times as a river sweeps from its source to the sea. By further control of pollution, we are using the same water more often. But this, by itself, can't increase our water supplies enough.

A further answer is to investigate ways to make salty water into fresh. And the Freeport plant is the first to be built as a result of the first comprehensive study of the problem—the saline water program of the U.S. Government.

This program was established in the Department of the Interior in 1952, upon the urging of President Harry S. Truman.

Truman suggested that $25 million be appropriated for a 5-year research and development program. Congress authorized $2 million. In 1955, under the Eisenhower administration, this amount was increased to $10 million, and the duration of the program extended to 14 years. In 1958, an additional $10 million was authorized for demonstration units.

We have had 8 years of coordinated research through contracts with universities, research organizations and industry. This work has indicated that at least five methods can produce fresh water at a cost that we can afford to pay. Demonstration plants are now being built to test out three of them; plants to try out the other processes are being designed:

The plant being built at Freeport will test a method known as multiple-effect long-tube-vertical distillation. This plant, with a capacity of 1 million gallons per day, is being built on land made available by the Dow Chemical Co. Dow is supplying steam and utilities at cost, and will buy half of the output. The other half will be bought by the city of Freeport. The process (explained in detail on page 16) involves several techniques not now used in similar distillation units. Their use should bring the cost of producing 1,000 gallons of water to the $1 figure. The plant is designed for eventual expansion to produce 17 million gallons per day. The cost should then be reduced to 50 cents per 1,000 gallons or less.

A second million-gallon-per-day plant is also under construction near San Diego, Calif. This will use what is known as the multistage flash distillation technique. Cost of this plant will be shared by Federal, State, and city governments. Cost of the water per 1,000 gallons is estimated at about $1.

A third plant, designed to de-salt brackish water, is being built at Webster, S. Dak., and should be in operation late this year. This plant will use the electrodialysis process, producing 250,000 gallons of fresh water per day for somewhat less than $1—perhaps 80 cents—per 1,000 gallons. This process uses a combination of thin membranes and an electric current to remove salt from water. It is not economic for treating sea water (which contains 35,000 parts per million of salt). But it is ideal for use with the less salty brackish water found in many arid areas throughout the world.

The fourth plant, also to be used to purify brackish water, will be built at Roswell, N. Mex. This will use the forced circulation vapor compression process.

The fifth plant will probably demonstrate a "freeze-out" process, a relatively new technique. This may well turn out to be the most economical technique for treating sea water, since it takes far less energy to freeze water than to boil it. In this process, salt water is frozen into a slush, and the salt (which has not frozen) is washed away from the ice crystals. Present costs are about $1 per 1,000 gallons, but these can probably be lowered to under 50 cents.

Other techniques are also promising. Perhaps the most obvious one is solar distillation, using the sun's heat to evaporate water. Solar stills normally involve a shallow basin with a transparent cover. The sun heats the water and causes it to evaporate; the vapor condenses on the underside of the cover, and runs down into a trough for collection. Initial cost of such equipment is still quite high.

Numerous other processes are also being investigated. Many of them involve other variations on distillation, freezing, or electrical techniques that could reduce costs. But in addition, some entirely different methods are being tested. Certain types of algae absorb salt from water. They may be used in these separations. It may be possible to find liquids that will "dissolve" pure water, thus separating it from its salt.

Undoubtedly, some of the techniques that are still in the research laboratory will show enough promise to receive large-scale tests. Some may be more economical than current methods.

As a result, people are now looking beyond the specifics of plant and process, to come up with some kind of an estimate of potential use throughout the world. For indeed, manufacture of fresh water from salt in the United States—substantial though it will be—will represent only a small part of the ultimate total. A 1959 Senate report put it this way: "If we can develop low-cost means of bringing water to the thirsty lands and peoples of the world, we shall bring a boon to mankind that is even more meaningful than the conquest of space [something to] greatly enhance the prestige of the United States."

And spokesmen for the United Nations Special Fund have reported that at least 60 of the 100 underdeveloped nations and territories associated with the U.N. face water shortages that will require installation of plants and equipment to desalt brackish and sea water.

Four thousand years ago, Hammurabi, King of Babylon, introduced irrigation to the fertile area between the Tigris and Euphrates Rivers, and proclaimed: "I brought the waters and made the desert bloom."

Today we again stand on a threshold, ready to make more desert bloom.

An Inspiring Husband-and-Wife Team

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. THOMPSON of Texas. Mr. Speaker, many Members of the Congress and many others in public life in Washington and throughout the land have come to know a most extraordinary man by the name of Joe Capsin who writes to us from Honolulu. A very eloquent article concerning this man appeared recently in the Honolulu Advertiser in the column "In One Ear," by Bob Krauss. I shall include this article in its entirety; and I commend it to you as a story of great courage and accomplishment under difficult circumstances.

I shall not add any words of mine concerning Joe, but I do desire to point out a factor in his amazing career which would never escape the knowledge of those who know him personally but which might not be known to the casual

reader. Behind Joe, or perhaps it is more appropriate to say "beside him," watching over him, cheering him on if he needs it, mothering him, bullying him, and loving him devotedly is his wife, Louise. She is, herself, a most retiring individual and one who will probably be intensely embarrassed, but I hope pleased, by this humble tribute of mine. In Honolulu, across the Pacific, and in many places of the United States, there are people who have been helped by Joe's intercession in their particular needs. Let everyone of them realize that without Louise it could not have been accomplished and let those of us who are blessed by being on Joe's correspondence list ourselves recall Louise—the other member of an inspiring husband-and-wife team.

Mr. Krauss' article follows:

IN ONE EAR

(By Bob Krauss)

About 16 years ago during the Roosevelt administration, before Hawaii had seen a jet airplane, a man in a little white house in Waikiki went to bed.

And until last Sunday, he hadn't gotten up.

His name is Joe Capsin and he has acute arthritis. Since 1945 Joe has been on his back. He can sit up long enough to get a haircut, about 20 minutes.

But don't get the idea that Joe has nothing to do.

Ask any newspaper editor in Honolulu and he'll tell you that Joe Capsin has more letter writing energy than 10 newspaper readers combined.

Ask syndicated Columnist Drew Pearson and he'll tell you that Joe is his closest Hawaii contact. Half a dozen important Congressmen know Joe Capsin, through letters he writes on an electric typewriter.

Most of these letters deal with legal matters involving veterans (Joe is a disabled veteran) who don't know how to work their way out of mazes of redtape.

Through the grapevine they hear about Joe.

He thumbs through the law books on the shelves by his bed. Then he begins writing letters. Often he's able to save his client a lot of money.

Joe never takes pay. "Give something to the Salvation Army," he'll insist, "or to somebody who needs it."

So Joe is seldom idle even though he's in bed. In fact, most of the people he writes to don't know he's an invalid.

His friends in the Disabled American Veterans Club didn't know what to give him for his birthday this year. It was last Sunday.

A few days before, Bill Oshiro, who's principal at Kalihi-uka School, went to see Joe at 426 Namanaha Street. "The boys want to know what they can do for you, Joe," he said. "Is there anything you really want?"

"Well, yes, there is," Joe answered. "I haven't been around the island since I went to bed 15 years ago. That's what I really want to do."

Oshiro called the Hawaii Ambulance Service, hoping it wouldn't cost a small fortune to rent an ambulance for all day.

He discovered that Vernon Vogan, president, is a disabled veteran, a former Navy hospital corpsman who served with the Marines in World War II. He donated the use of an ambulance.

The DAV's chipped in to pay the salaries of two attendants for the day, Robert Naauao and Martin Kaninau.

At 8:30 a.m. last Sunday, the ambulance pulled up in front of Joe's house. He and his wife rode in back. Two cars completed the convoy.

In one car was Representative Philip Minn, his wife, Momi, and their family. In the other car rode Bill Yamamoto and Mitsuo Okinaga, U.S. Government workers, and Bill Beers, Jr., who works for the State. They are all DAV members.

First they drove around Waikiki where, 15 years before, the only hotels on Kalakaua Avenue had been the Royal Hawaiian and the Moana.

They took Joe to Kuhio and Kaiulani Avenues in Waikiki where Joe and his bride had lived in a house "in the jungle."

Now the same spot is a jungle of apartment hotels.

Unlike a lot of people, Joe doesn't feel sad about it. "Those new buildings are beautiful," he said. "The colors, the architecture."

They drove down Ala Wai Boulevard, across the bridge on Kalakaua, then backtracked to the Club 100 and 442d clubhouses. Joe said frankly he got lost.

Honolulu has changed so completely in 15 years that he didn't recognize it.

They made a stop at Punchbowl National Cemetery, then took a spin through the Wilson Tunnel. They swung around on Kaneohoe Bay Drive and back to Honolulu.

Everybody had lunch at Pearl City Tavern. It was the first time since President Roosevent died that Joe had eaten in a restaurant. He had jumbo shrimps, as "good as I had in New Orleans."

By that time he was getting tired. So, after one last stop at the home of Judge Delbert Metzger, they took Joe home. It was 3 p.m.

"You can't realize what that trip meant to me," said Joe. "I wouldn't trade that ride for anything. Not anything. There's nothing I would have rather done. It was wonderful."

When the new Royal Prince co-op apartments are finished, Joe and his wife will move his office-bedroom to their new home on the top floor. "Once I get up there," he said, "I don't expect to ever come down again. Unless it's for another trip around the Island."

Memorandum on Stevenson Plan To Drop Hungary and Tibet From the United Nations Agenda as "Cold War Issues" in Exchange for Soviet Agreement To Postpone Disarmament Debate

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following memorandum by Mr. Christopher Emmet, chairman of the American Friends of the Captive Nations, of which I am proud to be a member, expresses the fears of this organization of the unfortunate suggestion to drop the Hungarian and Tibetan problems from the United Nations agenda.

Mr. Emmet's memorandum is forcefully presented and while I do not agree with his calling the countries of Eastern Europe Soviet colonies—they are conquered people, nothing more and nothing less—I agree with his overall presentation of the case for the captive nations. I also would like to include after the memorandum the proposed advertisement that summarizes the whole question very forcefully indeed:

MEMORANDUM BY CHRISTOPHER EMMET

The cause of the captive nations in the United States and the United Nations has obviously reached a crisis. It is up to our committee either to undertake energentic and even desperate measures, or to virtually go into hibernation until new events in European Europe, or a new crisis between the United States and the Soviet Union changes the present trend of U.S. Government policy and of public opinion. Since we are a bipartisan committee with several Senators and Congressmen, as well as others, who are active in the Democratic Party, there are obviously risks that in attacking any important policy decision of the Kennedy administration we will lose some of those members. Nevertheless, we took that risk with our Republican members when we attacked Eisenhower's handling of the Hungarian revolution, and to justify our existence we must take it now.

Good as President Kennedy's appointments and general policy pronouncements have been, his statements and policies during the campaign and since have not been very helpful to the particular cause we serve—the cause of keeping alive the memory of Soviet aggression and persecution in Eastern Europe and raising the issue of Soviet treaty violations and colonialism in the captive nations to a leading place in U.S. diplomacy and propaganda.

During the campaign and since, the President has talked about amending the Battle Act, which restricts aid and credits to the Communist countries of Eastern Europe, as if that were the sole policy choice available for him to advocate. There has been no similar reference to the possible need to increase the trade restrictions—though all diplomatic bargaining power depends on the stick as well as the carrot. The President's approach clearly suggests an attempt at improving relations with the satellite puppet governments step by step in the hope that this may wean them away from Moscow. His approach seems to exclude the use of economic and propaganda pressure which would increase the peoples' passive resistance in Eastern Europe as well as inspire criticism of Soviet colonialism abroad. This latter policy would increase the political and economic costs of Soviet colonialism and augment Western bargaining power in negotiating for a relaxation of Communist oppression. In our view, since the stability of the puppet governments is totally dependent on Moscow's support, the idea of bribing the Communist officials with concessions in trade or aid is naive. We should rather offer these economic concessions to the Soviet Union itself if it will permit more freedom in Eastern Europe; and conversely, we should threaten to increase propaganda and economic pressure against the puppet governments if the Soviet Union refuses to do so.

The so-called Titoist solution, which the President seems to favor, may be justified in the special geographic and political circumstances in Yugoslavia and Poland; it cannot possibly apply to the other countries of Eastern Europe where the governments are still totally subservient to Moscow. The approach our committee has always advocated is to weaken such governments rather than to help them by economic trade or aid, and to encourage the passive resistance of the captive peoples against these puppet governments and their Soviet masters. I need not recall all the arguments for our policy here, but I enclose a copy of our appeal to the Democratic and Republican platform committees, which is the most recent expression of our views.

The President has sensibly wanted to gain time to formulate his new policies, organize his administration and buttress our defenses before resuming negotiations with the Soviet Union. But in order to do this, Kennedy must persuade Khrushchev to agree to the postponement both of summit conferences and disarmament conferences (except for atomic tests). Evidently, part of the price Khrushchev wants the President to pay for such a postponement (aside from

our 2 months' toleration of the Soviet arms buildup in Laos) is to sacrifice the Hungarian and Tibetan items on the agenda of the present session of the U.N. General Assembly.

Although we sympathize with the President's motives, we believe that this price is too high. I enclose the text of a telegram which was sent to Ambassador Stevenson on behalf of our Executive Committee, which explains our views.

The Hungarian issue has already been partially evaded by the General Assembly for the last 3 years by the device of appointing a U.N. Commissioner, first Prince Wan Waithayaken and then Sir Leslie Munro, to negotiate for compliance with its resolutions, while the Communists have refused to even speak or write to these commissioners. This year, the Hungarian item was even omitted from the original agenda. It was only restored, together with the item on Tibet, in response to Khrushchev's resolution denouncing the United States over the U–2 incident. Therefore, unless Hungary is debated now, there are no grounds for confidence that it will ever be debated again.

Even if the Kennedy administration later wished to revive the Hungary issue, after abortive negotiations with the Soviets, or after new Soviet pressures on Berlin, it might be difficult to carry enough of the new nations with us in the U.N. In any case, it would damage the integrity of our cause if we abandon the Hungarian issue now for reasons of expediency, and treat Hungary as a source of weakness and a sore spot in our efforts to seek peace with the Soviet Union, instead of recognizing Hungary as a source of moral and political strength which increases the bargaining power of the West. Moreover, if our protests against aggression and injustice are cynically turned on and off according to our convenience, we will destroy all faith in our sincerity.

Nor can we count on the continued resistance of the captive peoples if we treat them as pawns in American foreign policy, to be remembered or not according to our interest of the moment. Yet Gen. Maxwell Taylor, whom the President admires, has described the passive resistance of these peoples now, and their potential active resistance in time of war, as one of the greatest deterrents against Soviet aggression.

The peoples' resistance depends on keeping their hope of eventual freedom alive. To do this, we must convince them, first, that we will never acquiesce in their present subjugation or make a deal with the Soviet Union at their expense; and second, that we are strong enough militarily, politically, economically and morally, to outcompete and out-last the Soviet Union in the struggle between our two systems for the future of the world.

The captive peoples know the weaknesses as well as the wickedness of communism. Nothing discourages them so much as signs of Western diplomatic retreats under Communist pressure, or Western gullibility toward Communist motives. They know of America's good will, but fear that we are naive, and any acts of ours which even appear to be acts of appeasement fulfill their fears on both these points.

In addition to all this, the ostensible grounds on which Ambassador Stevenson proposed to omit Hungary and Tibet from the agenda seem to me as dangerous as the omission itself. The theory is that we can negotiate better with the Soviet Union on disarmament or other matters if we are silent on the question of Hungary. Yet to attempt to negotiate with the Soviet Union without using the tremendous moral and propaganda weapons which her betrayal in Hungary, and her colonialism in Eastern Europe, represent, is to abandon the whole theory of negotiations from strength. It implies the adoption of Mr. Macmillan's thesis that we can hope for concessions from the Soviet Union on Berlin only by "relaxing tensions" and creating a "better atmosphere," instead of by increasing our own bargaining power by taking the propaganda offensive on Soviet colonialism, or even threatening to do so in order to get concessions from the Soviets. Yet Stevenson is doing it only to get a postponement of these negotiations.

Surely this is the apotheosis of the philosophy of appeasement which was so conscientiously carried out by Neville Chamberlin at Munich. Its adoption as official U.S. policy will put the American Friends of the Captive Nations, and all other organizations interested in the captive peoples, in the position of a shrill and irresponsible minority whose "warmongering" threatens the smooth course of negotiations.

The only hope is to dramatize the abyss into which we are imperceptibly sliding by such warnings as the enclosed advertisement. Certainly the American people as a whole, and the majority of the Catholic and other anti-Communist Democrats who voted for President Kennedy, had no realization that they were voting for this. This is especially true because Kennedy's many appeals for Polish freedom in the campaign were far better understood than his references to the Battle Act.

The policy of relaxing tensions to create a better atmosphere, without first removing the cause of the tension was clearly associated with the candidacy of Adlai Stevenson and not with that of President Kennedy. It was Kennedy who repeatedly promised negotiations from strength. Later the opposition from within the Democratic Party against the expected appointment of Stevenson as Secretary of State also indicated the strength of anti-Communist sentiment; yet it is the Stevenson policy which now seems to prevail in the case of Hungary and Tibet.

The President has just made an eloquent appeal for the Free Europe Committee at his last press conference on March 8, and we are sure that he will return again to the firmer line of pressure and propaganda to promote an eventual Soviet withdrawal, after he has had further experience with Khrushchev. He has never wavered in his position that we should never recognize the enslavement of Eastern Europe and it is only in connection with the methods of pressing for such freedom that he has shown any ambiguity. However, as mentioned above, if we cut Hungary and Tibet from the U.N. agenda now, the effects will haunt and hamper us in the future. This explains the urgency of our telegram and our proposed advertisement. The final decision will probably be made before our advertisement can appear, but paradoxically, if Hungary is cut from the agenda, we believe this warning of ours will be all the more necessary.

DRAFT FOR HUNGARY ADVERTISEMENT: CAN WE FORGET THE COLD WAR BY PRETENDING IT ISN'T THERE?

We are now being told that we must omit Hungary and Tibet from the U.N. agenda because they are cold war issues.

Everybody would like to forget about the cold war.

Nobody wants a war, cold or hot. Everybody longs for peace.

But we can't get rid of tensions by shoving their causes under the rug. We can only do it by removing those causes.

What is the cold war, anyhow?

The cold war started when the Soviet Union, after the triumph in World War II, made promises which it did not keep—

Remember Korea? Czechoslovakia? Vietnam? Hungary? Tibet?

The Soviet Union promised to respect the territorial integrity of the countries of Eastern Europe; the Red Army occupied them instead.

It promised the peoples of Eastern Europe that they could choose their own governments through free elections. The last free election in any of these countries was held in Czechoslovakia in 1946.

It promised that Germany would be allowed to unite in peace and freedom. Now, 15 years later, 20 Soviet divisions police East Germany; and the once great city of Berlin is split, its small area of freedom constantly menaced by Soviet tanks.

It promised to stop interfering in the internal affairs of other countries, and dissolved the Communist International, but subversion continues throughout the world, from Laos to the Congo.

Why is Hungary still on the U.N. agenda? Because in 1956, when the unarmed Hungarian people rose up against their Communist oppressors, the U.N. by an overwhelming majority called on the Soviet Union to withdraw its troops and permit Hungary to hold free elections. The Soviets are still in Budapest. The U.N. resolutions have been ignored.

Why is Tibet still on the U.N. agenda? Because in 1958 the Chinese Communists, disregarding all their promises, invaded Tibet, annexed it, and maintain themselves there by systematically murdering the Tibetan people.

Greece and Turkey are free today because the free world acted.

South Korea and South Vietnam are free today because the free world acted.

We did nothing when the Soviets took over Czechoslovakia in 1948.

We did nothing when Soviet tanks reentered Budapest in 1956.

We did nothing when the Chinese Communists overran Tibet in 1958.

Can we march toward a new frontier of peace and freedom while surrendering once-free peoples to aggression?

Can the U.N. expect to enforce its rule in the Congo if it does nothing about Hungary and Tibet?

Can we achieve a world of law if we enforce it in the free world only?

What do you think? Can we forget the cold war by pretending it isn't there?

AMERICAN FRIENDS OF THE CAPTIVE NATIONS.

Flaming Moderates: Harvard's GOP Advance

EXTENSION OF REMARKS
OF

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1961

Mr. MORSE. Mr. Speaker, a brilliant new magazine, called Advance, has burst upon the politico-literary horizon. The work of a bright, knowledgable group of Harvard Republican students, Advance is remarkable in its realistic grasp of the opportunities before the Republican Party, and of the problems facing the entire Nation. I had the pleasure of meeting the young publisher, Bruce Chapman, when he was in Washington recently, and I was tremendously impressed. Roscoe Drummond, the noted columnist, confirmed my views in a column which appeared in yesterday's Washington Post. Under leave to extend my remarks, I now insert this article:

FLAMING MODERATES: A HARVARD GOP MAGAZINE

(By Roscoe Drummond)

Harvard College does not have to be satisfied with manning the Kennedy administration with Democratic professors.

It is also manning a new magazine with

Republican students and giving the party the stimulus of vigorous, youthful, intellectual leadership which it has been needing for a long time.

When three young men from Cambridge, Mass., came to Washington a few days ago, they did not go to the White House to see Professor Schlesinger or Mr. Galbraith. They did not seek out President Kennedy's very own Massachusetts Senator, BENJAMIN A. SMITH II. They went directly to the office of an authentic New England Republican, Senator LEVERETT SALTONSTALL, whom Massachusetts voters seem to prefer, 4 to 1, over any other brand.

These three Harvard students, who were in search of nothing except a chance to be heard, conferred with Republican Hill leaders, including Senator THURSTON MORTON, chairman of th Republican National Committee, and held a press conference without tripping over a missile gap.

The purpose of the new Harvard student magazine, Advance, is to espouse the politics of "Progressive Republicanism." The three most active in its creation are Publisher Bruce Chapman, of Illinois; Editor George Gilder and Business Manager Robert Beal, both of Massachusetts.

They made it clear that they are just as Republican as they are progressive. The practical initiative they are taking to provide a new forum for their ideas suggests no state of shock over the election and no preoccupation with "might have beens."

The editors of "Advance" are not connected with any formal Republican organization. The initial money came from some 200 Republican leaders in different parts of the country. The editors retain total control of the magazine's policy and their hope is to stimulate the Republican Party in the 1960's to find positive answers to political and social problems.

"It is imperative," they contend, "that the Republican Party help direct the future of America with programs that are both progressive and consistent with the best Republican traditions, that the party be a leader in its own right, instead of reluctantly being dragged down the path of history in the trail of some New Deal or New Frontier.

"While we eschew the doctrines of the New Frontier, we emphatically deny the tired 19th century formulas of arch conservatism. We are, if anything, 'flaming moderates' avoiding both the welfare state and primitive state."

When the editors of "Advance," as shown by the first issue, apply their broad principles to practical affairs, they support the progressive wing of the Republican Party in Congress—CASE, SALTONSTALL, COOPER, etc. They look with favor upon the nomination of either Richard Nixon or Gov. Nelson Rockefeller in 1964. They are critical of what they consider the overly dogmatic views of Senator BARRY GOLDWATER, but argue that one of the virtues of the Republican Party is that it is not "committed to rigid ideologies," while the Democratic Party "is closely wed to the narrow point of view of unadulterated liberalism."

These young Republicans think—and hope—that the Nixon and Rockefeller forces will not split. They figure it would be a great mistake for either to do anything which would enable the extreme right to acquire control of the party.

The editors show every promise of getting out a zestful, provocative, and broadly interesting publication. On the political side there is a penetrating analysis of the election in New York State, a good profile of Representative JOHN LINDSAY, and an outline of the course which Senator CLIFFORD CASE charts for the Republican Party—a course of progress and preservation." But the magazine is not limited to politics. There are articles on the stakes in Germany and on arms control.

It has recently become fashionable to argue that there is a great rise of rightist opinion among students. Maybe there is a move from the extreme left. But the new Harvard Republican magazine hews strongly to center. It bespeaks the cause of the positive moderate.

Eulogy to Dr. Arthur H. Ruggles

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. FOGARTY. Mr. Speaker, on January 2, Rhode Island lost one of its most beloved citizens with the death of Dr. Arthur Hiler Ruggles in his 80th year. His passing was a profound loss to the profession of psychiatry, and a personal bereavement to his many colleagues, students, friends, and patients. To us in Rhode Island his death brought a sharper sting of sadness for he had become almost a legendary figure after 40 years as superintendent of Butler Hospital. Although he was a native of New Hampshire, Rhode Island had been his home for the past 55 years.

In the sunset of life, Dr. Ruggles could look back over a career of more than half a century in the healing sciences of medicine and psychiatry. Wherever there is knowledge of mental health research, training, and high-level treatment, the achievements of this beloved physician are known and will be remembered. He was equally as well known for his pioneer participation in the synthesis of the first citizens' mental hygiene movement—so closely was he identified that his long and productive career parallels the history of the national mental health program from its first halting steps.

As a trailblazer in child guidance and college mental health, as the venerated superintendent of Butler Hospital, as forerunner in the citizens' mental health movement in this country, as consultant to the Secretary of War in time of crisis, as president of the American Psychiatric Association, as scientist, author, scholar, gentleman, and kindly mentor to all who sought his help and guidance—all of these suggest but do not adequately convey the full scope of his contributions to the psychiatric profession and to his country. In the words of Dr. Robert H. Felix, president of the American Psychiatric Association, "The profession of psychiatry has suffered the loss of one of the greatest among its leaders for more than a century since the founding of the American Psychiatric Association."

I have a special pride in eulogizing this grand old man of psychiatry for we shared a mutual tie as friends, as fellow Rhode Islanders, and a lively interest in the progress of mental health affairs. But only Dr. Ruggles, from his vantage of fourscore years, could clearly view the cavalcade of mental health in its progress over the years since 1909 when, as a young psychiatrist, he pledged himself to Butler State Hospital. The concern that we Rhode Islanders have today for the mental health of our felow citizens is a heritage nurtured by Dr. Ruggles in a half century of tireless toil at the hospital that he made famous. Here it was that this humane healer learned to sense intimately the plight of the mentally ill. To him, his patients were people first and always, and he used every forum to propagate the doctrine of humaneness in the care and treatment of the mentally ill. This was a novel philosophy two generations ago, and it is a measure of the herculean task that lay ahead of this pioneering humanitarian—for he had to unchain prejudiced minds before he could help to unshackle the mentally burdened.

The first citizens' mental hygiene movement materialized from the efforts of Dr. Ruggles and his colleagues to enlist volunteer truth squads to refute the canards and misconceptions that largely prevailed about insanity. His perseverance quickened the early trickle of public interest into a stream and justified the formation of the National Committee for Mental Hygiene of which Dr. Ruggles was president for some years. When the public's quest for enlightenment and hope swelled into a torrent, Dr. Ruggles and other volunteer groups fused their efforts into a mighty clearinghouse of mental health education and information that we know today as the National Association for Mental Health. This voluntary army of devoted lay citizens serves as the most substantial auxiliary to the profession of psychiatry in acquainting the American public with its No. 1 public health problem. This was one fond dream that Dr. Ruggles was privileged to see come true.

In World War I, Dr. Ruggles served as psychiatric adviser to the Secretary of War and as chief psychiatrist of the 2d Infantry Division of the AEF. Perhaps it was at this period that Dr. Ruggles and other caretakers of the Nation's mental health realized that nothing less than a federally mounted program of research, training, and prevention, could ever hope to turn back the mounting flood of emotional and mental illnesses.

Tragically, the lessons taught by that war were forgotten in the complacency of peace. Not until World War II revealed an even more disheartening picture was the public alerted to the need for a national mental health program. When the Congress of the United States approved the National Mental Health Act in 1946, Dr. Ruggles was in his 65th year. Another of his visionary ideas of long ago was now the law of the land. But this sage of psychiatry had no time to rest on his laurels. The enormous job that lay ahead was a challenge that he accepted—there was even more to do. He labored on—to share his judgment and wisdom as a consultant to the National Institute of Mental Health that had been established by the Federal Government to implement the National Mental Health Act—to occupy the most honored position in psychiatry as president of the American Psychiatric Association. Yet he still found time in his crowded hours to minister to the needs of his charges at Butler Hospital and at the Emma Pendleton Bradley Home which has such a distinguished record in the treatment of children.

What a great man he was and yet,

withal, a modest kindly man who sought no accolades but only the enduring satisfaction of a lifetime dedicated to illuminating the dark night of mental illness. And it can truly be said that Dr. Ruggles trod the footsteps of St. Luke the Great Physician. How else can one account for the reverence in which he was held by his brother psychiatrists, the veneration that we in Rhode Island had for the "grand old man" at Butler, and the warmth and humanity that pervaded every gathering when he was present. He won distinction for himself yet all that he accomplished for his fellow men flowed from a philosophy that was based on an inner conviction that he was his brother's keeper.

Background on Project HOPE

EXTENSION OF REMARKS
OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 14, 1961

Mr. VAN PELT. Mr. Speaker, under unanimous consent to extend my own remarks in the Appendix of the RECORD, Include therein an article from the Fond du Lac Commonwealth Reporter, under date of February 23, 1961, and another article from the Oshkosh Daily Northwestern, of February 23, 1961, covering the activities of Miss Elizabeth Ahern, of Fond du Lac, Wis., who is presently serving aboard the SS *Hope*.

Project HOPE is a privately sponsored program to share this country's modern medical knowledge and skills with the newly developing countries. The SS *Hope I* is a floating medical training center for Southeast Asia in its first year of operation. The SS *Hope I* was formerly a Navy hospital ship, and is being loaned by the U.S. Government. It has the most modern medical equipment and supplies, and training aids. The ship, formerly the U.S.S. *Consolation*, is a 15,000-ton vessel, with 230 beds. It was constructed during World War II.

The permanent medical staff of the SS *Hope I* includes 15 physicians, two dentists, 25 nurses and 30 auxiliary personnel. Volunteer teams of up to 35 physicians will be flown to the ship on a rotating basis for tours of 4 months. The medical staff includes top specialists in the key fields of medicine. More than 2,000 medical people have applied for assignments on the SS *Hope I*.

HOPE is essentially a teaching program, although necessarily there will be treatment involved. American members of the medical staff will be assigned to work in small teams with their local counterparts. This will enable the American staffers to pass along modern techniques and the latest medical knowledge under working conditions.

Part of the medical staff will work on shipboard, part will form mobile, inland teams. They will work with physicians, surgeons, dentists, health officers, sanitation officials, nurses, midwives, and technicians.

The SS *Hope I* will visit only those countries to which it has been invited by the local medical professions. Indonesia is the first stop. The ship will remain there for about 6 months. Vietnam will be next, for a 4-month stay before its return to the United States. Invitations have also been received from Korea, Okinawa, and Pakistan. The ship left for Indonesia on September 22.

HOPE's program is geared to the specific needs of the countries visited. Activties are worked out in advance with local doctors. This will enable HOPE to concentrate on the most serious and pressing problems of each country.

This is the type of foreign aid that every American can take heart in. It is designed to help peoples to help themselves. HOPE is a gleaming symbol of the good will of Americans for the people of Asia.

The above-mentioned articles follow:

[From the Fond du Lac, (Wis.) Commonwealth Reporter, Feb. 23, 1961]

ELIZABETH AHERN, "HOPE" SHIP NURSE LAUDS HERITAGE

A local girl has gone halfway around the world to find out the farther she travels, the prouder she is to be an American.

"I feel as if we've really accomplished something," says Elizabeth Ahern, a nurse aboard the good ship *Hope*, currently waging the peace in southeast Asia. Miss Ahern wrote her experiences in a special report to Dr. William B. Walsh, president of Project HOPE, Washington, D.C.

Miss Ahern, daughter of Mr. and Mrs. T. L. Ahern, 229 East Division Street, is a graduate of the University of Wisconsin School of Nursing.

She has just completed serving her first 4 months aboard the American teaching and training ship *Hope*, currently anchored off the Indonesian island of Ambon, giving intensive short courses to local medical personnel. On March 6, the ship moves on to Kupang, another Indonesian island.

Working in the *Hope's* wards, Miss Ahern has cared for hundreds of patients who have been treated aboard the ship in connection with teaching seminars helds for local medical people.

PATIENTS GRATEFUL

"These patients are totally uncomplaining," reports Miss Ahern. "They are extremely grateful for anything that is done for them. One patient, who could speak only a few words of English, clasped my hand as she was discharged from the ship, and said slowly, 'I will not forget you.' "

The *Hope*, whose initials stand for "health opportunity for people everywhere," is supported by contributions from Americans in all walks of life.

One of the most gratifying moments of the entire journey, Miss Ahern wrote, was watching a 12-year-old Sudanese child feel the spot on his neck from which an ugly tumor had been removed.

"When the child was told the spot was gone forever, the expression on his face was enough to more than repay us for the long hours of work on that ward," the Wisconsin nurse wrote.

During the ship's stop at the island of Bali, Miss Ahern visited some of the Government-run leproseries and made recommendations for the distribution of bandages, vitamins, and medicines from the *Hope*.

At Sumbawa, in eastern Indonesia, she was a member of an inland medical team that set up an outpatient clinic in a warehouse.

FOUR HUNDRED ARE TREATED

"I had just finished writing a manual on the setting up of a shore clinic, and surprisingly enough, we were able to follow much of the manual right through to the finish," she said. American and Indonesian doctors treated more than 400 patients at the clinic during the 2 weeks the ship stopped at Sumbawa.

"Those we considered to be in need of further treatment we sent out to the ship," Miss Ahern reported. "By the time I finished work in the clinic, my Indonesian had improved considerably, having had to instruct the patients to take medicine three times a day, or to go out to the ship for further treatment, or to return to the clinic."

Miss Ahern has been aboard the *Hope* since it sailed from San Francisco late last September.

[From the Oshkosh, Wis., Daily Northwestern, Feb. 23, 1961]

NURSE WRITES OF WORK DONE BY PROJECT HOPE

A Fond du Lac nurse, who is well known in Oshkosh, has gone halfway around the world to find out the farther she travels, the prouder she is to be an American.

"I feel as if we've really accomplished something," says Elizabeth Ahern, a nurse aboard the good ship *Hope*, currently waging the peace in southeast Asia. Miss Ahern wrote her experiences in a special report to Dr. William B. Walsh, president of Project Hope, Washington, D.C.

Miss Ahern, daughter of Mr. and Mrs. T. L. Ahern, 229 East Division Street, Fond du Lac, is a graduate of the University of Wisconsin School of Nursing.

She has just completed her first 4 months aboard the American teaching and training ship *Hope*, currently anchored off the Indonesian island of Ambon, giving intensive short courses to local medical personnel. On March 6, the ship moves on to Kupang, another Indonesian island.

Peace Corps Typifies Great U.S. Tradition of Adventure

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 9, 1961

Mr. REUSS. Mr. Speaker, President Kennedy's Peace Corps proposal has quickened the spirit of adventure which has been responsible for the growth and development of America. This aspect of the proposal was well discussed in an article by Frank Conniff, which recently appeared in the Milwaukee Sentinel:

PEACE CORPS TYPIFIES GREAT U.S. TRADITION OF ADVENTURE

(By Frank Conniff)

There is a certain irony in the objectives raised by so-called conservatives to President Kennedy's Peace Corps, an enterprise which even its most ardent protagonists admit contains elements of risk.

The demurrers for the most part seem to be coming from the very people who in recent years have been most vociferous in demanding that the United States "seize the initiative," "carry the fight to the enemy," and, in general take command of the cold war raging between two diametrically different systems.

Well, President Kennedy has answered their calls for action with the Peace Corps. It could well be that events will prove the move a disaster of the first order, but our President appears willing to assume the gamble.

PREFER OWN DEMANDS

Why, then, are the objectors unwilling to take the risk? On the surface it would seem they prefer to get their kicks from mere demands that action be taken to blunt communism's worldwide offensive rather than from approval or concrete anti-Kremlin steps launched by our chief executive.

What they all seem to have forgotten is that President Kennedy has more to lose from a failure of the Peace Corps than any of the conservatives who are inveighing so heavily against it.

DIRE PROPHECIES MADE

If the project blows up completely or even takes a bad bounce, the fingers of failure will be pointed directly at the White House and not at the objectors—mostly Republican sympathizers in the first place—who are presently muttering such dire prophecies about its future.

Two or three years hence, should the Peace Corps eventuate into a boo-boo of embarrassing proportions, it will be President Kennedy who will be hard hit to explain its disintegration, not the long-faced pundits who now are predicting its doom.

Conservative commentators claim there are many bugs in the Peace Corps proposal. They are undoubtedly right. But there are many bugs, too, in the various gambits unleashed by the Kremlin in its attempts to take over the world.

KHRUSHCHEV DARES

The fear of snafus does not seem to stymie N. S. Khrushchev, however, when he decides to tee off on free people. The old man appears willing to buck the wheel despite obvious risks, while Uncle Sam sometimes waits until every possible contingency is foreseen. By then, of course, it is often too late.

In the opinion of this reporter, the Peace Corps contains those elements of imagination, adventure, and hope that once caught the fancy of our wonderful country.

Would any citizen in his right mind have ventured across the plains in the old days when every mile teemed with possible death or destruction? Would our forebears have sailed around South America to reach the promised land of California if they had been deterred by lurking dangers?

These questions answer themselves.

DARING AIDED COUNTRY

We have become the great Nation that we are precisely because our people were willing to dare, to gamble, to go forward in the obstinate belief that the future belonged to them and that they could mold it to their own purposes.

In undertaking the Peace Corps, this same deeply held belief should motivate the young men and women we send into the world with the passionate hope that the future again can be shaped in their own idealistic image.

In fact, the opposition of their elders should encourage them in the same way that the fears of the skeptics in the old days goaded the adventurers to supreme efforts.

WORLD AT STAKE

For that is what is at stake in the world we live in today: the great globe itself. Not that we intend to force our own customs or beliefs on the millions who lag behind in material blessings. We simply must hold fast to the faith that the American concept is indeed something that can capture the imagination and the devotion of those aspiring billions who are even now looking for an ideal to follow.

My own belief is that the tide will turn in our favor as soon as enough people through the world are equipped by education and improved environment to read American history.

FINAL PAGES UNWRITTEN

We all tend to forget, in our occasional bouts of despair, that the American story remains one of the most glowing chapters in all recorded history and that its final pages are not yet in sight of being written.

Perhaps the Peace Corps will prepare the ground for millions of people who some day will read the American story with delight and wonder, sensing our grandeur without any misgivings about our might.

The conservatives should stop looking under the bed. Our young people are not afraid, and that's what counts. Blessings on the Peace Corps.

"Old Hickory" Was Tough, Forceful, Adventuresome

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 14, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following story from the Lancaster News, Lancaster, S.C., of March 9, 1961:

On the 15th day of March in the year 1767, a baby was born in the home of James Crawford and his wife Jane, located about 10 miles north of Lancaster, who was destined to become the 7th President of the United States.

A few days after the death of her husband, Elizabeth Hutchinson Jackson, sister of Jane Crawford, journeyed from their home at Twelve Mile Creek to the Crawford home where she was given refuge and there on the eve of the Revolution she gave birth to her third son. The baby was named Andrew.

History relates that as a specimen of the young manhood which was beginning to dominate the country as the rule of the aristocracy was waning and the control of government was beginning to pass to frontiersmen, no better example could be found than Jackson. He was described as uneducated, crude, and fond of fighting, but energetic self-confident, honest and straightforward. His friends loved him ardently and his foes hated him just as ardently. He is reported to have abundantly returned the hatred.

The call for soldiers to resist the British invasion appealed to the spirit of young Andrew and he interrupted his few years of formal education to enter the Army. On August 1, 1780, at the age of 13, he participated in the Battle of Hanging Rock. In 1781, he and his older brother were taken prisoners when an attempt to capture a body of British troops near Waxhaw Church failed. According to history, the sabre blow which was to mark Jackson for life was inflicted when he refused to black the boots of a British officer while he was being held prisoner.

Andrew's brother, Robert, was also wounded in the fray and their mother made repeated attempts to have the two wounded boys released from the British prison camp at Camden in an exchange of prisoners. She finally succeeded and the boys returned home where Robert died 2 days after his return. Elizabeth Jackson went to Charleston to nurse the sick and wounded American soldiers and she herself died there.

OLD HICKORY

Andrew Jackson did not remain long in Waxhaw County following the close of the war. In 1784, he began reading law in Salisbury, N.C., and 3 years later was admitted to the bar. In 1788, he was appointed prosecuting attorney of the Western District of North Carolina, now Tennessee, and moved to Nashville. In 1791, he married Mrs. Rachel Donelson Rolards, a daughter of John Donelson, a pioneer settler of Tennessee.

Jackson served as a Member of Congress, U.S. Senator and judge of the Supreme Court of Tennessee.

As a soldier, he become major general of the militia, Indian fighter and conqueror of the British forces at New Orleans. His high-handed and independent manner of conducting military successes made him the hero of the West and earned him the title of "Old Hickory."

PRESIDENT JACKSON

In 1828, he overcame John Quincy Adams to become the seventh President of the United States. With his inauguration, the control of Government passed from the "Virginia dynasty" and the Adams family to the rule of the frontiersman.

During his term as President, Jackson strengthened his party, and left them enthusiastic on his platform of low expenditure, payment of debt, and no taxes.

Throughout the remainder of his life, his name still remained a "spell to conjure with," but in general he refused political alliances and his last years were quiet and uneventful.

Death came to Jackson on June 8, 1845, at his residence "the Hermitage," near Nashville, Tenn.

BIRTHDAY CELEBRATION

On March 15, 1961, a group of patriotic Americans will again gather at Jackson State Park near Lancaster to pay homage to this native-born son whose heritage has so enriched the American way of life.

With words and with music, he will be honored as the 194th anniversary of his birth is celebrated.

The public is invited to join the celebration which will begin at 3 p.m. Donald Russell of Spartanburg will deliver the key address, and a number of out-of-town dignitaries will be here for the ceremonies, which are being sponsored this year by the South Carolina Daughters of 1812, the South Carolina State Commission of Forestry, and the Lancaster County Historical Commission.

Appendix

Faith in Our Scientists

EXTENSION OF REMARKS
OF

HON. JEFFERY COHELAN
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. COHELAN. Mr. Speaker, Dr. William Baker, in an article appearing in the Berkeley Review, has made an interesting and perceptive analysis of C. P. Snow's recent speech before the American Association for the Advancement of Science.

Dr. Baker has explored the question of how scientists can best labor in the macrocosmos of the world outside their laboratories and libraries. He concludes that because of the large role scientists must play in human affairs that they must be trusted mightily.

This is a thoughtfully written article and I urge my colleagues to read it:

I am honored to respond, on behalf of the community of scientists, to the compelling issues drawn up so deftly in Sir Charles' address.

I should say, first that few, if any, scientists in the free world would be against his contentions about moral values and responsibilities. Therefore, I can most gainfully remark on a rather practical aspect of the matter, as becomes an industrialist—that is, the old query of what to do and how to do it, concerning public morally, since the matter of doing it or not is so convincingly treated by Sir Charles.

Thus, how can the scientists best labor in the macrocomos of the world outside their laboratories and libraries? This is what I shall try to answer.

First, above all, they must gain public trust and understanding, even though, because of its inner qualities, political, and social judgments derived from science may be less perfect than expected. Second, scientists must carry forth to all the world the bright hope, the good fortune, that science does betoken for mankind. We can indeed negate the spreading cynicism and nihilism of our time. Both are alien to science and to research. Science gainsays the words of a present-day anthropologist: "America is the only culture which has passed from barbarism to decline without going through a stage of civilization."

Science and its fruits do indeed confer that joy and sense of beauty—the esthetic content, as Sir Charles says—that can give our times social strength and buoyancy and liveliness. A society caught up in the great adventure of an Echo satellite, a reconstructed biological gene, a niobium-tin compound superconductor operating far above absolute zero—this will not lapse into Huxley's "Brave New World." Free people of today are ready to take up Wordsworth's offer:

"Come forth into the light of things,
Let Nature be your teacher.
She has a world of ready wealth,
Our minds and hearts to bless—
Spontaneous wisdom breathed by health,
Truth breathed by cheerfulness."

So, over all, scientists must learn to express just those human virtues which Sir Charles said so kindly in his opening words were theirs.

PUBLIC FAITH AND FOLLOWING

But now we have to go back to the first urgency for scientists—public faith and public following. The simple fact now is that scientists do not have the trust of people and of nations in dealing with the issues that Sir Charles raises—the issues of peace and war, of feast and famine, of life and death in their temporal forms. This is not a complaint; it is a realization. I could support this assertion by many grevious examples. Following Sir Charles theme, I shall, however, refer to only two. The first is the action that followed the scientific communities' plea of 1945–46 to achieve immediately nuclear disarmament and agreement on nuclear weapons between all nations of the world. Some statesmen in our own government indeed cared deeply about this issue. Some scientists worked hard with them to awaken the world and its politics to the nuclear terror shortly to come. These scientists enlisted others in an effort to see whether what looked to many like a monopoly of nuclear weapons would soon be a worldwide nuclear arms race.

I happened to be one of a task force that was gathered officially, with State Department sanction, at the very beginning of 1946 to prepare a detailed scientific estimate of just what Sir Charles now speaks of as an "engineering truth." We found, of course, the engineering truth that another country, explicitly the Soviet Union, would have nuclear weapons in a certain number of years after 1946—a number which we carefully estimated. Our estimate, which is a matter of record, was off by little more than a year, and it was, indeed, too conservative an estimate. But it was by no means trusted, and —an equally sorry circumstance—we lacked the skill to make people believe and heed it.

A somewhat similar but rather more complex situation besets us now in regard to the nuclear test ban. You remember that, following the technical agreement of the summer of 1958 for a test detection network, scientists working on the subject were obliged drastically to revise their estimate of the known efficiency of detection of nuclear events. This necessity and subsequent studies of the subject have aroused a widespread mistrust among national leaders, and perhaps among the populace at large, concerning the reliability of scientific judgments and decisions.

LIMITATIONS OF SCIENTIFIC CERTAINTY

So I would like, in the space available for comment, to say something about the inner nature of science and technology and of scientists and engineers—something which must be understood by all the world if we are to operate practically in the condition of moral unneutrality that has been invoked. These inner qualities really turn out to be special limits on science and technology. To state it baldly, scientifically there are limits on truth, there are limits on certainty, and there are limits on discovery itself. Maybe the limit on certainty is the most important to explore here. Scientific findings, scientific facts, are usually thought of as symbols of certainty. But people must realize that these findings are certain only with respect to a particular frame of reference. That frame of reference is, broadly, the present state of knowledge or the present position of scientific thought. Richard Feynman put this eloquently in a lecture on the value of science, delivered in 1955. He said, "We have found it of paramount importance that in order to progress we must recognize the ignorance and leave room for doubt. Scientific knowledge is a body of statements of varying degrees of certainty—some most unsure, some nearly sure, none absolutely certain. * * * Now we scientists are used to this, and we take it for granted that it is perfectly consistent to be unsure—that it is possible to live and not know." And so the world, facing the possibility of an era blessed by the fruits of science, as Sir Charles points out, must learn to accept the uncertainties of science.

Correspondingly, the truth is also subject to drastic revision in the light of discovery. Note carefully the difference between this kind of revision of truth and that in which the truth is compared to falsehood, deceit, or clumsy human error. Indeed, since wave mechanics has supplemented classical mechanics in the description of material events, the scientists' own concepts of truth and certainty have dramatically changed. But much of the popular view of science is still related to the deterministic description of the state of a physical system. Technically, this reached its climax in Newton's revelation of the basis of Kepler's laws governing the motion of the heavenly bodies. However, in atomic physics this causal deterministic account has been vigorously displaced by the quantum theory, involving a universal quantum of action. Thus, for nearly 60 years the physicist, and later the chemist, have had to make experimental conditions such that they could describe universally their findings without being dependent upon a particular quantum which was being observed at that particular time. In other words, to make these experiments anything like a truthful description we have had to work with such heavyhanded measurements that the individual quanta of action were completely disregarded. However in doing this we threw away the oldtime goal of certainty of position in time or in space, and thus a certainty of movement, too.

Hence, in a quite technical way, but with an abiding philosophical meaning, the scientists of our age and also the engineers who work with nuclear physics and with the tools of solid-state electronics, like transistors and magnets, have already come to terms with the kind of uncetrainty and incomplete truth with which they must live. But, along with this, of course, there is a quantization of truth. Never can the scientist deal with a half truth even though it may resemble that fragment of Irish confetti called a "half brick" in that both are said sometimes to carry further than the whole. The scientist has to tell the whole truth as he knows it in that moment in time, and nothing less or different can be expected. The situation relative to detection of underground nuclear explosions vividly illustrates this.

SCIENCE AND COMPROMISE

This brings us to some other large limitations in the tactics of science with respect to their harmonious integration in human affairs. For instance, that esteemed virtue of

some of the noblest leaders of societies and of nations, the ability to compromise, is painfully, utterly lacking in the scientist producing new science. My late colleague Karl Jansky had powerful reasons for regarding the sibiliant murmurs of his sibilian radio research antennas as some earthborn interference. This would have been just the sensible thing to decide on and allow for in the decisions on power and frequency then shaping up for long-distance radio usage. But the refusal of any researcher to compromise the posibilities led Jansky to the discovery of radio astronomy through radiation from the stars. Likewise, we cannot say that we will make an international agreement defining the correct amino acid sequence in the helix of a protein-nuclear acid molecule, convenient as that might be. In constrast, of course, we do make just such agreements about the gold value of the dollar, about international law, even about the time of day. Is it not well that science warns that all cannot be compromised? George Orwell, in 1884, warns grimly about such deep danger to human freedom: "For it is only by reconciling contradictions that power can be retained infinitely."

DISCOVERY AND INDIVIDUALITY

Finally, concerning the limitations on discovery, here we must respond to the popular queries, Why don't the scientists do the things we need to have done—why isn't there a cure for cancer now, why don't we have a defense against nuclear weapons, why cannot we make more reliable moon rockets, why don't we understand the forecasting of weather? Thus, on and on, the infinity of unanswered questions flows, and as long as the human race advances, so will it ever flow. The point is that the scientist does not really know how to multiply—or perhaps one might better say to distribute—his efforts. It is not useful for a team of 100 scientists each to have one one-hundredth of a good idea. No one ever synthesized an important new idea in science that way. The ideas of scientific discovery come one at a time from one person and one mind at a time. Sometimes two or three can aid each other. But scientific discovery cannot be collectivized, and does not flourish in collectivized structures. As Sir Charles has said, individuality, independence, scientific nonconformity are the requisites for discovery.

Even then, how hard and slow it is. Take the case of light—the mystery and adornment of the universe since the Creation: "Let there be light." Thousands of scientists have studied it, in tens of thousands of ways. But only this year was the concept of coherent light—light whose waves start and go from a source in unison—realized in the optical maser. Thus, Schawlow and Townes envisioned, and there have been achieved, light never before beheld. This is past the halfway point of the 20th century—what else, indeed, have scientists not beheld? All these things too, I hope, the people will understand and will have sympathy for, when science has the operational role for which Sir Charles Snow petitions.

Altogether then I ask that scientists be trusted mightily in view of the changes, the revisions, the alterations that they will constantly have to make in their role in large human affairs. In the small, they do almost universally trust each other, as Sir Charles has brought out so eloquently in his novels, even by dramatizing the rare cases of mistrust. The experiences of many decades now have shown that this trust is merited and does good.

Can Kennedy Meet the Test?

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. BRIDGES. Mr. President, I recently read a most provocative column written by Mr. Constantine Brown entitled "Can Kennedy Meet the Test?"

This excellent commentary by Mr. Brown is most interesting and informative and, in my estimation, is worthy of widespread attention. For this reason, I ask unanimous consent that the text of this editorial be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

CAN KENNEDY MEET THE TEST?
(By Constantine Brown)

Will President Kennedy be able to fulfill the Herculean task ahead of him? All Americans, regardless of party, hope he will, because they realize we are approaching a "quarter to twelve" situation.

Domestic problems are serious, but they can be improved with discipline and intelligent and honest administration. We still are potentially the richest country in the world with our ingenious and imaginative population. It is in the foreign field, however, that all the administration since 1945 have failed us. The enormous wealth-draining budgets; the ideological confusion which prevails in this usually well-balanced and patriotic Nation. The intellectual segment which is siding with our enemies at the expense of our friends, has its roots in the mishandling of international affairs.

OUR PRESIDENTIAL FAUX PAS

President Roosevelt created Russia's great might at the end of the war when he sacrificed the Eastern Europe and border states to Stalin's thirst for territorial aggrandizement. President Truman increased the power of international communism when he presided over the taking of China by the Communists. Finally, under the administration of President Eisenhower, we witnessed the emergence of militant communism in the Caribbean and Latin America. The spearhead is Fidel Castro and his fellow conspirators, whom we actually helped take over Cuba and thus establish a beachhead of international communism on our doorsteps.

Authoritarian governments have been historically repugnant to the American way of thinking. This repugnance has been injected into our international relations. In our struggle to contain communism, it became essential for us to accept the assistance of nations which, in order to ward off the Red menace, were compelled to maintain nondemocratic forms of governments. We overlooked for the last 15 years the fact that we "can't have the cake and eat it, too." To counter the threat of world domination by those who vowed to destroy freedom, we supported, on a quid pro quo basis, nations which were not following our political image. Thus, after accepting the regimes of managed democracy such as in Portugal and Spain, we are now creating the impression that we would be glad to support those who want to overthrow them.

The recent incident of the Portuguese luxury ship Santa Maria is an example. According to all precedents of maritime and admiralty law, Henrique Galvao, who hijacked the liner with a motley crew of Spaniards in exile and Argentine, Italian and French Communists besides a sprinkling of Portuguese opponents of Dictator Salazar, is guilty of piracy on the high seas. This was the first admission of our own Government as soon as the news reached Washington.

Yet within less than 48 hours we changed our attitude, not only because the administration was concerned over the safety of the American tourists aboard the Santa Maria, but also because it was thought by some administration advisers that it would be wise to play it cozy with the men who might conceivably replace the Salazar regime. We have treated Galvao with the courtesy to be extended the head of a revolutionary junta instead of dealing with him as a pirate.

THE SPANISH FREEZE

Similarly, the new administration has given indications of coolness toward Spain, where civil rights, as we understood them, do not exist. While Mr. Kennedy, after his victory, replied instantly to Premier Khrushchev's congratulations, he waited for nearly a month to answer Generalissimo Franco's felicitations. Last week, when a Pentagon official gave a briefing to a number of Congressmen about our bases abroad, Spain was represented by a white blotch on the map. When asked about our five bases in that country, the official replied, "This is now a political matter which cannot be discussed in my briefing."

A high-ranking American diplomat in Madrid suggested informally to Spanish officials that Generalissimo Franco would be wise to announce that he needs no further economic and military aid from us. He intimated that this would spare him the humiliation of having them cut off when the next foreign aid bill is presented in April to Congress.

Yet the Iberian Peninsula is immensely important to the common defense against Communist imperialism, of which President Kennedy is keenly aware. We have vital airbases in the Azores and even more important bases in Spain. Both will have to be renegotiated next year.

In his state of the Union message, the President emphasized the importance of NATO and complained that "in Europe our alliances are unfulfilled and in some disarray." Western Europe, however, does not have a parochial approach to the forms of governments of even its allies. Hence even the liberal-minded British wonder where our present attitude might take the coalition of free nations.

Interconnection of Electric Power Transmission Facilities

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 15, 1961

Mr. ENGLE. Mr. President, I am happy to note that Secretary Udall is acting expeditiously to improve the marketing facilities for the electric

power produced by Federal water projects.

I refer to the program that he proposed last week for transmission line construction—particularly an extra high voltage common carrier intertie between the Pacific Northwest and the Pacific Southwest. The Secretary has appointed a task force to study the feasibility of interconnecting the Bonneville and Central Valley project systems, and possibly also the Colorado River system. He wisely has directed that any such program must show mutual economic benefits to all the regions involved, and that any area of hydro surplus—such as the Northwest for the present—must have legal safeguards to assure it a permanent priority in the use of power generated in its own region.

I believe such a development can provide benefits to the electric consumers of all agencies, both public and private. A common carrier intertie would be available to anyone willing to pay the transmission fee. Public agencies and private companies both could take advantage of the hydro surpluses that occur in different months in different river basins. This kind of interregional integration can make two plus two equal five.

Closely linked with Secretary Udall's intertie study is his announcement of a program to complete the Trinity project transmission system by the construction of all-Federal lines to Tracy which is the CVP load center. These too can be common carrier lines.

The companion announcements—one on the intertie task force and the other on Trinity—are described in more detail in two Department of the Interior press releases which I would like to submit for inclusion in the Appendix of the RECORD.

There being no objection, the announcements were ordered to be printed in the RECORD, as follows:

TASK FORCE ON WEST COAST POWER INTERTIE

Secretary of the Interior Stewart L. Udall today named a five-man departmental task force, headed by Charles F. Luce, Bonneville Power Administrator, to study feasibility of an extra high-voltage common carrier electric transmission line between the Pacific Northwest and the Pacific Southwest.

Secretary Udall emphasized that any interconnection must be mutually advantageous to economic growth and conservation of energy in both regions involved. He charged the task force with recommending legal safeguards to assure that each power producing region will have a permanent priority in the use of electricity generated on its rivers and streams.

Udall declared this action was in keeping with President John F. Kennedy's recent message on natural resources and that immediate action is being taken because of developments in the Pacific Northwest which involve the Canadian Treaty, the proposed dual-purpose reactor at the Hanford Atomic Plant, and the need for maintaining the Pacific Northwest's low power rate.

Udall revealed that the Bonneville Power Administration's surplus has been reduced from $78,800,000 to $53 million in the past 4 years and the Administration will operate with an additional $13 million deficit this year because of the lack of markets for secondary energy. The Secretary said some $30 million worth of electric energy would waste over the spillways of Columbia River Federal dams this coming year because of inadequate transmission lines to market areas. "If this situation persists there will be heavy pressure to raise power rates in Bonneville Power Administration's service area—a step that seems unnecessary, and one we must take every means to prevent."

Udall emphasized that the proposed treaty with Canada would intensify the need for bold plans to market the Canadian and the Northwest power. Udall's directive said: "The possibility of integrating Canadian power supplies with the Pacific northwest-southwest intertie should be fully explored, and the plans of the British Columbia power agencies ascertained in this regard."

The Secretary further stated: "I am specifically requesting that in making this preliminary report the task force consult with the public and private power agencies in the areas affected, industrial customers of Federal power systems, and the Governors of the affected States, and other interested groups."

Secretary Udall asked that the task force studies consider the effect of the proposed intertie on existing energy resources and uses—oil, gas, and coal.

Other members of the task force who will submit a preliminary report to Assistant Secretary for Water and Power, Kenneth Holum, are: Morgan Dubrow, Washington Office Manager of the Bonneville Power Administration; Bernard Goldhammer, Bonneville Power Administration Commercial Operations Officer, Portland, Oreg.; Hugh P. Dugan, Regional Director of the Bureau of Reclamation, Sacramento, Calif.; and Milton A. Chase, General Engineer in the Assistant Secretary's office in Washington, D.C.

SURVEY WORK TO BEGIN ON ALL-FEDERAL TRANSMISSION FACILITIES FROM TRINITY

Secretary of the Interior Stewart L. Udall today approved recommendations to proceed with surveys and design work looking toward construction of all-Federal transmission facilities to distribute electric power from the Trinity Division of California's Central Valley project.

No rights-of-way will be purchased until surveys are complete. The Congress will have to approve the necessary construction funds.

The recommendations followed several months of study by the Bureau of Reclamation which showed this course of action would yield considerable financial gain to the Government over a period of years.

The recommendations approved by Secretary Udall are:

1. Construction of all Federal common carrier transmission facilities for Trinity power.

2. Utilization of 1961 appropriations of $320,000, already made by the Congress, for surveys and design work south of Keswick, Calif.

3. Consideration of construction of Trinity lines so they could be converted to a 500-kilovolt transmission line from near Keswick to Tracy, Calif., these considerations to be based on the possible future use of these facilities, if future strides show feasibility, as a section of the Pacific Northwest-Pacific Southwest intertie which is under study.

4. Authorizing the Bureau of Reclamation to contract for engineering work, location and design of Federal transmission facilities and to obtain data for necessary right-of-way acquisition so as to speed up the program.

"Our decision was purely a matter of economics," the Secretary declared.

He said Bureau of Reclamation comparisons indicate that 50 years after the San Luis unit goes into operation the Central Valley project would produce a surplus $12 million larger than if the Government entered into an alternative wheeling contract. This assures repayment of all reimbursable costs including those of the Trinity division. The $12 million advantage to the United States includes an estimated salvage value of at least $10 million at the end of the 50-year period.

The all-Federal system would consist of 230-kilovolt transmission lines to transmit energy from Trinity powerplants to Cottonwood and on to Elverta, as well as facilities for 230-kilovolt lines from Elverta to a point called East Sacramento to Tracy, together with powerplant transformers, switchyards, and terminal equipment.

Cost of these facilities is estimated at $28,800,000.

Discrimination in Employment

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 15, 1961

Mr. WILLIAMS of New Jersey. Mr. President, recently in a television interview I was asked about a so-called civil rights gap in President Kennedy's administration. My immediate response was that this gap has been closed by the moral leadership the President has already demonstrated. He has associated himself with the morality of the Supreme Court integration decision; he sent a telegram to Williamsburg applauding the brave people who are beginning integration in the South. The voice from the White House has been heard; our citizens know where the President stands on civil rights.

The most direct action taken by the President was the recent opening of a campaign to eliminate discrimination in employment. He intends to take every possible action to combat bias at its economic base; I am sure that we can expect lasting and significant progress in this effort.

The President's actions have already caused much editorial comment. I would like to have reprinted in the RECORD a few of them: from the AFL–CIO News of March 11, the Christian Science Monitor of March 8, the Daily Home News, New Brunswick, N.J., of February 24, and the Newark, N.J., Evening News of March 8.

I ask unanimous consent to have the above editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Daily Home News, New Brunswick, N.J., Feb. 24]

JOB EQUALITY FOR THE NEGRO

One of the areas in which President Kennedy seems to be moving forward swiftly is in opening up the Federal services to members of hitherto discriminated against minorities.

A striking case in point is his selection of Clifton R. Wharton, a career diplomat, to be Ambassador to Norway.

Wharton is a Negro. He is not the first Negro to hold an ambassadorial post, for some Negroes have attained that status as political appointees. But he is the first Negro to ascend this high in the diplomatic service as a career man, winning his job on merit.

It will be recalled, too, that Kennedy, when his Cabinet was still in the formative stage, offered a Cabinet post to a Negro Congressman, who declined the appointment.

We anticipate in the years immediately ahead that Kennedy will be registering many more "firsts" in giving the Negro the place to which he is entitled in the Federal service. And we think that this example at the Federal level will be instrumental in leading other governments at lower levels along the road toward complete equality of job opportunity for the Negro.

[From the Christian Science Monitor, Mar. 8, 1961]

CIVIL RIGHTS AND JOBS

Franklin Roosevelt initiated the use of Federal contracts to combat racial discrimination in work performed for the Government. Dwight Eisenhower expanded the effort under a committee headed by Vice President Nixon. Now John Kennedy has set up his own machinery for the same purpose. Its utility will depend very much on the spirit in which it is operated.

Civil rights advocates should not assume that vigor will be lacking because the new Committee on Equal Employment Opportunity is to be headed by Vice President JOHNSON. The Texas has a record of practical steps to advance civil rights, legislatively and by his own acts. Yet the record of these Presidential committees indicates that this one faces real problems.

Contracts pledging employers not to discriminate in their hiring have been written before. Now contractors will be asked to take active measures against discrimination, under threat of cancellation and blacklisting. But there are no visible sanctions against labor unions which discriminate, and in the past unions have been among the most stubborn discriminators. The Secretary of Labor is to be a member of the committee and much will depend on how his agents police Federal contracts.

The Executive order setting up this committee is the first action of the Kennedy administration to carry out strong promises on civil rights in the Democratic platform. It had been expected that the President would find it more feasible to move in this way than through new legislation which would meet entrenched congressional opposition. If this is the administration's main early move on civil rights the need to make it effective is doubly sharp.

[From the AFL–CIO News, Washington, D.C., Mar. 11, 1961]

A MAJOR ANTIBIAS STEP

President Kennedy's first Executive order in the civil rights field is a major step in the campaign to eliminate discrimination in employment.

The strengthening and expansion of the antidiscrimination machinery through the creation of a new President's Committee on Equal Employment Opportunity holds out real promise that "Americans of all colors and beliefs will have equal access to employment within the Government and with those who do business with the Government."

The President's action came a few days after the AFL–CIO Executive Council adopted a resolution at its mid-winter meeting welcoming indications that proposals to strengthen the committee were under consideration. The council declared that "even without statutory authority the President can—and should—strengthen the Government contract nondiscrimination policy."

The AFL–CIO hopes that the new Committee will look into the federation's proposals that its authority be extended to cover all grant-in-aid programs, that it require nondiscrimination throughout a contractor's labor force and that it will in fact disqualify violators of the nondiscrimination pledge until cause is removed and cancel existing contracts.

As the executive council declared: "Prejudices and century-long practices cannot be wiped out overnight by decree. But the work of extending the frontiers of equality must go on. The AFL–CIO pledges to do whatever it can to cooperate with the newly created Committee in the furtherance of this goal."

[From the Newark Evening News, Mar. 8, 1961]

EQUAL OPPORTUNITY

In no area of American life is group discrimination more apparent or seemingly more stubbornly rooted than in the occupations by which men earn their bread and butter. Thus it is fitting that the President now creates a Committee well armed to set the rules for achieving equal opportunity in employment by the Government or its contractors.

By assuring the Committee on Equal Employment Opportunity the use of the Labor Department offices to supervise the program and investigate complaints, Mr. Kennedy corrects a handicap of previous committees. And by attmpting the job through Executive order rather than legislation, he skirts the controversy civil rights proposals invariably evoke in Congress.

The new Committee's membership gives promise of a cohesive effort to eliminate discrimination from Federal hiring practices. Its Chairman is Vice President JOHNSON and includes Labor Secretary Goldberg, who as Vice Chairman, will undoubtedly be its sparkplug, the Attorney General, Defense Secretary, Army, Navy and Air Force Secretaries, the General Services Administrator, and the chairmen of the Civil Service Commission, the National Aeronautics and Space Administration and the Atomic Energy Commission.

That is as formidable a team as has ever been fielded in the fight to make Government practice what it preaches. Holders of Federal contacts are drafted to press the fight at the front—where the jobs are assigned. Where they fail to comply with this very proper Government employment policy, they will, barring a good explanation, find their contracts terminated.

Labor unions, too, will be pressed to abandon archaic discrimination habits, something that the AFL–CIO has not been able to accomplish by itself. President Kennedy should find many allies in his effort to eradicate discrimination in employment. For discrimination in this part of our national life, together with discrimination in voting and education, constitutes a national disgrace that neither our economy nor our conscience can longer tolerate.

Views on the Cold War

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 15, 1961

Mr. McINTIRE. Mr. Speaker, it is conspicuously apparent that today confusion hangs like a heavy cloud over United States-Russian relationships. And the American citizen's vision is dimmed by smoke rising from fires built by international pyromaniacs and from steam generated by the hot and cold antics of front men of certain unfriendly countries.

A letter submitted to the Bangor Daily News under date of January 27, 1961, by my good friend, Harold Walden, of Greenville, Maine, serves as a sweep of fresh air, for it clears away the mists that enshroud the causative factors of the cold war and extends each one of us the warm comfort of viewing a highly practical and promising solution.

I would like to share this unique optical experience with my colleagues; hence, I submit Mr. Walden's letter to the CONGRESSIONAL RECORD:

GREENVILLE, MAINE, *January 27, 1961.*

EDITOR, BANGOR DAILY NEWS:

In your leading editorial of January 21 you speak of the cold war as being between "two dominant powers built upon contrasting ideologies arrayed against each other." Is not this popular concept the very basis of our failure to find a solution to the problem?

To be sure capitalism and communism, carried to extremes, are opposed in ideology; but today this Nation is no longer capitalistic in the Marxian sense nor is Russia steeped in extreme communism. The problem lies in the fact that the peoples of Russian and of her so-called satellites are dominated by ruthless minorities which, hiding behind a false front of communism to which they give lip service only, seek to dominate the globe. Our great mistake is in treating these minorities and their top henchmen of the moment as though they represented the peoples involved.

How naively gullible can we be? A recent pronouncement by Khrushchev is being hailed in certain quarters as the most important since World War II. Actually this harangue and others from the same source have importance comparable to that of cheese to a mouse trap. But are we mice or are we men? No attempt at negotiation between the free nations and these self-appointed dictators, from Hitler down to Castro has ever produced anything but frustration, humilitation, and lost prestige. It is a major tactic of their craftiness to take us in these traps, tempted thereto by wishful thinking. When the widow of a late and great President invites this Khrushchev into her very home; when a President, a man of unquestioned integrity, naively says to this glibly lying butcher, "call me friend," is it surprising that we win the distrust, even the contempt, of freedom-seeking peoples?

What then is the solution to this problem which confronts the entire world and concerning which the world looks to us for the answer? It would appear that we should, insofar as possible and as peaceably as possible, bypass these ruthless, self-appointed, and nonrepresentative dictators and make every effort, both officially and unofficially, to reach the peoples involved with the message that we stand and shall stand ready to go much more than halfway in negotiating and cooperating with their true representatives to the end of peace, freedom, and human progress.

HAROLD WALDEN.

Tribute to E. J. Haslerud

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 15, 1961

Mr. YOUNG of North Dakota. Mr. President, North Dakota agriculture is losing one of its best and devoted friends

in the retirement of Mr. E. J. Haslerud, Director of the North Dakota Extension Service. Mr. Haslerud has for 34 years been associated with the extension work in North Dakota and is very widely known among our farmers for the good work he has done.

I am sure Mr. Haslerud is remembered, too, by many members of the Senate Appropriations Committee for his many able appearances before that committee in behalf of appropriations for the Extension Service.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Minot Daily News, published at Minot, N. Dak., on Saturday, March 11, paying a well-deserved tribute to this fine gentleman and public servant.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HIS CONTRIBUTION WAS GREAT
